Elephants

Width 5" Height 6"

These two elephants, pushing with all their strength, will hold your books in place. They make a most attractive pair of book rocks and have proven most popular.

A Garden Full of Tulips for \$1.00

75 Tulip Bulbs,
all first size,
taken from 25
named varieties,
for \$1.00.

PLANT THIS FALL

These Tulips have been selected from 25 of the most beautiful varieties, embracing all the colors that are to be found in this splendid class of spring-blooming bulbs.

Plant near your home—in your garden or back yard. The beautiful blossoms in a multitude of brilliant colors and shades will make April a spring month worth while.

75 Tulip Bulbs, Finest Mixed, \$1.00

Write or call at our store, mention "Literary Digest," and secure this splendid collection of Tulip Bulbs for only \$1.00, prepaid to your home, anywhere in the United States, with our 1914 Fall Catalogue.

Our Bulb Catalogue, Free on Request—contains complete list of choicest varieties of Darwin Tulips, Exhibition Hyacinths, New and Rare Narcissus and other miscellaneous bulbs.

Stump & Walter Co.

30-32 Barclay St.

New York

of the old countries from which many of the parents come, the neighborhood life gathers and sparkles.

Part of the afternoon the arena is in possession of the boys for basket-ball. The janitor brings out the two sturdy goal-posts which Joe, the engineer, made specially for the street. Their appearance starts a grand clamor on the part of a swarm of boys who circle around the referee—Tartakowsky, one of the young men of the neighborhood, student at the City College of New York, and a college basket-ball player. Each gang wants its team to play. Twelve gangs, turned into disciplined teams, contest against one another, while the resident workers stand guard in an effort to keep the surging crowd from breaking inside the ropes. All is excitement! Everybody is enjoying it. The little tots on the curb-bleachers cheer their big brothers.

All the old games you used to play with more or less freedom, and which are practically prohibited games on the East Side because of congestion and traffic, it is the hope to revive in the closed street—such games as prisoners' base, puss in the corner, hide-and-seek, fox and geese, tag, hop-step-and-a-jump, duck on the rock, hoop-rolling, hop-scotch, and walking on stilts.

IMPORTANT TO SUBSCRIBERS CONCERNING VACATION CHANGE OF ADDRESS

When notifying THE LITERARY DIGEST of a change in address, subscribers should give both the old and the new address. This notice should reach us about two weeks before the change is to take effect.

TWO DAYS ON THE LINE OF RETREAT

IN these days war correspondents "at the front" are a rarity. Tho the battle line extend for 150 miles, there is not one square foot upon which the newsmen are welcome. The difficulty of getting dispatches past the censor is not the correspondent's only difficulty. Unless he is content to follow in the wake of the fighting and glean what facts he can from the wounded and the refugees and from the telltale aspect of ruined homes and public buildings, the task that is cut out for him is one to tax his ingenuity to the utmost. To reach and remain at the front, he not only must risk capture and possible execution as a suspected spy, but he must also well play the part of a spy himself. Martial law, by which his presence there is prohibited, is merciless, but he must defy it. All the combatants are his enemies; he is no more safe in the English camp than in the German, but he must somehow manage to find his way among them. In recent numbers of the New York Evening Post appear eloquent accounts by a prominent correspondent, Robert Dunn, of the adventures experienced when, through accident, he joined at Le Cateau the remarkable retreat of the English from Mons. Having the opportunity to leave Paris for the north, he did so without an idea as to where he was going or where the fighting was.

at moment might be. His train stopt at e Cateau, in the Department of the Nord, ear Cambrai, and there he found himself, ore fortunately than he could have oped, in one of the most remarkable situations of the war so far. He writes:

I stepped out into the darkness of that range place, Le Cateau, and into such a spectacle as no man can forget. I knew at then; it would hardly have heightened the feeling to know also that in twelve hours I should see the town ablaze. The guards dissolved into the noisy platform crowd, carrying pasteboard bundles, baskets, babies. No one at the gate asked for my ticket or my papers. A half-visible squad of troops marched rapidly, whistling queer lively tune in unison. It was only when they broke feebly into the "Marseillaise" that I was sure they were French, and they were marching south.

I made for a light, through an iron gateway in a high brick wall. In the middle of the enclosure a woman outlined in the doorway demanded shrilly who I was and what I wanted. I asked for a hotel, and she directed me on up the street, as two dogs broke forth furiously. Outside, French troops were marching so densely that I had to brace and wait against the lightless brick houses of the narrow street, as it curved north, down into the hollow where the heart of Le Cateau lay. Suddenly I caught the impatient panting and the blinding shimmer of blocked automobiles. In them as they followed south were British uniforms, with the meager scarlet facing of staff officers. Then an immense clatter of hoofs, the jolt of heavy wheels—artillery, supply-wagons, cavalry, the gleam on wheels from more motors. It was the British in retreat—the British!

The town square was filled with them, already spreading their kits on the stone paving; with horses, motor-cars. It was half an hour after I had inquired at every lighted house for lodging before I found the Hôtel du Mouton Blanc. At a long table in a windowless room behind the café I sat down to dinner with a dozen British officers, and gave those around me the two Paris newspapers printed in English of that morning. They read them with an eager disdain, and it was from their comments that there first dawned on me the grim drama into which I had stumbled and their wonderful spirit under reverse.

"The Earl Leven wounded, eh?" said the young lieutenant of a Dorsetshire regiment on my right; "is that all they have?" Leven's was for days the only casualty made public. "We're rather well cut up, too. Five officers and 240 men alive out of a thousand in that business around Vicq."

It was the first bald chapter of the decorations that for the next two days officers and men repeated to me, and always thus, as if they were but remembering from a book of statistics, with never a quiver of the voice or eye; not as if they might betray downheartedness or sorrow, but actually as if such things, in their sublime assurance, were inconceivable. That saying, as old as history, that the Englishman never knows when he is beaten, may have appealed to me before as a figure of speech. In a flash I read its literalness.

A comrade of the lieutenant's came in. The pair had not met since the battle began three days before, and they named

Note the pitch of this 2-inch concrete Self-Sentering roof

Fan house of Self-Sentering and concrete

Concrete water tank made with Self-Sentering

How Self-Sentering is laid on beams

Self-Sentering Makes the Uses of Concrete More Practical and Less Costly

It has broadened its field and reduced its cost. It has cut out the need of temporary forms that added greatly to the expense of concrete construction. For Self-Sentering is both reinforcement and form, holding the wet concrete in place until set, then acting as a reinforcement that gives maximum strength and stiffness to the structure.

SELF SENTERING

With Self-Sentering you can build concrete roofs of any form or pitch—concrete walls, floors and partitions; fireproof, enduring and light in weight.

You can build quickly and economically factories, garages, water tanks, fences, etc., etc., that will not deteriorate.

Take advantage of Self-Sentering in every stage of building construction. It saves time and money, and results in better work.

McKESSON & ROBBINS
NEW YORK

over in the same matter-of-fact way brother officers—dead. "I say," the newcomer leaned over toward me, "how is that cheese there?"

They asked me no questions, but I was quite frank with them, even gave the Dorsetshire officer, whose name was Burnand, my card. I told the same story that I repeated afterward to any one who accosted me: that I was an American correspondent, who, having applied in proper form, with the required sworn declaration to accompany the French Army, had come north to look at the country where it was stated there was no fighting, and been caught by the British withdrawal.

"Well, if I were you," said the cavalry captain across the table, significantly, "I'd get out of here the first thing in the morning."

"Why?" I demanded.

"The Germans aren't five miles north of this bally place now. They'll be shelling it before six o'clock."

In the passageway a baby was crying with relentless piteousness. The mother, in a huge black "picture" hat, did her best at soothing, but the shrieks got on Burnand's mind—so he said, at least.

"Oh, choke that youngster," he kept muttering. "I'm nervous as a cat. I think I'd jump if I heard a door slam."

Nervous! After the carnage he had survived, the messmates he had seen slaughtered, he drawled this. He was no more nervous than any Englishman of his caste is after a cricket game. I never used to believe in caste; but if it made that young fellow what he was then, I do.

It was remarkable to find the common soldiers, he says, absolutely ignorant of their whereabouts, just as Zola has so often described them. Le Cateau might have been in the moon, for all they knew of it. "Write it down for me," laughed one of them, "so if they pick me up tomorrow the old lady will know where it happened." Unsupported by the French at Vieq, whence they had retired from Mons on the Sunday previous, the British cavalry had been forced to retreat. "We're drawing them down into France like a bait," explained one of them, "where the Frenchies can fight them on their own ground." The Germans were then only a few scant miles away, and in the morning the retreat would continue, sweeping completely through the little village. Mr. Dunn tells of the two women of the village who kept the "Mouton Blanc." "It is through them," he says, "as much as from the blind, contemptuous self-confidence of Tommy Atkins, that Le Cateau becomes unforgettable." He continues:

One was young and rosy-cheeked, but the other and head of the house, a sallow, thin being, with lined cheeks and a pointed jaw, began to relate to me how many hundred meals she had served that day, how in her bad health the village doctor had warned her that she must have rest and sleep, tho she would be up at four in the morning, making coffee.

I wonder—I doubt—if she is alive now. "Hein!" she summed up the evening, with the national nod and gesture of both

ands to her hips, at all the litter and wreckage on the floor. "C'est la guerre."

In that, and the next few moments, she pitomized the French just as much as Burnand or any of the rest had summed up the Briton. When she had helped me lift two of the leather wall-benches into the center of the café, and thrown on them a great striped mattress for my bed, I asked whether she would flee south in the morning.

"Go? Go away from Le Cateau—from my village—from the 'Mouton Blanc'? Why should I go? The German pigs will not touch me," she averred with a sublime calm, tho her beady eyes flashed. "Come, we will have a bottle of champagne. I have been keeping it for years."

And from somewhere the red-cheeked girl produced that bulging big bottle and three slim glasses. It had no label, but was of some good old vintage, tho a bit sweet, and we filled and refilled with the hissing stuff, drinking, "Vive la France!" and gossiping about *les beaux Anglais*, and her son who was with the army to the east, until quite two o'clock.

Before daylight the troops and the daring correspondent were amove. With the first shafts of sunlight upon the stacked wheat-heaves and willow groves began the firing. The writer speaks of long lines of racing leads, Uhlan cavalry, their horses hidden, howing above a hilltop not a mile away, and of the great stream of villagers from Le Cateau, setting out with a fatalistic patience along the St. Quentin road. He was the last to leave the village, but finally, carrying only a bottle of spring water, he made his way to a sheltering building in the open; and later progressed as the lighting advanced. About two miles from Le Cateau, he mounted a considerable rise and, looking back, saw his shelter of the night before already in flames. Here he was joined by a motor-cycle scout, "a huge, placid being with curly sorrel hair." The two watched the conflagration for some time. Continuing, he writes:

A bearded peasant in a black shirt and suspenders ran past toward the conflagration, toward home and family, surely, crying in falsetto, "*Le Cateau incende!*" Down in the hollow the great mass of cavalry were beginning some maneuver at a gallop.

"Wait," said the scout, rising. "You'll see something." And he went on to explain how the force in sight was preparing to take the offensive against the turning movement of the Germans to the east, which the cyclist had spoken of. Toward that quarter the land sloped upward. One mass of the cavalry, under cover of the artillery, who were to open fire as soon as the former rushed the approaching enemy's position, from the concealment of the rise, ranged themselves in the open. To the right and close at hand, the supporting cavalry gathered behind a dense grove, hidden and ready to swing out and overpower.

"They're wizards, these Germans," said the scout, "at masking their artillery."

Till well past noon we waited for this conflict. But the hours went like lightning.

SAVE YOUR EYES!

Everything depends upon your eyes. Your eyes are your most valuable possession—save them. Here is the very lamp you have been wishing for to prevent eye-strain and to preserve your sight.

The "WALLACE" (Model B) Portable Electric Lamp

For Home, Office and Travel.
The lamp with a hundred uses.

**Stands, Hangs, Clamps
or Sticks ANY PLACE
and ANY angle you put it.**

Price
\$2
by
Parcel
Post
prepaid

Lamp standing ready to be twisted to any angle

The handiest lamp in the world, because you can place it anywhere (either standing, hanging, clamped, or stuck by its suction cup) and it will stay wherever you put it, in any position desired, and concentrate its light exactly where you want light—always keeping your eyes in the shadow and resting and saving them from strain.

Concealed in base (4) is automatic clamp (5) for fastening lamp to any part of a desk, chair, bed-rod, dressing table, etc.—"iron grip" rubber suction cup (6) for fastening to mirror, window pane, or any non-porous surface—spring (5) for hanging lamp anywhere. Ten feet of silk extension cord (2) and patent plug which connects to any electric fixture. Shade (1) and socket (3) fit any size or shape bulb. Shade and bulb tilt to any angle you desire. Lamp is hand-somely and durably made of high-grade brass, beautifully nickel-plated. Weighs about a pound. Can be folded into a top-like ball and carried in a grip when travelling. (See cut.) The greatest lamp ever made for the tourist and traveler.

Ready for folding up.

Folded when not in use, or for traveling.

Reading in Bed.
Lamp clamped to bed-rod.

For Toilet Uses.
Floods face with light.

Perfect Shaving Lamp.
Attached to mirror by suction cup.

SPECIAL INTRODUCTORY OFFER—10 Days' FREE Trial

We want you to try this lamp—once used you'll never be without it. Write your name and address on the margin of this ad, tear out, pin a \$2 bill (your personal check, or a money order) to it and mail to us, and a "WALLACE" will be sent you, prepaid, by parcel post. Use it 10 days and if not entirely satisfied, return it and we will refund your money.

Saving your eye-sight is worth twenty times \$2. Write now, before you forget it.

INVESTMENTS AND FINANCE

THE WAR'S COST

DISCUSSING the cost of the European war, A. W. Ferrin, in *Moody's Magazine*, declares that the loss of life and capital already promises to be on so vast a scale that no one could predict what it will be. Nor could its effects in different parts of the world be predicted, since all countries are now closely bound to one another. Accepting the figures \$55,000,000 a day, which a French economist has evolved as the money cost of the war, he declares that the outlook is for "figures that stagger the imagination," and then asks, Who is going to pay for it all? Unless by revolution and repudiation the burden should eventually be shifted to the holders of Government bonds, it is the common people who will have to pay these frightful bills. Mr. Ferrin thinks repudiation not wholly impossible, especially if a decisive defeat should come to Germany.

All the Powers at the outbreak of the war adopted emergency measures to strengthen their resources. The cost will eventually show itself in the funded debts of the nations at war, and will be "a millstone around the neck of the whole world for generations to come." The nations at war already had colossal debts—France, \$6,283,000,000; Germany, \$5,000,000,000; Russia, \$4,550,000,000; Austria, \$3,750,000,000; the United Kingdom, \$3,500,000,000; Belgium, \$750,000,000. When to these crushing burdens has been added the war's cost, it will become a grave question what the chances are for the common people to pay the interest on the debt and have something left over for themselves to live on. While the nations which eventually win might recuperate their shattered finances from the indemnities that will be imposed upon the vanquished, it must be remembered that the conquered nations will not be in a position to pay the victors' debts and their own besides; so that repudiation would seem to be their only alternative—unless they resort to the step all neutral nations hope for—abolition of their armaments. Last year Germany spent on her army and navy \$350,000,000—a sum which would pay 3½ per cent. interest on twice her present debt.

Mr. Ferrin estimates that an international agreement by which armies and navies were made unnecessary would result in a total saving in military expenditures of a sum sufficiently large, not only to pay the interest on the cost of the present war, but "to leave something over toward the redemption of the war-created debt." Complete disarmament he does not regard as at all likely, but he believes it possible that such reductions may be made in armaments as to enable the warring nations to obtain in the savings thus effected funds for the interest on the cost of the war. In case this is not done, the people of these countries "should not be blamed if they prefer repudiation to starvation." Mr. Ferrin then discusses some of the economic results of the war on our side of the Atlantic:

"The business boom of this country which many market writers predicted would follow on the heels of the declaration of war in Europe has not yet material-

ized, but according to all logic some stimulation of our industries should soon be seen. With practically all the able-bodied men in Europe on the firing-line, some one will have to provide the warring countries with food and other products, and we seem to be the only country in a position to do so.

"On the debit side of the ledger are the items of our trade with Germany and Austria-Hungary. During the calendar year 1912 our exports to Germany exceeded \$300,000,000 and our imports from there were \$186,000,000. Our exports to Austria and Hungary were \$24,000,000 and our imports from there \$18,000,000. This trade will be lost while the war lasts, for it is inconceivable that with Great Britain's overpowering navy on guard, any merchant vessels will get through to the ports of the Dual Alliance.

"Of far more importance than anything else is the destruction of capital by the war. The cost of our Civil War, according to the English statistician Mulhall, was £740,000,000, that of the Franco-Prussian War £316,000,000, of the Crimean War £305,000,000, and of the war between Russia and Turkey £190,000,000. In those wars a total of about 6,000,000 men were engaged. In the present war, if the full strength of all the fighting nations is called out, 16,000,000 men will be engaged. If the war lasts many months it is likely to cost more than all the wars of the last fifty years put together.

"The destruction of capital will not only be enough to cut off the foreign market for our securities for years to come, but will cause a continuous movement this way of our securities already held there. This, however, may be a blessing in disguise, for if we have to take back our securities at low prices, we will at the same time be selling our grain and many other things abroad at high prices. The total foreign capital invested in the United States was estimated by the Royal Statistical Society in 1900 at six billion dollars. The bulk of this capital was in our railroad securities, England's investment in American rails alone being estimated at \$3,000,000,000. With the foreign liquidation of the last two years this amount has probably been largely reduced. Even if it hasn't, it appears that already 77 per cent. of our railroading financing is done at home, for the total capitalization of all our railroads is only about \$19,500,000,000, of which about \$11,000,000,000 is in bonds and notes and \$8,500,000,000 in stocks.

"With the favorable trade balance which the war seems likely to give us we may be able to take back from Europe at attractive prices all its floating supply of our stocks and bonds, and turn ourselves from a debtor to a creditor nation."

THE BIG DEBTS OF AMERICAN CITIES

How great have become the debts of American cities compared with the debts of the nation and States has been brought out by a writer in *Bradstreet's*. He declares that the net debts of these cities is "greater than those of the nation and States combined." Moreover, the per capita debt of the cities is greater than that of the nation and States combined. Not only this, but the per capita debt of the cities is "growing greatly," while that of the nation and States "shows a decline for a period of years." On June 30, 1913, our national debt, less cash in the Treasury, was \$1,028,564,055, and the net debts of the

WINTON SIX

Write Your Own Guarantee

The American Beauty

THE first company in America to manufacture a marketable motor car of any type (1898), and the first in the world to manufacture six-cylinder cars exclusively (1907), has so thoroly developed the Winton Six that today this car is the one outstanding exemplar of wholesome American beauty and merit.

☛ The Winton Six is free from every trace of foreign imitation. Its goodness is not of the make-believe kind that exists chiefly in the buyer's imagination.

☛ You have only to see this car to recognize its exceptional charm, and you have only to ride in it to know that the Winton Six will add a new zest to your enjoyment of life.

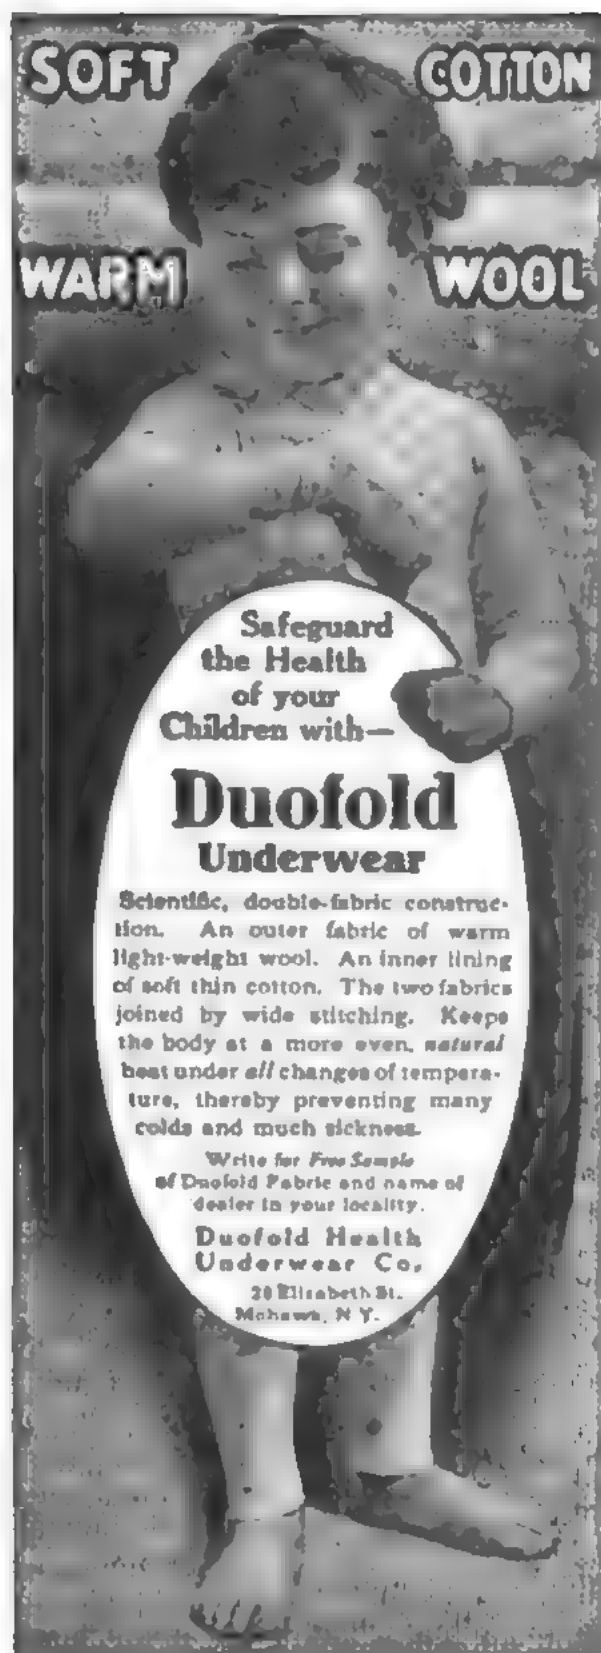

☛ Your particular Winton Six can be finished to conform to your individual taste, making it distinctly your personal possession—not merely anybody's car.

☛ Our catalog tells the facts fully and briefly.

20 Elizabeth St.
Mahwah, N. Y.

States, \$345,942,305, making a total for the nation and States of \$1,374,506,360.

How this total compares with the total net debts of cities is shown in a bulletin issued by the Census Bureau, covering 195 cities that have a population of 30,000 or more. The total indebtedness of these cities is \$2,015,600,000, or an excess of \$641,092,660 over the combined indebtedness of the nation and States. In the matter of per capita debt, it appears that the debts of the cities have rapidly increased. The figures at hand on this point do not embrace all the 195 cities in the statement of total debts, but are limited to 146 cities.

In these 146 cities the per capita debt in 1902 was \$44.19; in 1912 it was \$70.47. In the same period the New York City per capita debt grew from \$76.45 to \$156.57, while the per capita net debt of the nation declined from \$12.24 to \$10.77.

After 1911 the cities began to make a somewhat better showing. In one year, 77 cities showed decreases in debts, but there were 117 that showed increases. The decreases amounted to \$10,000,075, the increases to \$144,090,422. *Bradstreet's* then presents further figures on this subject for groups of cities classified by population:

"The first group comprises those cities having a population of 500,000 or over in the year covered; the second those having between 300,000 and 500,000 inhabitants; the third, those having a population of from 100,000 to 300,000; the fourth, those with from 50,000 to 100,000 inhabitants, and the fifth, cities having from 30,000 to 50,000 within their jurisdiction.

"For example, the per capita net indebtedness rises from \$38.12 for the fifth group, that of lowest population, to \$42.85 in the fourth group, \$44.61 in the third group, \$71.88 in the second group, and \$95.50 in the first group, that is, the one comprising the cities of largest population. Within the respective groups the range is sometimes wide, as will be seen by reference to the fact that in the first group the lowest city, Detroit, has only \$18.09 per capita net debt, while New York has \$156.57.

"In the second group Washington, D. C., the lowest city, has \$24.59, while Cincinnati, the highest, has \$139.18. In the third group Denver, Col., is lowest, with \$3.82, while the figure of \$109.23 is given for Omaha, Neb., the highest. In the fourth group the figures range from \$8.93 for Johnstown, Pa., the lowest, to \$128.73 for Portland, Me., the highest. In the fifth group the lowest city, Springfield, Mo., has only \$3.75, while Galveston, Tex., is credited with \$113.24.

"As an illustration of the divergence of individual cities from the general rule, it is noted that the per capita net indebtedness of Chicago, the second city in size in the country, is 13 per cent. less than that of Council Bluffs, Iowa, the smallest of the 195 cities reported. Ten cities show a per capita net indebtedness in excess of \$100, namely, New York, Boston, Cincinnati, Los Angeles, New Orleans, Omaha, Tacoma, Portland, Me., Atlantic City, and Galveston, while eight, namely, Denver, Erie, Peoria, Johnstown, Springfield, Mo., Joliet, Decatur, Ill., and Lansing, Mich., show a net per capita indebtedness of less than \$10."

ECONOMIC CONDITIONS IN GERMANY

Until the German war loans had been oversubscribed for, as officially announced in the third week of September, doubt had been expressed as to the success of these loans. Commenting on the success of the loans, *The Wall Street Journal* remarks that the extent to which German banking stands the test that has now been imposed

THE SAFE-CABINET

Now made in sizes suitable for the filing units of all standard makes both in wood and steel.

This makes it possible for you to "SAFE-CABINET" your private papers and business records from fire and theft exactly as the United States Government is protecting the diplomatic secrets of the nations in the American Consulates at all important capitals of warring Europe.

THE SAFE-CABINET (1914 Model) is the only steel filing cabinet bearing the label of inspection of the Underwriters' Laboratories.

If you don't find "SAFE-CABINET" in your telephone directory, address

THE SAFE-CABINET COMPANY
Dept. L-5 Marietta, Ohio

upon it "will be one of the most interesting economic developments of the war." Successful flotations of war loans are common occurrences when a war is popular. But *The Journal* believes that it sees "a potential danger in heavy note issues by the Reichsbank." Indeed, the future of German banks "is at stake." Following are other points in the article:

"The great improvement in the German monetary situation during the last year or two has attracted considerable attention in the financial world. But has it been a genuine growth, or will it fall to the ground under the heavy test to which it must perforce be subjected, even under the most favorable of conditions?"

"We know little so far of what has taken place in the Berlin money market. What has been allowed to come through has been fragmentary and not very satisfactory, owing to the military necessities. It is known that the Reichsbank has had to resort to extensive issues of notes which are nothing more than government notes. A recent advice indicated that over 2,000,000,000 marks in these notes had been issued since the outbreak of the war. The notes were generally well received by the public. Some business houses and small stores, it appears, refused to take the notes, with the result that the Government promptly ordered these establishments closed.

"A heavy issue of more or less fiat money of this description put out by a nation at war is a potential danger. Should success attend its arms there is no doubt that a normal condition would soon be restored. But, otherwise, the mending process might be very seriously impeded.

"It must also be borne in mind that any contemplation of Germany's financial structure must take into consideration the joint-stock banks, which have been so intimately associated with the financial and commercial progress of the country. These banks in Germany are really more like promoters. They are not only part owners of the great commercial enterprises, but they have helped to finance them, their activities extending over the seas. Consequently, in addition to facing the universal havoc wrought by the war, their future is also cast to a large extent upon the success of the German arms. Hence the position of the German joint-stock banks may be said to be more precarious than those of the other warring nations."

The Berlin correspondent of the *London Economist* declares that, by the end of August, Germany had showed signs of having adapted herself to the new conditions. At first there were panic and excitement, but these subsided. The harvest had been in the main gathered and the rise in food prices for the time being had been checked. Other conditions are described as follows:

"In Berlin, public life seems almost normal, except for the restriction, almost to the point of disappearance, of tram, bus, underground, and city railway traffic. Export trade, despite the vigorous attempt to keep open all connections with neutral countries, has been completely crippled, and industries of all kinds, except for the production of war material, have come very nearly to a standstill, and what little home trade remains, apart from the supply of food, is being carried on under great difficulties.

"In the great Rhenish Westphalian coal-field there appears to have been some recovery, and production is said to have been raised again to 60 per cent. of the normal output. This, however, hardly corresponds to another statement that the triple shifts have now been reduced to one. Whatever the coal production may be is of little use to industrial life in general, since so far it

"AVOID THE FIVE-O'CLOCK RUSH"

For Any Kind of Filing Proposition Consult

Amberg File & Index Co

1400 to 1416 Fulton Street, Chicago

79 & 81 Duane Street, New York

Doing business with specialists in our line is just as profitable as getting the best service and advice in any other field of activity.

Selecting furniture is important but is only the beginning and is after all the least important part of installing a filing outfit. Any number of people can sell you furniture and leave the rest to you, with a possibility that both furniture and equipment after a little time will prove unsatisfactory. There is quite a difference between buying furniture and installing a system.

The idea that any man, clever or otherwise, can install his own system is a mistake. It takes years to acquire a knowledge of the many ways things can be done and the right material to use in doing them. And it is difficult to handle some things even though we have installed 60,000 filing systems and have had years' experience.

Our method of procedure is (whenever possible) to send a competent man, who with your help and cooperation will plan the complete system you need. Our prices for what we furnish are published in our Catalogue and there is no charge for services.

The Heart of the Home

AS the human body has its own organs for removing broken-down tissues and poisonous gases and replacing them with fresh, pure air, so should the home be equipped with means for getting rid of dust and dirt and bad air and of purifying itself with wholesome air from outside. This need is perfectly supplied by the

TUEC STATIONARY CLEANER

For Health and Cleanliness

Permanently installed, out of sight in the basement, with ample piping connecting it with all parts of the house, the TUEC,—"The Heart of the Home,"—furnishes the vital force that means cleanliness and health and vigorous life. The pressure of a button starts its motor throbbing,—its powerful fan revolves and the whole house begins to breathe.

Down through the pipes come the dirt and dust into a sealed air-tight vessel.

With them come thousands of cubic feet of dead, breathed-over air, laden with minute bacteria that would otherwise find their way into the throats and lungs of the family. This air is all expelled through a vent outside the building and its place is taken by fresh, pure atmosphere from out of doors.

Dirt, dust, disease and melancholy, household drudgery and the ills that follow it, are strangers to the home that is equipped with the TUEC. And there is a TUEC perfectly suited to the requirements of your building, no matter what its size or age. The cost is well within your means, and less than your expectations. Installation can be made at any time.

Write today for the TUEC Book. No obligation involved.

THE TELL-TALE CARD

If you ever saw a man (he was a REAL salesman) take from his pocket a case containing

Peerless Patent Book Form Cards and detach a beautifully engraved, scrupulously clean, perfectly plain business card, you were amazed at the absolutely smooth edges of the card. There wasn't the slightest indication of its detachment. No man ever witnessed such an act without a stirring of his curiosity. Most men test the credibility of their senses by feeling the edge of the card or ask how such a thing is possible. The card marks the man. It tells the tale you can't tell yourself. Peerless Patent Book Form Card is the best thing in cards. It doesn't appear to have value. You can differentiate yourself. Send for a sample today for yourself. Send now.

Appearance of tab of cards in case.

has been impossible to provide transport for any coal except for military and government purposes.

"The great association of manufacturers, such as the Hansabund, appear to be very active in organizing whatever trade there may be on an 'Imperial' basis. As far as food supplies go, it is boasted that Germany has now stocks for eighteen months, which, with the necessary allowance for exaggeration, would agree more or less with the estimate of one year made in this letter three weeks ago. It may be pointed out that the Russian advance makes the prospects for the next harvest gloomy enough, since the great rye districts on which Germany depends will soon become the center of war. A warning against the wholesale slaughter of young and breeding cattle suggests that the pinch is being felt here also.

"As was inevitable, it is the poor who are already suffering most severely. According to *Vorwärts*, an investigation carried out by trade-union officials reveals the fact that there were already a week ago more than 100,000 unemployed in Berlin, and in order to realize the full significance of these figures, it must be remembered that, in addition, the whole able-bodied male population up to the age of 40 has already been taken away into the army. The removal of reservists, varying in different works roughly from 25 to 75 per cent. of the totals employed, instead of giving opportunities for more employment, have made it necessary to shut down more works. Some employers are taking a despicable advantage of their opportunity. They have reduced the wages of those remaining, and, instead of taking on new hands, are working overtime at reduced rates.

"According to the *Berliner Tageblatt* of August 26, the Berlin branch of the metal workers' union has 12 per cent. unemployed, apart from the 20 per cent. of its members in the field; the wood-workers' union, again, apart from those in the field, has 14,000 unemployed out of a total membership of 27,000. The masons' union, out of a membership of 12,000, has 2,000 at the front and 2,500 unemployed. The bookbinders' union has 3,300 unemployed, as compared with an average of 500. A third of the textile workers in Berlin are said by this radical paper to be unemployed, but to judge from *Vorwärts* this figure is far too moderate.

"In the Solingen steel manufacture, again according to *Vorwärts*, every branch of the industry, except the manufacture of weapons, is practically at a standstill. In Berlin, at least, it would seem impossible when work has been once lost to find more, and enormous crowds of people from every walk of life are said to wait outside the chief newspaper offices on the off-chance of earning a few pfennigs by the sale of papers. The feeding of school children at public expense is being organized on a wholesale scale, and eating-halls, where a midday meal can be obtained for 10 pfennigs, are being instituted in the poorer part of the city."

Of Course.—Tess—"Why were you weeping in the picture show?"

Jess—"It was a moving picture."—Judge.

Question of Fact.—The judge decided that certain evidence was inadmissible.

Counsel took strong exception to the ruling, and insisted that it was admissible.

"I know, your honor," said he, warmly, "that it is proper evidence. Here I have been practising at the Bar for forty years, and now I want to know if I am supposed to be a fool?"

"That," quietly replied the judge, "is a question of fact, and not of law, so I won't pass any opinion upon it, but will let the jury decide."—*Sacred Heart Review*.

FORD CARS RIDE EASY

PERSONAL GLIMPSES

(Continued from page 653)

The shell-fire around the town waxed furious. Pale flashes pricked themselves out yonder, like a long fuse lighting intermittently at dozens of points. Over the drifting haze from the invisible guns, the bursting shrapnel showed itself in shapes of tiny, woolly white clouds spawning in the clear sky, expanding magically. Tho the wind was strongly toward them, the thundering, the ugly menace, was deafening, desolating. Sometimes smoke hid the church dome. Powder gleams broke out between us and it. A few shells burst directly over the hamlet where the cavalry had been, not a quarter-mile away.

"They're getting our range," said my friend. "We'd better get out of this."

But we had no more than crossed the road to the foolish "cover" of a larger tree than the scout, who had left his motor-cycle against the wheat-sheaves, sauntered back for it, remarking, "That was silly of me." Peasants from the next village south, Busigny, grouped around us, and he idly warned them away. A beautiful, dark-faced girl, with raven hair, approached him, and said with a deliberate winningness—French of the French that she was in those thrilling moments:

"Monsieur, vous n'avez pas de la peur?"
Flirting on the battle-field! Who but the Française?

Occasionally an automobile or motor-cycle appeared with English and French officers, or scouts, such as his companion. The artillery firing grew more intermittent, waned, and then broke forth again as the English gained ground. Of the close of the battle we read:

The cavalry below were breaking position, galloping in all directions. More appeared on the ridge south of where the enemy had been expected. On our opposite side, long lines of troops—infantry—marched south on a hidden road. Another motor-scout, even younger, red-faced and lithe, with a tiny black mustache, dashed up for a moment, and as he left turned to me, demanding, briskly, "I say, by the way, what are you doing here?" But he rode off before I could answer, bidding so long to my first friend, calling him by name, "Walker."

Again we were alone on the bank under the barbed-wire fence, except for the peasants. It was covered with red clover, and all at once I found a four-leaved specimen and gave it to "Mr. Walker," who stuck it in his cap with a vague smile. The boy in corduroys began to gag and point into the sky over the marching infantry, where the rattle of cylinders had again broken forth.

"German 'plane, by —!" exclaimed the scout. "Look at her turned-back wings."

By the angle in each 'plane, the resemblance to an eagle, or a buzzard, was uncanny. It was steering straight for us, some 500 meters high, but before the breathless instant when it hung straight overhead and then sailed away eastward, the infantry massed on the road gave it a crackling defiance with their rifles.

"Our men, over there, then," said Walker, cranking his cycle. "I was wondering who they were," he drawled, and without a word of parting whisked away down the rear slope.

The cavalry, too, were withdrawing. I-

The Companies Timken Keeps

You who have read Timken advertisements realize how important to your safety, to low upkeep cost, to the long satisfactory use of your motor car it is to have good axles and bearings.

You have been urged to ask direct about the service Timken Bearings and Axles are giving. To "talk with the man who rides on Timkens" anywhere and everywhere you find him. To "talk with the repair man" who knows all makes of cars and their parts.

In the Timken Primers, "On Bearings" and "On Axles," (sent free on request) you will read the reasons back of the good service Timken Bearings and Axles give.

The proof of the pudding is the eating. Things as well as men are known by the company they keep. And by their place in that company.

Here are named most of "the companies Timken keeps." All use Timken Roller Bearings or Timken-Detroit Axles or both, in part or throughout, in one or more of their models. A booklet list naming the Timken equipment and its location in each model will be sent with the primers.

saw my chance of seeing any carnage vanish. There was nothing to do but retreat also, in company with the ejaculatory peasant, and join the baby-carriage procession forming from all the houses in the village at Busigny. At last the boy left me—turned abruptly with a curt adieu and his coatful of English crackers into the high hedge of the first brick farm—pondering over Walker's manner at his job.

Plainly, it was he who had been responsible for the operations at this small point of the terrible fight on that August 26. Yet not once had he shown the smallest worry, the least tension. He had never raised his voice, more than smiled inscrutably. Often in leveling his glasses he had seemed exasperatingly slow, not to say stupid, in distinguishing lines of trees from troops, and so forth. His calm was exasperating; he did not even seem alert; half a dozen times I had called attention to distant movements, at which he would say, first taking a bite of biscuit: "Ah, yes. I must look at that," and languidly level his binoculars. I bethought myself of an American on such a job—his tiptoe, braced concentration. But could I swear to any gain in efficiency by that?

In his account of the events the next day at Busigny, Mr. Dunn recounts an adventure that shows clearly the perils that he faced at every moment. A train-guard in a red cap had shown him a store where bicycles were sold, and, when he refused to pay the exorbitant charges asked, had taken into his head to make trouble for him. At the first alarm the village was aroused:

From doorways, alleys, side-streets, crowds scurried across the cobbles as tho I were a dog-fight. "Espion! Espion!" (spy), went up cries from the dense, menacing mob, of which instantly I was the center. The fingers that gript me belonged to a Teuton-looking creature, with a pointed blond beard. Of course, a hollow feeling crept under my ribs, but I had sense enough not to shake him off, and to brace my wits.

"*Wohin gehen Sie?*" demanded he, letting go.

"To St. Quentin," I answered, in French.

"But that is not the road to St. Quentin which we find you taking," said, in English, a short, sallow man in a felt hat. Score one for them. All around the notes of anger became derisive. I started to explain in English about the Hôtel du Nord and a carriage; but the first fellow cut in, roughly: "*Sprechen Sie deutsch?*"

"*Je ne comprends pas,*" I said. "*Parlez anglais.*"

Score two. "Ah!" exclaimed the pointed beard, triumphantly.

"You answer him, you understand, when he asks you in German where you are going," explained the other. "Then you say you can not speak German."

"Look here," I said, with a good English gasp-word. "Do you think I'm a spy—*espion?*"

"*Si!*" shouted the crowd. "*Si!*" And my captors nodded.

Then all gave gangway to a dumpy, bald little man, with eye-glasses on a gold chain, who plainly, from his interceding, worried air, had been listening on the fringes.

"*Monsieur le maire,*" indicated the felt hat, and they all fell jabbering among

themselves. Blond beard repeated the damning evidence of his verbal ruse, but I saw at once that in the mayor, gesticulating and declaring that I was English, lay a partizan.

"I'm an American," I corrected him, whipping out my passport. "Who are these two—detectives?"

"Detectives of the police," said the sallow one.

"Then let's go to the police station," I said, "so you can see all my papers."

We started, plowing through the eddying, noisy crowd. I beguiled the felt hat with the same true, plausible story told to the British. On the mayor's desk, just inside the graystone building, I spread out every paper and card I had—even my navy pass used at Vera Cruz. The police papers he studied under a stubby finger, muttering, holding the glasses half-way between them and his eyes; he even massaged the red seal on the passport, nodding with proper official unction, and laid a friendly paw on my coat. By the time the sallow man had translated each English sentence, the day was won, and he got busy with the municipal stamper to allow me to enter St. Quentin.

Deeming it wiser, in the end, to purchase one of the high-priced bicycles, the correspondent made his way thus mounted to St. Quentin. Here, at the Hôtel Métropole, he had barely secured the sole scant accommodations available when the English again descended upon him, and it was Le Cateau over again. For an hour a steady stream of huge motors marked with the Red Cross and bearing wounded swept through the town. There were no trains out that night for any passengers but the dying; the next day none at all. Returning to the hotel, the correspondent listened to the brief comments of the exhausted officers who thronged the main room and partook of the freely offered refreshments:

A bronzed cavalry captain, thirstily sipping his coffee, was telling a brother officer with a dust-stained face how in one place the ground had been so plowed with shells that he could not pick a way among them.

"We're beaten, all along," he said. "Done—that's what we are."

And when a Briton admits that—! But it was only the reflex groan of an instant.

"Forty thousand French, y' know, ought to have attacked from the west at eleven this morning," he went on. "Had forty miles to march, and didn't come up till too late. Not much left of the Black Watch, they say."

"Fighting four days now without a rest," reviewed another. "Well, they boasted they'd be in Paris in eight from the frontier, and this isn't half-way yet. We'll stand them off yet. This drawing scheme, to fight in the Frenchmen's own country, is bound to win."

"Hear the French got at them after dark," recovered the first speaker, "mashed them like flies." And wholly braced from his moment of despair, he had the generosity to add, "They're making a wonderful advance, these Germans."

"Of fifty-eight men with me, I mustered five at six o'clock."

"Infantry scattered all over the country, looking for companies that have been wiped out."

SETH THOMAS Clocks

Empire
Pattern

*Elegance
united with
Service*

The Seth Thomas Empire Clock keeps good time and good faith. Its classic lines reflect the glory of the Empire period.

The silvered dial, brass frame and beveled glass panels contribute to the pleasing simplicity of appearance. The musical voice of a full-toned Cathedral bell proclaims the hours and half-hours. The movement, which is eight-day, will serve you loyally and honestly for a lifetime—a characteristic of all Seth Thomas Clocks.

Your jeweler can show you the Empire or other Seth Thomas Clocks of satisfactory styles and prices. We will send a descriptive booklet on request.

And a third officer went on to tell how he had shot a German officer behind a tree, on refusing to surrender. Wounded, two peasants had helped him off to the German lines. "They'll get blamed for it, of course, and killed if the fellow dies. These poor people—it's they, not we, who suffer most in the end."

He concludes with a description of the crowded highway, next morning. We are reminded of Kipling's picture in "Kim" of the great highway of India and its cosmopolitan torrents of humanity.

I rode up the hill to the police, to get permission to leave town by bicycle instead of train. The Commissariat was talking excitedly under his Gothic arches, and waved me away with a hand before I could open my passport. Coasting down, a motor-cyclist buzzed past, mouth open in his unseeing, ashen face. Bandaged troopers, their horses killed, limped along the sidewalks like men walking in their sleep. Whenever a motor-lorry paused, its driver promptly fell into a doze; all the extra men on the artillery and supply-wagons slept through the jolting over pavements. Highlanders, grimed with soil, stockings around their ankles, tartans gone, halted and scraped along on their weary, blistered feet. War—this indeed was war in all its stupefying desperation.

Here was the working heart of the expeditionary force in full blast. A modern army, vividly on the job. Red-capped staff officers arrived and dashed away, to report, to give orders, clattering on great bay horses, surging in motors. Changing incessantly in person, gray-haired generals, colonels, aides—some with gold eye-glasses, all elegant—with armfuls of fluttering maps, shouted quiet commands to forces making off on the radiating streets in all directions toward the country. Long lines of artillery, of ammunition, supply-wagons, endless cavalry, seemed to march and counter-march up and down that hill, around those sharp corners, for upward of two hours. And always the commissary busses, that still blazoned on their sides in huge letters the commerce of London, mingled with the army of civilian motors, carts, carriages, in streaming flight, among the dumfounded population that had no means of escape.

At nine o'clock I took the Paris road, first leading almost straight west from St. Quentin to the village of Ham, fifteen miles beyond. As it happened, that was the whole front of this section of the English force, and I had the luck to be able to ride completely along it, ranged for battle. Just out of town the infantry was breaking camp, and the carcasses of their beef ration lay everywhere in the road. To right and left of it, deployed cavalry or artillery, making for the cover of groves or swells in the flattish, fertile country. And always the surging back and forth of lightning motors, of motor-scouts—tho I never again saw Walker; the lumbering of London busses, only one of which I saw wrecked on its side; but in places bread and biscuits, fragments of army documents, were mashed and ground into the macadam where there had been a spill. Between all, the refugees afoot, on wheels, the trundling baby-carriage army, picked a hesitating way, I clinging closely to them for concealment whenever the markings of an officer were visible.

We ship on approval without deposit, prepay the express and allow you to be the judge.

Durable Treads double the life of your tires and are sold under a sign-guarantee for 5000 miles without puncture. Applied in your own garage in thirty minutes.

SPECIAL DISCOUNT offered to motorists in no territory on first shipment direct from factory. postal will get full information and sample within week. State size of tires.

Don't wait—write today. Address nearest factory office THE COLORADO TIRE & LEATHER CO. 1226 Karpen Bldg., Chicago, Ill. 1129 Acme St., Denver, Co.

"Acousticon"

Covers 48 Degrees of

DEAFNESS

This is the most remarkable result ever achieved. The "Acousticon" has fitted over 100,000 deaf persons. No matter what caused your deafness, unless "stone" deaf or born deaf, you must use the famous "Acousticon" sooner or later to

HEAR DISTINCTLY

Regulates to suit your condition—remarkable patented exclusive feature transmits sound to the deaf ear, near or distant, indoors or outdoors, under varying conditions

Magnifies Sound 400%

The "Acousticon" is different from all others—not a simple, unguaranteed microphone—nothing to insert in the ear. Don't confuse it! Endorsed by world's greatest ear specialists. Delicately exercises and vivens inactive muscles of deaf ear and checks progress of deafness

Over 100,000 Users This is three times more than all other devices combined—proof of "Acousticon" superiority. Will last a lifetime—it is the ONLY DEAFNESS GAILY GUARANTEED that protects you fully against loss.

NO MONEY In Advance

TEN DAYS FREE TRIAL. We send you an "Acousticon" without deposit—you risk nothing. We prove at OUR RISK the wonderful clear hearing the "Acousticon" gives you. You must use an "Acousticon" if you wish to hear perfectly. No other instrument is sent out on a no-deposit plan. On

EASY TERMS enable everybody to own an "Acousticon" NOW. About \$15.00. FREE TRIAL OFFER AND EASY TERMS. Don't miss because other devices have failed to help you. That's "Acousticon" is like them. Make our great FREE TRIAL before you judge it. Write now for proof.

General Acoustic Company, 1332 Candler Building, New York City

THE SPICE OF LIFE

Justified at Last.—WILLIE—"Look here, mother, haven't I been telling you for the past two years that it was no use learning all that European geography?"—*Life*.

Unkind.—"I wonder how many men will be made unhappy when I marry," said the flirt.

"How many do you expect to marry?" answered her dearest friend.—*Man Lacht*.

Cheering Thought.—FIRST OLD LADY—"My dear, what do you think of this war? Isn't it terrible?"

SECOND OLD LADY—"Awful! But it can't last long; the Powers will surely intervene."—*Punch*.

The Wheel of Fortune.—"Jim"—errand boy.

"James"—office boy.

"Brown"—clerk.

"Mr. Brown"—head clerk.

"Brown"—junior member of the firm.

"James"—son-in-law of head of firm.

"Jim"—head of the firm and power on the street.—*St. Louis Mirror*.

And Then He Knew.—"I was speaking with your father last night," he said at last, somewhat inanely.

"Oh, were you?" answered the sweet young thing, lowering her eyes. "Er—what were you—er—talking about?"

"About the war in Europe. Your father said that he hoped the fighting would soon be over."

The sweet young thing smiled.

"Yes," she remarked, "I know he's very much opposed to long engagements."—*Cleveland Leader*.

Safe So Far.—Count von Bernstorff, the German Ambassador, called at the State Department to-day, but before going to the office of Mr. Bryan left his coat and umbrella in the diplomatic anteroom. On leaving he started after the things, but saw a man looking out of the window, his back to the door. The Ambassador hesitated.

"Who's in there?" he asked an attendant.

"The Minister of Santo Domingo," came the reply.

"Oh," said the Ambassador, "I can go in. We are not at war with Santo Domingo."—*New York Herald*.

As It Might Be.—A certain people were much given to deploring war. War, they kept insisting, was poor business.

Their King heard them, but he didn't take them seriously. The very first chance he got he picked a quarrel with a neighboring Power, and, that done, he lifted up his voice in the old way.

"The fatherland is in danger!" he cried. "The honor of the nation is assailed! My children, be patriots!"

"But they couldn't see him. "Not on your life!" they made answer. "You can fool all the people some of the time and some of the people all of the time, but you can not fool all the people all the time!"

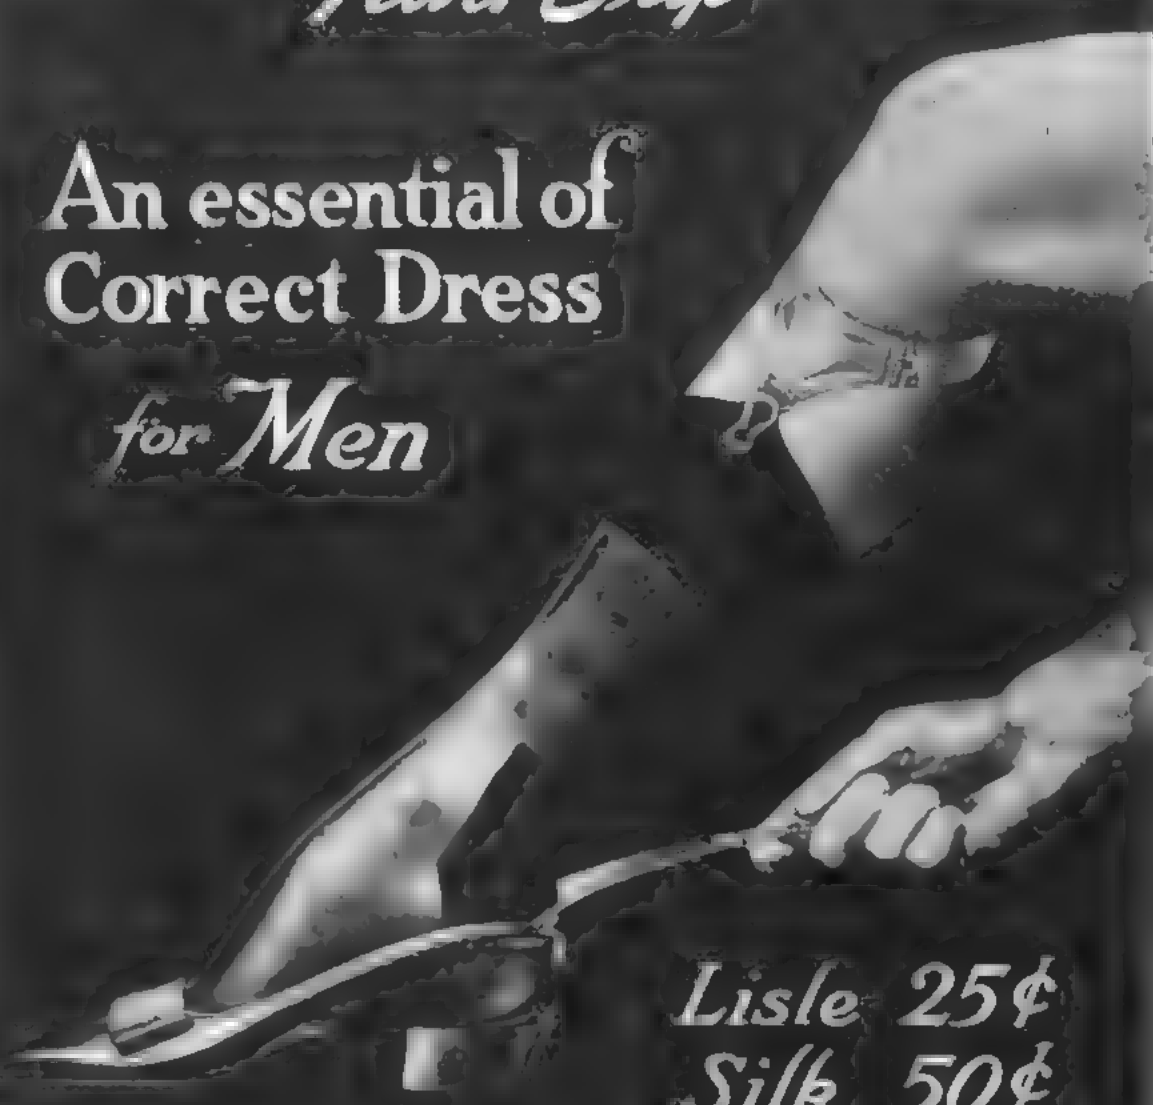

Whereupon the King made haste to patch up his quarrel and was very careful forever after not to pick another.

This fable teaches that we have still some distance to go before universal peace can be anything but a joke.—*New York Evening Post*.

CURRENT EVENTS

EUROPEAN WAR

September 17.—United States Ambassador Gerard at Berlin reports the German Chancellor von Bethmann-Hollweg as suggesting a tentative inquiry by the United States as to what peace terms the Allies might demand.

September 19.—Both sides acknowledge that in the seven days' fighting along the Aisne and the Oise rivers there has been no appreciable advantage to either side. Contradictory reports of small successes near Verdun are given by Berlin and Bordeaux. The Germans admit losses along the Oise.

Shells from the German guns ignite scaffolding about the famous Cathedral of Reims, and the flames are communicated to the roof and interior, accomplishing considerable damage.

It is now admitted by the French that Maubeuge, a first-line fortress in the Department of the Nord, was surrendered on September 7.

Berlin reports the Russians forced back to the eastern frontier in East Prussia with affairs in Galicia well in hand.

September 20.—Belgian forces are reported to have caused so much hindrance to the Germans in their operations against the Allies that heavy artillery is being rushed to Antwerp to crush King Albert's army.

Vienna admits the evacuation of Jaroslaw for strategic reasons.

From East Prussia General Hindenburg, with 120,000 men, starts an aggressive movement against Grodno, in Russian Poland.

Montenegrin troops are said to be within ten miles of Serajevo, the capital of Bosnia.

The British Admiralty reports an armed German merchantman sunk by the *Carmania* off South America; the English cruiser *Pegasus* disabled by the *Königsberg* near Zanzibar; and six English vessels in the Bay of Bengal captured by the *Emden*.

September 21.—The Germans, strongly entrenched along the Aisne, are reported

CHANNELL CHEMICAL COMPANY
Chicago • Toronto • London • Berlin

to be continuing still unsuccessfully their fierce assaults upon the Allies' line. A fierce battle is raging on the plateau of Craonne, twenty miles east of Soissons. The German War Office denies weakness on its right in the "Battle of the Two Rivers," praises the Allies' valor in attacking fortified positions, but announces that these attacks are growing weaker. London military experts express satisfaction with the progress of the battle and attribute the Allies' success to repeated bayonet charges.

Vienna admits that the Russians have crossed the river San.

Serbia officially reports crushing an Austrian army of invasion near the Drina River.

September 22.—Three armored British cruisers of the 12,000-ton type, the *Aboukir*, *Hoguc*, and *Cressy*, with a total complement of 2,200 men, are sunk in the North Sea by German submarines. Only 1,067 are rescued.

The Germans claim to have recaptured the heights of Craonne and the village of Bethany, near Reims.

An advance on Breslau, in Silesia, from Poland is reported.

September 23.—The French War Office announces that the Allies on the left have driven Von Kluck's army back eleven miles to the vicinity of Lassigny. Berlin states that the Allied center is weakening, and that German forces are closing around Verdun.

China replies to the Kaiser's protest against the Japanese operations in the East, disclaiming any responsibility for the violation of her neutrality, owing to her inability to defend it.

GENERAL FOREIGN

September 17.—Through Ambassador Spring-Rice, the British Government apologizes and expresses great regret to the United States for the alleged interview by Sir Lionel Carden, criticizing this country for the prospective withdrawal of American troops from Vera Cruz.

September 18.—Sir Ernest Shackleton and his party leave London to join the exploring party that is to start for the south polar regions.

September 20.—The National Bank of the Republic of Haiti stops all payments of money to the Haitian Government.

September 22.—An attempt to take Mexican refugees from a Ward Line steamer at Progreso is thwarted by the United States scout cruiser *Salem*.

September 23.—General Francisco Villa declares war upon Constitutional First Chief Carranza. Villa claims that four States, Chihuahua, Sonora, Zacatecas, and a portion of Coahuila, are in a state of uprising and will join with him.

DOMESTIC

WASHINGTON

September 17.—Members of the Federal Reserve Board, before the House Banking and Currency Committee, oppose the proposition to permit State banks to issue currency.

September 19.—The Interstate Commerce Commission consents to reopen hearings in the freight-rate case.

WHAT SHALL I READ TO-NIGHT?

A few hours a year, a few years in a lifetime are all any of us has to read.

Why waste that little time on useless, fast dying books? There are a few really great books in the world—Biographies, Histories, Essays, Dramas, Works of Travel, Fiction, Science, Religion, Philosophy, and Poetry—that truly picture the progress of civilization.

What are these few great worth-while books?

We want to send you the answer to that question in a free "Guide Booklet to Books." It is of wonderful value. It tells the story of

The Famous Five-Foot Shelf of Books

418 Masterpieces for the Price of 40

As a matter of efficiency, ask for this free booklet. Find out for yourself why one hundred thousand successful men have found in the Five-Foot Shelf, just the daily mental stimulus that they need.

Why one hundred thousand men, many of whom never went to College, now have a wide appreciation of literature, science, art—why they can think clearly, talk well—in short, why they are among the successful men of today.

Your Free Copy is Wrapped Up and Waiting

THE CORONA

Portable Typewriter

—this is the typewriter that is being carried by most of the War Correspondents now at the front. It is carried by them for the same reason it should be carried by you.

Because typewriting is always preferable to hand writing—it's much easier to read—records can be kept by making carbons, and the appearance of any document is enhanced many times.

The only reason why everything heretofore written has not been typewritten is that typewriters were heavy and cumbersome (for office use only), while the so-called portable machines have been mere playthings.

Now the Corona has solved the problem. It weighs only 6 lbs., the carriage folds over the machine—and when in its carrying case occupies only about the same amount of space as a large camera.

Let us send you full particulars and booklet No. 14, which will convince you that you should use a Corona too.

Corona Typewriter Co., Inc., Groton, N. Y.

141 West 42d St., at Broadway, New York City

You Can Weigh Exactly What You Should

You can, I know it, because I have reduced 32,000 women and have built up as many more—scientifically, naturally, without drugs, in the privacy of their own rooms; I can build up your vitality—at the same time I strengthen your heart action; can teach you to breathe, to stand, to walk and to correct such ailments as nervousness, torpid liver, constipation, indigestion, etc.

One pupil writes: "I weigh 111 lbs. less and I have gained wonderfully in strength." Another says: "Last May I weighed 100 lbs., this May I weigh 153, and Oh! I feel so well."

Write today for my free booklet

Author of "Growth in Silence,"
"Self-Sufficiency," etc. [23]

posits, the total for the nation exceeding \$48,000,000.

September 21.—The Senate filibuster against the Rivers and Harbors Bill is successful in having the bill returned to the committee, with instructions for a \$20,000,000 reduction.

September 23.—The Administration is reported as resenting an interview attributed to Attaché von Schoen, of the German Embassy, in which the Attaché violated diplomatic courtesy in his statements relative to relations between Japan and the United States.

GENERAL

September 17.—An underground explosion entombs many men in a coal-mine at Rockport, Ky.

September 19.—In a gale off the Oregon coast the steamship *Leggett* turns turtle and founders, with seventy-two lives lost.

September 23.—Admitting that the Red Cross army in Europe can not begin to cope with the situation it faces on the French battle-fields, Ernest P. Bicknell, National Director of the American Red Cross Society, arriving from England on the *Olympic*, begins a national campaign here, to muster money, nurses, medical supplies, and doctors for the service.

In Other Words.—ETHEL—"Gladys Smith's face always reminds me of a delicately tinted china cup."

BROTHER TOM—"Yes; it's a beautiful mug."—Judge.

Scrambled Zoology.—The hard-working storekeeper had vainly ransacked the whole of his shop in his efforts to please an old lady who wanted to purchase a present for her granddaughter. For the fifteenth time she picked up and critically examined a neat little satchel.

"Are you quite sure that this is genuine alligator-skin?" she inquired.

"Positive, madam," quoth the dealer. "I shot that alligator myself."

"It looks rather soiled," said the lady.

"That, madam, is where it struck the ground when it fell off the tree."—*Sacred Heart Review*.

Look for the Yellow Label Witt's Can and Pail

This is what it means:

DURABILITY. Made of heavy galvanized, rust-proof steel, with deep corrugations that are 20 times stronger than plain steel. Witt's outlasts two ordinary cans.

SANITATION. Special tight-fitting lid seals can as effectually as vault. Odors and garbage kept from flies and dogs kept out. Always neat.

Three sizes each of can and pail. Write for booklet and name of Witt Dealer in your town. Learn what others think of the Witt.

THE WITT CORNICK CO., Dept. E, Cincinnati, O.

SPEECHES By William Jennings Bryan

Bound in Dainty Separate Volumes.

Only 35c each postpaid. Here are the titles of the volumes: "The People's Law,"—"The Price of a Soul,"—"The Value of an Ideal,"—"Man,"—"The Prince of Peace."

These are the most popular of Secretary Bryan's numerous recent lectures and speeches. Each has been delivered before many large audiences.

In five uniform volumes, thin 12mo. Ornamental boards—dainty style. Price of each title 30c net; by mail 35c.

JULIAN ELTINGE
Famous Female Impersonator, says:

"Relaxation is necessary to the busy man, and a pipe filled with Tuxedo is the most satisfactory form of restful enjoyment I have ever discovered."

Julian Eltinge

"———So I Lit My Pipe—— and Sat Down to Think It Out"

Up a stump? Get out your pipe and fill it with good old creamy-smoking, brain-clearing, puzzle-solving Tuxedo. Hundreds of thousands of Americans, doctors, lawyers, business men—work out their problems this way every day.

Tuxedo is *the* tobacco for men of brains, because Tuxedo works *with* you, without obtruding itself. You never get a sense of over-indulgence or irritability with Tuxedo. There is no such thing possible as "too much Tuxedo." It's always an ever-pleasant, refreshing aid to your mental efficiency.

DOUGLAS FAIRBANKS
Last seen in "The New Henrietta," says:

"The fine flavor of Tuxedo tobacco makes me an enthusiastic pipe smoker, and the fact that it never bites my tongue makes Tuxedo my favorite."

Douglas Fairbanks

JAS. J. CORBETT
Ex-Champion Heavyweight, says:

"My enthusiasm for the fragrance and mildness of Tuxedo has no limit. Tuxedo is without doubt the most satisfactory pipe tobacco."

Jas. J. Corbett

Tuxedo

The Perfect Tobacco for Pipe and Cigarette

Tuxedo is built on a mild, soothing principle. All the bite is taken out of the tobacco by the *original* "Tuxedo Process." (This is the secret process which other so-called "no-bite" tobaccos have tried both to steal and to imitate. In both they've been unsuccessful.)

Only ripe, mellow, perfect leaves of the highest grade Kentucky Burley are used in Tuxedo. This superior tobacco is the *perfect* pipe tobacco, full of exquisite mildness and mellow fragrance.

TOPICS - OF - THE - DAY

"BUY A BALE OF COTTON"

DESPITE THE SMILES of the incredulous and the criticisms of economists, the "buy-a-bale-of-cotton" movement seems to have captured the popular im-

agination and to have advanced in a few weeks a long way toward its goal—the rescue of the Southern cotton-planter from threatened financial disaster. Raw cotton is the South's greatest staple and the nation's chief export. Hence the closing of some of the principal markets for this product by the European war, just when the South was beginning to harvest a record-breaking crop, threatened to leave the planters with a surplus of eight or ten million bales on their hands, to depress prices to a ruinous figure, and to impose upon a great section a financial crisis whose effects would be felt throughout the nation. While State and Federal authorities were wrestling with this situation without any very conspicuous success, a popular solution was offered and met with instant response. This was that everybody who could afford to invest fifty dollars should combine patriotism with a hope of profit, buy a bale of cotton at the arbitrary price of ten cents a pound, and hold it for a year, or until the market becomes normal again. "By this plan," says the *Atlanta Journal*, "the South, aided by her friends in other sections, can put into circulation \$400,000,000 before the end of the cotton season." Among the thousands of individuals who have already responded to the "buy-a-bale" slogan are doctors, lawyers, preachers, school-teachers, and

even the President of the United States, while many cities and great commercial and industrial corporations are buying in lots ranging from hundreds to thousands, and even hundreds of thousands, of bales.

Thus we read that the business men of New York have organized a campaign for the purchase of 200,000 bales, while similar plans have been perfected in Chicago for taking 100,000 bales from the market. Gimbel Brothers, a New York department store, is said to have bought 10,000 bales. "Buy-a-bale" clubs are the order of the day in Southern towns and villages, and individual purchasers are wearing buttons inscribed: "I've bought a bale. Have you?"

The "buy-a-bale" campaign, according to the *Atlanta Journal*, "began as a Georgia enterprise, but it soon

swept over the South, and to-day it is a nation-wide crusade." And as a result,

"Where one bale of cotton moved three weeks ago, thousands are moving now. They are moving out of the market, swiftly and steadily, at ten cents a pound. And the people who are buying them are going to hold them until profitable prices are established. More and more cotton is in demand. Less and less cotton is for sale. The South is not to be sacrificed. The South is to be saved, fortified, enriched; and the common country will share its prosperity."

Equally optimistic is the comment of another cotton State paper, the *Houston Chronicle*, in which we read:

"The cotton situation is rapidly righting itself. Already

HOW THE STORES ARE HELPING IN THE SOUTH.

This photograph shows a newly purchased bale in front of one of the leading stores in Atlanta, Georgia. The placard asks pointedly: "Have you bought yours?"

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label, subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnall Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

the market is stiffening to a material degree. Already the possibility of further speculative depression is growing more remote.

"And how has all this come about?"

"No legislative measures for relief have as yet become effective.

that is likely to benefit from low prices is that of the manufacturer. Even with low prices and disturbed markets he can hardly fail to benefit from cheaper cost of raw material, and the opening of the Panama Canal will make it possible for the American manufacturer to take advantage of trade with countries which have been buying their cotton goods from Europe."

But, after all, this movement is recognized as merely an emergency measure, and the *Oklahoma City Oklahoman* is one of many papers, in both the North and the South, to point out that it is "manifestly futile unless some means are found for curtailing next year's crop." The same warning is sounded in the following paragraphs from the *Atlanta Journal*:

"The farmer should bear in mind that unless the cotton acreage is cut something like 50 per cent. next year the relief now afforded will prove only temporary and certain disaster must be faced next fall.

"Newspapers throughout the country which have the farmers' real interests at heart are strongly advising them to make this reduction in acreage and to plant food crops and raise cattle instead of cotton. They are being urged to begin now to prepare for the fall planting of wheat, oats, and other cereals as fast as the cotton crop is gathered."

The same point is strongly emphasized by Secretary of Agriculture Houston, who is quoted in a Washington dispatch as saying:

"The acreage devoted to the next cotton crop ought to be greatly reduced. This is very important, of course; but the acreage can not be regulated or restricted by the Congress or the State legislatures. They have no authority to legislate upon this subject; but the farmers, acting upon their own initiative, or the farmers and merchants and bankers, acting together and for the protection of all, can control the acreage; the farmers by planting food crops and making cotton their surplus crop; the merchants and bankers

Copyrighted by Harris & Ewing

The Governors of six cotton-growing States met in Washington last week to discuss plans for keeping the price of cotton above 10 cents a pound. Resolutions were adopted recommending reduction of acreage, and Federal legislation facilitating the lending of public funds on cotton security. The Governors in this photograph are, from the reader's left to right, Trammell, of Florida; O'Neal, of Alabama; Slaton, of Georgia; Hall, of Louisiana, and Cruce, of Oklahoma.

SOUTHERN GOVERNORS FACING THE COTTON CRISIS.

"Government assistance through emergency currency is still a rather negligible factor.

"The reserve system remains to be put in working shape.

"Generally speaking, banks have not advanced much money on cotton except what they had already loaned for the growing and harvesting of crops.

"The proposed warehouse system has contributed little save by way of psychology.

"Yet the market is stiffening.

"There can be no explanation except that the 'buy-a-bale' movement has strengthened confidence of producers and alarmed speculators."

Its advocates claim that this movement, described by one paragrapher as "baling out the South," is really booming a good investment. "We can see no possibility of a price less than 12 cents a pound—\$60 a bale—as a minimum whenever there is peace in Europe," says the *San Francisco Chronicle*, and the *Louisville Post* reminds us that last year's crop was marketed at an average price of \$83 a bale. The virtue of this "buy-a-bale" idea, thinks the *Macon Telegraph*, is that "nobody will lose by it and everybody will gain." Already, says the *Savannah News*, the movement has gained a greater headway than the most sanguine of its originators predicted for it. One editor welcomes the movement as a practical recognition of the solidarity of Southern commercial interests, and an Atlanta man writing to *Collier's Weekly* calls it "an eloquent expression of the practical sympathy of the worker in other trades for the farmer whose cotton is his all and who must market it in some way or lose his lands and his living." Buying a bale of cotton at 10 cents a pound, says Fairfax Harrison, president of the Southern Railway, is "a safe investment of the money and a patriotic act in a vital emergency." And in the *New York Evening Post* we read:

"The situation is at present rather more encouraging than it has been at any time since September 1, the beginning of the cotton year. The South, then on the verge of panic, has calmed down, the 'buy-a-bale' movement has to some extent relieved the poorer class of tenant-farmers, and the planters financially able to do so will hold back as many bales as possible for higher prices. . . .

"Stimulation of the Southern cotton-mills is another hopeful according to the cotton experts. The one cotton interest

HOW MUCH LONGER?

—OFF in the *Nashville Tennessean*.

by laying down the rule and sticking to it that they will not extend aid in the way of advances to any farmer who does not reduce the acreage devoted by him to cotton-growing, and the bankers by refusing loans to farmers and merchants who will not make such agreement."

While all unite in commending the impulse of mutual helpfulness and cooperation which prompts the "buy-a-bale" idea,

BELGIAN SOLDIERS REENTERING TERMONDE, AND WHAT THEY FOUND THERE.

some papers are convinced that the plan is economically unsound. The *Seattle Post-Intelligencer* thinks it bears a strong resemblance to a conspiracy in restraint of trade, *The Wall Street Journal* objects only to the arbitrary and artificial price, and the *New York Times* fears the buyer may lose something on his investment.

SHALL WE ARM?

THE WASTE AND HORRORS of Europe's war serve as a text to some who preach against militarism and advocate general disarmament, but *The Army and Navy Register* (Washington) draws the distinctly opposite lesson that we need more militarism in our make-up. For "we may not always depend upon the good luck which has attended us in keeping out of difficulties with other nations." Perhaps we take too much for granted because of our "geographical isolation, and have arrogantly adopted the oceanic separation as our chief military asset." Some day, we are told, we shall discover our mistake, and find that "our enemy has annihilated distances and built his bulwarks in fine contempt for our vaunted security." So we should "extract from the war in Europe something beside the satisfaction of an uninterrupted neutrality." The Spanish War "taught us nothing but certain defects of organization, equipment, training, and so on," defects which luckily did not deprive us of any victories.

"We emerged from that conflict more certain than ever before that we would win in any encounter, however terrific, with any possible foe. We have yet to learn our lesson, and it is too much to expect that the war in Europe will accomplish that office for us. We must pay for the demonstration in our own way and, probably, at the cost of national defeat, humiliation, and sacrifice. Then we will be ready to do what should be realized now as an imperative duty."

England now regrets that it did not take Lord Roberts's advice and train its entire male population to arms, but "if Great Britain regards itself as not having been fully prepared . . . what must we think of ourselves, so immeasurably behind any of the Europeans in the preliminaries of battle?" The answer follows:

"We have nothing more than a vision of the failure of the reserves on land and sea. We have a regular military-naval force woefully inadequate for any of the possibilities of service which they may be called upon to render at any time, and, indeed, inadequate for the service they must perform at home and

abroad in these times of peace, disregarding for the sake of the phraseology the situation in Mexico. It will not be easy to raise volunteers even under the improved conditions made possible by the enactment of the Hay Bill. They will be untrained men for the most part, and they are apt to be called into service without sufficient equipment, clothing, arms, and ammunition to give them the value of a fighting personnel. We are lacking in individual military qualifications which are necessary in men who are called upon for the work of soldiers in time of war."

With a rather ominous look forward the writer then ventures to say that "our foe may emerge from, as he may be created by, this war in Europe." Nor does he think that we may have long to wait "before the blow is struck" that shall afford us a foe "worthy of our tradition and of the sublime faith in ourselves." We are warned that then "people who believe war with us on any terms is impossible, and the equally impudently ignorant who believe we can lick all creation without an interruption of normal business in this country, will be doomed to sustain the shock which is their unstinted merit." Then it will be learned that "we may not raise armies by a few magical passes and that we can not gain victories by merely possessing a righteous cause."

"It would be a profitable sequel to the war in Europe, therefore, if we took advantage of the developments abroad to prepare ourselves by training in this country a military personnel able to serve in the field intelligently, obediently, and capable of marksmanship. This might be done with due economy by compulsory military service for all eligibles on some such basis as was proposed by Representative McKellar earlier in the present session of Congress in a speech and in a measure which were promptly forgotten and, of course, ignored. However it may be done, it should, at least, be done, and with such thoroughness that when the time of trouble comes we may have a force fitted by experience and knowledge to fight not only valorously but victoriously."

No less a personage than ex-President Roosevelt may be cited in support of this writer's contention. Discussing the "tragedies and lessons" of "the world war" in *The Outlook* (New York), Colonel Roosevelt advises us that "one of the main lessons" is to be found in "the homely proverb," "speak softly and carry a big stick." Only the latter half of the adage, he goes on to say, is quoted "in deriding the men who wish to safeguard our national interest and honor," but the fact of the matter is that the first half is of equal importance. And Colonel Roosevelt applies the proverb in this instance to mean that we must be "respectful toward all people" and "refrain from

wronging them, while at the same time keeping ourselves in condition to prevent wrong being done to us." Finally, we are asked to consider "what befell Luxemburg" and "what has befallen China again and again during the past quarter of a century" as proof that "no amount of speaking softly will save any people which does not carry a big stick."

All objections that have been leveled against this line of reasoning may be epitomized in the statement of a reader correspondent of the *New York Times*, who says that:

"The central mistake which . . . Mr. Roosevelt makes is to overlook the fact that the world is governed by moral laws and not by brute force. Civilization advances slowly, but men are coming to realize that war is murder; that preparation for war is training murderers, and that the bullying of other countries is inciting to murder."

DOUBTS ABOUT THE DIRECT PRIMARY

SUSPICIONS that the direct primary might not bring in the political millennium began to be whispered in the press when this method resulted in Pennsylvania in choosing Mr. Penrose for the Senatorial nomination, a leader who has sometimes been referred to as a "boss." A little later, in Illinois, the direct primary nominated Roger Sullivan for the Senate, a statesman whose enemies have given him the same appellation of political power. Now comes New York State, whose direct primaries, it is true, have nominated no so-called "bosses," but they have chosen nominees who would just as certainly have been named, say several editorial observers, by the old convention system. The New York State Republicans choose District Attorney Whitman as nominee for Governor, while the Democrats name Governor Glynn to succeed himself. The Progressive candidate is Frederick M. Davenport, "the choice of Roosevelt and the organization," says the *Springfield Republican* (Ind.), "quite as much as Whitman was supported

by the Republican organization." The Progressive candidate for Senator is Bainbridge Colby. There is no surprise in these nominations, remarks the *New York Evening Post* (Ind.), for "any other result would have been truly surprising." As was expected, the organization won in all parties, this journal goes on to say, and it points to the fact that "experience with the direct primary is more and more showing that the skilled practitioners can use that political tool as successfully as any other." But *The Post* tells us also that:

"Cool-headed advocates of the direct primary recognized all this from the beginning. The disappointment is only for those who dreamed that, somehow, the direct primary would be a device to give us automatically high-grade and independent candidates, and to defeat the bosses and smash the machines. But the truth is that you can't smash the machine simply by more machinery. A given piece of machinery is better than another; and the really sound argument for the direct primary is that it is a great improvement over the old system. This means only that it can be used with greater ease and effect, if the determination to use it exists. But short of some great and exciting issue, some outrage of boss nomination, this weapon will not be seized upon eagerly by the rank and file of the party, and the consequence is that the leaders will generally have their way."

Then, too, the *New York Times* (Ind. Dem.) notes with interest that only "40 per cent. of those who had the right to vote in the primaries did so," so that "it may now be assumed that the nominations will be made by half or less than half the electorate, except in unusually interesting campaigns, where popular feeling is deeply stirred." We read on:

"The results reached on Monday, so far as the principal offices are concerned, would have been reached under the convention system. The same men would have been nominated. Thus New York has repeated the recent experience of Illinois. This shows that no great change is effected by direct primaries in ordinary elections. No light has been shed either by the Illinois or the New York primaries on what would happen in a time of popular ferment or uprising. It is certain that under the primary

system the people could and would make themselves felt, tho whether they would do so more effectively than they did under the old system there is nothing as yet to show. It is interesting to note that in the various districts where a local boss had opposition the votes almost invariably overturned the boss. . . . Whatever may be the case in larger affairs, it has become easier to unhorse a boss."

CHECKING DIPLOMATIC LOQUACITY

GLARING INDISCRETIONS of speech recently attributed to at least three foreign diplomats in this country are said to have moved President Wilson to a determination to discourage sternly such lapses in the future, more particularly because they menace American neutrality. Already Ambassador A. Rustem Bey, who refused to "reconsider" his obnoxious remarks, has announced his immediate return to Constantinople, while Sir Lionel Carden's alleged indiscretion has been repudiated for him by the British Ambassador, and Baron von Schoen's has been denied by himself and by the German Ambassador. Washington dispatches say, however, that the State Department is still awaiting with interest more direct information concerning Sir Lionel Carden's reported characterization of the President's order withdrawing our troops from Vera Cruz as "shameful," and that it is "still looking into" the interview attributed to Baron von Schoen by a Washington paper. In this interview, the authenticity of which was at first acknowledged at the German Embassy, and afterward denied, the Baron, just transferred from Tokyo to Washington, is quoted as saying that "throughout Japan there is an intense hatred of the American people," and that "the mass of the Japanese people believe that war with the United States is inevitable." Ambassador A. Rustem Bey's outbreak also took the form of an interview, in which he said that Great Britain was trying to involve the United States in the European war. He further indulged in ironical comments on reports that Christians in Turkey were in danger of massacre, and referred sarcastically to lynchings in the Southern States and to the "water-cures" in the Philippines during the Aguinaldo insurrection.

Our papers are practically of one voice in commending the President's resolve to discourage this form of indiscretion among visiting diplomats. "No foreign diplomat residing in this country has any right to engage in a campaign the purpose of which is to rouse enmity among our people against any nation

with which we are at peace," says the *Indianapolis News*. And in the *Louisville Times* we read:

"The Administration has about all it can do to keep its own passengers and crew from rocking the boat. Those who have come on board as accredited guests are neither expected nor desired to set a bad example. If they do, then their room is more desirable than their company."

Baron von Schoen's statement that the interview attributed to him "is in no way correct" is generally interpreted by the press as merely a "diplomatic denial." On this point the *New York Globe* says:

"A prominent public officer at Washington laid down the rule a few years ago that if a man is misquoted to the extent of one word in a column interview, and the interview proved embarrassing, he may unqualifiedly repudiate the whole of it. Another rule is that the interviewed, tho saying all of the things attributed to him, may deny it provided he did not 'authorize,' as it is called, the interview. So Washington newspaper offices regard the Von Schoen denial as of the usual technical variety."

And in the *Washington Times*, which first printed the interview, we read:

"The diplomats have been entrusted, seemingly, with the task of conducting a propaganda to influence American opinion one way or the other. Altogether too many ill-considered statements have been given out in connection with this effort. It is rather too much to presume that the newspapers will cheerfully assume the blame for mistakes of diplomats who are so ready to use the press for their particular purposes, and then to repudiate it when developments indicate that a *faux pas* has been committed."

Many papers recall the fact that our own representatives abroad have occasionally incurred criticism for some error of judgment or act of tactlessness, but they agree that as the score now stands, our "untrained" diplomats have rather the advantage over the trained diplomats of Europe. An exception to this view, however, is found in the case of the *Detroit Free Press*, which thinks that we live in a glass house and must not throw stones. *The Free Press* recalls certain remarks of Mr. Bryan on Home Rule, of George Fred Williams on Albania, and the "somewhat unhappy remarks on the European war uttered recently in Paris by William G. Sharp, ambassador-in-prospect to France," and says that "these offenses of American diplomacy were surely quite as serious as those charged to the trio of foreign diplomats."

The first photograph shows how the citizens have cleared all neighboring woodland to deprive the approaching Germans of cover. The second shows a portion of the barbed-wire entanglements, which form one of the supplementary defenses. These entanglements form a zone three hundred yards wide and nearly twenty miles long. The wires are charged with a high-power electric current from the city's lighting plant.

ON THE OUTSKIRTS OF ANTWERP.

ACCUSING THE BANKS OF HOARDING

THE STARTLING CHARGE of Secretary of the Treasury McAdoo that certain of our banks are hoarding money and charging exorbitant interest on loans has roused some objection among such editorial observers as believe that "the process of official regulation of every sort of business" has gone far enough. The *New York Journal of Commerce*, for one, argues that banks which demand "more than money is worth" will find themselves with idle funds on their hands, a condition most obviously against their own interest. And it adds that tho a bank "may overestimate its needs," still when it finds it does not need large reserves, "it will soon weary of keeping funds that earn nothing." Therefore this journal puts it down as an axiom that "business may be left largely to self-regulation." The extreme opposite to this view is upheld among others by the *Nashville Southern Lumberman*, which remarks that "it is a long cry from the late Grover Cleveland's weak admission to Governor Oates, of Alabama, 'By —, Oates, the banks have got this country by the leg,' to Secretary McAdoo's announcement," which is "the most important development that has come in the whole Government program of monopoly investigation." The Secretary not only accuses the banks, press dispatches state, but is refusing to deposit Government funds in the banks alleged to be hoarding. Moreover, he has withdrawn \$3,000,000 of Government deposits, we are informed by Washington dispatches, from such banks which will be placed with other banks "that have not been guilty of offending," and in localities where the money will be of service to the crop and business situation. The Secretary's published list of the hoarders names 247 National banks located in all sections of the country outside of reserve and central reserve cities, and he expresses regret in his announcement that "the Government has not the power" to reach State banks and trust companies, which, he says, are also "hoarding money and refusing to extend legitimate credits." "I shall ask the superintendents of banks in the various States," declares the Secretary, "to cooperate with the Government by supplying reports of the condition of the State banks and trust companies."

"This sort of personal interference and coercion of bankers," remarks the *New York Herald*, "is not within the proper province of the Secretary of the Treasury, and is a dangerous innovation." The *New York Times* holds a similar view, adding, with reference to the fact that most of the accused banks are in smaller towns and cities, that:

"A bank with a few thousand dollars capital in a village is National only in name. It is neither a commercial nor a financial bank, with short maturities, and easy access to sources of quick extrication from its necessities. Such banks make collections mostly at their customers' pleasure, but must meet their demands for money from money, for there is no other resource. . . . Emergency currency is not useful for such banks as the Secretary names in the large denominations provided. Clearing-house certificates and rediscount are not for them. They know their business as well as the Secretary."

Quite a different picture is given of the "small-town" banker by the *New York Commercial*, which approves of Mr. McAdoo's action and tells us that:

"Too many men are engaged in the banking business and direct the operations of the National banks in the smaller cities and towns who know nothing about scientific banking. They are nothing more than petty money-lenders and their ignorance of the fundamentals of the business makes than a danger to the whole country. When these Federal Reserve banks open their doors the individual banks will have the lesson of standing together instead of each trying to protect itself at the expense of others. It will be impossible for them to draw down their reserves in a panic, and the danger of runs by banks rather than by private depositors will be removed. While the worst of the hoarding seems to have taken place in the Southern States, some National banks in the smaller cities of New York State have been equally guilty, one of these having confest to a hoard of cash amounting to 61 per cent. of its deposits, and it is located in a busy and important manufacturing town."

Also the *New Orleans Item*, noting that many of the country banks have become "frightened," sees "nothing untimely" in the Secretary's "warning" to the banks that "they should keep interest rates on a reasonable basis and should be liberal instead of stingy with their advances." The *Omaha World-Herald* notes ironically that "the bankers are always very bitter in their complaints when the common people begin to withdraw their deposits from the banks and hoard money, but the National Reserve Board and Secretary of the Treasury now declare that bankers are doing that very sort of thing themselves." And the *New York World* remarks:

"For the first time since the establishment of the National banking system, its conductors have been held to strict account in a matter which is as legitimate a subject of official supervision as any other. The Treasury does not release its millions to promote usury. It does not act for the enrichment of bankers. Its one motive is to assist in the restoration of normal conditions so far as finance, commerce, and industry are concerned, and bankers who do not cooperate heartily to that end will be exposed and denounced."

A HITCH IN THE COLORADO PEACE PLAN

THE REJECTION of President Wilson's three-year "truce" plan for the Colorado strike deadlock by a majority group of the coal-mine operators will not surprise any one who views the situation "dispassionately," thinks the *New York Sun*. The proposal, according to this journal, contemplates "a sort of gentlemen's agreement for the jaws of the United States and the State of Colorado," by which the Miners' Union pledges itself not to pursue "a policy of anarchy"; while as for the operators, "property and industry are to be safe so long as they submit to the arbitrary rule of a tribunal having no legal status and ruling without the pale of law." Here *The Sun* refers to the proposed Grievance Committee, which is the chief objection of the operators, altho some observers attest that this committee is merely the safeguard of the men, who, in accepting President Wilson's proposal, agree not to use their legal weapon of the strike for a period of three years.

The Grievance Committee, as formerly recorded in these pages, was to be composed of men of each mine who had worked there for a period at least of six months. Married men were to be in the majority of membership. In case the committee failed to adjust a difficulty with the employer, recourse was to be taken to a committee of three, appointed by the President. This committee of three was to consist of a representative of each of the disputants and of one impartial member; and its decisions were to be final. Other suggestions in President Wilson's truce proposal provided that State laws be enforced; that miners who had not been found guilty of violation of the law be permitted to go back to work; that intimidation be prohibited; and that wage-scales and mine regulations be posted.

The acceptance of the President's plan by the United Mine Workers of America calls forth warm commendation in some quarters, and the "reason and patriotism" of their reply are noted. "We feel it our duty to respond to your earnest wish," they are quoted as saying, "and we do so, as we trust, in the true spirit of American citizenship." The rejection of the truce plan by the operators, on the ground that it is "unfair and impracticable," is stated in a letter to the President signed by forty-eight coal companies. The same position practically, the press inform us, is taken by the Colorado Fuel and Iron Company, which has sent a separate communication to Washington.

The operators base their refusal largely on the character of the Federal mediators who drew up the peace plan, saying that

their "previous records" justify the belief that they are partisans of the strikers. The operators state also that while they are willing to employ "as many of the strikers as possible" they can not agree to employ "all striking miners who have not been found guilty of violence." Above all, their minds are set against the Grievance Commission, which, they affirm, practically takes "entire control of the most important department" of their business out of their hands.

Despite the veto of the operators, Washington dispatches indicate that the President does not consider the discussion closed, and we read that he is working for further negotiations and expects "a favorable settlement." That the operators assure the President they are in "complete accord" with his sentiments is noted by the *New York Times*, but it remarks also that "they make out a very strong case against important features" of his plan. This journal then points out that the operators accept the proposal for enforcement of the mining and labor laws of Colorado and have acceded to the suggestions about posting wage-scales and rules of the mines. They agree, moreover, *The Times* notes, to the prohibition clause against "intimidation of union or non-union men," altho the President's plan does not show how it is to be made effective. As to the re-employment of all striking miners not "found guilty" of violation of the law, the operators claim that 332 strikers are under indictment for murder and 137 indicted for other felonies. *The Times* does not think the companies can be expected to reemploy these men. What is more, the 9,500 miners now working, we read, are "entitled to continuance in their jobs."

An expression of local sentiment is found in the *Colorado Springs Telegraph*, which says that:

"The position taken by President Wilson with respect to the strike among the coal-miners is that the operators must accept the plan proposed . . . whether an injustice is done to their business or not.

"The President seems to be much more anxious that 2,500 striking coal-miners be given back their jobs than he does that the 9,500 miners who are now peaceably at work be protected from violence and intimidation. . . .

"It is suggested that the President may withdraw the Federal troops from this State, and perhaps he will, but, if he does, the burden of renewed bloodshed will fall upon him and the United Mine Workers of America and not upon the men who are doing no more than trying to earn a living at their accustomed vocation."

More conciliatory and more hopeful in tone is *The Rocky Mountain News* (Denver), which deplors the strife of a year's duration and pleads urgently for peace between capital and

HIS MAJESTY—UNCLE SAM.

WHY NOT "SEE AMERICA FIRST"?

—Chamberlain in *The Messes*.

PROGRESS AND POVERTY.

labor so that "Colorado will enter at once upon a period of prosperity which has not before been equaled in this State." In recalling recent bitter days this journal makes a statement about the spread of the news during the conflict that must be of interest to all readers outside Colorado as well as those within her borders who prize her fair fame. We read:

"In the rush of events attending the early days of the strike there was difficulty in obtaining accurate information of what was going on. It is probably true that our newspapers published many statements which were mere rumors, and many other statements which, if true, had better not been published. In the stress of the conflict Colorado people took issue and became partisan on the one side or the other. They may have said things which only increased the intensity of the struggle, and done things which they would not have done had they taken time for sober second thought.

"If *The News*, in the heat of the conflict, printed reports that came to it over the wires which proved to be only rumors, and in that way inadvertently injured the State, this paper acknowledges and deeply regrets such mistakes and will seek earnestly to rectify them."

But all this is of the past, says *The News*, which adds that the people of Colorado hope that industrial peace will "result speedily from the negotiations now pending."

Sharper criticism of the operators appears in the *New York World*, which observes that their reply is "that of men who evidently prefer war to peace," and it goes on to say that "while a few points are conceded, opposition to unionism, which is at the root of all the trouble, is adhered to as tenaciously as ever." We read on:

"Altho concealed by many words, the position of the mine-operators is a denial to labor of privileges recognized in every civilized land. Workingmen who can not organize for their own welfare, who can not present their grievances through their own representatives, who are denied the protection of the laws by local officials in most cases on the pay-rolls of the mining companies, and who may be shot down by a mercenary 'militia'

made up in part of imported gunmen, are only one step removed from slavery.

"This is a bondage which can not last. President Wilson for the moment commands peace, but he will not perpetually use Federal troops in support of a tyranny entrenched and defiant."

The World is ready to admit that during the conflict in Colorado "the right has not all been on one side," but it insists that if better conditions are to prevail "there must be conference and concession." In this connection the *Springfield Republican* points out that:

"It should not be forgotten that the Miners' Union has voted to surrender very substantial rights for three years in accepting the agreement. The concessions can not be said to be all on one side—by any means. The miners would surrender for three years the right to strike, to picket, to parade, to colonize, or conduct mass campaigning; they would not only waive any claim to recognition of their union, but also the claim to maintain contractual relations with their employers. These are very solid concessions. The right to strike is established by law; the right to picket and parade peaceably is also founded on the law of the land. Practically, the miners consent to the suppression for three years not only of their claim to recognition as an organization, but of their right as free men to quit work in concert, as they please and when they please. In view of the history of labor warfare in the Colorado coal-fields, a three-years' peace under such conditions ought to possess some merit in the eyes of the operators. Their experience has proved that the strike-breakers of to-day become the strikers of to-morrow."

As to the "strong objection" of the operators to the Grievance Commission, *The Republican* says that this proposed body is "labor's compensation for surrendering its legal right to strike, picket, parade, colonize, and campaign," and it adds:

"Unless the principle of the Grievance Commission is accepted by the operators, for the sake of peace, no truce is possible. If they expect to outpoint the President in a game of wits and force him to keep Federal troops in the mine-fields for their protection, after they have rejected his proposals, they may blunder in their calculations. The State of Colorado has police duties which it can not indefinitely shirk."

FOREIGN - COMMENT

Copyrighted by the San Printing and Publishing Association, by special arrangement with the Illustrated London News

GERMAN CRUISER MAINZ SINKING AFTER BRITISH BOMBARDMENT. PHOTOGRAPHED BY A BRITISH OFFICER.

GERMAN RESENTMENT AT CHARGES OF BARBARITY

UNDER THE IRONICAL TITLE "We Barbarians" the *Kölnische Zeitung* publishes a spirited article in which the opprobrium heaped upon Germany by the press of her allied adversaries, as represented by such great journals as the *London Times* and the *Paris Gaulois* and *Temps*, is characterized as undeserved as well as intentionally slanderous. German soldiers and the Kaiser's subjects in general are declared quite incapable of the cruelties and outrages attributed to them, on hearsay, by these French, English, and Belgian newspapers; for the Germans, we are told, are not only leaders in art, literature, and philosophy, but they feel deeply the destruction of the architectural monuments which lay within the line of battle and the desolation in villages and towns which followed their triumphal march.

The *London Times* had spoken of "the infamy of Louvain" and denounced editorially "the incredible barbarity of the Germans." "The rack and thumb-screw are not to be compared to the tortures practised in Belgium by the enemy."

"German savagery ran riot," we are told by this leading English organ, which quotes a letter from "an officer serving with the army in France," in which he tells of three girls who took refuge in the British trenches after being maltreated and mutilated by the Germans. "Luckily," says the officer, "I caught the Uhlan officer in the act, and with a rifle at 300 yards killed him." "These outrages continue," says the *Times's* Ostend special correspondent, and at the "Germans' crime against every law of civilization, when the story is written, the world will stand aghast." Such atrocities "we are forced to conclude have the approval of the War Lord himself." The *Paris Temps*, too, appeals to the men of France to unite in resisting her invaders, whose attack "is directed against all human laws by the coalition of German and Austro-Hungarian barbarians raging, in a sort of criminal drunkenness, and leagued, like the Huns of Attila, to destroy the invincible supremacy of human civilization." The *Petit Journal* (Paris) rejoices that Italy "has refused to be associated with this campaign of piracy," and the *Gaulois* remarks that "the example of Germany is bearing fruit" in the cruelty of Servians toward their Austrian prisoners, whom "they mutilate horribly, and poison the food, the beverages, and the water" of Germany's allies.

The weight of the editorial reply of the German paper referred

to is increased by the fact that the *Kölnische Zeitung* is an especially important journal and carries with it at least the approval of the Berlin Government. The writer begins with the following outburst of bitter indignation:

"Teutonic Barbarians, Vandals! Such are the terms which French and English speaking-trumpets are shrieking into the ears of the world. After lies comes calumnious opprobrium. By nobody is the fate of Belgium, the burning down of every building, the destruction of Louvain, so deeply deplored as by the German people and our brave troops who felt bound to carry out to the bitter end the chastisement they were compelled to inflict. Germany and her Army aimed to carry on a war, which was forced upon them, with a vigor tempered by humanity, such as the German nation is trained in; to observe carefully the rules of international law and at least to soften the horrors of battle. It has long been impressed upon all German minds and again and again reiterated in their hours of military instructions that soldiers must fight only against soldiers, that private citizens were to be left unmolested. We all of us had taken this for granted. Could it be possible we should suddenly forget all

TWO GERMAN CRUISERS SUNK IN HONGKONG HARBOR.

—From a photograph reproduced in *The Japan Advertiser*.

this, and from mere bloodthirstiness have shot down unarmed civilians, and for the sake of robbery and destruction reduced to ashes villages and towns? Our youth go to war with the watchword 'Germany first of all.' They could not understand that the inhabitants of captured towns and villages would lodge in their backs the murderous bullet as soon as it was dark, firing at them from windows and cellars. Soldiers were almost stupefied by such atrocities, and as soon as their officers gave the order would of course wreak punishment on the offenders, set fire to the houses from which their comrades had been shot, and execute the offenders."

After these exculpations the writer proceeds to make the oft repeated general charges which warranted such of the acts as the Army acknowledges to be true, thus showing on what authority the Berlin people were led to believe the explanations given by the German invaders of Belgium. The *Kölnische Zeitung* thinks that the Germans in Belgium could not possibly have acted otherwise than they did. It was frequently a matter of self-defense, or at least self-protection. They terrorized the Belgians in order to prevent their own destruction, for they represent the inhabitants of the little Kingdom as being treacherous and tricky as well as cruel. To quote further:

"Necessity knows no law, was the saying of the Imperial

Chancellor. And was it not bitter necessity which forced us into a war in which we were compelled to act with severity? And was it in accordance with duty to humanity which we hear so hypocritically appealed to that Russians, French, and English have all fallen upon us and our allies, that England has even stirred up Japan against us? . . .

"We suppose that equally fine and humane is this crafty buckster war which England has let loose upon us, by which we are cut off from foreign countries while she endeavors through the lying dispatches with which she floods the world to undermine our existence as a nation and gather a harvest she has not sown. In the meantime she holds back her cowardly fleet, and feels high glee in trumpery prizes, and captures of non-combatant merchantmen. Is this the way in which they understand humanity and philanthropy? Who can defend the use by En-

HOME RULE AND THE WAR

THE KING OF ENGLAND has signed the Parliamentary bill granting autonomy to Ireland, and Ireland has quickly responded. Mr. John Redmond, the leader of the Irish Nationalists, in a speech at Dublin remarked: "I have promised the Archbishop of Malines that Ireland would bring her arms and her strength to avenge Louvain. It is Ireland's duty to fight. Great Britain has kept faith with Ireland, and Ireland will keep faith with Great Britain."

These remarks were made after a notable utterance of the Prime Minister, Mr. Asquith, who opened his speech at the Dublin Mansion House by saying:

"As head of the King's Government I come to summon loyal and patriotic Ireland to take her place in defense of our common cause. There have been wars with regard to which there has been a diversity of opinions. Such is not the case at this present moment. To-day throughout the Empire, without distinction of creed, party, race, climate, or class, the people are united in defending the principle of maintaining the vital interests, not only of the British Empire, but of all that is worth having in our common civilization and the future progress of mankind. This task is being attempted whether Great Britain succeeds or fails, but we are not going to fail. There could not be any higher cause for the vindication of international good faith and the protection of the weak against the violence of the strong who preach a practical religion of force."

We learn from the London papers that vast crowds thronged about the Dublin Mansion House during the delivery of this speech, and Mr. Asquith was greeted with thunderous applause. The Nationalist Volunteers attended him as a guard of honor, and Dublin took every opportunity of expressing its enthusiasm for Mr. John Redmond's success as representing the Nationalist's cause in the British Parliament and in securing for his native land the Home Rule which had so long been the dream of patriotic Irishmen.

Altho the Government placed the Home Rule Bill on the statute-book, they are making a proviso that the act shall not go into operation for twelve months in any event, and if the war has not terminated then, until such further date, not later than the termination of the war, to be fixed by order in council. *The Morning Post* (London), a strictly Conservative paper and always opposed to the Home Rule measure, says that this step indicates weakness in the Liberal Government. To quote the concluding sentences of an editorial on this point in which the vacillation of Mr. Asquith and his alleged deceitful subtlety are again, according to the style of the Conservative press, dwelt upon and condemned:

"Such a measure does not bind the Government to refrain from bringing these Acts into force before the end of the war, but may result in the Acts being brought into force in the midst of the great international crisis which may quite possibly come when war and peace hang in the balance and the terms which will decide the future of Europe are being arranged. Against such a time the Government are preparing for this country a domestic crisis which can hardly fail to be grave and may weaken and hamper England in the negotiations which will then be proceeding."

"That is an important but still a minor point. Another point of importance but still subsidiary is that the Government tacitly admit by this policy of postponement the weakness incident to such a division of Governmental and Parliamentary powers as is inherent in the Home Rule Bill. 'Unity is strength'—

the truth of these old saws which seem platitudes in peace are brought home with dramatic directness by war, which, like Death, reminds us of the importance of simple truths. With two Parliaments and two Governments in these islands England could hardly have acted with the directness and confidence necessary to the national safety at such a time. Every Department of State—not merely the Foreign Office, the War Office, and the Admiralty, but every single Department, is strained to one purpose and directed by a single mind—the mind of one Government bent upon victory, and using every power of the State to bring victory about."

THE SIRENS SING.

A clay caricature made in Italy, showing Russia, France, and Germany trying to induce Italy to abandon its neutrality.

glish and French armies of the atrocious dumdum bullets forbidden in war by international agreement? . . . Is it humane when the wounded shoot the German soldiers who desire to bandage their wounds, or when the French carry off from Saarlouis the wives and children of the German officials, and ravage the city of Saarburg, like Huns? And is it in accordance with international law that French fugitives threw bombs onto German territory previous to the declaration of war? We have not read in the slanderous tales with which the Allies are attempting to disgrace us before the world a single allusion to these atrocities. . . . The irony of history which now is dealing so terrible a blow to English hopes will also clear up these lying calumnies against the 'Teutonic barbarians.' To the degenerate Romans not only those peoples who would not acknowledge their domination, but the Germans also, were barbarians. So long as we were politically helpless and in a high degree needed by England to fight her battles we were the beloved people of the Poet and the Thinker, but as soon as we became powerful and independent and withdrew from the tutelage of England, we at once were changed into barbarians. We can and will submit to this. Two things speak for us—the German good conscience and the convincing might of the German list." *Translation made*

THE BEAFORTH HIGHLANDERS, FROM VANCOUVER, READY TO LEAVE CANADA FOR THE FRONT.

As the Home Rule Bill is not to come into operation at present, in the interval an Amending Bill for the temporary exclusion of Ulster will be introduced. So the Nationalists have Home Rule, while Ulster must await the success of the amendment. This has incensed the Conservative Opposition, and Mr. Bonar Law, the leader of his party in the House of Commons, has expressed his indignation over what he considers the betrayal of the Conservatives by Mr. Asquith. On this point the *Manchester Guardian* (Liberal) remarks that the Government has made the only possible compromise under the present conditions, and we read:

"An Amending Bill will be introduced next session, and it will be at least as likely to be passed by agreement as it would have been this session. What, then, do the Opposition, what do Sir Edward Carson and his friends lose by the change of procedure? They lose nothing whatever except the opportunity of causing civil commotion and taking steps to establish what they call a Provisional Government. Well, when the war is over and the Ulster Volunteers who have gone to the war come home, they can still rebel if they want to, and Mr. Bonar Law yesterday assured Sir Edward Carson of his and his party's unlimited support in that enterprise. But we venture to prophesy that they won't want to, and if that is their only loss the loss is a gain. . . . It is matter for great regret that the Opposition, at any rate the official Opposition for whom Lord Lansdowne and Mr. Bonar Law speak, should feel themselves seriously aggrieved by this procedure and should regard it as a breach of the understanding arrived at on the outbreak of war for a truce between the political parties. It is needless to say that on the part of the Government this is not admitted, and that it is their intention fully and honestly to carry out that understanding according to the best of their ability. It is not a question of principle; on the principle to be followed both sides are in agreement; it is a question of the interpretation or application of the principle. It is admitted that, till the war is over, so far as possible nothing should be done to place either side in a worse position than it occupied before the war began. Unfortunately, to maintain the present position exactly as it stands is in the nature of the case impossible; the utmost that can be done is to balance one change by another, so that the final result will be fair."

The other London Liberal papers concur in this view of the situation, and even the Unionist organs, led by *The Daily Mail* and *Daily Telegraph*, are faint in their criticism.

POLES WARNED AGAINST THE CZAR

THE CZAR'S OFFER to the three Polands, Austrian, German, and Russian, of autonomous government and union under one national flag subject only to his scepter, is to be looked upon with suspicion, says R. Travers Hyndman in *Justice*, a London "organ of the Social Democracy." In the first place, he declares, it is extremely improbable that the promise will be kept even if they fulfil the condition of rising up

and throwing off the yoke of the Berlin and Vienna rulers. The Austrian Poles are very well off, we are told, and form in the Vienna Reichsrath a strong party, which has taken a large part in the government of the Austrian Empire. The 'Poles of Germany are in a large measure of Galician origin and, "conscious of energy and financial ability, have moved into German Poland because, in spite of many galling national restrictions, they find there much greater opportunities of advancement." After characterizing the Poles in general as "the most gifted, charming, and politically incapable race of Europe," this writer asks, "What have the Austrian and German Poles to gain if they come under the sway of the Czar?" He proceeds:

CARNEZIO: "I almost wish I had my money back!"

—Amsterdammer.

"Who, outside of the English press, will hold the Czar's offer of Home Rule to Poland worth belief? Look to Finland if you would see how Imperial promises are kept! Since 1809 the Czars of Russia have sworn to maintain the Constitution and recognize the autonomy of Finland. Alexander I. declared his intention 'to give this people a political existence,' and Nicholas II. suspended the Constitution of Finland and placed the country under a military dictator. The Finns regained their autonomy in 1906, and the Emperor Nicholas confirmed their establishment of democratic self-government in 1906. He destroyed it utterly, in spite of widespread European remonstrance, in 1910. A Czar's word holds good for less than four years!"

"Europe," declares Mr. Hyndman, "is threatened by the half-civilized domination of Pan-Slavism." Let the Poles ask their Russian brethren "how the latter enjoy the autocratic régime of St. Petersburg," or Petrograd, as the capital has been renamed in shedding its Tientonic appellation. But no scepter of the Czar should be stretched over reunited Poland, which

should take its place, not under a government qualified by the vague term autonomous, but under a Polish government as independent as that of France or England. To quote further:

"If this war ends by greatly increasing the Russian might, then a good half of Europe will be held by the Slavonic races. That may be well or ill, but it will be ill indeed if the Russian autocracy becomes the ruling power among these Slavs. We ardently hope that the scattered Poles may seize this chance to unite once more as a nation and to rebuild their magnificent artistic achievements on a sound basis of national independence, but we are certain, unless strong pressure is brought to bear on Russia from without, that this will never be."

Then, he says, England would have a golden opportunity of redeeming her lost reputation as the defender of the feeblar nationalities:

"What a chance for England to play the great part in Europe once more. To insist not only on the restoration of Alsace-Lorraine to the French, and 'Sonder-jylland' (Schleswig-Holstein) to the Danes, but also to maintain the independence of Poland, and to free Sweden and Norway from the ever-growing Russian menace! All this England might do if she ever became a great-hearted Power, the leader of a union of the small nationalities—became, indeed, that bulwark of racial independence and freedom which her poets once imagined her to be!"

BRITISH TRIBUTE TO FRENCH ARMS

THE VAST IMPROVEMENT in the military organization of France since the *débâcle* of Sedan is vividly portrayed by Sir James Yoxall, M.P., in a contribution to the *London Daily Chronicle*. The defeat sustained by the army of Napoleon III., declares this learned specialist, was a lesson not to be forgotten, and it spurred on the efforts made to regain the position won by the soldiers of Napoleon I. The result has been to enable Mr. Millerand to put into the field a force that has been fit to meet the military machine organized by Moltke and Bismarck. While the French armies have been improved by the lessons of adversity, the German troops have lacked that schooling and have perhaps lost advantage for that

reason. Mr. Yoxall writes, with a vicious dig here and there at Germany:

"From the Crimean War up till 1870 the French Army possessed a repute and a prestige similar to those which the German Army has possessed since then (until the other day). In repute and prestige of that kind lie the causes of decay, negligence, overconfidence, and collapse. Since 1871 the French have had to improve their army continually, not as a weapon of offense, but a tool of defense, and every vestige of the flashy, lascivious Imperial Court influence upon military promotion has passed away. In 1870 it was the French who were the attackers, and the Germans who could cry, 'The Fatherland is in danger!' Now it is the other way. Now, also, it is the case that titled and aristocratic generals and staffs who have learned to be luxurious are in charge of the German Army; so that in more than one important way the positions are reversed. In 1870 swift and early German victories demoralized the French Army and heartened up the Prussians; now the great setback in Belgium and France has had the opposite effects. In 1870 the German commissariat was good; now it seems to be sending men forward in painful boots, starving. This is another vastly important difference, and certainly not 'as in 1870.' Here is a letter from a soldier at Toul, received by his wife in Paris last week:

"If people should tell you that France is not ready, that we are in want of anything, tell them that it is not true. Everything was ready, and if a man wanted two pairs of boots he got them. Nothing was refused the soldiers. Well fed, well led, with the spirit that animates all of us, we feel confident that we shall carry everything before us."

The fortifications of France on her eastern frontier have been transformed since the days of that Louis Napoleon whom this writer speaks of as "the emptiest of dreamers and the most predestined of dupes." Furthermore:

"In 1870 the French generals were eyeless, so to speak. They had no light horsemen to scout with at all comparable with the German Uhlans. Colonel Henry wrote that 'At the outset of hostilities we had nothing but insufficient cavalry, badly organized and absolutely unversed in the duties of exploring or of securing our main guards. From the first days of the war till the last our cavalry, preoccupied with the idea of battling only, never did anything in the way of scouting.' The French light horse are totally different now, and the French flying men are the best in the world so far."

"THE COMING OF THE INVASION."

WILHELM II.—"What is this distant rumbling that I hear? Doubtless the plaudits of my people!" —*Punch* (London).

SCIENCE - AND - INVENTION

DOING WITHOUT GERMANY

THE ASSERTION of the German Government that the export trade of that country will shortly be resumed ought to be cheering news, for, according to *The Engineering News* (New York, September 17), there is probably no other nation in the world whose sudden isolation commercially would cause such wide-spread loss. And, more than any other nation, this paper goes on to say, Germany has won its place, not by natural resources or location, but by the skill and intelligence with which its people have attacked modern technical problems. We are now learning what it is to go without the things that are "made in Germany," and *The News* says that some people are having their eyes opened to the extent and importance of the field covered by these articles. While engineers and chemists, we are told, are generally aware of Germany's leadership in science and technology, the events of the past few weeks have been a great object-lesson to the general public. We read:

"Few have realized the extent to which the whole world has relied upon German scientists, chemists, engineers, and manufacturers for the supply of many materials necessary in the arts. Manufacturers in America and in England who were congratulating themselves on their enlarged opportunities for foreign trade in markets where the supply of German goods was cut off have in not a few cases found their own productive operations seriously hampered because they could no longer obtain certain materials from Germany.

"As is well known, steel-manufacturers were greatly worried to know what they were to do for their supply of ferromanganese. Manufacturers of fertilizers have had to face the possible shut-down of their works through the cutting off of the supply of German potash. In the textile industries, manufacturers suddenly realized that with access to German ports blockaded by war-ships there was every prospect that the supply of dyes and dyeing materials would be seriously interfered with. In the drug and chemical trade, prices doubled and trebled when it was realized that, with further supplies from Germany cut off, the world would have to get along for a time without certain drugs and chemicals which have become well-nigh essential both in the pharmacy and in certain industries.

"The above list might be greatly extended."

But can we not furnish at home "something just as good" as most of these German products? Possibly, *The News* thinks, if we are granted time enough; but this would mean a very long time indeed, in most cases. It would take many years, for instance, to bring our facilities for supplying potash up to the demands of our own farmers and manufacturers—what are they to do in the meantime? Says the writer:

"The same thing holds true of numerous materials in the dye and chemical trades. Physicians and druggists accustomed to use some of the varied products of coal-tar, most of which have originated in and are solely produced by Germany, are in a quandary to know what they can do if the source of supply is entirely shut off.

"It is of particular interest to note, moreover, that the manufacturers of England, Germany's great commercial rival and present enemy, are almost as badly hit as those of the United States by the cutting off of the supply of German products. Our English exchanges reveal that while English manufacturers are making large plans for capturing the export trade in many lands which Germany can not now reach, they find themselves handicapped at every turn by the cutting off of supplies which they themselves have been accustomed to obtain from Germany.

"Fortunately, the war has not yet closed all the avenues by which Germany can send out its product to the world. Through Holland, a neutral nation, shipments from Germany can reach tide-water and be distributed by neutral vessels."

Thomas A. Edison, in *The Iron Age* (New York), tells how he

gets along without one German product, and incidentally offers a bit of good advice. He writes:

"Carbolic acid is not obtainable in this country, as our tars contain scarcely any; hence we are dependent on England and Germany. I am the largest single user of carbolic acid here, and the embargo placed on shipments by England, together with the impossibility of obtaining any from Germany, has put me in a pretty tight place. However, by massing a big gang of men in three shifts, I have erected all the machinery and apparatus for making phenol synthetically from benzol, and my plant is now working, but I shall manufacture only for my own use in the production of phonograph-records. It occurs to me that there are many things we are short of in the chemical line that could be made here quickly, if some people in the trade would act—not talk."

IS THE DUMDUM A MYTH?

THAT WHEN THE KAISER and his enemies accuse each other of using "dumdum" bullets, "all are right and all are wrong," is the editorial opinion of *The Medical Record* (New York, September 19), which, in a leading article under the heading "The Dumdum Myth," asserts that there can be no doubt that the German Emperor and the Allies are all mistaken. Dumdums were not used by either army, but a legitimate substitute that is "just as bad." *The Record* triumphantly poses as a seer in this regard, for on May 2 last, so it says, it "prophesied that there would be a return to inhumanity in the next war because of the use of the spitz bullet recently introduced by Germany and adopted by several other armies, that of Great Britain and the United States among them." It goes on to say:

"This bullet is quite short, of conical shape, and tapers so gradually that the center of gravity is thrown back near the base; consequently, in spite of its great initial velocity and flat projectory, it has a tendency to turn sideways upon meeting any obstacle, altho it will go through the soft parts, making a small, clean-cut channel, and do little or no injury unless it hits a vital organ. In the article on 'Gunshot Wounds' in the fourth volume of the 'Reference Handbook of the Medical Sciences' Colonel La Garde says of this bullet: 'The least resistance upsets it, and in turning at great velocity the wounds it inflicts are very much lacerated and otherwise attended with destructive effects which are not unlike the wounds inflicted by dumdum bullets. For this reason the new pointed bullet is a great disappointment to military surgeons. In experiments which we conducted two years ago we found the resistance encountered in the hip-joint, chest, and abdomen of cadavers sufficient to cause the bullet to turn, and the resulting wounds were like those of an expanding or metal-patch bullet.' Colonel Roosevelt, in his 'African Game Trails,' refers to the wounds of the pointed bullet as having a slashing effect against large game. At 280 and again at 180 yards he brought down two bulls each with one shot, the bullet making 'a terrific rending compared with the heavier ordinary-shaped bullet of the same composition.'

"In all probability these spitz-bullet wounds have been mistaken for the explosive lesions of the dumdum bullets, and the accusation of the German Emperor was therefore made in good faith, but in curious ignorance of the effects of the missiles used by his own Army. Nevertheless the dumdum or a similar bullet has been occasionally used in this war, but by civilians. East Prussia, for instance, is a game-country, and the hunters there use the dumdum type of bullet in the chase. The Russian invaders of that country have been frequently attacked by 'snipers' who used their hunting-rifles loaded with dumdums. It is possible that the civilian hunters in eastern France did the same, and so an occasional dumdum may have been found in the bodies of the German wounded, but that the armies of any of the nations now at war are using this bullet is altogether improbable. They have no occasion to use it, for the spitz bullet is almost as destructive and its employment is just as brutal."

SPEED IN BASEBALL

THAT BASEBALL is a game which depends on doing things with great rapidity, on executing skilful movements in small fractions of a second, on thinking, deciding, and acting almost simultaneously, most of us know; but we have never seen the matter reduced to figures as C. H. Claudy does it in his article on "Time as a Factor in Baseball," contributed to *The Scientific American* (New York, September 19). Mr. Claudy reminds us, in the first place, that the popularity of the game as a spectacle depends largely upon its uncertainty,

baseball authorities are so rigid in their requirements of the structure, size, and weight of a baseball.

"When a man gets on first base, his next thought is of second—the station only 90 feet away, which looks so near and is so far. A good base-runner may be able to take a 'lead' of 10 feet—he must needs be very good indeed to do so with a clever pitcher. He may thus reduce the distance between bases to 80 feet. With a standing start any good base-runner should make this distance in 3 seconds. Starting as the pitcher begins to deliver the ball, it would seem easy enough to slide into that bag in 3 seconds time, well ahead of the ball. Yet the pitcher, who throws the ball 65 feet (60.5 to the plate and 4.5 feet more to the catcher's hands), and the catcher, who must stop it, pick

it out of his glove and fire it 124 and fraction feet to second base, manage between them to handle the ball so quickly that in the majority of cases the ball is waiting for the runner when he arrives, giving the short-stop or second-baseman who caught it plenty of time to reach forward and down and touch the runner with the hand which holds the ball. If a total of 3 seconds be allowed for the two throws, and 0.3 of a second be allowed the catcher to catch, set himself and throw, then the ball travels 184.5 feet in 2.7 seconds, or at the rate of 68 feet a second. This rate must be again divided, since the pitcher's pitch is much more rapid than the catcher's throw. From 100 to 120 feet per second is average speed for a fast ball such as is thrown by Walter Johnson or Joe Wood. The catcher can get no such speed on his throw, since he must throw along a curved trajectory, which at its greatest height is 8 or 9 feet in the air. Part of his throwing force is put into making the ball climb. Fans who do not know the game sometimes speak of a catcher as throwing 'weak' because his throw fades down to the ground at second base. As a matter of fact the good catcher expects to have his

ball reach second base a trifle to his right of the bag and low down. He hopes for this because the minute fraction of time between the fielder's catch at the ball and his dropping his hands to 'get' the runner may make the difference between 'safe' and 'out.' For the same reason the base-runner slides. He doesn't make quite as fast time sliding as he would running. But he is under the necessity of stopping quickly and 'on the bag,' and of keeping his anatomy as far away from the fielder as he can. Sliding makes him certain of a quick and sudden stop, and also makes it necessary for the fielder to drop his hands (which takes time) to touch him. Hence the catcher saves this extra fraction of time with a low throw."

So much for throwing; now for batting. Why may a fast pitch be batted further than a slow one? Because the speed of the batted ball is due partly to its own rebound from the bat and partly to the bat's velocity. The longest hits are thus made from fast pitching. Of course, fast pitching is hard to hit, because that element of time enters again. The batter, hitting at an unexpected "fast one," will make a foul (if he hits it at all) more often than anything else. Mr. Claudy goes on:

"The best 'arms' in the business can throw a ball farther than the most powerful batter can bat a ball tossed—not pitched—in the air. The record throw is 420 feet 9½ inches, made by Sheldon Lejeune in 1910. The record batted ball (not made in a

COMPARATIVE SPEEDS OF BASEBALL AND RUNNER.

"Matty" is here seen throwing the runner out at first. Despite the swift trip of the ball from bat to pitcher and thence to the first-baseman's mitt, the runner is only a few feet behind it.

and its uncertainty depends on the relation between distances and on the time required to make the ball travel. Stated arithmetically, this may be put as follows:

"The bases are 90 feet apart. The fastest time ever made about the bases from home to home was 13½ seconds, and this not during a game. Fifteen seconds about the bases is fast time, or 3¾ seconds between bases with a running start for all except first base. First base has been made from the plate on a bunt and run in 3½ seconds, but the time is very unusual, 4 seconds flat being good time. . . . Infield grounders . . . average about the speed of a fast express-train—say 66 miles an hour, or 88 feet per second.

"The short-stop will play from 110 to 135 feet from the plate. Suppose he gets an infield grounder 125 feet from the plate. At 88 feet a second, it has taken 1.4 seconds to reach him. Allowing 1.7 seconds for the throw to first base, he has 0.9 of a second only in which to make the catch, draw his arm back, and make his throw. Yet more men are thrown out at first base on ground-balls fielded by the short-stop than ever beat the throw to the first station! The play is almost always close—so close that one of the differences between a good and a poor first-baseman is that the good one will reach far forward to get a ball, knowing that the time it takes the ball to travel the 5 feet he can reach may make the difference between 'safe' and 'out!'

"It is because of this delicate balance between time of batted ball and throw, and the ability of a man to run 90 feet, that the

game or from a pitched ball, but from a ball tossed in the air by a 'fungo' batter) is 419 feet $\frac{1}{2}$ inch, made by Edward Walsh in 1911. There is no record of the length of the longest fly batted from pitching, for an excellent reason. A small boy outside the fence always makes off with the ball before an over-fence home-run drive can be measured! It is probably well over 500 feet.

"At the rate of 120 feet a second it takes one-half a second for the ball to get from the pitcher's hand to the batter at the plate. It is the fact that this time is so small which accounts for much of the pitcher's power over the batter. Half the time a pitcher 'fools' a batter it is not because the batter didn't see the curve of the ball or note that the ball was a 'floater' (one pitched slowly), but because there wasn't time for his 'nervous reaction' to work between his recognition of the act and the instant he must act on his knowledge. . . . The mind has been made up. The brain has telegraphed its instructions. Spite of his will, the bat swings—and after it has passed over the plate the ball passes lazily by the batter into the catcher's mitt."

THE SANITARY DINING-CAR

ALL LOVERS OF MARK TWAIN will remember that, after perusing statistical evidence that many more persons die in their beds than perish in railway accidents, the genial humorist registered a resolve to "avoid those deadly beds," and to live thereafter on the rail. An additional reason for adopting this clever method of prolonging life may be found in the assurance of Dr. M. Clayton Thrush, of Philadelphia, that a railway dining-car is the most sanitary public place in which to take one's meals. Says Dr. Thrush, in his paper on "The Importance of Proper Sanitary Measures in the Preparation of Foodstuffs," printed in *The Medical Summary* (Philadelphia, October):

"How many private homes ever subject the persons who cook the food, or the persons who bring it to the table, to a medical

service to undergo an examination every thirty days. No person with any trace of any communicable disease can hold a position in their dining-cars. Here is a very important thing for the preservation of human health, which the 'soulless' corporation managed by all sorts of interlocking directors does infinitely

A CLOSE DECISION.

Because the ball comes low, the baseman is able to save the fraction of a second required to carry down a high ball and touch the runner.

better for us than we do for ourselves. If you want a really safe place to eat, ride in a dining-car—safe as to sanitation and safe from accident. I notice, for example, that in carrying 110,000,000 passengers last year, the Pennsylvania Railroad did not kill one. A grown-up is far freer from danger in such a train than is a baby in its carriage. The class of people who handle and prepare the foodstuffs are frequently infected with transmissible diseases."

Apparently, however, sanitary conditions on railway-cars other than the diner are not always so satisfactory. Says the doctor:

"Every one who has traveled even to a minor degree has witnessed the uncleanly and often filthy manner in which the drinking-water receptacles on passenger-coaches are filled with ice and water. This work is usually performed by the cheapest ignorant laborer, who handles the ice with dirty and unwashed hands, often reeking with coal dirt and 'smeat' from off the sides of the cars, which he grasps in order to raise himself to the top; and sometimes his hands are contaminated with disease, which is particularly common among this class of employees. These same conditions often apply in filling the water-coolers of passenger-stations.

"May we not reasonably ask: Of what value is the individual drinking-cup in protecting the public, when the water is already polluted with poisonous material? Or of what use are our efforts to procure pure foods if they are already partly decomposed from improper storage, on the one hand, or tainted by unclean hands in preparing them for the table?"

Dr. Thrush suggests that the following sanitary regulations should be enacted into suitable laws by the legislatures of the various States, and that each State should provide proper officials to enforce them rigidly:

"1. State control of every public eating-place within its jurisdiction. Each place to be inspected, licensed, and controlled as outlined above, said inspection to be repeated at reasonable intervals, and to include the 'personnel' of the help, the quality, and methods of storing, cooking, and serving of the foodstuffs, the cleaning of the dishes and

A SAFE THREE-BAGGER.

The runner is aided by the necessarily high throw in from the field, giving him ample time to slide in to the bag while the baseman reaches for the ball.

examination? Such precaution is very rare indeed. It is almost as rare in the hotels and public eating-places; and it is rare even in the best of clubs. But some of our railroads, and I am pleased to report that the number is rapidly increasing since my report one year ago, compel every person employed in their dining-car

vessels, the drinking-water, and finally the sanitary arrangements of the kitchens and dining-rooms.

"2. Employment bureaus should require a health certificate of all applicants for positions where they handle or serve foodstuffs.

"3. State legislation for the proper maintenance and regulation of all cold-storage plants, with a time limit on each article of food.

"4. The methods of handling, storing, and displaying foodstuffs for sale should all be governed by proper sanitary regulations.

"5. The cleanliness that should be observed in handling all utensils, vessels, dishes, table linens and towels, also the compulsory use of individual drinking-cups in all public places, and the proper observance of sanitary regulations in the construction, ventilation, and plumbing arrangements of all kitchens and dining-rooms for public use should all be controlled by suitable laws, which should be rigidly enforced.

"6. Properly qualified persons should be furnished in sufficient numbers to see that all of the above regulations are properly observed and carried out; and fines and penalties should be imposed on those who refuse to comply with the same.

"7. State regulation of all streams and water supplies within its border, so as to prevent pollution and contamination; and a State laboratory should be maintained for the bacteriologic and chemical examination at reasonable intervals of all the important sources of drinking-water."

THE LIFE OF METALS

A METAL IS NOT the smooth, regular thing that a polished surface of it seems to the naked eye. The microscope shows that it has structure which may change as outside conditions alter; and with these changes the properties of the metal also become different. It is owing to these properties that the tempering of steel and many other changes in this and other metals are possible. The changes are not always useful ones sometimes, as in the case of the "disease" of tin, about which so much has been written, they render a metal industrially useless. Under a heading similar to the above, Félix Robin writes in *La Nature* (Paris, August 1) on the various properties of metals that are due to alterations in their microscopic structure. The structure, he tells us, is caused by the arrangement of crystals, and its progressive changes are not unlike those that accompany vital phenomena in living organisms. The crystal, like the living cell, even takes its origin from a "germ." Says Mr. Robin:

"At the moment of solidification there arise in a molten

metal crystalline germs around which takes place the progressive formation of solid crystals. How crystals grow is unknown to us, but perhaps there is some correlation with the unequal movements of liquid particles moving in currents. It has been proved that in an ingot that is solidifying, crystallites—crystals in formation, or skeleton crystals—appear everywhere, developing simultaneously in all directions, in the cubic or some other related system. The opacity of metals prevents their complete crystallographic study, but it has been seen that the elements are generally regular

development ceases at the points of contact and continues laterally into the spaces that are still liquid, until there are no longer any such. The result is a final structure of the metal—a 'figure of agglomeration' of crystalline elements arrested irregularly in their development and called by some writers 'grains.' Their joints are toothed in the fashion of bony structures.

"When a section is polished and treated with acid, the surface presents the appearance of blotches of different colors with irregular boundaries; these are the grains, whose crystalline structure often forms very beautiful branching figures.

"If there is no tension in the metal thus formed, the structure does not vary when heat is applied below the melting-point.

"Grains of metal are deformed under the action of exterior forces. Like crystals they seem to 'rearrange' by arranging themselves in parallel bands; so arranged they may slide on their neighbors. When the deformation or pressure is sufficient, the metal . . . becomes hard and brittle . . . and probably the crystalline structure is more or less fully destroyed. The metal is then unstable, tho it returns to a stable condition in time. The return (tempering) is the more rapid as the mobility of the elements is greater and consequently as the temperature is higher. It is as if the solid metal were a liquid of very high

viscosity. As the metal returns to stability, crystalline germs arise and grow . . . at each other's expense. This structure is that of most metal objects; obtained by deformation and tempering, it gives strength and malleability. We may compare it to the agglomeration of soap-bubbles—to a mass of foam with permeable membranes. . . .

"When iron is heated above 900 degrees it assumes another physical state, and its structure is entirely modified. There appears a new network of grains, keeping only occasionally the old contours. This property is utilized to re-

generate this metal; the structure of large, fragile grains, obtained by shaping it, is replaced by a very fine, tenacious fiber.

"The cellular structure of metals is thus subject to continual, more or less rapid modifications, taking place when they are heated, or even in the cold state. The study of these phenomena is the more worthy of interest in that it may result in conclusions of indisputable interest to practical industry."—*Translation made for THE LITERARY DIGEST.*

A GROWING CRYSTAL

MENTAL AND PHYSICAL FATIGUE COMPARED—Some interesting and fruitful observations were presented just before the war to the Academy of Science in Paris concerning the effects of physical and mental fatigue on the pressure of the blood. According to experiments conducted by Mr. Lahy on such exertions as that of a soldier on march there is no observable augmentation of blood-pressure. Very different results, however, are observed in other cases, such, for example, as that of typists, who, while exerting very slight muscular effort, are obliged to practise sustained attention, exercise the memory constantly, and make motions which, tho slight, must be skilfully adapted to certain ends and therefore require judgment. In other words, those labors in which watchful attention is continuously directed toward the same object have the greatest tendency to increase the pressure of the blood. Such regularity of increased pressure must have some effect on the health, and this fact should be considered, says the *Revue Scientifique*, in fixing the duration of hours of work. —*Translated and abstracted for THE LITERARY DIGEST.*

A SENSIBLE GEOMETRY-TEACHER

MOST PERSONS, if asked the reason for studying elementary geometry, would answer, "to develop the reasoning powers." But if requested to explain just how the powers of reasoning are developed by some of the current methods of teaching, they would be puzzled for a reply. It would seem that many pupils have never connected their lessons in geometry with reasoning of any kind. A collection of students in the Buffalo Central High School who had often failed in geometry were turned over to Miss Sara C. Walsh recently, and she succeeded in putting 82 per cent. of them through the Regents' examination. How she did it she tells in an article contributed to *The Mathematics Teacher* (New York), which will be profitable reading for teachers and interesting, as well as instructive, to the laity. Says Miss Walsh:

"None of these pupils was mentally deficient, as was shown by exceptional work in other lines. Such remarks as these reached me at the first regular session of the class: 'I'll never get it.' 'What's the good of it, anyhow?' 'I hate the stuff.' 'I'd like to get together all the geometry-books in the school and watch them burn.'

"I made a few remarks somewhat as follows: 'At my own request, this class was given to me because I am convinced that any one can pass geometry who can do as creditable work in other lines as some of you can. There are in this class, to my knowledge, two excellent musicians and two with oratorical ability, and these four people claim that they can not do geometry. Perhaps it is great success in one line that discourages us at mediocre success in another. Should we give up because things are difficult? I think the reasons for a large share of failure in geometry are (1) that pupils do not try; (2) that a misconception creeps in or something is swallowed wholesale because the book says so or the teacher says so. You must work with me or I shall become discouraged, and that would be the worst thing that could happen to you. I know that some of you are discouraged, but this is an opportunity freely to discuss anything you want, without the feeling that some superior fellow student will glance condescendingly at you. You are all in the same boat. Will it move onward or sink?'"

One of the first exercises Miss Walsh gave the class was to prove something that was not so. It was three days before they "caught on," but in these three days they had learned a valuable lesson. They had apparently been trained, not to ascertain the truth, but to find some reason or other for something that had been assigned to them.

"No one gave me the correct answer. One by one they seemed to come to the conclusion that there was no need of

assigning no reason or giving a reason which did not agree with the facts granted. These triangles had to be proved congruent, and evidently the end justified any means.

"One day, I asked why a certain construction line was used. One little girl volunteered this information: 'That comes next.' I repeated the question, thinking she had misunderstood. She answered, 'I don't know.' 'All right, then continue the proof.' She continued, giving a proof that sounded perfect,

HOW THE CRYSTALS APPEAR WHEN THEY HAVE UNITED AND FORMED SOLID METAL.

tho she did not see what the construction line had to do with it. This and similar experiences showed me that often by happy chance or careful memorizing, but not because they belonged there, statement and authority were put side by side.

"Sometimes I wrote on the board eight to ten or even twenty theorems and had them arranged in order, not by memory but according to the nature of their proof. From this they saw how the theorems were linked. . . . One of the most difficult things I have ever faced was to help these people to solve originals not depending on congruent triangles. Unless I helped, they decided they couldn't do them. If I did help, they memorized what I said.

"Many could not keep the goal in mind or would write a proof that was true so far as the hypothesis was concerned but did not fit the conclusion. I suggested working on rough paper as follows: Make two columns. Label first, 'What I know.' Label the second, 'What I want to know.' Under the first were put the granted and all the conclusions that naturally came from it. Under the second were put the statement to be proved and the possible ways of solving it, that is, all theorems that end with statement to be proved—the second last steps, so to speak.

"There was in this class a youth who had been taking geometry for five years. He could play the piano, play football, and make a good speech. He did well in English, but the boys used to rail him about his extreme fondness for geometry. At the beginning of the term he came to me and said he believed he had never really worked in geometry, but he was determined to get the examination this time. 'Now, how do you do this original?' he asked me. I had warned the class to be definite in their questions to know what was granted and what to be proved and write the proof as far as they could. So I said, 'What do you know?' With restrained wrath he exclaimed,

'If I know I wouldn't have to ask.' His idea of help was for me to say the whole proof off. At first he would say a line equalled a line 'because I can see they are equal.' He used to answer at random. Sometimes I asked him how much he would risk on the truth of his statements. Gradually he raised his estimate of the truth of his statements. My chief conversation with him used to consist of these questions, 'What do you know? What do you want to know? Have you used everything granted?'

"The morning of the examination I saw him in the hall. 'Well, what did you think of the examination?' I asked. He replied, 'I kept saying to myself, What do I know? What do I want to know? until I was afraid I would find myself shouting it aloud. Another thing, I would stake my life that I got it this time.' He received the highest mark in this class, 91. I sent him a card with

his mark and my signature, and within the next two days I saw him several times show that card to some one. They had to be shown.

"Eighty-two per cent. of the class passed the Regents' examination and seemed pleased to have mastered at last that very difficult subject."

THE GROWTH OF METAL "GRAINS."

hesitation in this class. The guesses became wilder. We tried the same exercise three days before some one, in disgust, said he didn't think it could be done. This was the case. The hypothesis was not complete. I didn't tell them that, but made them figure out why it couldn't be solved. If they wanted an angle equal to a certain angle, they said they were equal; either

REIMS'S DEPARTED GLORY

THE GLORY of Reims has departed. Of that truth even later and more considered reports seem to bear evidence. The walls and towers of the great church were left standing after the first assaults, but word of later bombardments seems to put even them in jeopardy. It was the marvelous

Tribune Mr. Donn Barber, one of the leaders in this profession, writes this:

"I can add but little to what has already been said on the subject of the destruction reported at Reims. We probably have not heard the whole story as yet, but it is greatly to be hoped that this great cathedral has not suffered beyond the power of ultimate restoration. Restoration, of course, can never bring back the lost atmosphere, mellowed beauty, and color of this marvelous building. It can at least, however, preserve its forms and design to posterity. That any damage whatever should have been done this gorgeous monument is sickening and unbelievable, and the storm of protest that its mutilation has called forth was naturally to be expected. It is to be hoped that these expressions of popular disgust, however, may be the means in some way of sparing the other valuable monuments of antiquity which have come down to us as a part of the common heritage of the human race.

"Of all the artistic achievements of the French people, their Gothic cathedrals probably stand out as the loveliest of their work and influences. Reims is one of architecture's choicest flowers. It is a priceless masterpiece which has seemed to crystallize some of the Godlike attributes of man. It was wrought in a noble and inspired art and enshrined glorious memories. To feel that its calm, sacred mission has been violated outrages our sensibilities. Nowadays architecture seems to be outside the precincts of culture. It is surprising how little educated people know or seem to care about architecture. Moreover, their ignorance and apathy seem to be naked and unashamed. Perhaps this late experience will have the effect of interesting the world at large more in the knowledge and love of architecture and in some realization of its inestimable value to all mankind.

"Architecture has been described very logically as the printing-press of all ages. Its great monuments that have come down to us through the ages are sacred trusts. We should so understand them and glory in their preservation. The righteous

indignation of the artist at a time like this is perfectly normal. May this indignation, tempered with justice and sanity and calmly expressed, win friends for the cause of art, and thereby naturally make for its better protection and understanding."

Robert Tappan, another of America's well-known architects, speaks through the columns of the *New York Evening Post*:

"What a commentary it is upon the times we have come upon! Do you suppose any soldiers of any nation which had Christianity deep in their hearts could have done this thing? Not at all. Whether professedly or not, it was the deed of a gang of atheists.

"Reims Cathedral may be rebuilt stone for stone as a replica

WHERE THE KINGS OF FRANCE WERE CROWNED.

A French art commission reports that all the roofs of the cathedral have been burned, the stained-glass windows riddled and to a great extent broken. The sculptured decoration and statuary are irreparably destroyed, but the statue of Joan of Arc, in front of the cathedral, is unhurt.

ornament of sculptured stone that formed their glory, and this has been racked and torn. A few of the artistic treasures of the building were saved from the fire of the roof and other woodwork. One observer speaks as tho a miracle were wrought to save the priceless Gobelin tapestries that remained uninjured while molten lead fell all around them from the burning roof. The carillon of bells that were famous the world over are a mass of shapeless metal. Among us none know better than our architects what the world is being bereft of by the destruction of her monuments. Their protests are like the of people suffering physical pain. In the *New York*

of what it once was, but it will never be the cathedral of old, with its mellowness of the ages, its glowing tone of time. The day in which it was built, as well as the spirit, is gone. The great charm of the Reims Cathedral, as in those at Paris, Notre Dame, at Chartres, was the mystery of it, the impression of beauty it gave that was not to be explained. You can't reduce Gothic art to rules. That is why it is not taught in schools. The essence of the Gothic ideal is spirit, good taste; you can't really put it into words. Only within the last generation have we come to realize that Gothic art is not something low and barbaric. Perhaps the Germans still so regard it. Does the fact that Germany has no really notable examples of Gothic architecture explain the recent outrage of her soldiers?"

Germany has pleaded the excuse of military necessity. The French are said to have used the towers as observation-points to assist in training their guns. The charge will have to be settled by investigation, for it is just as strongly denied by the opposing side. Berlin promises an official investigation, and the *Frankfurter Zeitung* adds a promise that perhaps some will find solving:

"War which destroys also opens a way to new creators. At all times mankind has regained courage to create new works stronger and more beautiful than those which had been destroyed.

"If the German armies in their victorious advance have had to hunt the enemy, not only from the fortresses but also from the ancient and sacred seats of civilization, we have at least the consolation that a victory bought so dearly will eventually produce greater and more beautiful works than medieval churches towering to the sky."

THE WAR OF THE PENS

THE MAN IN THE STREET may in this crisis refute the idea that the pen is mightier than the sword. At least, as the *San Francisco Chronicle* is his spokesman, he shows a poor opinion of the man of letters as a fighter off the firing-line. This journal wonders "what more do these authors know of the rights and wrongs of such an international conflict as this than the rank and file of citizens able to read and think for themselves?" The question is launched against the British authors who gave to the press a conjoint statement of their views, and thereby, thinks *The Chronicle*, showed that "there is no form of reasoning more fallacious than that which is known as argument by means of great names." Nevertheless, this sort of argument proceeds, and calls authors, college professors, poets, theologians, even artists and architects, into the ranks of the pen-warriors. One shibboleth has been launched from the field of the Allies, and that is "barbarian." Nothing could be a greater surprise to the Germans than this, and Gerhart Hauptmann, the playwright, retorts: "The shallow Parisian feuilletonist Bergson may call us barbarians as much as he pleases," and "the great poet and deluded Gallomania Maeterlinck may impose upon us similar nice titles after having called us the 'conscience of Europe'; the world knows that we are an old civilized nation." Hauptmann's defense of his native country appears in several New York papers, and states this:

"Nowhere is the idea of cosmopolitanism more deeply rooted than with us. Look at our literature of translations and name me a nation which is trying just as hard as we to render justice to the spirit and the originality of other nations so as thoroughly to understand their soul. Did not Maeterlinck win most of his glory and his money with us? For a parlor philosophaster like Bergson, of course, there is no room in the country of Kant and Schopenhauer.

"I say it frankly. We have and we had no hatred against France; we have idolized the plastic art, sculpture, pictorial art, and the literature of that country. For the world-wide recognition of Rodin the way was paved in Germany. We admire Anatole France, Maupassant, Flaubert, and Balzac are read in Germany like German authors. We feel a deep affection for the national life of southern France. Enthusiastic admirers of Mistral can be found even in small German cities, among the poorer population.

"It is to be greatly regretted that Germany and France could not be political friends. They should have been, since they are the administrators of the continental productions of the mind and since they are the two great thoroughly cultured European master nations. Fate, however, wanted it different. In the year 1870 the German tribes through fighting obtained for themselves the German unity and the German Empire. These achievements guaranteed to our nation an epoch of peace for more than forty years, a time of budding, of growing, of strengthening, of thriving, of fruit-bearing unparalleled.

"Out of a population becoming more and more numerous there arose more and more numerous individualities. Individual

"I'M DOING MY WORST—THIS MAY BE MY LAST APPEARANCE."

—Nelson Harding in the *Brooklyn Eagle*

energy and general elasticity created the great achievements of our industry, of our commerce, and of our transportation systems. I do not believe that an American, English, French, or Italian traveler ever believed himself among barbarians while visiting German families, German cities, German hotels, German ships, German concerts, German theaters, Bayreuth, German libraries, or German museums. We have traveled in other countries and we have always welcomed any stranger."

The great German dramatist reasserts the pacifist nature of Emperor William, and declares that war was forced upon Germany as a measure of defense. "Who was it that did conspire to bring about this war?" he asks. "Who even whistled for the Mongolian, for the Jap, that he should come to bite viciously and cowardly at Europe's heels?"

"It is with great pain and bitterness that I pronounce the word 'England.' I belong to those barbarians upon whom the English University of Oxford bestowed the degrees of doctor *honoris causa*. I have friends in England who with one foot are standing on the intellectual soil of Germany. Haldane, former English Minister of War, and with him numerous Englishmen, undertook regular pilgrimages to the small barbarian city of Weimar, where the barbarians Goethe, Schiller, Herder, Wieland, and others have exerted themselves for the humanity of the whole world.

"We have a German poet whose dramas have become national property as the dramas of no other German poet. His name is

William Shakespeare, the same Shakespeare who is England's prince of poets. The mother of our Emperor was an Englishwoman, the wife of the King of England a German. And yet this congenerical and congenial nation has sent the declaration of war into our house. Why? Heaven only may know.

"But this much is certain—the sanguiferous world-concert now raging on the European continent has an English diplomat as impresario and conductor. The question is whether the finale of this horrible music still will see the same conductor. 'My cousin, thou didst not mean well, neither with thyself nor with us, when thy tools threw murder and arson into our huts.' While I am writing these words the day of the solar eclipse has passed. The German Army has defeated between Metz and the Vosges eight French army corps and driven them to flight. Every German in his native country feels it had to come this way. Our jealous enemies forged an iron ring around our breast and we knew our breast had to expand, that it had to split asunder this ring, or else we had to cease breathing. But Germany will not cease to breathe, and so it came to pass that the iron ring was forced apart."

The reverse of the shield appears in an article by a brilliant English writer. Mr. Chesterton declares in *Everybody's* (October) that the word "barbarian" is the key to the situation, the explaining that "the Prussians themselves can not form a notion of what we mean when we call them barbarians." And that "is precisely because they are barbarians," he adds with his peculiar insouciance—

"They are perfectly and even pathetically sincere when they say they are the People of Culture; and even when they practically deny that there is any culture at all in the land of Turgenev and the land of Chopin. And the Prussians really are cultured in the sense that they read a great many books. But the spirit of civilization is not to be found in books.

"Nor is barbarism a mere term of abuse for what people call 'militarism.' Many of the most genuinely civilized states the world has known have been and are very military. Napoleon was no more a barbarian than Raffael or Alfieri; he was a great and subtle Italian artist. The spirit of civilization does not lie in the absence of war; otherwise the vanguard of civilization would consist almost entirely of Eskimos.

"Nor does barbarism mean anything so external even as real brutality and cruelty. Some of the most polished and enlightened societies in history, Athens or Paris, have exacted appalling vengeance beyond the dreams of a Red Indian. No; the essence of barbarism is spiritual. It could easily coexist with universal knowledge or everlasting peace; but it can not be long regnant; because every man who has the soul of civilization feels it to be inferior even while it is supreme."

Mr. Chesterton avers that "the psychology of the barbarian is this: that, like the lower animals, he does not understand reciprocity."

"He has not that little mirror in the mind in which we see the mind of the other man. If I scatter crumbs for the birds in winter, that will not prevent the birds from eating my fruit in summer; because birds, like Prussians, are barbarians. If I leave the bee his honey, he may still leave me his sting. And he has not broken any contract, because bees, like Prussians, are barbarians.

"Now this fundamental unreason and inequality, as of men ruled by beasts, can be tested by taking any civilized institution in Prussia (and Prussia has nearly all civilized institutions) and noting that in each case Prussia has added this strange one-eyed and one-sided character. For instance, the duel is often called a relic of barbarism; but the duel, tho it may be bad, is certainly not barbaric. It exists in Prussia; but it also exists in France, Italy, Belgium, Austria—in short, the duel exists almost everywhere where high civilization exists. But then the duel, right or wrong, is reciprocal.

"What does specially exist in Prussia, and does not exist anywhere in the world except in Prussia, is the idea of an officer really thinking himself a fine fellow, not only because he wears a sword when other people don't, but even when he draws the sword on people who haven't got any. Prussian officers really talk with a monstrous solemnity about honor and vindication in connection with an armed man attempting to murder a shop-keeper. I may thrust with my rapier; you must not thrust with your rapier; that is the soul of the barbarian. He is in the true sense half-witted: he can see only half of every question that is presented to him. He can not turn his imaginative

telescope round and look through the other end of it, even for a joke: the barbarian is incapable of jokes.

"Now if we examine each of Prussia's claims, even her legitimate claims, we shall find that they all exhibit this one-eyed philosophy. Thus, it is quite true that North Germany has a *kultur*, a scheme of arts and sciences. France and Italy have constantly praised it; England and America have rather overpraised it. But it does not praise anything but itself. It claims to be at once German culture and also universal culture; it would substitute German not only for Polish but for Latin and for Esperanto.

Little Turk or Japanese.

Don't you wish that you were me?

is as far as its imagination can get in 'world-politics.'

"This is the real difference at the depths of this business: Russia makes war for a dogma or France for a theory; but the enormous and unlimited ambition of Prussia is merely a limitation of the mind."

ROLLAND TO HAUPTMANN

THE FRENCHMAN, Romaine Rolland, author of "Jean Christophe," who has always labored to promote understanding between France and Germany, addresses this open letter to Gerhart Hauptmann in the *Journal de Genève*. He writes "expecting an answer . . . an answer that would be an act." "The opinion of Europe," he declares, "awaits it as I do. . . . At such a time silence itself is an act." He says:

"I am not, Gerhart Hauptmann, one of those Frenchmen who regard Germany as a barbarous nation. I know the intellectual and moral greatness of your mighty race. I know all that I owe to the thinkers of old Germany; and even now, at this hour, I recall the example and the words of our Goethe—for he belongs to the whole of humanity—repudiating all national hatreds and preserving the calmness of his soul on those heights 'where one feels the happiness and the misfortunes of other peoples as one's own.' I myself have labored all my life to bring together the minds of our two nations; and the atrocities of this impious war in which, to the ruin of European civilization, they are involved, will never lead me to soil my spirit with hatred.

"Whatever pain, then, your Germany may give me, whatever reasons I may have to stigmatize as criminal German policy and the means that it employs, I do not attach responsibility for it to the people which is burdened by it and is used as its blind instrument. It is not that I regard, as you do, war as a predestined thing. A Frenchman does not believe in fatality. Fatality is the excuse of will-less souls. War springs from the weakness and stupidity of nations. One can not feel resentment against them for it; one can only pity them. I do not reproach you with our miseries; for yours will be no less. If France is ruined, Germany will be ruined too. I did not even raise my voice when I saw your armies violating the neutrality of noble Belgium. This flagrant breach of honor, which incurs the contempt of every upright conscience, is quite in the political tradition of your Prussian kings; it did not surprise me.

"But when it comes to the fury with which you are treating that high-spirited nation whose only crime has been to defend its independence and the cause of justice to the last ditch, as you Germans yourselves did in 1813 . . . why this is too much! The world is revolted by it. Keep these savageries for us Frenchmen, your true enemies! But to wreak them against these victims, against this small, unhappy, innocent Belgian people! . . . How shameful is this!

"And not content to fling yourselves on living Belgium, you wage war on the dead, on the glories of past ages. You bombard Malines, you burn Rubens, and Louvain is now no more than a heap of ashes—Louvain with its treasures of art and of science, the sacred town! What are you, then, Hauptmann, and by what name do you want us to call you since you repudiate the title of barbarians? Are you the grandsons of Goethe or of Attila? Are you making war on armies or on the human spirit? Kill men if you like, but respect masterpieces! These are the mere heritage of the human race. You, like all the rest of us, have your obligations there; in flinging them aside you show yourselves unworthy of our great inheritance, unworthy to take your place in that little European army which is civilization's guard of honor.

"I do not address this to the opinion of the rest of the world. I address it to you yourself, Hauptmann. In the name of our

Europe, of which you have hitherto been one of the most illustrious champions, in the name of that civilization for which the greatest of men have striven all down the ages, in the name of the very honor of your Germanic race, Gerhart Hauptmann, I abjure you. I challenge you, you and the intellectuals of Germany, among whom I reckon so many friends, to protest with the last ounce of your energy against this crime which is recoiling upon you."

WAR'S END TO THE OLD ESTHETIC ERA

IT IS REPORTED in the newspapers that ladies in the fashionable world of New York are organizing to establish America as the arbiter of women's fashions. The French scepter is laid down, and even French dressmakers are at the front. Paul Poiret, whose name has figured as the latest leader in modes, now spends his time between his artillery post at Belfort and his Paris shop, which now makes only army uniforms. These changes are prophetic of a long future, according to Mr. Francis Grierson, a well-known writer described by Arnold Bennett as "the most enigmatical personality of our times." Whatever the outcome of the present war, it "will touch the social bed-rock of Europe," Mr. Grierson asserts. It marks the end of an old and the beginning of a new era, as sharply defined as the passing from one room to another—and closing the door. In France the change will penetrate to the core of society and "will turn things inside out; politics, society, literature, art, music, science, religion, socialism." In the *New York Sun* we find this interesting provision:

"Society will be moved to its foundations—first, by the number of its leaders who will fall in battle; second, by the redistribution of private fortunes consequent on so many deaths; third, by the long period of mourning to follow. Nothing will remain as it was. Parisian social life will change as by magic. The great families of rank will abandon Paris and take refuge in their chateaux, and the leading mansions of the capital will be barred to fashion and gaiety for years to come. In the highest circles only relatives will receive relatives.

"Only those who know the inner life of France can imagine what the conditions will be. Only those who know the country life of France will be able to grasp the full meaning of the present ordeals. No one from the highest to the lowest will escape the consequences of a war that will pierce to the center every section, every group, every family. All the young men are gone from the homes. Dukes and princes are fighting side by side with farmers. You could not distinguish poets from waiters, artists from artisans, musicians from mechanics, boulevardiers from school teachers.

"On the field of slaughter sheep and goats are all one. Imagination boggles at the reality. All attempts to depict the psychological state of the combatants fall short of the inexorable facts. We have to begin at the beginning in order to get a faint notion of what such a war means to the French and the Germans. Against the old Latin culture of 2,000 years are hurled all the forces of a younger, more strenuous people who roll on as a vast human machine, and the two forces clash as two opposing

worlds. Beside this ordeal the war of 1870 appears like a school-boys' game of football."

Strike a deadly blow at society, says this writer, and you strike art, literature, music, everything. Literature, he thinks, "will instantly receive a new pessimistic impulse which will make utopian theories and old academical maxims appear like so many Mother Goose stories." We read further:

"Books that were found pleasant and nonchalantly optimistic will now, under the final ordeal, appear to French readers without meaning and without savor. The whole outlook will be changed.

"The Paris and the France that we know will seem like something that has been folded up and put away. If the Germans should storm Paris it will be like the passing of a historical dream. Many of the most promising writers, artists, composers, philosophers, scientists will never return from the field of carnage. A new order of ideas will spring up. Freak art and freak music will die out for want of fresh recruits.

"Paris has been the hotbed of all sorts of eccentricisms in the name of art, and the war will render them unfashionable. It will kill what I have called 'blue china poetry.' Of the thousands of young Frenchmen who flock to Paris every year from the provinces, seeking fame, not more than one or two ever succeed. Paris is not a creator of talent, but a maelstrom in which the majority are overwhelmed.

"The war will exercise a profound influence on French philosophical thought. There will be a return to the fundamental verities. People will tire of the broken reed of Voltaireism. It will strengthen the Church and readjust the views and judgments of Socialists."

Changes in England, too, are foreseen by this writer "as great and tumultuous as any on the Continent."

"The old order is even now as good as dead. The writers with pleasant theories of parliamentary utopias will never again sway the British public as they have been doing these last ten years. Writers of paradox will find no more readers. The cheery optimist will change his tactics.

"The professional humorists of London will perhaps have the hardest time of all. It is difficult to conceive the position of the professional London cynic at this juncture. He has been caught in a trap of his

own invention. It will now be seen how empty has been the boasting, the bluff, the nonchalance of the past twenty years. London has wallowed in tears and temperaments until the decadence has become unconscious and mechanical. Nothing short of a war like this could have produced any striking result."

A conclusion somewhat similar to those of Mr. Grierson's is reached by a writer in the *New York Evening Post* who, while seeing that "the relations of war to letters are manifold," finds that it "plays its better part when it deepens national spirit and the sense of oneness with fellow countrymen, and not through the mere furnishing of scenes and emotions to be depicted." The writer adds:

"From this point of view the war now going on is not a highly promising one. Except perhaps for Poland, it can hardly establish a new nation. It is more likely to end in general exhaustion than in affirming the glorious self-confidence of a people; and its consequences to culture must be deplorable. But only speculation is possible on such a subject."

FRANCIS GRIERSON.

Who declares that the Paris and the France that we know will seem like something that has been folded up and put away.

RELIGION-AND-SOCIAL-SERVICE

APPEAL OF THE GERMAN CLERGY

SURPRISE is expressed by the Federal Council of Churches of America at the warlike tone of the statement issued by the Protestant ministers of Germany defending their country's resort to arms. The manifesto is addressed "To the Evangelical Christians Abroad" and is signed by twenty-nine leading clergymen and churchmen of Germany, including

Christians greeted the fellowship in faith and service which the Edinburgh World Missionary Conference left as a sacred legacy to Protestant Christendom; they know also how we have, to the best of our ability, cooperated in order that among the Christian nations, with their competing political and economic interests, there should arise a Christianity united and joyous in the recognition of the task entrusted to it by God. It was also

to us a matter of conscience to remove by every means political misunderstandings and ill feelings and to assist in bringing about friendly relations between the nations. We have now to endure the taunt that we have believed in the power of the Christian faith to conquer the wickedness of those who are seeking war, and we encounter the reproach that our efforts for peace have only served to conceal from our people the true attitude of their enemies. Nevertheless we do not regret that we have thus endeavored to promote peace. Our people could not enter into this struggle with so clear a conscience if leading men of its ecclesiastical, scientific, and commercial life had not in such manifold ways exerted themselves to make this fratricidal strife impossible.

"Not for the sake of our people, whose sword is bright and keen—for the sake of the unique world-task of the Christian peoples in the decisive hour of the world-mission, we now address ourselves to the Evangelical Christians abroad in neutral and inimical lands.

"We were hoping that

through God there should arise from the responsibility of the hour a stream of new life for the Christian peoples. Already we were able to trace in our German Churches the powerful effects of this blessing, and the fellowship with the Christians of other lands in obedience to the universal commission of Jesus was to us a service of sacred joy.

"If this fellowship is now irreparably destroyed;

"if the peoples among whom missions and brotherly love had begun to be a power lapse into savagery in murderous war through hate and bitterness;

"if a simply incurable rent has been made in Teutonic Protestantism;

"if Christian Europe forfeits a notable portion of her position in the world;

"if the sacred springs from which her peoples should derive their own life and should offer it to others are corrupted and choked;

the guilt of this rests, this we hereby declare before our Christian brethren of other lands with calm certainty, not on our people. We know full well that through this sanguinary judgment God is also calling our nation to repentance, and we rejoice that she is hearing his holy voice and turning to him. But in this we know that we are at one with all the Christians among our people, that we can and must repudiate on their behalf and on behalf of their Government the responsibility for the terrible crime of this war and all its consequences for the development of the Kingdom of God on earth. With the deepest conviction

WRECKED CHURCH IN TERMONDE.

Romaine Rolland asks of Gerhart Hauptmann: "Do you wage war against armies or against the human spirit?"

Axenfeld, Dussmann, Harnack, Kaftan, Labusen, Richter, and Wundt. It insists that Germany is guiltless in "this fratricidal war in which the Christian people of Europe are rending one another." In fact, "she has left no one who is willing to see the truth in doubt as to her peaceful disposition. Only under the compulsion to repel a wanton attack has she now drawn the sword." The opening scenes of the present awful drama were played when the theologians began to write, and their view of the case of Belgium is treated in connection with charges made of cruelty to German people:

"Unnamable horrors have been committed against Germans living peaceably abroad—against women and children, against wounded and physicians—cruelties and shamelessness such as many a heathen and Mohammedan war has not revealed. Are these the fruits by which the non-Christian peoples are to recognize whose disciples the Christian nations are? Even the not unnatural excitement of a people, whose neutrality—already violated by our adversaries—could under the pressure of implacable necessity not be respected, affords no excuse for inhumanities, nor does it lessen the shame that such could take place in a land long ago Christianized."

The concluding part of the plea is this:

"Our Christian friends abroad know how joyfully we German

we must attribute it to those who have long secretly and cunningly been spinning a web of conspiracy against Germany, which now they have flung over us in order to strangle us therein.

"We direct our appeal to the conscience of our Christian brethren in other lands, and press upon them the question, what God now requires of them, and what can and must take place, in order that, through blindness and unscrupulousness in God's great hour of the missionary enterprise, Christendom shall not be robbed of its power and of its right to serve as his messenger to non-Christian humanity.

"The Holy God carries on his work to its goal, even through the storm and horror of war, and permits no human wickedness to defeat his purpose. Therefore we come before him with the prayer:

"Hallowed be thy name;
Thy Kingdom come;
Thy Will be done!"

As an English commentary on this letter address to Evangelical Christians, a writer to *The Westminster Gazette*, M. Matheson, draws attention to an article in *The Quarterly Register* of the Presbyterian Alliance. For some years, he declares, large secessions from the German Protestant State Church have been in progress, it being estimated that during 1912-13 some 80,000 withdrew and during the first four months of this year about 30,000. The reasons suggested are "the spread of the scientific spirit and the growth of social democracy." In explanation of the latter the writer quotes this:

"The authorities of the Protestant State Church, and notably the pastors, are the traditional supporters of the Throne, the buttresses of the ruling caste. Every measure introduced by the Government having for its purpose the limitation or curtailment of the liberties of the people has had the support of the Church. Never a protest is raised at the piling up of armaments. Many of us believe that Germany is setting the pace for the rest of the world, both as to her land and her sea forces. I can recall no ecclesiastical voice raised against the imposition of this awful burden on the people. The newspapers most intimately associated with the Protestant Church and its ministers—the *Reichsbote* and the *Kreuzzeitung*—are the most truculent antagonists of the movements directed to the limitation of armaments and to the cause of international peace."

THE PROTESTS OF CHRISTIAN PACIFISTS

MANY PEOPLE in both branches of the English-speaking world are troubled with the question of the righteousness of war. To fight at all seems to them to be contrary to the teachings of Jesus and incompatible with professions of faith in him. *The Christian Commonwealth* (London) reports the weekly reception of letters from its readers "protesting, generally in the name of Christian pacifism, against the war." Some writers declare without equivocation that they would prefer to see England as a nation destroyed rather than that it should give countenance to the belief that righteous ends can ever be furthered by the sword. One correspondent suggests to *The Christian Commonwealth* that it has been trying to think religiously and politically at the same time, that it believes in force, and is therefore false to the Christ point of view. To these charges this paper rejoins:

"This is not a conception of Christianity which can be lightly swept aside. The people who urge that nations, as individuals, ought to take their stand on the teaching of Jesus concerning non-resistance may be dismissed as visionaries and impossible idealists; but the fine heroism of their attitude remains as a challenge to the moral opportunists. Yet they, like the rest of us, are bound to face the facts, and think politically as well as religiously. The doctrine of non-resistance must be tested in practice, by the facts of history, in the light of the brute certainties of daily life. It is not a doctrine that concerns secure and sheltered people; its real application lies toward those who are threatened with loss or outrage, the weak and defenseless.

"Let us be quite sure, however, that we see the issue from their point of view before we make the doctrine the basis of conduct. To a woman or child threatened with outrage or

death at the hands of a ruffian, brutalized and insensitive to the appeal that her helplessness makes, the non-resisting idealist who refused to resort to force in order to save her would seem as much a criminal as the actual perpetrator of the outrage. For the victim it would mean not that idealism had conquered, and the teaching of Jesus justified in its fruits, but that brute force had triumphed. This may be an extreme instance, but it is the final, practical application of the doctrine which must be considered; and its application is limited by the claim that every weak and defenseless creature has upon the protection and succor of the strong and pitiful. The weak and helpless have

Copyrighted by Underwood & Underwood, New York.

REMAINS OF A CHURCH AT MONS.

rights which are just as sacred and authoritative as the duties and ideals of the non-resister. For nations which try to practise the doctrine it means that no armed aggression by another nation, however wanton or merciless that aggression might be, should be resisted by armed force. The Belgian people, for example, ought to have allowed their territory to be invaded without striking a blow in self-defense. Will those who believe in the doctrine of non-resistance tell us whether the Belgians were right or wrong in resisting the invader by force of arms?"

The Christian Commonwealth goes on to explain that while it believes that in the present state of the world the teaching of Jesus concerning non-resistance can not be carried to its fullest and furthest application, it does believe that the spirit which underlies that teaching is destined to become supreme in the world. It proceeds:

"Mr. G. K. Chesterton once said that we have not yet been able to decide whether Christianity is sanity preached to a world of lunatics or lunacy preached to a world of sane people. The truth is that we live in a world which is neither sane nor mad, but both together at one and the same time. Mankind oscillates between frantic extremes. Europe at this moment is passing through a phase of such a collective madness. What is really happening now is that the sane people of Europe are fighting to maintain European civilization at the level it has reached, and to save the nations from rattling back to barbarism. We are meeting force with force because there is no alternative to that dreadful necessity save the laying down of our arms.

"To disarm our fighting forces and to dismantle our Navy would mean not the triumph of reason, but the victory of force.

This is the final apologetic and justification we offer for Great Britain in the war she is now waging against Germany. In this sense only do we support the war. We could not stand by and allow Prussian militarism to become supreme in Europe. We shall not be able to stand by and see any other despotism, founded on force or fraud, achieve a similar conquest. Is it un-Christian to argue that when the peoples of the Continent are plunged into a hell not of their making, the British people, with their tradition of liberty and their life-and-death interest in the spread of the higher civilization, could not stand idly by and strike no blow on behalf of the causes in which they believe? We do not so understand the mind of Christ."

MEXICO AND THE CATHOLIC CHURCH

THE VIOLENCE of clashing opinion, which is a sort of substitute for war in neutral nations, shows itself in a lesser degree in discussions of the problem of the Catholic clergy and members of religious orders in Mexico. The Government, notes one unsectarian editor, "has taken a stand restricting the Roman Catholic Church, which was once all-powerful," and in common with other non-Catholic observers he believes that the Government is acting within its rights and holds that it is restraining, not religion, but the papacy. On the other hand, the resentment felt by Catholics against what they consider inhumanity and injustice may be gathered from the comment aroused by a sermon on the subject by Bishop Joseph Schrembs, of Toledo, Ohio. The occasion was the opening of the thirteenth annual convention of the American Federation of Catholic Societies in Baltimore, where, the press informs us, a report has been adopted protesting against the recognition by the United States of any Government in Mexico that does not guarantee religious liberty. Complaining of the failure of our Government to protect Catholics in Mexico, Bishop Schrembs alludes to Secretary Bryan's famous "Cross of Gold" speech and suggests that there lies to hand an opportunity for him to translate "rhetoric into action." Greater emphasis is applied to this sermon because it was heard by Cardinal Gibbons, who, according to press dispatches, approves the Bishop's sentiments. The *Brooklyn Eagle*, which criticizes Bishop Schrembs as severely perhaps as he rates Mr. Bryan, points out that "the matter of religion in Mexico, whether Protestant or Roman Catholic or any other kind, is a matter for Mexicans themselves to consider, and in which the United States should be conspicuously a non-interfering factor." Again, we are reminded that our Government is "neither a church-maker nor a church-unmaker," and that all churches "look alike" to it because, "officially regarded," religion is "a matter of conscience and not of Government preference among denominations." The *Eagle* also notes that "the Pope has done and said very much to indicate his sympathy with the peace propaganda which President Wilson and Secretary Bryan and all religious denominations on this hemisphere are doing their best to promote." The Bishop's sermon is reported in the press in part as follows:

"In Mexico, thousands of Catholics, men and women, are being outraged in their most sacred religious convictions. Churches have been closed and desecrated, priests and bishops robbed of all they possess, in many instances butchered and painfully murdered.

"The profession and practise of religion have been proscribed. Women of the Church have been subjected to the shameful and brutal lust of soldiers. What have we done? Where are those agents of public opinion—the press—to stir the people that they may rise in righteous indignation? Where is the man who said, 'You shall not press down this crown of thorns upon the brow of labor'?

"Men and women are made to drink the bitter cup of religious persecution, led to Gethsemane bleeding and mangled. Here is a field for the translation of rhetoric into action. We have prevented any other Government from stepping in there, and yet do we stand sponsor for this? Catholics of Mexico clamor day for justice outraged by brutes."

A wholly different understanding of the Mexican Catholic question naturally is found among observers who are not Catholics. By them we are advised that it is not "persecution" that is going on in Mexico, but a "reform of abuses." Such an attitude is deplored by *The Catholic Standard and Times* (Philadelphia), which says of the refugee clergy and nuns at Vera Cruz that:

"It is not alone that they have been subjected to ignominy and brutal injustice at home, but they must be held up before the world as representatives of a Church which has plundered the people of Mexico, and therefore deserving of the persecutions they are now undergoing. It is the old, old story of the Wolf and the Lamb in real life—as it was enacted in France in revolutionary days and in our own time very recently. In no country wherein this cunning vulpine trick has been played were the circumstances more sickening in their duplicity and hypocrisy than in Mexico. The traducer has followed in the tracks of the highwayman and with cynical effrontery attempted to show that the victims have been the aggressors and the despoilers of the people. Relying on the ignorance of the American public with regard to Mexico and Latin America, the apologists for to-day's persecutions boldly set forth the pretense that the spoliation of the Church and its clergy and religious orders is only a restoration of what belongs to the people, and so to bar any claim to sympathy on the part of the refugees."

It is remarkable also, adds this journal, that "while our press agencies here can get every item of information about the reasons the Villas and the Carranzas have for disliking the clergy and for their hatred of the Church, they are as blind as Nelson at the Battle of the Baltic to the pronouncements of the libeled bishops and priests of those abominable calumnies."

If we turn now to the non-Catholic but unsectarian viewpoint of *The Missionary Review of the World* (New York), we see the other side of the shield. This review says that:

"The Roman Catholic Church has, through its officials, intermeddled with political affairs not only in Mexico but in other States where it has had power. The Pope claims temporal power and authority, and tries to exert them. Romanism is, therefore, a menace to free government. Romanism must go with absolutism in government. The Church of Christ must do a spiritual work with spiritual forces. The Church in Mexico has not done this, therefore the present movement is antipapal, but not antireligious."

In this publication also we read the statement of the Governor of the State of Nuevo Leon which accuses the Catholic Church of being "a pernicious factor in disruption and discord," and charges further that the Church "has showed itself an implacable enemy to the Liberal movement and progress from the first revolution of Ayulza until the present," and "has had its benedictions for the crimes and corruptions of Huerta, and has unsuccessfully worked to incite the public against the Constitutionalists' cause." How drastic is the revision of church and school procedure enforced by the decree of the Governor of Nuevo Leon may be seen from *The Missionary Review's* account of its provisions. We read that:

"1. All foreign Catholic priests and Jesuits will be expelled from the State of Nuevo Leon.

"2. Of the remaining Catholic priests those who can not prove their complete abstention from politics will be expelled.

"3. Churches will remain open daily from six in the morning until one in the afternoon. Only priests having permission to do so will be permitted to officiate.

"4. Confession is prohibited. (The confessionals were burned.)

"5. The public is prohibited from entering the sacristy.

"6. Church bells shall ring only to celebrate *fiestas* in honor of the country or for triumphs of the Constitutionalist arms.

"7. All Catholic colleges shall be closed which do not obey the programs and texts ordered by officials and which do not have at their head some professor or graduate of the normal schools of the country, who will be responsible to the Government for any infraction of the rules.

"8. Any infraction of these laws will be punishable by a fine of \$100 to \$500, and arrest and imprisonment from two to four months, or both fine and imprisonment."

CURRENT POETRY

THIS war has produced some splendid poetry—Gilbert K. Chesterton's "A Wife of Flanders," for example, and "F. F. V.'s" stirring celebration of the French forces. But it has also caused numerous poets to attempt a sort of writing to which their talents are unsuited, to force their quiet and scholarly Muses to sing martial measures.

It is good to see that Mr. John Masefield has successfully resisted the temptation to hurl invectives at the Kaiser. To *The English Review* and *Harper's Weekly* he contributes a war-poem that is characteristically vivid and sincere, and actually international in its scope. A translation of it into German would appeal to the Kaiser's embattled subjects, as the original poem must appeal to those whose hearts are with the Allies. Mr. Masefield's poem will be surer of an audience ten years from now than most of the violently partizan poems that this war has called into being.

AUGUST, 1914

BY JOHN MASEFIELD

How still this quiet cornfield is to-night.
By an intenser glow the evening falls
Bringing, not darkness, but a deeper light.
Among the stooks a partridge covey calls.

The windows glitter on the distant hill;
Beyond the hedge the sheep-bells in the fold
Stumble on sudden music and are still;
The forlorn pine woods droop above the wold.

An endless quiet valley reaches out
Past the blue hills into the evening sky;
Over the stubble, cawing, goes a rook
Of rooks from harvest, flagging as they fly.

So beautiful it is I never saw
So great a beauty on these English fields
Touched, by the twilight's coming, into awe.
Ripe to the soul and rich with summer's
yields.

These homes, this valley spread below me here,
The rooks, the tilted stacks, the beasts in pen,
Have been the heartfelt things, past-speaking dear
To unknown generations of dead men.

Who, century after century, held these farms,
And, looking out to watch the changing sky,
Heard, as we hear, the rumors and alarms
Of war at hand and danger pressing nigh.

And knew, as we know, that the message meant
The breaking-off of ties, the loss of friends,
Death, like a miser getting in his rent
And no new stones laid where the trackway ends.

The harvest not yet won, the empty bin,
The friendly horses taken from the stalls,
The fallow on the hill not yet brought in,
The cracks unplastered in the laking walls;

Yet heard the news, and went discouraged home,
And brooded by the fire with heavy mind,
With such dumb-loving of the Berkshire loam
As breaks the dumb hearts of the English kind.

Then sadly rose and left the well-loved Downs
And so, by ship to sea, and knew no more
The fields of home, the byres, the market towns,
Nor the dear outline of the English shore.

He knew the misery of the soaking trench,
The freezing in the rigging, the despair
Of the revolting second of the wretch
When the blind soul is flung upon the air.

And died (uncouthly, most) in foreign lands
For some idea but dimly understood
Of an English city never built by hands,
Which love of England prompted and made
good.

There is Money in Good Light

Good light earns money at every counter and desk; in every store, office and factory and can be made to cost even less (less current) than poor light.

Earns money in stores by attracting customers, and they see better, stay longer, buy better, and buy more.

Earns money in offices by increasing efficiency—more and better work with fewer mistakes.

Earns money in factories by improving the output more of it with fewer "seconds" and less waste.

Earns money everywhere by cutting down lighting bills and enabling people to see better and work faster, with fewer mistakes, less fatigue, and without eye-strain and resultant headaches and "days off".

Alba Bowl on Macbeth-Evans Fixture.
"Good light earns money by cutting down lighting bills and enabling people to see better and work better."

Macbeth-Evans Lighting Equipment

(with Alba and Decora Glassware)

Good light is mostly a matter of the right globes and shades. Alba or Decora Globes and Shades on Macbeth-Evans fixtures get more and better light from the current, diffuse and direct the light where it is needed to make seeing easy and comfortable, and turn the harsh brilliant glare of tungsten lamps into a soft, agreeable illumination that is easy to see by, read by and work by.

How to get Good Light—use the Coupon

Determine to investigate—when you know the facts it is usually possible to get good light by a few simple changes in your equipment.

The following pamphlets give the facts about good light and will be sent free on request:

- | | | | |
|----------------|-----------|------------|--------------|
| 1-Homes | 4-Stores | 7-Hotels | 10-Hospitals |
| 2-Dept. Stores | 5-Offices | 8-Banks | 11-Churches |
| 3-Restaurants | 6-Clubs | 9-Theatres | |

Send for one or more of these Lighting Pamphlets and for a Portfolio of Individual Suggestions for your particular purpose.

If there be any life beyond the grave
It must be near the men and things we love.
Some power of quick suggestion how to save
Touching the living soul as from above.

An influence from the Earth from those dead hearts
So passionate once, so deep, so truly kind,
That in the living child the spirit starts
Feeling companioned still, not left behind.

Surely above these fields a spirit broods.
A sense of many watchers muttering near.
Of the lone Downland with the forlorn woods
Loved to the death, inestimably dear.

A muttering from beyond the veil of Death
From long-dead men, to whom this quiet scene
Came among blinding tears with the last breath
The dying soldier's vision of his queen.

All the unspoken worship of those lives
Spent in forgotten wars at other calls
Glimmers upon these fields where evening drives
Beauty like breath, so gently darkness falls.

Darkness that makes the meadows holier still.
The elm-trees sadden in the hedge, a sigh
Moves in the beech-clump on the haunted hill.
The rising planets deepen in the sky.

And silence broods like spirit on the breeze.
A glimmering moon begins, the moonlight runs
Over the grasses of the ancient way.
Rutted this morning by the passing guns.

In the same issue of *The English Review* is a poem by Mr. Ian Hamilton, a poem not inspired by the present war, but full of that heroic spirit which commands admiration to-day as in the forgotten time when men first went to battle. Mr. Hamilton has worthily sung what is perhaps the most beautiful episode in the history of British arms—the death of that great general who waited, weaponless, the coming of his savage foes.

GORDON

BY IAN HAMILTON

Khartum, January, 1913.

Where the Blue Nile into the White Nile alps;
Where the long betrothed at last link hands;
The ghost of dead men move their lips.
And the sigh of the winds o'er the desert sands
Bears the whispered name—Charles Gordon.

The murmur springs from the monstrous grave
Of the three ten thousand cruelly slain,
But the blue wave rolls to the milky wave,
"Once I bore on my bosom a crimson stain
From the heart of their God—Charles Gordon."

Yet ever the more, through all the land,
From Bahr-el-Ghazl to Kordofan,
That name is a spell to strengthen our hand:
As the sign of the Cross, that name of a Man—
Of the Cross they fastened our Lord on.

Kitchener conquered and Wingate reigns;
No better soldiers, great is their glory:—
The moth and the rust shall dispute their gains
While still, like the lantern of God, shines the
story
Of the warrior who buckled no sword on.

Look, where our flag, like a restless flame,
Proclaims afar the end of fear;
Where would it be but for deeds of fame,
But for the Man who stood under it here?
As the Dervishes stormed—Charles Gordon!

From the steps his pinnace kept signaling, Come—
Our steam is up—the Nile flows red—
Closer each throb of the Dervish drum—
Khartum is lost—your men are dead:—
And—life is sweet, Charles Gordon!

When the thirty spears set his spirit free,
He met them, we know, as friend meets friend,
Sharp keys were they to Eternity,
But he has it—you swear—death was never the
end
Of the leader we loved—Charles Gordon!

Mr. George Sterling has left, of late, such high and strange themes as "Wine of Wizardry" and "The Black Vulture" and sung of things beautifully human. To *Munsey's Magazine* he contributes some verses charming in their evidence of sympathetic understanding.

AFTER VACATION

BY GEORGE STERLING

Below her now the storming city rolls
The tireless thunder of a sadder sea
Than that between the planet's frozen poles,
And she is captive who awhile was free.

Far out across the dusty roofs her gaze
Beholds the turbid vapors jetting forth,
And tow'r and spire unhidden by the haze
Tell where the hungered city reaches north.

No little time ago it was she stood
Where the unhurried sea-wind offered her
The clean, wild fragrance of the cedar wood,
And made the little grasses dip and stir.

But here the sea-wind tells not of the wave,
Smearing the smoke-plumes on the tainted sky,
And lost the blossoms that the summer gave—
The nameless meadow-flowers, aloof and shy.

It is another fairness she must seek,
Here where the cold and stately dungeons roar—
Some hint of what the chiseled granites speak,
Some iron beauty at the world's deep core.

But grant her time a little longer. She
Has yet of memory a vanished day;
Her dreams are of the spaces of the sea,
And snowlike sands about a turquoise bay.

Munsey's Magazine contains also this exquisite study of autumn. It does not need its signature to be recognized as Mr. Le Gallienne's work.

AUTUMN SONG

BY RICHARD LE GALLIENNE

All things that fade and fall
With a strange, haunted sound
Upon the astered ground,
In sad September nights;
Apples and yellow leaves
And the low, ghostlike call
Of summer's lost delights
That grieves and grieves:
Of these be the song made,
Like them to fall and fade.

Of garden corners dank,
With piercing smell of mold,
Of summer's cup of gold,
Wherefrom so deep he drank,
By the dry fountain's edge
Cast down and grown arid,
Dust calling unto dust,
Sedge sighing unto sedge,
Of these let the song tell
That pleaseth Autumn well.

Of woods—a painted scene,
A hollow mimic show,
A mask within whose glow
A grinning death is seen;
Of flowers funeral
That seem not flowers at all,
But little paper shapes
An art fantastic apes:
In these has Autumn pride
That knows not she hath died

New Price
\$695

The Beautiful New 1915 Maxwell "25"

New Price
\$695

Holds the Road at 50 Miles an Hour

The Sensation of the Automobile Year

The biggest automobile value ever offered for less than \$1,000. Our production of 60,000 cars makes the new price of \$695 fully equipped (with 17 new features) possible.

Here are the Seventeen New Features

1. Five door-type body. 2. Two front seats. 3. Two rear seats. 4. Two side seats. 5. Two rear seats. 6. Two front seats. 7. Two rear seats. 8. Two side seats. 9. Two rear seats. 10. Two front seats. 11. Two rear seats. 12. Two side seats. 13. Two rear seats. 14. Two front seats. 15. Two rear seats. 16. Two side seats. 17. Two rear seats.

With Electric Self-Starter and Electric Lights \$55 Extra

The new 1915 "25" is a display of Maxwell's skill. It is a car that is a credit to the Maxwell Motor Co., Inc., Detroit, Mich.

More than 37,000 "1915" Maxwells Ordered Within Six Weeks After August 1st

On August 1st, the double page newspaper announcement—reproduced in miniature above—announced the 1915 Model Maxwell "Wonder Car." It was published in the leading newspapers of America and was followed by Maxwell page advertising in this and other prominent national publications.

Within six weeks after August 1st, more than 37,000 Maxwells were ordered by dealers. Everything indicates that, by the time this is printed, orders for at least 50,000 Maxwell cars will have been received.

This tremendous demand proves that the public and automobile dealers have recognized the 1915 Model Maxwell as the biggest automobile value ever offered for less than \$1,000.

The Maxwell Motor Company is now shipping 800 cars a week to dealers. Within a short time, this production will be increased to 1,200 cars per week. To be sure of prompt delivery, go to the Maxwell dealer nearest you and order your Maxwell now.

"Holds the Road at 50 Miles an Hour"

Quite a difference in your plant, when walls and ceilings are covered with Rice's Gloss Mill-White.

Do you get only 1-500 of the light you should?

Do you want to *reduce* your expense of production?

The amount of daylight in a plant has a direct effect on this expense. One firm found that the expense of production rose 20% when artificial light had to be used. Employees work better when they can see better.

Illumination engineers say that the light in many plants is only 1/500 to 1/1000 of the strength of pure daylight.

If you paint your walls and ceilings with Rice's Gloss Mill-White, you will get the maximum amount of daylight possible in the plant. Rice's Mill-White results in from 19% to 36% more daylight, because it *reflects* light, instead of absorbing it. It cuts electric lighting bills heavily. (See the Kno-tair Hosiery Co. letter below.)

Over 3,000 firms now use this interior finish. Rice's requires *less* frequent repainting since it remains white longest. And it is highly sanitary—it can be washed with soap and water without killing the gloss.

Guaranteed to Remain White Longest

Rice's is the original mill-white. All others are imitations. It is the only gloss paint which contains no varnish. For that reason we *guarantee* that if Rice's does not remain white longer than any other gloss paint—applied at the same time and under the same conditions—we will give, free, enough Rice's to repaint the job with one coat. We also guarantee that, properly applied, Rice's Mill-White will not flake or scale. You cannot lose under this guarantee.

Sold Direct From Factory

Rice's Mill-White is sold direct from the factory, in barrels containing sufficient paint to cover 20,000 square feet—one coat.

Write for booklet, "*More Light,*" and sample board. Write today.

What a Few Users Say

Sanitary conditions in our plant have improved wonderfully. We should judge we are getting 30% more light than before. — *Kellogg's Toasted Corn Flakes Co., Battle Creek, Mich.*

We are indeed astonished to note the vast amount of daylight created by this paint—especially where we were formerly forced to use electric lights all day. Now find it entirely unnecessary. Agreeably surprised to observe how easy it is to keep clean. — *Kno-tair Hosiery Co., Philadelphia, Pa.*

The most practical interior finish we have ever used on walls and ceilings. We imagine will show an increase of between 20 and 25% in light. — *R. J. Reynolds Tobacco Co. (Makers of Prince Albert).*

Find it very satisfactory, indeed. — *Gillette Safety Razor Co.*

The best thing we know of. — *H. Doherty Silk Co., Paterson, N. J.*

Out of six comparative tests, Rice's Mill-White leads. — *Killingly Mfg. Co., Killingly, Conn.*

Tested it in competition with several other makes. The architect and owners respectively, Mr. Pitt and Canadian Yale & Towne Co., agree that yours is the best in appearance. — *F. Telford, Niagara Falls, Ont.*

Still pleased with the finish which was applied three years ago. Is in as fine and permanent condition as when applied. — *General Fire Extinguisher Co., Providence, R. I.*

PERSONAL GLIMPSES

NAVAL WARFARE AS IT REALLY IS

OUR experience in America with what a naval battle really means is confined for the most part to the engagements incidental to the war with Spain, in which our own ships suffered negligible injury and where the injury to the enemy was alleviated by a speedy surrender. In contrast to this lenient form of warfare is the account given by the *Manchester Guardian* of a battle in which there was no surrender, and which terminated only when the broken hulk of the ship attacked, still firing as it could with its paralyzed battery, went down with colors still flying. It was at the battle of Tsushima, in the Russo-Japanese War, and the account from which selections have been taken is remarkable for the fact that it is written by an officer who was through the whole engagement and who took notes of it from the start until his ship was on the point of sinking. The author is Captain Semenov, who, then on the Russian flagship *Suvoroff*, had no definite post on that fateful day and was therefore at liberty to note, in detail, the gradual destruction of his ship. Beginning with the first gun-fire, he writes:

"Now the fun will begin," thought I to myself, going up to the after-bridge, which seemed to be the most convenient place for carrying out my duty of seeing and noting down everything, as from there I could see both the enemy and our own fleet.

The first shells flew over us. At this range some of the long ones turned a complete somersault, and could clearly be seen with the naked eye curving like so many sticks thrown in the air. They flew over us, making a sort of wail, different to the ordinary roar.

After them came others, short of us—nearer and nearer. Splinters whistled through the air, jingled against the side and superstructure. Then, quite close and abreast the foremost funnel, rose a gigantic pillar of smoke, water, and flame. I saw stretchers being carried along the fore-bridge.

How could I make detailed notes when it seemed impossible even to count the number of projectiles striking us? I had not only never witnessed such a fire before but I had never imagined anything like it. Shells seemed to be pouring upon us incessantly, one after another. It seemed as if these were mines, not shells, which were striking the ship's side and falling on the deck. They burst as soon as they touched anything—the moment they encountered the least impediment in their flight. Hand-rails, funnel-guys, topping lifts of the boats' derricks, were quite sufficient to cause a thoroughly efficient burst. The steel plates and superstructure on the upper deck were torn to pieces and the splinters caused many casualties. Iron ladders were crumpled up into rings, and guns were literally hurled from their mountings.

In addition to this, there was the usual high temperature and liquid flame

of the explosion, which seemed to spread over everything. I actually watched a steel plate catch fire from a burst. Of course, the steel did not burn, but the paint on it did. Such almost non-combustible materials as hammocks, and rows of boxes drenched with water, flared up in a moment. At times it was impossible to see anything with glasses, owing to everything being so distorted with the quivering, heated air.

A man reported that the after-turret had been blown up, and almost simultaneously there resounded above us a rumbling noise accompanied by the sharp clank of falling iron. Something large and heavy fell with a crash; the ship's boats on the spar-deck were smashed to bits; burning debris fell all round us, and we were enveloped in an impenetrable smoke. At the time, we did not know what had happened, but afterward we learned that it was the foremost funnel which had fallen.

I attempted to pass through the upper battery, whence to the poop the nearest way was through the Admiral's cabin, but here the staff officers' quarters were burning furiously. Turning back, I met Flag Lieutenant Kruijanoffsky on the ladder, hurrying downward.

"Where are you going to?"

"Into the steering compartment; the rudder is disabled," he shouted to me in passing.

"That is all that is wanting," thought I to myself, rushing up on deck.

He speaks again of the sensation as the shells were being poured out upon the ship as from some huge receptacle overturned in the pall of smoke above them. They fired blindly into a blank wall of gray powder-smoke, but it soon became evident that the enemy either could see them or else had their range well fixed, for the *Suvoroff* became the center of a whirlwind of fire and iron. We read:

Lying almost stationary in the water, and slowly working her engines so as to get on the proper course and follow the fleet, the *Suvoroff* offered her battered sides in turn to the enemy, firing wildly from those of her guns which were still serviceable, and, alas! they were few in number.

Creeping with difficulty onto the upper deck through the torn hatchway, I scarcely recognized the place where a short time since we had stood with Demchinsky. Movement was literally impossible. Astern the spar-deck had fallen down and was burning in a bright flame on the deck; in front of me was a heap of debris. The ladders to the bridge had gone and the starboard end of the bridge had been destroyed; even the gangway under the bridge on the other side was blocked. I was obliged to go below again and come down the port side.

There were no fires; everything that could ignite had already been burned. The four 75-millimeter guns had been torn off their mountings, and in vain I looked on them for marks of direct hits. None could be seen. The havoc had clearly been caused by the force of the explosion, and not by the impact of the shell. How was this? Neither mines nor pyroxylin were stored in the battery, so

AFTER competitive tests and a repeat order last year, LARKIN CO. ordered 5 more Lippard-Stewart 2-Ton Trucks in August, 1914. This victory for Lippard-Stewarts was gained only by efficiency and low up-keep costs. Larkin Co. now use only the Lippard-Stewart for medium and light hauling after actual tests and use of other cars.

Sturdy—Quick-Acting—Noiseless

Lippard-Stewart delivery cars and trucks are now operating in over 70 lines of business. They are recognized in every city for their attractive appearance, noiselessness, flexibility and ever-ready service. You see fleets of them doing work in the large cities. They are used by the U. S. Parcel Post, by the U. S. Army. They are popular for Omnibus, Patrol, Ambulance and Funeral Work.

Different Capacities for Different Uses

A manufacturer or merchant knows that he wastes much by using a truck of overcapacity. By making up a fleet of Lippard-Stewarts in $\frac{1}{2}$ -ton, 1-ton, $1\frac{1}{2}$ -ton, 2-ton sizes, you cut out the waste in operating expense and realize a big saving and great convenience in having only one make of trucks and delivery cars.

Attention given to particular body requirements.

Business Men, Write Us About Your Delivery Problems

the enemy's shells must have exploded with the force of mines.

The final touch to the picture is given in a paragraph taken from the Japanese official account of the engagement:

In the dusk, when our cruisers were driving the enemy northward, they came upon the *Suvaroff* alone, at some distance from the fight, heeling over badly and enveloped in flames and smoke. The division (Captain-Lieutenant Fudzimoto) of torpedo-boats, which was with our cruisers, was at once sent to attack her. Altho much burned and still on fire—altho she had been subjected to so many attacks, having been fired at by all the fleet (in the full sense of the word)—altho she had only one serviceable gun—she still opened fire, showing her determination to defend herself to the last moment of her existence—so long, in fact, as she remained above water. At length, about 7 p. m., after our torpedo-boats had twice attacked her, she went to the bottom.

THE PENNANT TRUST AND THE WORLD'S SERIES

CREDIT for smashing the Pennant Trust, says the New York *Herald*, goes to the Boston Braves, who wrested from the New York Giants and John McGraw the pennant that for three years has been the property of the Gothamites. It had come to be regarded by New Yorkers as an inalienable right to have a winning team, but this year the Braves, when last on the list, decided that this was a monopoly in restraint of good baseball, and, on the afternoon of July 18, commenced dissolution proceedings against the Giants' position. Heywood Broun, of the New York *Tribune*, recounts the history of the Braves' progress, that began with their rise to seventh place that fateful day:

Since then the Braves have been doing little else but win. On July 20 they were in sixth place. They were fourth on July 21, and then after a long, hard pull they reached second place on August 10. The next day they dropt into third position, but this setback was only temporary. From second to third and back to second again, they fluctuated until, on September 2, they moved into first place. Hurled back from here after only a day's tenure, they drew into a tie for the lead on September 5. On September 8 the tie was broken, and since then the Braves have been moving onward and upward. The Giants have been moving onward and downward.

Some time ago George Stallings was christened the Miracle Man, and now his title is secure.

A trust that did not bust is the Athletic Association for the Preservation of the American Pennant for Philadelphia, and its magnate is Cornelius McGilliuddy, inevitably renamed Connie Mack. The scalp that now adorns the Athletics' clubhouse completes a fair half-dozen similar trophies, and Connie Mack is besieged with messages of congratulation from all parts of the baseball world. The Balti-

Western Electric Washer and Wringer

The Name Guarantees It

Here is the right Electrical Washer. Correctly designed. The revolving cylinder sends the hot, cleansing suds through the fabric without injury to even delicate laces. Cost of operation so slight that it need not be considered. Only proper and modern way to wash clothes, whether by housewife, servant, or laundress. Converts wash day and ironing day into one. If your house is wired for electricity and you want to practice domestic economy—investigate.

more News remarks editorially upon the victory:

With old "Cap" Anson, the tall leader of the Athletics now shares the honor of being a flag-winner six times. Not only Philadelphia, but the baseball world at large, owes Connie Mack much. He is a baseball-builder in more than the sense of his own club. The tall tactician of the world's champions is pointed to throughout the land as a baseball example well worthy of emulation by all, from the youngster breaking into his first amateur game down to the man making his mark in the majors. Connie is anything but the proverbial slave-driver of baseball, and he is as retiring as a blushing bride. His method is such that the players truly get the greater part of the honors, no matter how large the part that might be his due.

By bringing the college men into the game to a greater extent than ever before, Mack raised to a degree the standard of behavior on the field. A member of the Athletics being put off the field for bad behavior is practically unheard of. Thus Connie has helped the great national game and thus does he richly merit the honors that are again his. Whether he wins or loses the coming big battle, we can not say, but defeat can not harm the Mackian standard. It is built to stay.

In *Harper's Weekly* of October 3 appears a forecast by Billy Evans, in which he does not venture to predict the outcome of the championship series, but does state his view of the difficulties the Athletics will meet in any conflict with the Braves, and gives his opinion of their chance for success. He writes:

A meeting with the Boston club would present many new situations for the Athletics to solve. Mack's team would be up against a crack trio of pitchers in James, Rudolph, and Gowdy, with whose delivery they were entirely unfamiliar. This would naturally make it necessary for the Mack men to play a more careful, cautious game, than in facing the Giants for the third time. While the Athletics have always been fairly successful against Tressau, spitball pitchers as a rule give them more trouble than the old-style delivery twirlers. James and Rudolph, I understand, depend largely for success on the use of the spitball. This means the Athletics will get more than their share of a style of delivery hated by all players. To make the situation all the harder, the Athletic pitchers will know little of the style of the Boston batsmen, with the exception of Johnny Evers.

The Athletics should have one decided advantage over any National League team it may be called upon to face—condition.

Regardless of what team wins the pennant in the National League, it will have been through a grueling struggle that is bound to have its effect on the mental as well as the physical condition of its players. When the strain is over and the pennant decided, a period of relaxation sets in, and often it is very hard to get the team back into high speed for the crucial test. Such races as have featured the National League this year very often find all the contenders quite stale as they go under the wire. The Athletics have been taking things comparatively easy for weeks past, and should go into the series in the top condition.

Duofold Underwear

Combines All the Protection of Wool and All the Comfort of Cotton

BETTER protection against sickness and more **REAL** comfort are given by Duofold than by any other underwear.

Duofold is a *double garment*, made of two fabrics which together weigh much less than ordinary underwear. The outer fabric is warm, light weight wool. The inner lining is soft, thin cotton. *No wool touches the skin.* The cotton lining absorbs the moisture of the body and protects the flesh from the irritating wool. The woolen outer fabric repels the Winter's cold and retains the natural heat of the body.

The two fabrics are joined by wide stitching through which the air circulates and keeps the garment fresh and dry.

Your physician will explain the scientific reasons why this two-ply garment is more com-

fortable than ordinary underwear.

Colds are caused by sudden chilling after overheating, and *no other underwear keeps the body at so nearly natural heat under all changes of temperature as Duofold.*

Its woolen outer fabric keeps you from getting chilled as quickly as you do in an all-cotton garment. The cotton lining keeps you from perspiring so excessively as you do in all-wool underwear.

Duofold keeps you warm, but it *doesn't scratch* like all-wool underwear—the cotton inner fabric is soft as a rose.

And Duofold *doesn't pinch or shrink* like all-wool underwear.

Duofold is made in Union and Two-Piece Suits in Several Weights and All Sizes for Men, Women and Children.

FREE! Sample of Duofold Fabric and Booklet on request.

DUOFOLD HEALTH UNDERWEAR CO., 37 Elizabeth St, Mohawk, N. Y.

That tense moment

—when the cue ball pauses with indecision right on the edge of the pocket.

It's just one of the ever-changing, exciting situations that make Home Billiards or Pocket Billiards the game of a thousand thrills.

Give your little steam "boy-ler" this "safety-valve" for his explosive energies. Let all the family share this royal diversion that steadies nerves, braces the body and induces sound sleep.

Brunswick "Baby Grand"
Carom Billiard Style

"BABY GRAND" Carom or Pocket Billiard Tables

A cabinet masterpiece in rich San Domingo mahogany. Note the equipment—genuine Vermont slate bed, celebrated Monarch quick-acting cushions and fast imported billiard cloth. These give the same speed, accurate angles and long life of Brunswick regulation tables, from which the "Baby Grand" varies only in size. Not a toy nor cheap-made make-shift. Yet sold to you at factory prices—terms as low as 20¢ a day.

Note, also, the concealed cue rack and accessory drawer that holds entire playing outfit.

"Baby Grand" sizes 3 by 6 feet, 3½ by 7, 4 by 8. Brunswick "Grand" 4½ by 9 feet. All furnished as a Carom, Pocket Billiard or combination Carom and Pocket Billiard Table.

Other Brunswick Home Billiard Tables include "Convertible" Models, which can be changed in a moment from full-fledged Billiard and Pocket Billiard Tables to Library or Dining Tables, and vice versa.

30 Days' Trial—A Year to Pay Playing Outfit FREE

We give with each Brunswick Table a complete playing outfit FREE—balls, hand-tapered cues, rack, markers, spirit level, cover, cue-clamps, tips, brush, chalk, book on "How to Play," etc.

Mail the Coupon or send a postal for our brand new edition of "Billiards—The Home Magnet," a de luxe book that pictures Brunswick Tables in actual colors; gives easy terms, factory prices and full information of our 30-day trial offer. You incur no obligation and book comes postpaid.

WEATHERING GALES OF LAUGHTER

IT can be readily understood that a fun-maker must be a philosopher. Some philosophers are funny, and one of them has written a monograph on laughter, but these are different matters. Any man who has stood before thousands of people and has seen a smile break through the adamant line of their countenances, has watched it stretch and spread, surge into a chuckle, rise and twinkle in a thousand eyes, and finally burst forth into a crescendo of irrepressible merriment—any one who has seen this night after night, and has known himself to be the cause of it, must inevitably have formed a philosophy of laughter. Marceline, the "droll" in the New York Hippodrome, says that his laugh-producing antics do not seem funny to him at all. His philosophy is that audiences are a queer breed of animals who react unexplainably to certain known tricks that he plays. But John Bunny, of the Vitagraph Film Company, has, upon his own testimony, a philosophy of another sort. In the October *Photoplay* he states it as follows:

Laughter is the solution of life; laughter is life; laughter daily makes it possible to go on. There is only one delight that is keener than that of a joke, a comment, or a gesture at which you spontaneously laugh, and that is the delight of making other people, a whole crowd of people, laugh with you. Making other people laugh is the greatest game in the world—and we are all playing it. Some of us are professionals; most of us are amateurs; that is all. We all like tears, I suppose, or we would not shed them so easily. But what is the good of tears, unless it is to increase our delight in laughter?

If the tragic spirit is always hovering over us, always the comic spirit is just around the corner. For the comic spirit, which is the spirit of laughter, is a rough-and-ready and every-day sort. It is above us or beneath us—it is of us. Laughter is a wind; sadness is a cloud. The wind of laughter—and nothing else—may dispel the cloud of sadness. What better job in life could a man hope for than to be a wind of laughter? None, unless to be a gale, a gale of laughter blowing around the world!

Such a statement, after thirty years of being a comedian, is a startling testimony to the efficacy of mirth. Confronted by an individual who believes so implicitly in the universal need of it, we can but laugh with him, as thousands do daily. John Bunny has made people cry, but that doesn't interest him. It is the laugh that counts. In acting before a camera, he confesses, he misses sorely the concrete, immediate response to his efforts. In order to receive his payment, he must go around to the "front" and listen in the dark to the people shrieking at his rotund shadow. But, on the other hand, he avoids thereby the terror of the footlight artist—stage-fright. One may have extorted a million laughs, and yet may find himself, in

Some of the "Whys" of the Eight-Cylinder Cadillac

The superior steadiness of the Eight-Cylinder Cadillac has its source in several causes, each and every one of them scientifically exact.

This superlative smoothness, in other words, is not left to chance, but is the positive result of positive principles.

And these positive principles exert secondary influences, each of which, in turn, contributes to the same desired end.

Translated into the simplest language, eight cylinders mean greater continuity in the generation of power. The greater the degree of continuity, the greater the smoothness, and the less the vibration, of course.

This, then, is the main and primary source of that steadiness which makes you forget that an engine is at work carrying the car forward.

The power impulses are not "almost" continuous, but actually and completely continuous, so that you are assured that the riding qualities of the car are as scientifically smooth as they can practically be made.

And then there are added to the main principle, the supplementary advantages which accrue from the very nature of the V-type engine—every one of them tending, again, to lessen vibration.

The crankshaft in the Cadillac V-type eight-cylinder engine, for instance, is but $26\frac{1}{16}$ inches long, between the outer ends of its rear and forward bearings.

Experienced motorists, familiar with the periodic vibration or "thrashing" which is characteristic in engines requiring a long crankshaft, will recognize immediately the beneficial effect of the lesser length.

The cam shaft, which is driven by a silent chain from the crankshaft, is likewise shorter, and another tendency toward periodic vibration is thus removed.

All of the reciprocating parts, including pistons, connecting rods, valves, etc., are very much lighter, a

fact which in itself contributes very largely to smoothness and absence of vibration.

Again, the "smashing" force with which the power impulses are ordinarily applied, is eliminated in this Cadillac Eight-Cylinder engine because the application of power is distributed over eight pistons—an impulse every quarter turn of the fly-wheel—another element contributing to smoothness.

The impulses overlap so completely that they melt and merge, as we have said before, one into another. When one power impulse is but half way on its stroke, another impulse begins and the impact on each is relatively light.

No severe shock or jar is communicated in these explosions. The process is not a succession of hammering blows, but rather like the touch of light and expert fingers sweeping the key board of a piano with almost incredible speed.

The net result is that unique sensation which tends to make you forget the presence of the engine—that sense of buoyance and of being borne forward by some means other than mechanical.

The basic power principle would not, of course, exercise its highest efficiency if it were not supplemented and supported by that painstaking construction in every other part of the chassis which is characteristic of Cadillac execution.

The car is not merely "a" car with a V-type eight cylinder engine, but an Eight-Cylinder Cadillac with each and every part and function in tune and harmony.

We are serenely confident that after the first ride, your own expressions of delight will go far beyond anything we may have said in these announcements, or any enthusiasm that may be expressed by the Cadillac dealer.

There are twenty-five models of the Hamilton watch. Every one has Hamilton quality and Hamilton accuracy. They range in price from \$12.25 for movement only (in Canada \$12.50) up to the superb Hamilton masterpiece at \$150.00. Your jeweler can show you the Hamilton you want, either in a cased watch or in a movement only, to be fitted to any style case you select, or to your own watch case if you prefer.

HAMILTON WATCH COMPANY
Dept. L Lancaster, Pennsylvania

trembling panic, facing the thought failure. John Bunny knows well enough what this experience is, and describes graphically the mental torture of a victim:

There are the rows of faces, each looking very much like every other, and horror of horrors!—each one as still, patient, as glum, as the faces of the passengers in street-cars going home at night. Then it is that the comedian's heart rises in his breast, and his knees tremble under him, and the sweat rolls down his cheeks—and—he does his best or his worst.

But when they do laugh and one laugh begets another and you can't mop your face or open your mouth without setting them off into guffaws! then the comedian really lives; then he rides the upper air, then he is a conqueror beside whom Christopher Columbus is a scared adventurer, afraid to go home, and Napoleon a little man with a frown.

EATING IN AMERICAN

"WHAT'S in a name?" is a matter of as much dispute at present perhaps, as at any time since Juliet first pondered the question. Russia finds St. Petersburg distasteful and substitutes Petrograd; Turkey, finding this alteration too much for her sense of fitness (or, possibly, her sense of humor), changes it back again to St. Petersburg; and meanwhile the Associated Press and other heartless newsgatherers abroad continue to afflict the public with such names as Boverig, Rzeszow, and Wieliczka. We at home must take foreign names as they come, but already the war has moved us, and quite in the spirit of neutrality, to alter a few names in our own land. As evidence of this, from Chicago comes news of change that may sweep like a fury of fire over the whole country, avenging in an instantaneous reversion to common sense the abuse of years' standing. Briefly, it is this: Chicago restaurateurs are deciding to call the dishes they serve by American names instead of German or French. According to the *Chicago Post* we shall find that—

Where "Canapé Russe" led off a lunch, caviar on toast is the new appetizer. "Wiener Schnitzel, Holstein," has been given its passports, and veal cutlets with fried egg and vegetables rushed into place. "Filet mignon, Stanley" is no more—it is Tenderloin steak, horseradish sauce. "Chicken broth en gelée" is just plain chicken broth in jelly. "Ris de veau petits pois," is nothing more or less than sweetbreads with new peas. "Chicken sous cloche" is the same bird "under glass." For dessert "Lalla Rookh" is the well-known vanilla ice-cream, with rum.

Heretofore the lady or gentleman who ate in English in our best restaurants has been classed with the barbarian who failed to hand the waiter his watch on a chain. To order plain sweetbreads at peas, instead of ris de veau, petits pois identified a person as an aborigine who would tuck his napkin into his collar and eat his sweetbreads and peas with

SATISFACTION

When you buy furniture you want to know that it is the best obtainable, that it will add to the beauty of your home, will give a charm or pleasing effect at once noticeable.

Macey Library Cases are made after designs of the old masters in furniture. They are like heirlooms handed down through generations.

Let us send you our style book giving complete descriptions and suggestions on modern libraries.

his knife. Next to a failure to tip, there was no deadlier insult possible to the attendants in a first-class restaurant than to be addressed in the English language. We do not pretend to understand this; we only know from experience that it is so. We congratulate the Hôtel La Salle cooks (slang for *chef*) on their bravery in serving food not smothered in its native dialect. They are pioneers, and for a while no doubt will be maligned. But sooner or later they will get their due meed of appreciation from the countless army of hungry people who, at one time or another, have wandered through a linguistic menu sealing about \$5 a syllable, and ordered whatever they could pronounce in the hope that it would turn out to be something good to eat; but which, masquerading under a name as long and as complicated as this sentence we are just writing, usually materialized as chicken hash or bologna sausage. We are encouraged to believe the time is coming when even the head waiters will descend from the gloomy heights of dignity they now occupy, and, meeting us on the common ground of a language we can both understand, treat us as if we were nearly as good as they are!

AN AMERICAN IN LOTUS-LAND

THEY say that a true American could not be happy in Lotus-land, and doubtless they malign us. The true American knows more than the mere alchemic trick of turning time into money. On occasion he can be extravagantly idle, even for days at a time. And yet, seldom does he understand the real nature of the Lotus-eater, the spendthrift of golden hours, to whom the striking of the clock, as time ticks on, is no more than the tinkling of bells stirred by the breeze. For such lack of sympathy he is not to be blamed, for it is a far cry from the city, where one runs to catch street-cars, to such a place as that described recently by a writer to the New York Evening Post. She writes from Longitude 150°, mid-Pacific, from an islet of Hawaii, where life is lived simply and comfortably on the theory that "Nature will provide." The story is practically only a diary of a few summer days, written with the lazy ease and inconsequentiality which is the very atmosphere of Lotus-land. She begins abruptly:

... Don't ask where we are. You will not find us on any map. We are not even a pin-point. We acknowledge the vagueness of our Hawaiian islet whereabouts. It is, in fact, one of the things we love. We are only a fringe of beach between two great oceans—on one side the joyous blue of the Pacific, and on the other a great sea of sugar-cane surging up to the mountain wall behind, five thousand feet high; mountains on which you seem to see the very hand of God, the beginning of creation. It is a place where everything had everybody "begin again."

And here are found all races and peoples, a *marécroïne* of nationalities. There are Japanese, Chinese, brown-faced and bare-foot natives, Filipinos, Koreans, Portu-

KNOWN THE WORLD OVER

The "Bulldog"

A new idea of the greatest interest—this Gillette Safety Razor with *stocky bulldog handle*, extra weight, generous grip and fine balance. Brought out less than a month ago, and already creating more excitement and a quicker success than any new model since the first Gillette came out.

Contained in an oval case of Gray Antique Leather, with Blade Boxes to match, containing 12 double-edged Gillette Blades (24 shaving edges). With Triple Silver plated Razor, \$5.00; with Gold plated Razor, \$6.00. See it at your Gillette dealer's anywhere.

Detroit, Mich.

SECURITY
AUTOMOBILE
CONTRACT
INSURANCE

128,000 Miles!

"We have been using a Continental Motor in one of our cars for several seasons past. This car has gone a little over 128,000 miles. We are returning the motor to have it overhauled."—From a communication of one of the bureaus of the U. S. Government, on file at the Detroit factory.

Continental Motors

One hundred and twenty-eight thousand miles—five times around the world! Such is the pledge of mechanical security in Continental Motors.

Yet—when a repair part or a service is needed—next year or ten years from now, back of the maker of the vehicle and back of all change in the industry will still be the Continental Motor Mfg. Co., a sure and reliable source of supplies, an insurance of uninterrupted use.

Security like this is vitally important, preceding almost every other consideration in the making of a motor investment.

Men do not buy houses and lands without examining well the abstracts thereof. An abstract insures the future by guaranteeing the past. The future of the car with a Continental Motor is insured by the extra guarantee of over a hundred thousand Continentals now in use, and by more than ten years of manufacturing success.

A Continental Motor is a sure safeguard of many seasons of satisfaction, with the maximum resale value when the time finally does come for a new Continental.

Security! And over a hundred Continental-equipped pleasure and commercial cars to choose from!

Make sure of the future—insure yourself with one of these Continental-equipped cars or trucks.

use, pretty Spanish girls, shy and well-dressed, and a sprinkling of the more secure types of world-wanderers. In little spaces we are shown the mélange of humanity as it appears in the bright Hawaiian sunshine. First a glance from the veranda in the morning light:

Ogawa, the Japanese yard-man, is running along the horizon-line watering palms and ferns; Ichii, also Japanese, is somewhere on the Milky Way conveying papayas and pineapples to the breakfast-table, and incidentally making a charming bit of color in the morning light with her gay kimono and obi of turquoise blue. The Chinese cook, Ah Yee, very much in the ascendent, is boiling rice and frying bananas against the moment when "Boss" comes *kaukau* (eat)."

Then a view of the tiny estate, bounded—

On the north, by a little native store where you can buy three eggs, five bananas, ten *kukui* nuts, and get your watch mended. Also on the north, a pseudo-Japanese rest-house, where the faithful assemble on feast-days and distribute cakes to any and all. On the east, a New England person and a mussy "Park," so it is labeled. On the south, a square of sand perpetually covered with drying fish, and the Ah Lum store, with Ah Lum himself and the ten little Ah Lums. (That boundary of Ah Lum's is a source of continual fascination.) On the west, another Chinese store, with a pretty wife; a Japanese carpenter and his family, and a Japanese tailor-shop.

Perhaps you are asking, "What's in the yard?" Well, first, and last, and always—mango-trees. I am sitting under one now, with a group of children, waiting for a ripe mango to fall. When it comes "kerchunk," there will be a race for all to see who gets it. I don't, you may be sure. Those little people squatting on their heels are incredibly swift. Once upon a time, when I grasped a mango which hit my nose, I heard them say, "The fuller take." (In our beach vernacular everybody's a "fuller," regardless of age, sex, or previous condition of mind.) As you have doubtless heard, eating a mango is a kind of abandoned joy. Down you go biting into the juicy fruit from which great, luscious streams pour forth over your countenance, hair, and clothing. It's worth it. You count the world and cleanliness well lost, and soon gaily to the next. For this is the variable rule of mango-land: if you eat one, you eat three at least. And some little friends of mine are a bit aggrieved because their mother has fixed the daily maximum at fifteen. Oh! parents can be so hard!

Where did I leave off? The yard? I have just made a tour of it to explain that under no circumstances must the branches of the *kukui* be wantonly trimmed. This is the form that the directions took, otherwise they would be completely misunderstood. "You savvy this kind tree?" (Putting my hand upon it). "You savvy, Boss?" (Oh, the number of times I stole J.'s spirit and authority!) "He looks much like. No want cut. This tree? Yes, all time—no cut! Boss too much *kuku* (angry) before cut."

J. seems to be especially attached to the *kukui*, and indeed I do not wonder. The leaves are shimmering gray with

plumes of white blossoms like the lilac, only more exquisite, and a solid trunk of deep, rich black. It's like a bit of poetry, a bar of music in the offensive prose and discord of our beach hovels and shanties. For we are dirty; shockingly, fearfully, horribly dirty; sewerage unknown; sanitation written only on the stars; stenches innumerable; ways of living curious, surprising, and all in the open, so "he who runs" and walks may mark, learn, and fearfully digest.

"I can hear you asking," the writer hastens to add, "'What about the babies? How do you dare bring them up in a place like that? Why do you live near the hovels and shanties?'" Her reply is readily given:

Because the "babies" are already germ-proof. Bare-footed, with only one garment (rompers), bareheaded, outdoors day and night (we sleep on a screened veranda), bathing in the sea, drinking good milk, they are supremely, superbly well and strong. Our cow, called after native royalty Queen Kahumanu, is our family hearthstone, as it were—our Lares and Penates. Where we go, she goes, or the other way around. We rely on her as we do on this wonderful, wonderful climate. Sunlight pulses around and through the babies, and shines from their jolly little curls and browned faces. For they are not pink and white, but amber—the Sun Children of ours.

NEW SURGICAL TACTICS ON THE BATTLE-FIELD

IT has been said that the armies in Europe have better arrangements for taking care of the dead than of the wounded. It may seem a ludicrous example of inefficiency that, where large numbers of wounded are certain to result from every battle fought, the most elaborate measures have not been taken to provide for them. Yet something must be granted to the fact that war to-day is fought on a scale unprecedented, with untried equipment and according to tactics unknown in any former actual fighting experience. The army surgeons and their staffs face conditions for which no one could be completely prepared. In six weeks of fighting the wounded totaled nearly a quarter of a million, a record which the reddest page of history can not exceed. In the *New York Herald*, Dr. James J. Walsh, M.D., Ph.D., Sc.D., explains the difficulties confronted by the surgeons of to-day:

During the Civil War in this country, or even during the Franco-Prussian War, a battle lasted for a day or at most two and a portion of the third, and then an opportunity was afforded to succor the wounded and carry them at least to the field hospitals for surgical treatment. Now there is very little chance for that until many days have passed, and in the meantime there are ever so many more wounded demanding attention than in the battles of a generation ago. This new problem has developed a new mode of procedure on the surgeon's part and a modern method of caring for the wounded in battle which does

SHAMPOOING
with "Packer's"
brings lasting benefits to
your hair in a natural
way.

See how reasonably it
accomplishes this:

Its pure pine-laden lather
first removes the dust and
dandruff which clog the pores.
Thus, the scalp is made clean
and pliable.

Then—as its rich, creamy
lather is rubbed into the scalp
by continued manipulation,
more blood is brought to the
tissues and the hair roots re-
ceive increased nourishment.

In this way, the regular use of
"Packer's" improves the health,
lustre and beauty of your hair.

much to save at least some of the awful suffering that has to be undergone.

The surgeon now does not wait for the end of a battle, nor does he remain in quarters some distance at the rear, expecting the wounded to be carried to him, for the number of wounded are entirely too great for that and the battle is waged too strenuously to permit such movements of the hospital corps.

Armed with a pocket surgical case, in which are contained a number of absolutely necessary instruments and ligatures, and with some antiseptics, especially iodine, and, above all, carrying a hypodermic syringe and a plentiful supply of morphine and other anodyne drugs, the surgeon on hands and knees makes his way along the rows of the dead and wounded even while the battle is raging, and, with the shot passing over him, stretches himself alongside those needing care and proceeds to help them in the best way that he can for the moment.

This is the key-note of the surgeon's new duties: temporary alleviation of pain and stoppage of loss of blood. It may be days before the men he relieves can be placed in comfortable wards in some field hospital; meanwhile the hospital is the field itself. No longer does the surgeon depend upon antiseptics alone. He has progressed a step beyond that, and now includes anesthetic invariably in his field equipment. Dr. Walsh explains:

As soon as a wounded man is encountered, he is given a full hypodermic dose of morphine and his position is made as comfortable as possible by supporting wounded members and putting a fold of one of his own garments under his head. Every soldier in a modern army carries in his knapsack a little packet of antiseptic gauze and a bandage or two. The surgeon examines the wound, particularly for an external bleeding, and relieves that by catching the artery, if one is spurting, and tying it. Oozing of blood is prevented by packing with gauze and by pressure.

A tourniquet which was the old-fashioned mode, preventing bleeding by twisting a bandage so tightly around the limb as to prevent all blood from flowing through it, is now very seldom applied, because it may be many hours before more special attention can be paid to the wounded man and in the meantime gangrene or very serious infective processes would be set up in the limb. Where an artery is not directly wounded the pressure of gauze can be depended on to cause stoppage of bleeding, especially in connection with the use of morphine, which lowers blood-pressure and lessens the movements that might cause reopening of bleeding points.

The fact that the gauze is antiseptic and carefully carried by each individual soldier in its original wrappings, that it is meant to keep it aseptic, provides the proper material which the surgeon could not well take with him in sufficient quantity on his crawling errand of mercy, and which could not be well preserved from possible infection if it were carried in any considerable quantities. All that one soldier carries may not be needed for himself, and then some of this material is employed for those lying near him, so far as is necessary.

Where bones have been broken in the

mba by bullets the soldier's own bayonet
his rifle is used as a splint, so that when
becomes necessary to move him, when-
ver that will be possible, the soft tissues
will be not further injured than they have
been by the renewed movement of the frag-
ments and the bony fractures rendered
even more compound, that is, set more in
communication with the outer air, and
therefore made much more in danger of
infection than they were before.

Wherever wounds are exposed to par-
ticular infection iodine is used as an
antiseptic and a protective. Iodine is also
employed as an antiseptic before the intro-
duction of the hypodermic needle, so as
to avoid the carrying in of infectious ma-
terial from the skin, for soldiers have
often not had the opportunity, even if they
always had the inclination, to wash them-
selves for days before, and their resistive
ability is distinctly lowered so that in-
fections readily take place.

The antiseptic having played its part,
the further services of the anesthetic com-
bine to restore the victim and refresh his
weakened forces. Dr. Walsh shows how
and a nurse morphine may be to the fevered,
can-racked, and nerve-frenzied patient:

It takes usually only a few moments
for the hypodermic before the wounded
soldier feels more comfortable, and the dose
is usually large enough so that in spite of
the battle raging round him he falls to
sleep. If he has been through days of
fighting, such as many of the men during
the present war have had to encounter,
sleep comes rather readily with the bene-
ficial aid of morphine, in spite of his own
pain and all the bustle and tumult around
him. The picture of these sleeping, help-
less soldiers dreaming away hours that
could otherwise be full of intensest pain
and discomfort is the one relieving feature
of the awful scene of the modern battle-field.

Most of the wounded are suffering very
severely from thirst, partly because they
have had no opportunity to drink fluids
to any extent for hours before the battle,
partly because their exertions have tended
to use up their fluids, and partly because
they had been too occupied with their
surroundings to obtain as much fluid as
they could when the opportunity pre-
sented itself. The morphine quiets this
thirst better than anything else. It would
often be dangerous to carry what might
seem a bounteous supply of water to
soldiers under such circumstances. It
would raise their blood-pressure, which
could cause bleeding to begin again in
many places even after it had stopped, and
could often be fatal for those who had
wounds in the abdominal region which
had pierced their stomachs and intestines.
The one hope for these men is that they
shall be kept at rest, and their digestive
tract left quite empty. Not a few of them
sweat completely and rather rapidly
under such circumstances.

A good deal of sympathy is aroused for
soldiers on the firing-line, because, as a
rule, for many hours at a time they do
not get regular food and must be satis-
fied with very little to eat. It is fortunate
for many of them, however, when wounds
come in the abdominal region, that their
stomachs and intestines are practically
empty, for that constitutes the best possi-
ble protection against the pouring out of
intestinal contents, which would inevitably
lead to fatal peritonitis. A wound, even if

NATCO HOLLOW TILE

Fireproof, age-proof, damp-proof, vermin-proof—warmer in
Winter, cooler in Summer

Why Build of Other Materials When You Can Build of Natco?

NOT one single sound argument has been developed
against Natco construction, and every one of its in-
numerable advantages is an argument against all other
forms of construction.

The truth becomes plainer and clearer the more the sub-
ject is looked into. *You will find every Natco argument
strong, every argument against it weak.*

Partitions, floors and roof as well as exterior walls can have Natco
construction and Natco fire safety—there are different forms of Natco
Hollow Tile for their different requirements. None is genuine Natco
unless it bears pressed into the Hollow Tile the trademark "Natco."

More information as to Natco Hollow Tile will be found in the new 32-page handbook,
"FIREPROOF HOUSES OF NATCO HOLLOW TILE," containing 75 illustrations
of Natco residences and being an invaluable guide to the prospective builder. Mailed to any
address upon receipt of 10 cents to cover postage.

Now You Can Buy a Bissell \$67⁵⁰ Electric Suction Cleaner for 67⁵⁰

With One Full Month's Free Trial

QUANTIFY production and close manufacturing permit us to reduce the price of the Bissell Electric Suction Cleaner, complete as shown, to \$67.50.

Try It Through Your Dealer—We'll Prepay All Charges

No building so large—no home so small—that a Bissell will not save you money and time. Gives perfect service in Office Buildings, Churches, Schools, Theaters, Restaurants, etc., as well as Homes. Cleans a whole floor of your house from one connection. Runs lightly beside you—you don't have to drag it or push it on a stick.

See It Work Before You Buy Any Cleaner

The Bissell moves more air—at higher speed—than built-in cleaners costing several times its price, because its powerful motor is close up to the job—no long lengths of tubing with friction-making bends and joints. It extracts the fine, germ-laden dust that cheap, low-powered cleaners cannot reach, as well as litter too heavy for them to lift. *The Bissell gets everything.*

It Is Also a Power Motor, to Lighten Your Housework

For a small additional cost we will supply you with an Emery Wheel and Buffing Wheel for sharpening knives, polishing silver, and also with a *Complete Power Base* to run your washing machine, bread mixer, light lathes or other small machinery.

A Month's Free Trial—Write For It Today

Give us your dealer's name and we will send it through him, or direct if you prefer. *Extended payments arranged if desired.*

doubly penetrating, of an empty stomach or intestines seldom produces anything more than a very localized area of peritonitis, and men have been known to have as many as seven penetrating wounds of the intestines, a single ball causing a few of them because of its mode of passage through the abdominal cavity, without causing anything more than a passing intrabdominal inflammatory reaction from which they completely recovered.

The morphin has a very favorable action in a number of other ways. The awful scare that settles down over a man who does not know how badly he is wounded and fears for the worst, while for hours there may be no chance to help himself and no opportunity for treatment, would of itself prove fatal in many cases. It is perfectly possible for a wounded man to be literally scared to death over his condition, which may not be nearly so serious as he thinks. Besides, this scare has a tendency to raise blood pressure, to make his heart beat faster than before, and consequently to cause bleeding to occur more copiously.

Nature mercifully causes many a man to lose consciousness shortly after being wounded, even tho the wound may not touch a vital spot in him. During such a fainting spell bleeding usually stops because the heart beats slow and feebly, but when the wounded man recovers consciousness the restlessness and dread consequences that ensue often cause serious effects. All these are dissipated by the use of morphin.

Besides, there is no worry about other and none of that awful depression that comes as a consequence of seeing mortally or very seriously wounded men all around most of them crying and moaning. The surgeon proceeds to crawl from one to another, fixing up their wounds rapidly by first-aid methods, giving the consolatory hypodermic, fixing them in the most comfortable attitudes, spending a few minutes with each one and succeeding in relieving sometimes a dozen an hour. He must have his wits around him; he must be utterly fearless for himself; he must be intent on his work, but he has the reward in the grateful looks of men who for the time being thought all was over with them. Occasionally after half an hour he has to go back to some wounded man—often not one of the most badly wounded—who is making a great fuss and disturbing those around him, and who must be given an additional hypodermic of the previous morphin.

This is the surgeon's work all the day long, and as much of the night as he can actually keep awake. Every moment seems time stolen from those who need it sadly, and it continues for days. Men can be mowed down by hundreds, and even thousands, with machine guns, but they have to be cared for, and their suffering relieved individually. Even the hopeless, wounded is not left to die unattended, or at least, neglected, now. He is given the consoling injection of morphin, partly for the sake of others as well as himself, and the surgeon passes. The inhuman slaughter goes on, but the redeeming element of surgical care comes in as some compensation for it all, and at least the suffering of men in mind, as well as body—the mental torture having often been worse in the past than the physical pain—is relieved and he is given his best chance for recovery from his wounds.

SUNDAY DINNER SERVED BY UNCLE SAM

BEFORE the days of the cool, compact, tho sometimes uncertain, gas-range, it was not uncommon for families to purchase their Sunday dinners, already cooked, at a nearby bakeshop or *rôtisserie*. From that stage we have progressed, through the gas-range and fireless cooker, to the kitchenette, and now a step beyond is being taken. In Indiana appears a reversion to the old-time method of securing ready-cooked dinners, but with a difference. One does not run around the corner for the roast: that would not be up to date. Instead, one idles slowly home from church of a Sunday, finishes the morning paper in comfort by the fire, and waits with faith secure for the appearance of the postman to bring the Sunday dinner direct to the door. The Indianapolis *Star* explains the operation of this new system of cookless cooking and suggests a few schemes of a similar nature:

Roast chicken packed in dough in an air-tight can, which acts like a fireless cooker and retains the heat, sent by parcel post direct to the consumer, is the device of a farmer in the north end of the State. From one hundred to two hundred South Bend citizens are getting chicken for their Sunday dinners in this way. It arrives piping hot and is very satisfactory.

That farmer is ingenious; he has initiative. There was the parcel post, at his hand were the chickens, and in the distance was a market. Why not utilize the best means of transportation available? The experiment was tried and has proved successful. Doubtless he will extend his efforts and presently will be conducting a varied delicatessen business by long-distance order, for that enterprising sort of man is not likely to be satisfied with one venture of the kind.

The parcel post has not yet proved the short cut between producer and consumer that was hoped, but it is such individual experiments as these that will gradually bring about this desirable end. For there are many foods, cooked or uncooked, that city-dwellers would prefer to get direct from the farmer rather than through the medium of cold-storage houses and various middlemen.

Chicken is one of these, for the experienced consumer knows that freshly killed, healthy farm poultry has a flavor quite superior to that of fowls long in storage or feverish from close confinement in crowded coops in market.

Eggs would make another marketable parcel-post product if some one would devise a safe method of shipment. [Such a method was described in *THE LITERARY DIGEST* for November 29, 1913.] Fastidious folk know that really fresh eggs are a luxury greatly to be desired, and the very suspicion that the specimen served to them has been in storage for months effectually destroys the appetite for it.

Country-cured ham is also a luxury coveted by many who find the genuine article unattainable in city markets—the slow-cured, smoked ham not known to commerce. Sparerib with real meat on the bones, well-made country sausage, head-cheese, and other pork products are in

HOTEL WOODSTOCK, NEW YORK.
Comfort Without Extravagance.

Smoke is Unburned Fuel

The real reason for installing a Kewanee Smokeless Boiler is not merely because it is smokeless—but because it will cut your coal costs.

Smoke is nothing but unconsumed fuel. Therefore a smokeless boiler is an economical boiler because all of the heat giving elements in the fuel are used to make heat and none of them get up the stack unburned, as smoke.

Apartment Building, 246 West End Ave., New York City. Two Kewanee Smokeless Boilers in this building used \$1424.00 less coal, in one heating season, than was used in another building of the same size owned by the same concern.

It has been conclusively proven, many times, that a Kewanee Smokeless Boiler gets an average of 75% of the heat from the poorest of soft coal. Ordinary boilers seldom get more than 60%. That means a

KEWANEE Smokeless Firebox Boiler

will get as much heat out of 80 tons of coal as the ordinary boiler can get from 100 tons.

Furthermore, if you are building in a city where a smoke ordinance is enforced, a Kewanee Smokeless permits you to use cheap bituminous instead of expensive anthracite.

You therefore cut your coal costs in two ways when you install a Kewanee Smokeless. You save coal because none of it goes up the stack unburned, as smoke. And you are able to burn cheap soft coal instead of expensive anthracite.

We will gladly supply you with literature describing these boilers.

This Set in Pigeon, Only \$12.00

The Encyclopaedia Sensation

No Bulk—No High Cost—But Six Million Words at Lowest Price Ever Known

The Everyman Encyclopaedia is Up-to-the-Minute, Accurate, Complete. As a work of reference it contains more articles than even the largest. It has 1200 illustrations and diagrams. Yet its price is sensationally low.

The Everyman Encyclopaedia

12 Volumes in the Set

Cloth Binding, \$5.00 Limp Binding, \$3.00 Reinforced Cloth, \$10.00
Quarter Pigeon, \$12.00

Instead of saying you will buy an encyclopaedia "some day," you can buy an Everyman Encyclopaedia today. It is the best book bargain ever offered the public.

The books are strongly and uniformly bound—sewn with double thread on tapes. They open flat like the school geographies. The bindings are exceptionally durable in any climate and will hold together under the constant usage and handling that a book of reference gets.

The printing type is clear and readable. And the paper is specially thin, pure white, tough, durable and remarkably opaque, rendering the type unusually clear.

The low prices on the Everyman Encyclopaedia are due to the tremendous volume of sales and the fact that it is a part of Everyman's Library. There is no "club plan," no coupons are to be saved, you don't have to subscribe to anything.

Marriage is the natural aim of and the ideal state for everybody. A knowledge of the questions that have to be faced sooner or later is absolutely essential to mental and physical health and happiness. Dr. Chaston presents a concise and practical message on the problems of sex, parenthood, etc., in this attractive and reasonably priced volume. 200 pages, 100 pp., \$1.00 net. Average earnings, 100 pp., \$1.00 net.

Funk & Wagnalls Company, 354 60 Fourth Ave., New York

demand. The maker of good butter can always find customers at good prices, but the making of "gilt-edged" butter, unfortunately, is an art which few have mastered, and good country butter is hard to find.

These are but a few of the many articles in which there might be an active, direct traffic between producer and consumer. The example of the farmer who evolved the roast-chicken scheme should inspire others to original ventures in finding purchasers for their wares.

SPINNING A NEW ONE ACROSS THE PLATE

FOLLOWING the wail of many baseball fans that the game has become all pitching and little hitting, comes the news—adding insult to injury—that a new kind of ball has been used for some time by several pitchers, one more difficult to locate than any of those generally known. This is the emery-ball, last pitched some days ago by Ray Keating, of the New York Americans, against the Athletics. By the help of this ball he won on this day a scintillating victory over the world's champions; but the emery-ball proved something of a boomerang, for its very difficulty urged Second Baseman Collins, of the opposing team, to show considerable curiosity as to the manner of its direction. His inquiring mind led him straight to the mark, and he forthwith called upon Umpire Connolly to examine Keating's glove. The ball was curiously roughened on one side, and in the glove was found the cause—a square inch of emery-paper sewed into the palm. By the aid of the emery-paper the pitcher could get an extremely effective grip on the ball, resulting in quite a new line of bewildering breaks and swerves. The New York Sun remarks further on the genesis of the freak ball, which has now been forbidden under heavy penalty in all the clubs of the American League:

When Keating's trick was discovered the news leaked out that most of the New York pitchers had mastered the new style of delivery. Indeed most of the twirlers who were supposed to be expert in the manipulation of the spitball were using emery-paper instead of saliva. They were schooled in the art by Catcher Ed Sweeney, who for several years was the battery-mate of Russell Ford. It was Ford who first discovered the cunning use to which emery-paper might be put. His experiments along these lines resulted in his wonderful record of twenty-six victories and only six defeats in the American League campaign of 1910.

That season, under George Stallings, Ford as a first-year man established one of the most enviable records of all time. He came from the Southern League highly recommended as a spitball pitcher. In fast company within a few weeks he gained wide publicity as the originator of a freak delivery. It was claimed that he could break his spitball at will to either side. This mastery made him as formidable against a left-hander as against a right-handed batsman.

The truth of the matter is that Ford threw very, very few spitballs to Ameri-

can League batters. His freak, or double-barreled spitter, was nothing more than the emery-papered style in which Keating was discovered. Occasionally Ford would offer the moist brand, but only often enough to keep concealed his real ace.

"Sweeney was in on the secret," said Frank Chance recently. "But he kept the secret well. He was the only man in the business outside of Ford who had the faintest idea of Russ's secret up to a few weeks ago. He tells me that the discovery was made quite by accident. Kahler, the Cleveland pitcher, dreamed one night that Ford told him the secret. He immediately experimented with emery-paper and found that he could get marvelous results. He told Sweeney of the discovery, and Sweeney immediately realized that Ford's secret had become an open book. It was then that he imparted instructions to his battery-mates.

"Ford was far more cunning than Keating," Chance continued. "Ray had the emery-paper sewed in the palm of his glove. As soon as Connolly called for the hit the cat was out of the bag.

"Ford, I am told, never left himself open in this way. He wore a glove from which the palm had been cut. Then, by palming the emery-paper, he was able to roughen the surface of the ball to the required degree without running the risk of detection. This he accomplished while bluffing the motions of preparing a spitball. Keating was too careless in his motions to get away with such a smart bunch of players as the Athletics."

Chance declares that never in his long experience has he seen such a puzzling assortment of shoots and twists as result from the delivery of a ball properly doctored with emery application.

"Mack's men were completely mystified with what Keating hurled at them," said the Peerless Leader. "Ray had those sappers hopping around to save their lives. Of course none of the pitchers in our league have mastered the delivery as well as Ford had in 1910, for they haven't had time enough to work on it. In Sweeney, who was familiar with every phase of the teaser, New York had a very distinct advantage over any rival. This freak is more deadly to the fingers of an inexperienced backstop than even the spitball was, for it is posset of more freakish breaks. You will remember that it took several years to break in catchers capable of receiving the ordinary spitter."

The freakish traits of this latest delivery are very easy of explanation. Deviation from the course of flight of a thrown ball is caused by air resistance. A ball, spinning as it travels, affords the more resistance or friction on the side turning into resisting air. A roughened spot not only enables the pitcher to take a firmer grip so that this spin may be greatly increased, but also affords greater resistance to the air. Consequently the course of the ball is changed more abruptly or into the freakish shoots for which the emery-ball already has become famed.

His Truthfulness.—"No," said the old gentleman sternly, "I will not do it. Never have I sold anything by false representations, and I will not begin now. It is an inferior grade of shoe, and I will never pass it off as anything better. Make it 'A Shoe Fit for a Queen' and put it in the window. A queen does not have to do much walking."—*New York Globe.*

THE SPICE OF LIFE

Too Bad.—THE NEW MAID—"In my last place I always took things fairly easy."

COOK—"Well, it's different here. They keep everything locked up."—*Tit-Bits*.

Inefficacy of Prayer.—MARJORIE—"Will I get everything I pray for, mama?"

MOTHER (cautiously)—"Everything that's good for you, dear."

MARJORIE (disgustedly)—"Oh, what's the use, then; I get that anyway."—*Life*.

Rare Courtesy.—"How do you like your new music-master?"

"He is a very nice, polite young man. When I made a mistake yesterday he said: 'Pray, mademoiselle, why do you take so much pains to improve upon Beethoven?'"
—*Le Figaro*.

A Promising Investment.—"The lasting, delightful perfume of the age. One who can prove that the perfume of Otto Mohini is not lasting for four days by putting five drops on the handkerchief will be rewarded Rs. 100 cash. Try only small tube and get the reward."—*Adv. in the Hitavada*.—*Punch*.

Improvement on Nature.—At the orphan asylum the childless Mrs. Hathiway, who had selected an infant for adoption, suddenly showed trepidation.

"Will I have to keep the baby, if it doesn't suit my husband?" she asked hesitatingly.

"Of course you won't have to keep it," responded the accommodating matron. "You can bring the kid back and exchange it any time. We're not arbitrary, like the stork."—*Judge*.

Opportunity.—A young suburban doctor whose practise was not very great sat in his study reading away a lazy afternoon in early summer. His man servant appeared at the door.

"Doctor, them boys is stealin' your green peaches again. Shall I chase them away?"

The doctor looked thoughtful for a moment, then leveled his eyes at the servant.

"No," he said.—*Lippincott's*.

A Fable of Fortune.—Lazyman, Contentedman, and Busyman lived together in the same house. One day, when only Lazyman and Contentedman were at home, Opportunity knocked.

As Lazyman made not the slightest move to go to the door, Contentedman went and opened it.

"I am Opportunity," said the visitor, "and I have something very wonderful for you."

Lazyman yawned and said nothing.

Contentedman courteously explained that he was not interested, for the very good reason that he had everything he wanted.

"I believe Busyman also lives here," said Opportunity. "Where is he? I know he would be glad to see me."

"Indeed he would, but he's out. He's always busy running around. You're not the first Opportunity that's missed. Opportunities have been knocking here regularly for years, but he's never at home. I tell him it doesn't pay to be so busy."

Opportunity walked away with dejected mien.—*Life*.

My Beauty Exercises

will make you look Younger and More Beautiful than at the external treatment you might use for a lifetime. No massage, electricity, vibration, strapping, fillers or surgery—Just Nature's Way.

Results come soon and are permanent. My System makes muddy, sallow skins clear

and the complexion as fresh as in girlhood; firms the flesh, and never fails to lift drooping and sagging facial muscles, thereby obliterating resultant wrinkles. The too thin face and neck are rounded out and hollows filled in. No one too old or too young to benefit.

My System makes double chins disappear quickly and it leaves the flesh firm after the superfluous fat is worked away.

My Beauty Exercises are supplemented by special work to make the figure more shapely and youthful; instructions to beautify the hair, eyebrows and eyelashes, hands, nails and feet.

No matter how tired, five minutes of my Facial Exercise will freshen complexion and give it a most exquisite coloring.

Write today for my New Booklet on "Facial Beauty Culture, Body Culture and New Beauty Suggestions"—FREE.

KATHRYN MURRAY

Dept. 1310, 209 State Street, Chicago

The First Woman to Teach Scientific Facial Exercises

Utter Proof.—"Do yer love me, 'Erb?"
"Love yer, 'Liza, I should jest think I does. Why, if yer ever gives me up I'll murder yer. I can't say more'n that, can I?"—*Punch*.

Two Artists.—"This pianist has wonderful power. He can make you feel hot or cold, happy or morose, at will."
"That's nothing new. So can our janitor."—*Canadian Courier*.

Explained.—"Your daughter plays some very robust pieces."
"She's got a beau in the parlor," growled pa, "and that loud music is to drown the sound of her mother washing the dishes."—*Pittsburg Post*.

Too Easy.—HARRY—"Marry me and your smallest wishes will always be fulfilled."
CARRIE—"I am able to do that myself. What I want is a man who will gratify my biggest wishes."—*Town Topics*.

If They Could Speak.—AUNT KATE—"Oh, you precious darling! Won't you give auntie a kiss this morning?"
BABY—"I suppose I'll have to. Here, nurse, wash off Aunt Kate's mouth with this solution of boric acid."—*Life*.

Agile Parent.—"Papa, what is an escutcheon?"
"Why?"
"This story says there was a blot on his escutcheon."
"Oh, yes! An escutcheon is a light-colored vest. He had probably been carrying a fountain pen."—*Houston Post*.

Taken at His Word.—At a recent election the candidate was "heckled" rather badly by the local butcher. At last he grew rather tired of it, and hinted that the man was wasting time by asking silly questions.
The butcher, enraged, retorted—
"If I had you in my sausage-machine I'd make mince-meat of you."
The candidate turned to him, and asked, gently:
"Is thy servant a dog that thou shouldst do this thing?"—*Tit-Bits*.

Is Your Wife Helpless —or Dangerous—

in these times when more idlers
make more brutes and more thugs?

THESE times make more idlers. More idlers mean more brutes and thugs. Brutes and thugs break your house; shock your wife into permanent hysteria and mark your children with a horrible fear for life.

Give your wife the solid assurance of a Savage Protector that she knows she can aim as easy as pointing her finger. That shoots lightning quick at each crook of her finger. That checks the vicious degenerate and heartless criminal.

Fathers, it is your serious duty in these times to arm your home by day and by night with a Savage Automatic—the one arm which every brute and thug fears. They fear its ten lightning shots vs. the 6 or 8 of other makes; they fear the novice's power to aim it as easy as pointing your finger. Therefore, take pains that you get the Savage—the one the brutes and thugs fear.

As harmless as a kitten around the house, because it is the only automatic that tells by a glance or touch whether loaded or empty.

Take home a Savage today. Or at least send to us for information.

SAVAGE ARMS CO., 3210 SAVAGE AVE., UTICA, N. Y.

THE  SAVAGE AUTOMATIC

Fire insurance does not prevent — FIRE! —

But protects you against a catastrophe that strikes one insured man out of thirty. The company offering that protection must be investigated. Does it pay its claims fairly, cheerfully, without quibble and without attempting to get out of an honest obligation?

The Agent of the Hartford Fire Insurance Co. in your town sells that kind of service. He sells honorable intentions and he sells the ability to carry out those intentions. He is the type of man you pick to deal with in other lines.

Nobody wants a fire.
We have a booklet
that tells how to pre-
vent it. Send for a free

Are Your Inactive Funds Earning Interest?

Those having funds earning no income, and who, as a result of the war disturbance and the consequent closing of the markets, cannot invest them satisfactorily, should consider the advantage of holding such funds intact until the proper time for permanent investment arrives.

Our interest bearing Certificates of Deposit afford a means for safely and profitably accomplishing this purpose. We also allow interest on funds deposited with us in a checking account.

We will be pleased to submit a definite proposition at your request.

INVESTMENTS - AND - FINANCE

WHEN TO OPEN THE STOCK EXCHANGE

ACTION taken in September, permitting sales of unlisted securities, is believed in financial quarters to be a step the influence of which will act favorably on the problem of opening the Stock Exchange for unrestricted business. Just how soon this opening will take place, no one in authority as yet ventures to say. The paramount reason for delay has long been the banking situation. When that clears up sufficiently—that is, when loans secured by listed stocks are made sufficiently safe—it is believed that an opening will be made. In some quarters it has been understood that, as a tentative opening date, November 1 has been selected. This, however, is contingent on the course of events in finance, and notably on the Federal Reserve Bank for New York being in full operation by that time. The chances, however, of this bank being in full operation on November 1 are somewhat doubtful. Some authorities in the banking world believe that the Federal Reserve Bank will not be ready before December 1, in which case the Exchange would not be opened before that date. On this point, a writer in *The Journal of Commerce* says:

"The practical work that the New York Federal Bank must accomplish in connection with the local financial situation is the conversion of the present Vreeland emergency-note circulation, which in New York at present is somewhat in excess of \$140,000,000. For this circulation Federal notes will, as a broad proposition, be issued, altho there necessarily will not be a technical and specific exchange. The new notes will be based, as is well known, on commercial paper. Many details will obviously have to be worked out in forcing, even at the most rapid rate possible, the new currency into circulation. Bankers have advised from Washington that the printing of the new Federal currency is proceeding rapidly. There will thus be slight probability of delay from the purely mechanical end of the situation.

"But other sources of delays can not be so effectively handled in advance. For instance, the Class C directors of the various district banks have not been definitely announced. It is known that full selections have been made. These men are not at all likely to be able to immediately relinquish the important positions they have heretofore been occupying and which have fitted them for the new responsibilities that they are to assume. Some may require a full month to arrange the transfer.

"This in turn brings up the question whether it will be the policy of the Federal Board to inaugurate the reserve banks of the various districts piecemeal or whether it will not be thought desirable to place the entire system simultaneously in operation. There is much to be said on either side of this proposal, since presumably there will be considerable criticism by outlying sections if New York should be singled out by permitting its district bank to be first placed in operation. On the other hand, the argument that is suggested at this center is that the Reserve Board will first desire to make a model bank to try out in a practical way the various problems, instead of allowing complications to arise by attempting the same thing at one time under varying conditions. New York, obviously, by its preponderating share of

the country's business, would be by long odds the advantageous district in which to establish a bank, after which the banks of the other districts could be modeled.

"Another feature that will take time will be the collection of an efficient staff at New York capable of taking hold of the new financial situation in an authoritative way. This, according to banking interest here, can not be safely attempted in a short a period as four weeks. It will not be safe to assume such a heavy burden as will have to be carried, in New York at least, until the entire staff has been thoroughly trained and the delicate questions that must naturally arise have been worked out.

"Another problem is the selection and fitting up of a banking-house. There have been suggestions, for instance, that temporary quarters might be obtained until the Chase National Bank vacates its offices on the ground floor of the Clearing House building. Such a location seems for obvious reasons the ideal one. The question of clearings in connection with or independent of the Clearing House is an interesting one. There will, too, necessarily be delay in formulating systems of accounts. Furthermore, the banks must be called upon for their subscriptions to the Federal Bank's capital."

It is believed that danger from European liquidation has become a small factor in the problem of opening the Exchange. Far more serious is the banking situation. A suggestion has been made, and in some quarters commented on favorably, that a combination or syndicate might be formed with resources reaching as great as \$250,000,000, to support prices for stocks when a possible slump occurs. On this subject a writer in *The Financial World* says:

"This task is one that, tho formidable, is by no means insurmountable. As we have pointed out previously, the total of British holdings of our securities is \$5,000,000,000, according to the best authorities, and perhaps \$6,500,000,000, counting Great Britain and Continental Europe as well. Authorities disagree as to the percentage of this great mass of securities that will probably come from Europe sooner or later, but even if only 10 per cent. of the total were offered, that would mean \$650,000,000, and only 1 per cent. of the total of foreign holdings would mean that \$65,000,000 would have to be raised.

"We do not believe that the liquidation from abroad would be nearly so great in volume as expected, and think a \$250,000,000 pool would more than care for such selling, and, as it would in all probability be extended over a period of many months, the \$250,000,000 would not be required all in a lump. Mere pledges for that amount, with assurances of \$75,000,000 to \$100,000,000 for instant use, would go a long way toward meeting the situation, as we see it.

"The worst of the panicky selling has already taken place and what is now likely to come is selling that would take the form of cautious liquidation in order to prevent sacrifices."

EUROPEAN HOLDINGS OF AMERICAN SECURITIES

In reply to inquiries specifically addressed to them, thirty-one corporations on September 28 had replied to a *Wall Street Journal* inquiry as to the amounts of their stocks held in Europe. These foreign holdings on June 30 of this year amounted

San Diego ^{Panama} ^{California} Exposition

See Southern
California

and the

Panama-California Exposition

THERE are always plenty of reasons for a trip to Southern California; in winter, every day is a new reason; and Southern California is all the others.

But January 1st, 1915, offers still one more; a big one; a marvelous reason. That day the great Panama-California Exposition at San Diego opens its flower-decked gates to the world.

It is a combination of attractions you may never see again in this world; escape from winter cold, a visit to the world's garden spot, with a wonderful Exposition to instruct, to delight with its beauty and charm.

Begin now to plan this trip; whether you travel merely for pleasure, for new scenes and surroundings; or for study, observation, practical knowledge, San Diego and the Panama-California Exposition should be your objective point.

This great Exposition is to display possibilities; it is an Exposition of tomorrow, more than of yesterday; you'll see, not only what men *have done*, but what they can do; you'll see them *doing it*; you'll see the plans for what they're going to do; the resources and opportunities of the great Southwest are arrayed before you.

The Exposition is a beautiful Spanish Colonial city, built in a wonderful natural park. You are invited to be a guest there; to stay as long as you choose.

The gates open January 1st, 1915, and do not close until December 31st, 1915.

Texas & Pac.	39,763,810	1,270	10	500,000
U. S. Steel com.	509,302,500	47,665		122,405,500
U. S. Steel pf.	360,281,100	90,403		27,514,200
West Maryland	59,159,230	1,009	11	177,000
Western Union	99,752,800	14,144	145	
Woolworth com.	50,000,000	1,340	39	549,700
Woolworth pf.	14,000,000	938	33	334,300

Of the above stocks, United States Steel is the one most largely held abroad; the holdings of common are \$122,405,500, and of preferred \$27,514,200. It had been thought when the Stock Exchange closed on July 30 that liquidations in Steel from Europe had been very large. Records for August 31 show, however, a very small decline in holdings over those for June 1. The decline for the two classes of steel stock was only 2½ per cent. The Wall Street Journal says as to declines in European holdings of other stocks:

"We have no information as to how much of the European holdings of other securities were liquidated previous to the closing of the Exchange, but applying the same ratio of decrease as in the case of the Steel stocks to the \$318,133,017 foreign holdings which have been reported to us, only about \$8,000,000 par value would have been liquidated.

"Next to United States Steel, Pennsylvania Railroad reports the largest European holdings; these on June 30, 1914, totaled \$74,490,442, of a total outstanding capital stock of \$499,265,700, equal to 14.9 per cent. United States Steel's European holdings on June 1, 1914, equaled in the case of the common 24.1 per cent. of outstanding stock and in the case of the preferred 7.6 per cent. of outstanding stock.

"Another company with large European holdings of stock is Kansas City Southern, of whose \$51,000,000 outstanding stock \$22,205,500, or 43.5 per cent., was held abroad June 30, 1914. Of American Smelters preferred "A" stock, \$11,962,900 out of \$17,000,000 outstanding was held abroad, and of the preferred "B" \$13,550,400 out of \$30,000,000 outstanding. American Telephone & Telegraph European holdings total \$12,479,900 of a total outstanding of \$344,672,300.

"Little change is shown in the amount of stock held in Europe over the past year. Twenty-two companies have reported their

A Kalamazoo Direct to You

holdings on June 30, 1913, as well as on June 30, 1914, and in practically every case the change shown is trifling. European holdings of these twenty-two companies on June 30, 1914, totaled \$156,240,652, as against \$151,492,994 on June 30, 1913, an increase of \$4,747,658, or a little over 3 per cent.

"In the case of some of the companies, a strikingly small amount of stock is in the hands of Europeans. Thus American Tobacco Co. with \$40,242,400 common and \$52,775,400 preferred stock outstanding reports only \$53,500 common and \$365,900 preferred held abroad. American Ice Securities with \$19,045,100 stock outstanding reports no European stockholders of record. Central Leather reports its European holdings as trifling. Seaboard Air Line reports but \$100,000 stock held abroad."

STATISTICS OF OCCUPATIONS IN THIS COUNTRY

Some recent statistics, compiled by the Census Bureau and cited by *Bradstreet's*, show that the number of people in this country engaged in gainful occupations is on the increase; that this increase is more rapid now than it was in former years, and that the increase among women is more rapid than among men. Of all persons in the country ten years of age in 1910, more than one-half were pursuing gainful occupations. Four out of every five males were so engaged and one out of every four females. Further points to which the writer calls attention are these:

"The proportion of gainful workers to the whole population—41.5 per cent.—represents an advance compared with the percentage given for the year 1880, which was 34.7 per cent. The proportion of the male population engaged in gainful occupations increased from 57.8 per cent. in 1880 to 63.6 per cent. in 1910, while the proportion of the female population increased during the same period from 10.7 to 18.1 per cent. The proportion of the population ten years of age and over engaged in gainful occupations increased from 47.3 per cent. in 1880 to 53.3 per cent. in 1910, and in this case, as in that of the proportion of the number of gainful workers to the population as a whole, the increase was least rapid in the decade from 1880 to 1900, and most marked in the decade from 1900 to 1910. The proportion of the male population ten years of age and over gainfully occupied increased from 78.7 per cent. in 1880 to 81.3 per cent. in 1910, while the proportion of gainful workers in the female population ten years of age and over increased from 14.7 to 23.4 per cent.

"As will be seen by comparing these figures, the ratio of increase in the proportion of the female population gainfully employed was considerably greater than that in the proportion of the male population. Of a total of 38,167,336 persons engaged in gainful occupations in 1910, the males, as has been said above, numbered 30,091,566, or 78.8 per cent., while the females numbered 8,075,772, or 21.2 per cent.

"Among the persons gainfully occupied, those engaged in agriculture, forestry, and animal husbandry led all the rest, comprising 33.2 per cent., or nearly one-third of the total. Manufacturing and mechanical industries gave employment to the next largest body of workers, comprising 27.9 per cent., or over one-fourth of the whole. Those engaged in these two general divisions of occupations, therefore, included over three-fifths of all the gainful workers."

Holstein Cows' Milk Is Best for Baby.

A leading doctor says that 80 per cent. of all infant troubles is due to inability to assimilate food, and that "infant mortality could be reduced 50 per cent. if all infants were fed intelligently on purebred registered Holstein Cows' Milk."

If your baby is having digestive troubles, or if you want to be sure that it will steadily thrive, try Holstein Cows' Milk, either modified or unmodified, as your doctor thinks best. It is very similar to the milk of the human mother in chemical composition. Baby can readily digest and assimilate it, obtaining from it the great vitality of the large, healthy, vigorous Holstein cows. It costs no more than any other milk.

Nursing mothers, who drink this milk every day, rapidly gain in strength and thus greatly increase baby's vitality. It is the most nutritious milk for invalids, convalescents, and very old people.

Holstein Milk is naturally light-colored. Don't imagine that yellow milk is better, for it isn't. Investigate the milk of this black-and-white cow. Send for our free booklet, "The Story of Holstein Milk."

CURRENT EVENTS

EUROPEAN WAR

September 24.—The English commander, Sir John French, reports from the Aisne: "Our progress, tho slow, has been continuous. The present battle may well last for some days before a decision is reached, since it now approximates siege operations."

Petrograd announces the Russian occupation of Soldau, on the southern frontier of East Prussia.

September 25.—Along the battle-line in France, extending from St. Quentin to Toul, the heaviest fighting is reported between the Somme and the Oise, and through the small towns north of the Somme. In addition, the forts of the Meuse, from Verdun to Toul, are being heavily bombarded.

The Russian forces in Poland and Galicia are reported to be nearing each other, for concerted action against Krakow.

September 26.—The Germans have apparently gained some ground at St. Mihiel, on the Meuse, and recaptured St. Quentin. At the latter point the French are making desperate and repeated efforts to regain lost ground.

Przemysl, the only Galician stronghold in the path of the Russian advance on Krakow, is undergoing heavy bombardment.

Because of heart trouble, Prince Oscar, the fifth son of the Kaiser, is obliged to leave his regiment and report at Metz for treatment.

Disregarding the protest of the Chinese Foreign Office, Japanese troops take Weihien, in the province of Shantung. Official communications indicate that Germany intends to hold China responsible for any loss of territory through Japanese aggression.

September 27.—The troops of the Czar are said to have crossed through the passes in the Carpathian Mountains into the plains of Hungary, and to have reached Tarnow, 75 miles from Krakow.

Germany is rushing a large force to reinforce Krakow.

The German advance into Poland, it is reported, has fared badly, and is now checked. The central armies of Russia are reported as advancing in a wedge-shaped formation upon Posen and Breslau.

Sozodont for the teeth

"An ounce of prevention," etc., certainly applies to the care of the teeth. Clean teeth in clean mouths are important health factors. Sozodont will keep healthy teeth healthy.

Because personal taste varies, Sozodont is available in Paste, Powder and Liquid. Your dentist would no doubt advise you to use either the *Paste or Powder in the morning* to polish the teeth, and the *Liquid at night*, because it gets in between the teeth and around the gums, stimulating and hardening them, and cleanses better than Paste or Powder.

Sozodont Liquid is alkaline and neutralizes the acidity of the mouth.

There is no better "teeth insurance" than Sozodont. If you have never used it, take out your "teeth insurance" today.

Send for this interesting and valuable pamphlet, "A Dentist's Talk on the Value of a Clean Mouth and Clean Teeth."

Hall & Ruckel, Inc., New York
Makers of Sozodont since 1846

September 25.—The Atlantic Deep-Waterways Association in session at Albany protests at Senator Burton's filibuster against the River and Harbor Bill and denounces the Senator as a foe to inland waterways.

September 28.—It is authoritatively reported that nine-tenths of the \$2,000,000 estate of the late Mrs. Frank Leslie has been left to aid the cause of woman suffrage.

September 29.—As the investigation for criminal mismanagement of the New York, New Haven & Hartford Railroad is commenced, four directors resign.

By the old way, these 10 operations were necessary:

1. Strip razor.
2. Work up lather in cup.
3. Apply lather to face.
4. Rub in with fingers.
5. Shave one side of face.
6. Strip razor again.
7. Renew dried-up lather on unshaved side of face.
8. Shave unshaved side of face.
9. Wash off lather.
10. Apply lotion to prevent soreness and allay burning.

By the Mennen way only 5 operations are necessary:

1. Strip razor.
2. Apply Mennen's Shaving Cream.
3. Lather with brush.
4. Shave entire face (re-stripping and re-lathering unnecessary as lather does not dry).
5. Wash off lather (no lotion or other soothing application necessary).

Compare the Old Way of shaving with the Mennen Way

Use Mennen's Shaving Cream and it will take you but *half* as long to shave! You will be rid of *all* the sore, smarting after-effects, for Mennen's contains no free caustic to bite and burn your skin.

You will find it is the lather—not the razor—that has made shaving a torture. The full creamy lather of Mennen's Shaving Cream needs no "rubbing in." It instantly softens the stiffest beard and leaves the face soft, smooth, cool and comfortable.

Mennen's Shaving Cream is put up in sanitary, airtight tubes with handy hexagon screw tops. No amount of advertising

can make you realize what a difference there is between it and other shaving preparations. You must *try it*—then you will know.

At all dealers, 25c. Send 10c for a demonstrator tube containing enough for 50 shaves. Gerhard Mennen Co., Newark, N. J., makers of the celebrated Mennen's Borated and Violet Talcum Toilet Powders and Mennen's Cream Dentifrice.

Mennen's Shaving Cream

The Truth About Germany Facts About the WAR

The above notable Pamphlet, which is now exciting world-wide interest, and which gives the origin and cause of the present European conflict from the viewpoint of Germany's most eminent men, issued under the patronage of men like Fuerst Buelow, Albert Ballin, Prof. Dr. von Harnack, Prof. Dr. Lamprecht, Dr. Kaempff, has just been published in this country under the auspices of an American committee.

This Pamphlet can be secured from Booksellers and News-dealers generally, and from the following Booksellers in New York City:

The Autographic

KODAK

You can now date and title your negatives, permanently, and almost instantly at the time you make them.

EVERY negative that is worth making is worth a date and title. The places you visit—interesting dates and facts about the children, their age at the time the pictures were made—the autographs of friends you photograph—these notations add to the value of every picture you make. Architects, engineers and contractors who make photographic records of progressive work, can add greatly to their value by adding notes and dates permanently on the *negatives* by means of the Autographic Kodak. The amateur photographer who wants to improve the quality of his work can make notations on his negatives, of the light conditions, stop and exposure.

Just release a stop and a little door opens in the back of the Kodak; write whatever notation you want, on the red paper of the Autographic Film Cartridge with a pencil or stylus; expose from 2 to 5 seconds; close the door and you are ready for the next exposure. On the margins between the negatives will appear a permanent photographic reproduction of the notation you made. It is not a part of the Autographic plan to have this writing appear in the print itself, but simply that it be kept as a record of date and title on the negative. It is obvious, however, that it is no trouble to include it on the print when desired.

The greatest photographic advance in twenty years.

TOPICS - OF - THE - DAY

GERMANY'S COLONIAL LOSSES

GERMANY'S COLONIAL EMPIRE, a territory five times as large as the Fatherland, is fast melting away, remark several of our editors. These outlying possessions which, as the *New York World* notes, were "acquired with so much pains and sometimes at great cost, were found to prove the weakest links" in the Kaiser's line of defense "when the German fleet retired to the protection of the North Sea land forts." In the light of what has been happening to these German overseas dominions, the *Colorado Springs Gazette* finds it interesting to recall that "two months ago, when Chancellor von Bethmann-Hollweg was trying to persuade Sir Edward Grey to keep England neutral, he promised that Germany would respect the territorial integrity of France in the final settlement, but admitted that it intended to take the French African possessions." The German colonial territory consists of the African

colonies of German Southwest and East Africa, Kamerun, and Togoland; Kaiser Wilhelm's Land (German New Guinea); the Bismarek archipelago, the Carolines, the Marianas (Ladrones), the Marshall Islands, and part of the Samoan group in the Pacific; and the "temporary" leasehold of Kiaochow on the Chinese coast, with an adjacent protectorate. The position and relative importance of these colonies may be ascertained by a glance at the accompanying map and table. That these far-flung outposts should be open to early conquest was inevitable, says the *New York World*, tho it is surprising that the conquest should be carried on largely by British colonial forces. This, it notes, is what has been done:

"By August 26, a British detachment from the Gold Coast had occupied Port Lome and annexed Togoland, the German colony lying between the Gold Coast and the French territory of Dahomey. On September 3 the German Samoa Islands of Savaii and Upolu capitulated to the New Zealanders, and the German Governor was sent as a prisoner to the Fiji Islands.

Last week Kaiser Wilhelm's Land, or German New Guinea, which adjoins Papua, or British New Guinea, was occupied without opposition by an Australian force. The task of cleaning up the remaining German possessions in the Pacific Ocean—the Bismarek, Caroline, Marianas, and Marshall Islands—has already been begun by the Australians; it seems to present no serious difficulties.

"In South Africa General Botha, the famous Boer fighter, has announced that he will take command of the colonial troops in the field, and forces from Cape Colony have been sent over the border of German Southwest Africa. Dar-es-Salaam, the port of German East Africa, lying between Portuguese East Africa on the south and British East Africa on the north, was bombarded by a British cruiser and has been invaded from Rhodesia and British East Africa. In Kamerun, which lies on the west coast of Africa, between French Nigeria and the French Congo, a French gunboat has seized a port on Corisco Bay.

"While the investment of Kiaochow is a Japanese operation, the British have also landed their troops from Hongkong and India, and French reinforcements from Indo-China are reported to be on the way. It is the most formidable obstacle to be encountered in the Allies' campaign against the German colonies, and must be reduced by the slow methods of blockade and siege."

Japan has also been active in the Pacific, and has taken the islands of Jaluit and Yap, containing respectively the capitals of the Marshall and Caroline groups. The Japanese occupation, it is officially explained, is but temporary and for military purposes, and the islands are to be handed over to the British as soon as it is practicable, or at the close of the war.

It should be noted, however, that the British campaigns in Africa are not likely to be altogether one-sided. For a recent visitor to German Southwest Africa, Germany's most populous colony, tells the British South-Africans through the *Cape Town Times* that they will be opposed by admirably trained and thoroughly equipped German troops. He estimates, according to the *New York Sun's* quotation of the *London Times* reprint

GERMAN COLONIAL STATISTICS

	Area Sq. Miles	Pop. White	Pop. Native	Imports	Exports	Subvention
Togoland.....	33,700	368	1,031,978	\$2,657,750	\$2,284,250	None
Kamerun.....	191,130	1,871	2,648,720	5,514,000	\$1,576,500
Southwest Africa...	322,450	14,830	79,556	4,548,900	7,114,220	1,255,000
East Africa.....	394,180	5,336	7,646,770	11,973,580	7,477,575	12,450,000
Kiaochow.....	200	4,470	169,900	28,735,000	20,073,750	2,440,000
Pacific Isles.....	96,100	1,984	634,579	1,500,000	1,275,000	402,500

These figures, explains the *New York Evening Post*, from which we take them, tho in some cases approximate, are official and the latest obtainable, generally those of 1913. Samoa is omitted from the Pacific Isles estimate. A subvention is an imperial subsidy to cover the deficit in colonial revenues.

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label. **SUBSCRIPTION** including the month named. **CUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE** or **CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

of his article, that "the German forces number at least 10,000, with sixty-six six-gun batteries, and a fine complement of machine guns." They are said to have singularly complete communications, with good telephone- and telegraph-lines, and several strong defensive positions in country particularly difficult for military operations.

The attacks on the German colonies have turned editorial attention to the genesis and development of the German colonial system. The present German Empire, it is remembered, dates from 1871. The first German colony was officially established in 1884. When the present war broke out Germany's colonies were five times the size of the Empire, embracing, according to a New York *Evening Post* writer, "a territory of 1,027,000 miles, and exceeding in area the foreign possessions of either Holland or Portugal." The New York *Evening Sun* calls Germany's colonial activity "a post-Bismarckian development." Germany's race for commercial and maritime supremacy, "year after year distancing ancient rivals and pressing close upon English heels," caused her to "view with resentment a condition in which her ships were at the mercy of the English, the French, even the Portuguese and the Dutch colonial ports. Nowhere about the Seven Seas was Germany in possession of naval or commercial bases such as even the most insignificant of nations possess." To repair this situation William II. and the successors of Bismarck made haste to plant their flag upon territory not already occupied. Thus, continues *The Evening Sun*:

"Togoland, Kamerun, German Southwest Africa, and German East Africa were acquired; Samoa, Kaiser Wilhelm's Land and Spanish islands in the Pacific were annexed or purchased. Ten years ago the world map began to show considerable areas bearing the German colors.

"Yet while Germany was doing this France acquired Madagascar, made good her empire from the Mediterranean to the Niger and the Kongo, extended her frontier in Indo-China, began the absorption of Morocco. Great Britain conquered the Boer Republics, the United States the Philippines and Porto Rico; even little Belgium came into possession of the vast Kongo Free State, incomparably superior to all the colonial acquisitions of the mighty German Empire. Italy, ally but still a rival, took Tripoli, the last waste place on the North-African coast.

"Thus, looking back over German official and unofficial comment during the past decade, there is noticeable the ever-growing bitterness and dissatisfaction disclosed over the failure of modern Germany to acquire its 'place in the sun,' the manifest injustice that was patent in the distribution of overseas land which had

allotted to France, with a stationary population, Great Britain, inferior in its European population to Germany, splendid colonial territories capable of receiving European immigrants, while Germans, without colonies, members of an ever-growing population, were compelled to lose nationality when they emigrated, and German industrial prosperity was threatened by the ever-increasing number of lands in which hostile tariffs handicapped German exports."

Such, then, "was the colonial emotion of Germany prior to war"; what, asks *The Evening Sun*, has been the effect of the war upon her "insignificant," yet "precious," "place in the sun?" Simply, it answers, that while the world's attention is fixt on the battle-fields of Western Europe, "German colonial possessions on two continents are becoming the prey of her opponents"—

"So Louis XV. and Napoleon saw their overseas territories vanish. So France lost Quebec and India."

Whether the German colonies are vanishing or are merely endangered, it seems to a New York *Evening Post* writer that they are "a source of weakness, not of strength," to the Empire. Thus far, but one has proved self-supporting, and some have been heavy drains on the home revenues, tho this observer is inclined to believe that, if properly taken care of, they might in the end prove lucrative investments.

Kiaochow now figures prominently because of the Japanese attack on it. It is Germany's only foothold on the Asiatic continent, as one of our editors notes, and she looked upon it as a future "base from which she was to challenge British influence at Hongkong and French in Indo-China." There are coal-mines near the port and iron ore has been found. Germany has spent millions in development here, building a railroad, breakwater, and a big floating dock at Tsing-tau. Germany's largest colony is East Africa. It grew from a strip of coast land acquired from the Sultan of Zanzibar. Later negotiations with this potentate led to an arrangement whereby England received some territory on this coast in exchange for Helgoland, which has since proved so valuable to Germany. German Southwest Africa was Germany's first colony, and, according to the figures presented with the *Evening Post* article, the only one containing a considerable body of white settlers. It consists of the territories once known as Damaraland and Great Namaland. The New York *Times* points out that about 2,000 of its white population are Boers and that

FEEDING THE FLAMES.

THE PRICE.

Germany and her colonies are black on this map, and her smaller island possessions are surrounded by a black line. Her African colonies are (1) German Southwest Africa, (2) German East Africa, (3) Kamerun, (4) Togoland. The largest colonial territory outside of Africa is (5) Kaiser Wilhelm's Land, in New Guinea. All that portion of the world not involved in the European War is shown in white on the map.

THE WORLD AT WAR.

the colony is developing great mineral and agricultural industries and that in 1913 the diamond production was considerable.

Leaving the war out of consideration for the moment, *The Evening Post* writer concludes that,

"Undeniably at this time Germany's colonies are a source of weakness, and not of strength. Undeniably the Kaiser's vision of sea power, commercial supremacy founded on naval strength and colonial development, has failed up to now. So far as the colonies are concerned, the reason may be found in the altogether paternal attitude of the Kaiser toward them. Regarding a bureaucratic system as the best for Germany, and, therefore, for all the world, he has thought, first, of establishing in each a central government rather than trading-posts. Each of the German dependencies has its complete complement of officials, but the German immigrant, knowing this, still prefers North and South America to an elaborate organization with which he has been made familiar at home. The territories are there, but the people are not tempted to occupy them. The government is there, much in the sense of a regiment with a complete set of officers and no privates. The expense has been enormous, the return nothing at all. The failure or success of the experiment depends on the fortunes of war, and yet the pioneer work will be found enduring in any event."

ENGLAND'S CONTRABAND COMPROMISE

THE FRICTION that threatened last week between this country and Great Britain over the vexed question of "conditional contraband" has been avoided by a triangular understanding between our State Department, the British Foreign Office, and the Netherlands Government; and the promptness of the settlement serves to show, says the *Chicago Herald*, "how readily disputes are adjusted if the nations really want to adjust them." The embarrassment began when London

dispatches announced that Great Britain intended to regard foodstuffs and copper as contraband of war, and to seize such cargoes, even when carried by neutral ships between neutral ports, if it had reason to believe that Germany was their ultimate destination. Germany requires food imports for her great armies and copper for use in the manufacture of war munitions, and the cutting off of such supplies, explain the London correspondents, "is no small part of the Allies' plans to force her to her knees." As Holland under present conditions affords an obvious gateway to Germany, England decided to intercept neutral vessels carrying food or

FRENCH INFANTRY FIRING FROM THE COVER OF LONG GRASS.

copper to Dutch ports. In a London dispatch to the *New York Times* dated September 30 we read:

"England's point of view is readily seen by observers, who consider England right in stopping cargoes, even tho she may later be penalized in prize courts, for if such stoppage of supplies should lessen the duration of the war even by a single day, England will save herself practically all damages, as the war is costing her nearly \$5,000,000 daily.

"The British Navy has arrested about a score of vessels flying the Dutch flag. Some of these have come from America bearing American cargoes. That is where the United States State Department has come in, and there has been a rather lively exchange of views on the subject, altho the whole negotiation is being conducted in the most amicable manner imaginable, the British Foreign Office being keenly desirous of affording to American shippers the minimum amount of inconvenience and interference and being guided in imposing restrictions only by the laws of self-preservation."

This attitude, nevertheless, evoked the protests of American shippers, with the result that England, after negotiations with Washington and The Hague, announced the following compromises: American copper shipments to neutral countries will not be molested by British ships when covered by an understanding between shippers and consignees that they are for domestic use only; and foodstuffs consigned to Holland in neutral ships will not be treated as contraband. The latter change is made feasible, according to a London dispatch to the *New York World*, by "a new and important" agreement on the part of Holland not to transship such cargoes to Germany. These compromises are made "pending the revision of Great Britain's proclamation in regard to contraband," and are viewed in Washington, according to a dispatch from that city, as "a diplomatic victory for this Government." Holland's agreement, according to a Washington dispatch to the *New York Journal of Commerce*, is that she will impose the following conditions on ships bringing supplies to her ports:

"(1) That a guaranty is given that consignments will not be reshipped to Germany or any belligerent country, and (2) that a ship will not be permitted to dock in Dutch ports if it has on board a greater cargo of foodstuffs than can be utilized at or in the vicinity of the port to which it is consigned."

These conditions, we are told, are being vigorously enforced by Holland, who is "trying to be neutral in the face of great difficulties." Her position is made all the harder, explains the editor of the *London Daily Chronicle*, by the fact that "under an international treaty she has to maintain the guaranties of right of entry of imports into Germany up the Rhine." This authority goes on to explain that

"A certain number of articles are contraband at present, and Holland rigorously excludes them. Other articles come under the disputed category of conditional contraband. Holland can give no guaranty to the Allies that these will not get through to Germany. All she can do is to get a guaranty from importers of goods intended for home consumption.

"The difficulty of the Rhine convention is overcome chiefly by Holland stopping the possible reexportation of goods on the ground that they are required by the Dutch people, but this can only be done in cases where prices have risen and State intervention is justified."

Embarrassing situations such as that from which England and the United States are extricated by the present compromise, remark many of our editors, are bound to develop as long as there is no general international agreement on the subject of "conditional contraband." A partial solution of this problem was reached at an international maritime conference in the winter of 1907-8, when several of the nations subscribed to Article 35 of the Declaration of London, which provides that "conditional contraband is not liable to capture except when found on board a vessel bound for territory belonging to or occupied by the enemy, and when it is not to be discharged in an intervening port." Great Britain, however, accepted the Declaration of London only in part, her Parliament specifically rejecting Article 35. Under the head of contraband, as the editors remind us, is classed "what the average man would term 'munitions of war'—arms and other distinctly military equipment." Conditional contraband is a class much less clearly defined, and may include "foodstuffs, fuel, clothing, railway material, and other articles not necessarily of military use, but which may be of such use."

The *New York Tribune* sees humor in the fact that England's first intention to seize cargoes of conditional contraband carried from America to Dutch ports in neutral ships finds its chief support in the doctrine of "continuous voyages," a doctrine originated and maintained by the United States in the face of British protest at the time of our Civil War. This doctrine seeks to make an exception to the general rule that trade between neutrals must not be disturbed by war. Concerning it we read in the *Manchester (England) Guardian*:

"Until the American Civil War it had never been suggested that even absolute contraband could be seized in a neutral ship bound to a neutral port, however near the enemy's territory. To minimize the risk of capture in that war blockade-runners resorted to the device of conveying contraband in neutral sailing-vessels from Britain to a neutral port in the West Indies, whence the cargo ran the blockade in swift steam-vessels of light draft. The American cruisers met this move by seizing the neutral

Copyrighted by the International News Service.

The white cloud near the middle of the picture is a German shell bursting. The smoke in the background is from the Allies' artillery.

SOISSONS UNDER FIRE.

sailing-ship before reaching its neutral destination, and successfully claimed condemnation of the cargo from the American prize-courts on the ground that the voyage of the goods, if not of the ship, was continuous from a neutral to an enemy's country despite transshipment at an intervening neutral port. The American decisions gave rise to much outcry from the learned who denounced them as unfounded in principle or authority, but it is noteworthy that the British Government, altho urged by the ship-owners affected, did not officially protest."

Turning to the comment of the United States press we find a general tone of satisfaction with the solution reached—the more so because, as the *Washington Post* remarks, "the double duty of observing the obligations of neutrality and of enforcing our rights as a neutral is the most delicate and important task that confronts our Government." Says the *Chicago Herald*:

"With the supply or non-supply of the enemy's forces the United States naturally had no concern. Its concern was for the maintenance of the rights of commerce between neutral nations. It naturally protested against any theory which could be made to prohibit commerce between neutral nations."

"In view of this attitude, sound in reason and maintained with temperate firmness, the British Government recoiled from its position. The assurances given by the Dutch Government that it will prevent the exportation of foodstuffs to Germany naturally helped to a solution of the problem."

"There were powerful reasons on all sides to bring about the spirit of reasonable settlement. But the case shows none the less that a settlement can always be found by nations that approach the issue without any other idea than that of settling it."

In an informative editorial on neutrality and contraband *The Wall Street Journal* explains that

"A 'conduct friendly and impartial' does not make it the duty of the Government to prevent its citizens from trading with any of the belligerent Powers. Therefore, a citizen of the United States may load a vessel here with wheat, army shoes, armored cars, or any commodities, and clear it for a port in England, France, Germany, or Austria, without a violation of neutrality."

"On the other hand (if the goods are contraband), he runs the risk of capture by a belligerent power, and the United States has no right to come to his aid. The risk is his own. He can sell wheat or copper to Germany or England, and deliver it if he can. But whether delivered or captured, the loading and clearing from our ports is not a violation of neutrality."

The *New York Sun* points out that while the practical effect of the present understanding between this country, Great Britain, and Holland "is of the highest importance," no question of international law and practise is settled by it. We read:

"England has yielded nothing of the principle for which she contends; a principle, by the way, which has been persistently and traditionally maintained by our own Government."

FREE MARKETS FOR CITY DWELLERS

PERHAPS when the school children of New York have all read the pamphlet, "How to Buy," recently distributed among them by the city fathers, and other children in other cities have had similar instruction, and when farmers have heeded the excellent advice on how to sell which is being offered them by city-bred editors, municipal-market schemes will be more successful in cutting down the cost of living. For the *Baltimore American* is but one of several papers to note editorially that from reports coming from a number of cities which have been trying the experiment of municipally controlled markets "it does not seem that in a single instance expectations as to lowering the retail cost of foods to city consumers have been realized." Chicago, we are reminded, opened a municipal market about three weeks ago "amid general rejoicing, but the market has been doing such a small business that, according to *The Tribune*, the plan of establishing other markets in congested residential districts has been abandoned." New York's market scheme "seems to have been kept alive only by continual boosting." The curb markets tried in Philadelphia, *The American* learns, "met with only moderate success," while "public markets established in Indianapolis and Portland, Ore., seem to have failed almost completely." The trouble in all these cases, to judge from press reports, would seem to be, not that fruits and vegetables were not actually sold at low prices—for they were—but that either sellers or buyers failed to show sufficient interest in the markets to make the total sales much more than a negligible quantity.

In New York, where the public markets have been open about six weeks, it would seem, according to a statement in *The Commercial*, to be the buyers who are tiring of the experiment. "Already," it declares, "the air is filled with the whining of women who refuse to carry home their purchases," tho "the prices speak for themselves and the quality is all that can be desired. . . . The masses can get all the markets they want, for they have the votes; but it would be senseless to waste time and money if the housewives will not go to market." If this diagnosis is accurate, observes the *New Orleans Times-Picayune*, "the success or failure of New York's free-market experiment mainly depends now upon the consumer's willingness to economize when the way to economy has been opened by the city authorities." But the producer has taken as little advantage of his opportunities as the consumer, the *New York Press* notes, for the Chicago market has failed to achieve complete success "because of the reluctance of farmers to bring their goods to the retail

stands." And the New York *Press* gives some of the explanations offered by the farmers themselves:

"Some said that the innovation came too late in the season for the convenient change from the old practise of selling to the commission merchant. Others declared that, owing to busy times on the farm, they could not afford to spend all day in the city disposing of a wagon-load of stuff which a commission man would take off their hands in ten minutes. A third reason was that housewives are too particular and buy only the best of the produce, whereas the commission man takes it all, the poor with the good."

The *Press* thinks that the third reason is probably the real one: "the commission merchant takes the good and bad in a lump and the housewife doesn't." But the answer is: "let the farmer grade his goods and price them accordingly."

While the markets may not have been used to the full extent that their most earnest advocates may have hoped, it should be noted that in New York the experiment is considered a success by its backers. "The figures submitted by the Mayor's committee showing the difference between the prices of foodstuffs in those markets and at the grocer- and butcher-shops still patronized by the mass must have an enlightening effect," declares the *Brooklyn Citizen*, "and will tell ultimately when a better-organized governmental effort to end the general extortion is made." The committee found, for instance,

"That in the purchase of eight different things, including potatoes and other vegetables and grapes and other fruits, the average saving of buyers in the open market is 40 per cent., the lowest being 25 per cent. on potatoes and the highest 50 per cent. on tomatoes. On thirty-four articles, including eggs, meats, and fish, the average saving is 38 per cent. In the interest of the poor, at all events, there is a call for an increase in the number of these open markets."

In a special report on the business done one Saturday in the four New York markets, this committee gave the names of "thirty-three farmers who brought produce into the four markets on that day"—

"Four of them sold out so early that they were enabled to return with a second load. The amount of produce which passed direct from the producer to the consumer is given as thirty-seven truck-loads. Many of the farmers sold out at noon. The loads ran as high as five tons."

And Borough President Marks, of Manhattan, who is largely responsible for the establishment and maintenance of the city market, said last week:

"This is the fifth week of the markets, during which period the business of the markets has trebled."

"Our purpose is to further develop this system, connecting the same with trolley service, and shortly lead up to the development of our railroad- and steamship-terminal facilities for supplies from the distance."

Two of New York's most influential dailies, *The Times* and *The Sun*, while admitting that the free markets had a temporary and perhaps a permanent place in the scheme of things, believe that they can never, in *The Times'* words, "lower the cost of living for the bulk of the population that is too busy to do its own marketing. Wholesale and retail services are still needed." *The Times* adds that the question, as seen by George W. Perkins, Chairman of the Mayor's Food Supply Committee, "is whether the cost of these services can not be much reduced."

And this paper points out that much can be done to improve and simplify methods of transportation to the city and of distribution within the city.

A CONGRESSIONAL PROPHET OF WAR

IT MAY HAVE BEEN "a statesmanlike policy," as one of his supporters calls it, that Congressman James R. Mann outlined when he said we should keep the Philippines indefinitely in view of the "inevitable" conflict to come between East and West for the command of the Pacific, and it may be that events in Europe only add weight to his arguments, but if so the press are in general unconvinced. Indeed, this speech of the Republican leader in the House of Representatives, being delivered at such a time as this, has been called "unfortunate," "silly," "rocking the boat," or "an almost criminal indiscretion" by papers of all shades of political affiliation, while to the usually impartial New York *Globe* (Ind.) it proves that Mr. Mann is "himself an unsafe leader with respect to international affairs." Even some who fully agree with Mr. Mann concerning the destiny of the Philippines find his speech a rather remarkable example of the "wrong-right" variety and regret that such "a good argument was lost in the din of alarmist bathos." However deserving of praise or blame Mr. Mann's reasoning may be, his speech is considered noteworthy as setting forth definitely and more or less officially the Republican Philippine policy. And the speech came, says the New York *Sun's* Washington correspondent, as "the single bright spot in a day of protracted general debate." Mr. Mann referred to Japan's marvelous advance as a world-power, and continued significantly:

"Close to Japan, lying like a sleeping child of the world, is China, with her vast territory, with her immense population, and that which was going on in Japan a few years ago is now going on in China. The awakening of China is more marvelous, perhaps, than was the awakening of Japan, and as these great people in China arise to the civilization of our modern days and engage in the manufacture of products we will enter

on a series of competitive efforts with the Far East which have never yet been equaled in this world.

"And we who are now legislating, if we do not bear in mind possibilities not merely of to-day or to-morrow or 100 years from now, of the inevitable conflict, commercial or otherwise, which we will meet in the Far East, have forgotten the principles which ought to actuate us."

The speaker then emphatically affirmed his belief that

"It is as certain as the sun will rise to-morrow that a conflict will come between the Far East and the Far West across the Pacific Ocean. All that has taken place in the world during the history of the races up to now teaches us that avoidance of this conflict is impossible."

"I hope that it may be only a commercial conflict. I hope that war may not come. I hope there will be no conflict of arms, but I have little faith that in this world of ours people and races are able to meet in competition for a long period without armed conflict. A fight for commercial supremacy leads in the end to a fight with arms because that is the final arbiter between nations."

"We command the Pacific Ocean with the land that we have on this side, with the islands that we possess in the sea, and with the Philippines on the other side."

"Will we surrender our command? I say no; never."

"If we should let the Philippine Islands go to-day without a

"A CONFLICT WILL COME BETWEEN THE FAR EAST AND THE FAR WEST."

And because Congressman Mann sees it coming, he would have us keep the Philippine Islands, which now give us the "command" of the Pacific.

"I THOUGHT I PUT YOU TO BED."

—Donahay in the *Cleveland Plain Dealer*

MEXICO'S PRESIDENTIAL PROCESSION.

MEXICAN MOVIES.

string tied to them they would belong to some other country within ten years, but if they could keep their independence for twenty-five or fifty or even one hundred years, in the end they would be used against us in the inevitable conflict between competing races. . . .

"Keep the Philippines under the flag of the United States and make them our friends. There is no advantage in having the Philippines in the event of war if they are unfriendly to us. Most people who get under our flag want to stay there. If we treat the Filipinos right they will want to stay there."

The *Sun*, speaking editorially, does not find that Mr. Mann has violated his own injunction against improper utterance during these days of war. What he said was "a very long-range speculation and entirely academic. . . . No diplomat would take such theorizing seriously. The State Department will not be asked to explain." The gentleman from Illinois, we are told, has set forth "a statesmanlike policy," and "if it be objected that the second part of Mr. Mann's program is not feasible, the spectacle of native Indian princes and their subjects taking the field to preserve the British Empire may be pointed out to his critics." This thought also occurs to the *Washington Times*, which sees a coming revision of the antiimperialistic idea "that far-distant dependencies are a weakness, not a strength, to the nation." Further—

"Is it not probable that when this war is ended, a new conception of imperial relationships, a new understanding of the ties between mother countries and their dependencies, will prevail throughout the world? . . .

"Britain's Empire appears to have been builded on the ideal of giving real liberty, substantial independence, and vast material benefits to a great group of communities held together in ties of common sympathy, institutions, sentiment, and interest. Is it to be conceded that the United States shall fail in the effort to win the affection and loyalty of the Filipino people, where Britain has succeeded in winning the Hindus and the Boers?"

But the *Chicago Herald* (Ind.), which stands with Congressman Mann on the main question—the retention of the Philippines—declares that, in support of his position, he has "marshaled all the worst arguments conceivable." First, he predicts war, and such predictions always "tend to fulfil themselves," then he commits himself to the theories that war is inevitable and "that commerce is necessarily a species of war," and he lends his authority to the "yellow peril" idea, thinking that "because a nation of Orientals is making something out of itself, from Occidental standards, the Occident is in danger." The New

York *Evening Mail* (Prog.) likewise regrets "that the opposition leader in the House should damage a good cause by a bad argument."

Still less patience with Mr. Mann's argument is shown by other papers, mostly of Democratic or pro-Wilson leanings. His talk, says the *New Haven Journal-Courier* (Ind.), is silly, and "especially silly at this time." And similar characterizations appear in the editorial columns of such dailies as the *New York Evening Post* (Ind.) and *Journal of Commerce*, *Philadelphia Record* (Dem.) and *Public Ledger* (Ind. Rep.), *Baltimore Sun* (Ind.), *Pittsburg Post* (Dem.), *Buffalo Courier* (Dem.), *Cleveland Plain Dealer* (Dem.), and *Indianapolis News* (Ind.). The *New York Globe* (Ind.) dubs Mr. Mann "the Bernhardt of Congress," and says:

"If Manns, Hobsons, and Hearsts excite fear and distrust of Japan among Americans, and the Manns, Hobsons, and Hearsts of Japan contemporaneously excite fear and distrust of the United States among the Japanese, it is conceivable that trouble may some time arrive. The game of arousing mutual national antipathies is a self-developing one. Mann's speech will be quoted in Japan by a Japanese Mann to prove how hostile is the United States. Then the words of the Japanese Mann will be telegraphed to this country and will be quoted by our Mann as proof of the increasing bellicosity of Japan. And so on and on. . . .

"No responsible public man of America should ever predict the inevitability of war with any country. Mr. Mann has proved himself an unsafe leader with respect to international affairs."

His speech, comments the *New Orleans Times-Picayune* (Dem.), "very closely resembles a challenge." "The 'Far East' could hardly be blamed" for taking his words at their face value, and preparing for a conflict, from which the United States would emerge "either shorn of its remote possessions, or committed to further conquest and a more elaborate program of imperialism. . . . The prospect held out to us by Mr. Mann is not alluring." And the *New Orleans* paper concludes by thus answering the argument that seemed so convincing to the *New York Sun* and the *Washington Times*:

"A Philippine republic, proud and jealous of its independence, bound to us by ties of gratitude and interest alike, would prove a far more effective help to us, in the event Mr. Mann's gloomy prediction is fulfilled, than would a Philippine dependency held by force, ripe for revolt against a hateful alien yoke whenever our entanglement in war with a Far Eastern power offered the opportunity."

PERILS OF NEUTRALITY

THE MAN who takes his stand midway between two opposing armies naturally receives the fire of both. To each army he seems to be an outpost of the enemy. So this weekly, aiming to preserve a strict neutrality, is accused of partiality by extremists of each side, who see very clearly that we favor the foe. The good book tells us when smitten on one cheek to turn the other, but we are saved the trouble by being smitten on both cheeks at once. Thus far the smiters are exactly even on both sides, and make up in vigor for what they lack in number. Omitting about half a dozen of the milder ones, they are sure that:

WE FAVOR THE GERMANS
TORONTO, CAN.

You quite unfairly, as it seems to me, quote opinions favoring the German side of the question, while you almost entirely omit any quotations favoring the other side.

TORONTO, CAN.

Of late, some of us think that the German bias has been a little more manifest. . . .

HAMILTON, ONT.

Why do you cater to the Germanic race in America?

The Toronto World.

They (the Kaiser and his friends) have persuaded the usually judicial LITERARY DIGEST to publish everything that could be found favorable to the Kaiser and his contention, until that periodical, eminently able and, as a rule, eminently fair, has become a dyed-in-the-wool partizan.

TORONTO, CAN.

I regret that the tone of your editors' comments in the few places where they are made conveys an impression distinctly disagreeable to one living under the British flag.

WE FAVOR THE ALLIES
MILWAUKEE, WIS.

Is it not strange that in your perusal of the press, all articles should have escaped your notice with the exception of those which take a stand for the Triple Entente?

MILWAUKEE, WIS.

In a number of your articles your writings come out a little too strongly anti-German. Is this necessary?

KINGSTON, N. Y.

The undersigned objects to any and all sarcastic flings at Germany on the part of THE LITERARY DIGEST. We are verily getting enough of these from the daily papers and should be spared by your paper.

OAKLAND, CAL.

Have liked your paper always, but since the war you seem partial to the English.

HANKINSON, N. D.

You give the English too much space in your paper, too much to be regarded as impartial.

WE FAVOR THE GERMANS
TORONTO, CAN.

Throughout your entire issues, since the war commenced, your selections appear to be taken, arranged, and commented upon as tho with one necessary idea always in view: i.e., the righteousness of the Pan-German cause. . . .

TORONTO, CAN.

Your magazine has been admired by all its readers in all parts of the world for its unbiased, non-partizan attitude on all questions. . . . Yet you have injected your pro-German sympathies . . . to such an extent that you entirely fail to give a reasonable representation of the opinion of the American press.

TORONTO, CAN.

I wonder that you and your organization pretend to be anything else than patriotic Germans of the Fatherland who as yet have not even become naturalized in the United States, and that evidently being the case I am surely wasting good ammunition in paper and ink which, as a matter of fact, were you in your proper place in the German Army, should be good British lead and powder.

TORONTO, CAN.

It is to be hoped that you will advise your editors, who are undoubtedly pro-German . . . to be more fair regarding the Allies.

MONCTON, N. B.

You have descended to unfair and insidious partizanship and are defending a cause and condoning crimes that are a disgrace to civilization.

WE FAVOR THE ALLIES
BROOKLYN, N. Y.

It is with surprise that I observe your unfriendly attitude toward Germany.

MAYVILLE, WIS.

You are not giving Germany a square deal in the hour of her trial.

AKRON, OHIO.

Looking through THE DIGEST I was amazed, astounded, and shocked beyond description to see that your people had printed a caricature of Emperor Wilhelm II. . . . comparing Kaiser Wilhelm with that blood-thirsty, thieving usurper Napoleon. . . . Unless you can explain to my satisfaction this slur on all fair-minded and impartial people, you may consider me a non-subscriber, as I shall do everything in my power against you. . . . Let us have fair play.

MARIBEL, WIS.

There is no room in my house for a paper which like yours shows such partiality against Germany, as is plainly seen in the way you are taking your selections from the different papers. There is no doubt that you have joined the ranks of the yellow, narrow-minded Cossack press of this country which tries, altho on your part in a more gentle way, to arouse prejudice against Germany.

IRONWOOD, MICH.

THE LITERARY DIGEST has become infected by a rather serious kind of Teutophobia. . . . Civilization is at stake, and Christianity is in danger if the intrigue-mad Englishmen win in the present war.

FOREIGN - COMMENT

LONDON'S FEAR OF A "ZEPPELIN" RAID

THE FIGHT of armies in the air was one of the features of the campaign of Titus which the Jews noticed in the configuration of the clouds, but air warfare has become a reality in these days, soaring above the reach of earthly weapons. The Germans have dropt their bombs in Antwerp and Paris, and we learn from the *Düsseldorf Zeitung* that bombs have been dropt by the English in their city. It is now feared in England that the enemy may attempt to destroy that cluster of buildings in London which forms the center of the capital of the Empire, comprising Buckingham Palace, Westminster Abbey, and the Houses of Parliament. Says the *London Daily Express*:

"Altho London and other cities in the British Isles have not so much to fear from hostile air-ships as places on the Continent, we can not close our eyes to the fact that an attack on us by air is a possibility. That this is so is shown by the precautionary measures that our War Department has been taking.

"Yet, far from causing anything like panic, the warning notices issued in the press and the subdued light in our streets give us a certain sense of security. The knowledge that we have our own patrols in the sky to warn and to guard

us against possible foreign air-marauders has a distinctly reassuring influence.

"What are the facts, as we are aware of them, of the possibilities of a German air attack? There is a rumor that the Germans are secretly building a large number of Zeppelins, but this is an obvious impossibility. Zeppelins, like war-ships, take

SEARCHING THE SKY FOR HOSTILE AIRCRAFT.

Powerful search-lights are flashed over London nightly to detect possible German Zeppelins.

From "The Sphere," London.

HOW THE AIR-SHIPS MIGHT INVADE ENGLAND

The illustration shows the conditions governing a possible Zeppelin attack upon London. The nearest German air-ship base to England is at Cologne, which is 310 miles from London. A Zeppelin can only travel about 400 miles without replenishment, and therefore its action is limited to a radius of about 200 miles and even this, of course, is only possible under the most favorable weather conditions.

time to build. Before the war began Germany's entire fleet of Zeppelins numbered perhaps a dozen, and approximately half of this number have been already put out of action. The most generous estimate would not give the Germans now more than five or six Zeppelins in various stages of completion."

The writer then discusses the respective advantages of the aeroplane and the dirigible:

"In the light of an attack, what are the comparative advantages of the dirigible and the aeroplane? The dirigible, in the form of a Zeppelin, could easily make the journey from the Continent to London and back. Fair weather, however, would be an absolute necessity. An air-ship of this type is capable at the most of carrying a cargo of from three to four tons, which, in the form of explosives, would prove a distinct menace.

"The advantage of the dirigible over the aeroplane for bomb-dropping principally lies in the fact that she is able to hover over a position and release her missile vertically, but this advantage is to a large extent negatived because she must remain at a high altitude for her own safety, and, in consequence, accurate aiming is not easy. With the aeroplane, hovering over a target is an impossibility. She relies entirely upon her speed for her support in the air, and this disadvantage makes accurate aim problematical."

England, we are told, has prepared certain guns to deal with this attack by air and boldly faces the contingency of such an invasion. How the invader might attack and how he might be put out of action are thus discussed:

"If a Zeppelin flying at a height of 3,000 feet—where, by the way, she would be a ready target for our own antiaircraft guns—released her arrows and bullets, they would reach the ground with a velocity of about 450 feet per second. In the case of shrapnel bullets, weighing, say, twenty to the pound, this would mean a striking energy of about 100 foot-pounds. As an energy

of 60 foot-pounds is considered by experts to be sufficient to put a combatant out of action, we can readily see that falling missiles from aircraft constitute a real danger to the individual. At an altitude of a little over a mile the arrows and bullets would drop with a velocity of about 630 feet per second, with a proportionate increase in death-dealing effectiveness.

"So much may be said of the power of the dirigible and aeroplane if they were ever allowed to be in a position to drop

"GERMANY'S WAR SURPRISE."

FULL-SIZE REPRODUCTION OF THE GIANT SIEGE-GUN PROJECTILE WHICH SELLS FOR TWO CENTS IN BERLIN.

There has just reached London a specimen of a remarkable broad-sheet that is being widely sold for the equivalent of two cents per copy in Berlin. It is a full-size reproduction of the projectile which is thrown by the new big German 42 cm. (16.4 in.) siege-gun. The reproduction is headed "Germany's War Surprise, 1914," and the pictured projectile is marked with the names of Liège, Namur, Longwy, and Maulbeuge, with the motto "With God for King and Fatherland." There are also two pictures showing the effects produced by the projectile. In the view here given with the British soldier the proportionate size of the projectile may be estimated.

missiles on London. It will not be easy for them to approach the city, however, because our authorities have not been slow to recognize the necessity and provide means of defense. Besides the operations of our own aircraft designed to meet the sky-marauders in their own element, we have at various important strategic points small but powerful guns capable of firing at high angles of elevation.

"The size and capacity of these guns are not definitely known to the public, but it is certain that they are quick-firers of small caliber. The heaviest projectile they fire would probably be about eight pounds in weight and two inches in diameter, with a muzzle velocity of, say, 2,500 feet per second. Such a shell would be capable of reaching 3,000 feet vertically into the air in about one and a half seconds, at which height it would still about one and a half seconds.

"Even rifle-fire is of great service in repelling aircraft attacks. A bullet from our service rifle fired at an air-ship 3,000 feet above the ground would still retain more than sufficient energy to kill the aviator or to damage his engine irreparably. The bullet would reach such a target in about three seconds. At the height of a mile, which the bullet would attain in less than six seconds, it would still possess sufficient power to give the aviator a knock-out blow."

GERMANY CUT OFF FROM IMPORTS

FAMINE is said by the poet to be the bosom friend and comrade of War. German economists had foreseen this in the terrible campaign they believed imminent, and their darkest predictions are being fulfilled in the obstruction of commerce by the blockade of the North Sea and Baltic ports, through which the Fatherland received much of its grain and the raw products which supplied the mills and factories with materials for the fine products which flooded the world. Thousands of hands are idle, we are told, and thousands of mouths are hungry in the conflict which has brought them to helplessness and starvation. American residents in Berlin have opened a kitchen to feed 200 hungry a day during the war in appreciation of the courtesies of the German people to the fleeing American refugees during the past months. In this connection it is interesting to read an article by Dr. Karl Ballod, of Berlin, in the *Preussische Jahrbücher* (Berlin), an abstract of which is given in *The Evening Post* (New York). The author is an authority on the subject he is handling and does not shrink from a controversy with one of Germany's leading military authorities, Count von Moltke, who wrote a very optimistic article in the same journal maintaining that his country could get on very well without imported breadstuffs. Dr. Ballod's article is called "The Feeding of the German People in Case of War." It was published in July, and is of high significance, as it pointed to the fact that not only was war near at hand, but that famous economists were considering the material effects of such a conflict. A few days ago Vice-Chancellor Delbrück argued at some length that Germany can not be starved out, thus showing that there is some fear of such a danger. Dr. Ballod makes out that Germany in time of war will be unable to feed her people, as one-third of the grain required for food is imported. He contrasts the condition of Germany in July with what it was in former times. To quote his words:

"Fifteen years ago one could still trust that in case of war, if importations from foreign countries were stopped, or, at least, much restricted, we might, if need be, get along with the home production of grain, provided energetic measures were taken to forbid the manufacture of brandy and beer; to-day this is no longer possible.

"It is true our importation of breadstuffs has decreased within the last years; we export a half million tons of rye instead

REMAINS OF A GERMAN AEROPLANE.
Brought to earth by a party of English riflemen.

of importing, as we did in the nineties, from three-quarters of a million to a million tons of rye. This fact explains the prevailing optimistic view as to the danger, or rather lack of danger, from the cutting off of foreign supplies, with which English and French writers have threatened us.

"Count Moltke inclines to this optimistic view. In differing with him, emphasis must be laid on the fact that the bread-stuff question can be understood only in connection with the

LONDON AND BERLIN ELECT EACH OTHER TO THE ANANIAS CLUB.

question of the entire consumption of grain, plus feed, plus nuts, seeds, etc.

"The importation of breadstuffs has decreased—but the total importation of grain and other food products has increased enormously. In 1911-13 we imported, in round figures ten million tons of grain and feed, and, in addition, at least five million tons' worth of grain in the form of 900 million marks' worth of cattle, meat, fat, herring, eggs, butter, and cheese.

"Even if the statistics of German crops are accepted as correct and the crops for 1911-13 are put down as amounting to 25 million tons net, it appears that fully a third of the grain required for food is imported, of which the breadstuffs constitute only one-tenth."

Dr. Ballod disputes the rosy views of Count von Moltke, who thinks that the German people could support themselves on the grain raised in their own fields. He says:

"It is a terrible self-deception to make out that the German people could get along eleven months in the year with the grain which they themselves raise for bread. Get along! Yes, as long as they can import 60 per cent. of the feed needed for cattle. The cessation of importation of feed would reduce the milk-giving qualities of cows to three-fourths of the normal, and be disastrous as far as hog-raising is concerned; two-thirds of the eggs could not be fattened for the market, but would have to be slaughtered as quickly as possible. Restricted importation of feed means, therefore, a reduced supply of animal foodstuffs, and hence a crying need for more bread."

He thinks that in case of war the frontier and harbors of Germany would be absolutely blockaded and all trade absolutely obstructed, and he opposes Count von Moltke, who thinks that such a complete blockade would be impossible. To quote further:

"Does Count von Moltke believe that the ports of Holland, Belgium, Denmark, and Sweden, even in the worst case of a great war—Triple Alliance against Triple Entente—will remain open to Germany? That England even after the declaration of war would direct its merchants and shippers to supply us with food products by way of Holland? English writers are of a different opinion; they say frankly that it would be possible to starve Germany.

"It must be noted that in order to stop the importation

of foodstuffs it would not be necessary for England even to violate the neutrality of Holland and Belgium. The grain-vessels which ply between England and Holland and Belgium are—most German authors do not seem to know this—two-thirds of them English vessels. All that England would have to do, therefore, would be to keep its ships in English ports. German ships would be seized. As to the rest, Belgium herself must buy 2,500,000 tons of grain to add to the home product of 1,500,000 tons, and Holland depends on a foreign supply of 1,500,000 tons. Therefore, the neutrality of Holland and Belgium is worthless. These countries will have to be thankful if England permits them to import enough grain to supply their own populations.

"Switzerland can give no help. Austria-Hungary has barely enough for itself under the most favorable conditions. Italy imports in wheat alone from 1,250,000 to 1,500,000 tons a year, and must, therefore, keep on friendly terms with England.

"Roumania could help, but is uncertain. Denmark is naturally unfriendly. Sweden and Norway could supply small quantities if the German Fleet controlled the Baltic, but England would soon put a stop to that by sending a couple of small cruisers to Norway, whose navy is a negligible quantity, the same as that of Holland, which serves mainly to protect the colonies from native pirates."

According to the Berlin Professor, 4,900,000 men between the ages of twenty and thirty-nine would be called to join the colors. The effect of the withdrawal of this vast number of men from agriculture and industry, the closing of factories due to the lack of importation of raw materials, must cast out of work a great many men, boys, women, and girls. This would result, says Dr. Ballod, in putting Germany's recent development two hundred years back, and setting her down from her pinnacle of commercial achievement to a level below Finland, Switzerland, or Belgium. He adds, in conclusion:

"It is to be regretted that some military authorities who seem to see the necessity of laying up provisions fear to broach the subject, thinking that it may hurt the carrying out of the distinctly military program to confess that they still need so much more. This is a mistake, as the supplies could be bought on notes and the supplies themselves be given as security, and the purchase, therefore, would not require loans."

MAKING GAME OF THE FOE.

GERMAN TRADE AFTER THE WAR

IT IS TRUE that German trade is almost paralyzed at present, but German writers are predicting that when the war is over the onward march of their commercial progress will be resumed and England will find the same competition driving her products out of the world's market. A writer in the *Berlin Zukunft* discusses this question in an optimistic article, basing his conclusions on figures that appear in the *London Economist*, the great financial organ of the British metropolis. While the German writer anticipates great changes in the money market as the results of the present struggle, he speaks very hopefully about the results as far as they relate to Germany. England is not the whole financial and mercantile world, he says, and the war will not last forever. South America and the Far East will continue to be the markets of Europe, and on these markets Germany has had a predominant control. He speaks very slightly of England's attempted exclusion of German goods, and says that the people of the British Isles still depend, and will continue to depend, upon the supplies from German sugar-refineries. Moreover:

"Since the new American tariff came into operation, there has been a tendency to import German textiles. This is a source of wealth for the Fatherland which can not be overestimated. It is often asked why England can not meet us on this ground, but the English manufacturers have frequently stated that they find the high wages demanded by English operatives have hindered them in competing with Germany. The Americans have long ago given up any attempt to compete with our country in this field, from which Great Britain is being driven by our commercial activities."

This writer goes on to say that the English Government has altogether mistaken the situation and has done nothing to foster its own local industries. It is often said that England has been dilatory both in the prosecution of her wars and the promotion of her commercial interests. The opportunity which the European con-

flict has afforded of enlarged commercial and transporting interests for England, this writer thinks, has been missed in that country, and Germany will be quick to take advantage of it. Germany has been a large supplier and exporter of goods to America, Canada, and the United Kingdom, and England will be too busy during the war to win back these markets. The Briton has dropped back too far in the commercial race, we are assured, to regain his old position of supremacy:

"What England at one time depended on as her commercial heritage, Germany will soon take possession of. England is not now taking up anything like a commercial struggle for the mastery, but has sunk into slothful torpor. The German industry and the Germans' trade as exporters have no longer any need to appeal to the importing nations of the earth. Of course, it necessarily must, to a large extent, be checked and hindered, but when the war is over the peaceful competition which will result will affect a great State like ours to a degree which will make the country still more broadly spread her productions over the world. Doubtless, competition will mean that those who make the best goods will find the best and most numerous customers. Even if England refuses to deal with us in trade, the

consequence will be that Germany must struggle with redoubled energy to wrest from her rivals a commerce in which she has hitherto been so brilliant and successful. On the other hand, England would merely be injuring her own country if she put a tariff on goods imported from Germany. At present German sugar is imported by England to an amount which in 1913 reached \$50,000,000. It will not be very easy for England, after the present war is ended, to destroy so large a supplier of necessary food as this is. Our adversaries and those who are envious of us can, of course, for a short time blind the public eye to their best interests, but in the long run we shall find that the war has done no injury to our export business because our rival will be compelled to purchase what is needed from the best and cheapest market, which will be found in Germany. Germany can count without fear on the coming of any foreign competition as the consequences of this fatal war, and, in any case, the commercial fortune of our country will never depend merely upon the favor of England."

SCIENCE - AND - INVENTION

TO STOP TELEPHONE-EAVESDROPPING

LISTENING to what the neighbors say over the party wire will no longer be a popular amusement when the device recently invented by A. G. Howard, of Nebraska, is attached to telephone-instruments generally. Mr. Howard's invention, we are informed by Frank G. Moorhead, in an article contributed to *The Technical World Magazine* (Chicago, October), sounds a warning when a third party breaks in on the wire, and also identifies the culprit to both the legitimate users of the telephone. As there are about nine million party-line telephones in the United States, the device seems destined to affect a great many people and to check a firmly established custom. Mr. Moorhead says that the accompanying reproduction of a photograph showing a farmer's wife at work at her sewing-machine, with the receiver of the telephone firmly bound to her ear, is *bona fide* and no fake. The good woman's object, of course, is not to miss a single word of the conversation of her neighbors throughout the entire day! He goes on to explain:

"Howard's device has been tried out on a number of party lines and has proved practical. It is the result of eleven years' experimentation.

"One of the questions most frequently asked of me by new subscribers," says Howard, who himself is in the telephone business, "is this: 'Does every one on the line have an opportunity to hear what I say when I am talking to another party?' I am forced to acknowledge that such is the case. One farmer's wife asked me that question eleven years ago. When I replied, she asked if there was not in existence a telephone that would give private service on a party line. When I told her that I had never heard of such an instrument, she said some bright telephone man had better get busy and invent one; it would make his fortune. I took the tip, got busy, and believe I have solved the problem."

"Mr. Howard's device can be readily attached to any telephone. The user operates his tele-

phone in the old manner, except that he turns a little switch just as soon as he begins to talk. This switch starts a mechanism which is timed by a small clock. An indicator points out the time the conversation continues and the telephone connection is automatically cut off at the end of four minutes. If, during the conversation, some other subscriber on the line

picks up his receiver, the removal of the instrument from the hook produces a musical sound which not only notifies the users, but identifies the one who is listening.

"The identifying sound is produced by means of a disk carrying toothed projections on its extremity, which come in contact with a pair of key-note tongues. These tongues produce the musical signal, which is of a high or a low note, to represent the long or the short ring used to call the different subscribers on the party line. Inasmuch as most party lines have from four to twenty users, there are the corresponding number of different signals or musical sounds by means of which the location of the receiver just removed is learned.

"The device thus has the twofold effect of measuring the length of a conversation and identifying the eaves-

dropper. The inventor believes that cutting down unnecessary conversations, by automatically shutting off the connection at the end of four minutes, will effect a saving of 50 per cent. or more on batteries and that it will eventually result in reduced telephone rates."

Such are the benefits which the inventor of the new device expects to confer upon the talking world. But not everybody is to be made happier. In fact, Mr. Moorhead thinks it is

"Very doubtful if most country subscribers will take kindly to the device which will cut off some of their keenest pleasures, for there is no doubt that many farmers' wives meet and talk in company on the rural lines in a way which should be regarded as perfectly legitimate. At such times a frantic call for a doctor is always regarded, and under ordinary circumstances there is very little business need of the telephone at the hours when it is used for neighborly talk. But business methods are moving into the country along with scientific improvements."

HIS INVENTION.

Which will make party-line conversations private.

THE COST OF THE HUMAN MOTOR

AN IMPORTANT feature of the modern "efficiency systems" is the careful balance of cost of yield. Eminent physiologists, including notably the distinguished German scientist, Fischer, have been studying the "human motor" from this standpoint. Most people, according to *L'Illustration* (Paris, July 25), still have vague ideas of the mechanical value of the human machine in units of work as compared with cost of production. We read:

"According to the experiments of physiologists, particularly those of Fischer, the latent energy in the food required by an adult man in twenty-four hours is from 3,000 to 3,600 calories. A notable part of this is utilized in the interior of the body to determine animal activity and produce its permanent manifestations, respiration, digestion, circulation of the blood, elimination, etc.

"The excess of the remaining energy is applied to the production of mechanical effects. Thus, muscular labor of average intensity for the eight hours of a working day is the equivalent of about 20,000 foot-pounds of work, or 300 calories, a trifle less than one-half of a horse power per hour.

"Under such conditions, and assuming this yield, whose exactitude may be taken as certain, we can calculate the cost of 100 horse-power per hour with regard to the particular form of motor employed."

An interesting comparative table, based on these calculations, is given as follows:

250 men at 60 cents per day	\$150.00
10 horses (all expenses covered)	12.00
1 steam-engine	1.20
1 gas-engine87 1/2

"These four figures establish indisputably that human motor-power is more than a hundred times as costly as that produced by steam. This is a very strong argument in favor of the modern industrial thesis of intensive machinery.

"The man-motor is an economic heresy. He is bound to give place to the machine of which the workman is merely the directing intelligence. From this point of view, physiology furnishes a peremptory demonstration of the favorite doctrines of scientific socialism."—*Translation made for THE LITERARY DIGEST.*

SPINAL CURVATURE IN BABIES

THE APPALLING FREQUENCY of spinal curvature among infants and school children has been investigated by a number of physiologists, who find that it is often caused by the manner in which the child is carried by the mother or nurse, who supports it on the left arm while the right hand holds it prest firmly against her own body. According to an article in *La Revue* (Paris), this position, when too frequently and continuously maintained during the day, often results in a compression of the tender young bones of the pelvis and upper thigh which is sufficient to cause a deviation in the vertebral column. This condition is found most often in girls, and it becomes most visible in the early teens. We read further:

"Dr. Engelmann, of Vienna, who has made a long series of observations on this subject based on autopsies, has found that this scoliosis is ordinarily shown more on the left side than on the right. It may be very serious when the child's skeleton is frail or it is predisposed to rickets.

"Statistics established with meticulous care by such well-known physiologists as Schroder, Waithe, and Combe attest that among 2,314 pupils in the primary schools who were carefully examined, 91.4 per cent. presented deformations of the dorsal spine with incurvation to the left."

It is stated also that E. Muller found that 68 per cent. of the victims of scoliosis inclined the head on this side. According to Dr. Engelmann this affection is entirely due to the vicious method of holding the new-born infant. Hence he urges exceedingly great care in this matter, which is the more important

as a long-established scoliosis is almost irremediable, the usual remedies of orthopedic corsets, massage, plaster jackets, etc., being not very effective in cases which have become chronic.—*Translation made for THE LITERARY DIGEST.*

TO STOP GUN-DEAFNESS

WOULD you rather lose your hand or your hearing? Probably most persons would prefer the former. Now the enemy's artillery may deprive you of your hand, while your own may make you deaf; hence the conclusion that under certain circumstances one's own guns may be more dangerous than the enemy's. A writer in *The Medical Record*, quoted in *The Scientific American Supplement* (New York, September 26), calls deafness from the concussion of a gun "one of the minor accidents of war"; yet he confesses that it can not be ignored. One discharge of a single piece of artillery may put in jeopardy the hearing of a large number of soldiers. In the course of a prolonged "artillery duel," it would seem a marvel that any one's ears remain intact. Protective devices are imperatively necessary. Says the writer mentioned above:

"The aural injuries to which the soldier is exposed are no different from those of the boiler-maker, of the structural iron-worker, of the sportsman, and of those who are exposed to the shriek of the railway whistle when a train is passing through a tunnel or covered station. Johnson Horne, in *The Lancet*, August 15, 1914, points out that the report of a piece of artillery, the concussion of an explosion, or the firing of a cannon close to the ear may exert its injurious effects upon the nerve-terminals of the ear, may cause rupture of the drum-membrane, and may even result in irremediable deafness. During the Russo-Japanese War, among the 1,791 men who were wounded in the naval engagements there were 116 cases of concussion of the labyrinth and rupture and congestion of the tympanic membrane, which cases represented 7 per cent. of the wounded who survived. The injuries to the drum and to the nerve-endings are due to the sudden condensation or rarefaction of the air in the external auditory meatus. As a rule one ear is more affected than the other. Politzer states that with the improvements in modern artillery ruptures of the drum-membrane are now scarcely ever met with. This is attributed to the introduction of breech-loaders, and also to the fact that the serving party withdraws to a distance of about twelve paces, with the exception of one man who attends to the firing, but who also stands at a considerable distance.

"In naval warfare, however, the gunners can not be protected in this manner. Experience has taught the gunner that by keeping the mouth open so as to equalize the air-pressure on each side of the drum-membrane the unpleasant consequences of concussion may be diminished. The toothpick that is chewed by naval officers while serving the guns partly fulfils this requirement, altho a piece of rubber rolled between the teeth would be still better as a means of keeping the mouth partly open.

"The Japanese naval surgeons distributed pledgets of absorbent cotton to the entire crew with the instruction that the ears be plugged up during the firing of guns. In spite of this measure, possibly on account of its careless application in individual cases, many instances of deafness resulted. In 1911 the British Admiralty advised the use of an aural plug consisting of a mixture of plasticine and cotton-wool. Johnson Horne believes that an efficient aural plug should be close-fitting and impervious, and, while reducing the intensity of sound, should not prevent hearing; it should be easy to insert and easy to remove intact; it should be non-irritating; it should be inexpensive so that the same plug may not be used repeatedly; and, above all, it must be as nearly antiseptic as possible. Cotton-wool when inserted sufficiently tightly is not easily removed intact and does not long remain sterile when handled by men engaged in gun-firing. The ear-plugs made of vulcanite rubber or celluloid can not be supplied to fit exactly the channel of the ear. They must be made of a substance that retains its shape without hardening or softening and remains ever plastic. A substance having the consistency of jeweler's wax may be produced and may be made to fulfil all the requirements of effectively plugging the ears and at the same time of preventing infection."

PANORAMIC MOVIES

THE NEXT THING that is to be offered for the delectation of the insatiable dime-theatergoer appears to be a combination of the old-fashioned panorama and the moving picture. A so-called "kinetorama," intended to supply the evident need for a machine of this sort, was put on the market fifteen years ago by a French inventor, but he used a battery of cinematographs working all at once—too complex a device to succeed. Dr. Hans Goetz, of Munich, Bavaria, has now devised a suitable modification of the ordinary moving-picture camera which does the business—so we are told by Dr. Alfred Gradenwitz, writing in *The Scientific American* (New York, September 12). This camera rotates about a vertical axis like an ordinary panorama camera, while at the same time the strip of film on which the moving picture is imprinted is passing in front of the slit. Says Dr. Gradenwitz:

"The accompanying diagram is a top plan view of such an apparatus: *a* is the vertical axis around which the camera, *b*, rotates. The objective, *c*, comprises an adjustable slot, *d*, below which a film, *e*, is arranged to pass under the action of a gearing controlled by the axis, while unwinding from drum *f* on drum *g*.

"When this apparatus is made to rotate once round its vertical axis, the whole panorama is reproduced photographically, or, as it were, unwound on the film. However, it suffices to provide for a continuous rotation at a speed corresponding with the normal rate of moving-picture projection (that is, about fifteen revolutions per second), in order to produce a most unexpected conversion, and to transform the camera into an ideal panorama cinematograph. The pictures thus obtained, at first sight, do not seem to have anything in common with moving-picture films, and are nothing but a panorama continually unwound, comparable to a wall-paper border. However, on examining

the panorama more closely, the pictures are seen to differ from one another, any moving objects occupying more or less different positions, as on the sections of an ordinary cinematograph film. In fact, the only distinctive feature of the panorama film is the substitution of a single, continuous picture for an intermittent succession of film sections.

"This picture has to be projected on the walls of a large circular hall, so as to cover simultaneously the whole of its circumference. In an ordinary cinematograph, films are, of course, projected by an intermittently operating mechanism,

each section being successively illuminated, projected, and advanced in one-sixteenth of a second. The projection of moving-picture panorama films is by no means more difficult, provided the camera described be supplemented by some illuminating means.

"In order to facilitate the understanding of the underlying principle, let the film be supposed to be lighted intensely by a lamp arranged close behind it, above the axis of rotation, *a*, thus converting the camera into a lantern projecting on the screen a narrow picture, in accordance with the width of the slot, *d*.

"Suppose the apparatus, installed in a circular hall with white walls, to be set rotating slowly: Narrow pictures, corresponding with each point of the original scene, will appear successively at the various parts of the circumference. If a tree was standing on one side of the scenery, in taking the cinematograph record, and a house on the other side, the tree will be projected in succession on opposite sides of the hall. Owing, however, to the persistence of visual impressions, the human eye will perceive simultaneously successive parts of the picture, provided the apparatus be turned round at a sufficient speed. In fact, the narrow bands composing the projection will melt into a single continuous picture covering the whole circumference of the hall like a real panorama. A similar principle has been embodied in the 'photorama' designed by the Lumière Brothers, where rotating objectives were arranged to project a photograph wound on a glass drum.

"In actual practice, it is, of course, impracticable to arrange

INTERIOR MECHANISM OF THE EXPERIMENTAL CAMERA

THE EXPERIMENTAL PANORAMIC MOVING-PICTURE CAMERA.

the lamp immediately behind the film. A powerful search-light is therefore installed outside of the apparatus, the light of which is thrown by mirrors through the hollow axis of rotation.

"The astonishing result obtained by Dr. Goetz's apparatus may be described as follows: The Lumière 'photorama' at each rotation projects an always identical picture, the picture passing before the slot of this apparatus is seen to vary continually, each turn bringing a new phase of the original motion into view. In fact, the projection thus obtained is a real moving-picture panorama, performing its natural movements, where houses and other immovable objects, of course, remain in position, the same as on an ordinary cinematograph film. The apparatus, it is true, requires an intense illumination; since, however, the insertion of a glass trough containing an acidulated 1 per cent. solution of copper sulfite eliminates heat effects to 96 per cent. nearly, this does not entail any danger.

"Moving-picture panoramas literally place the spectator in the midst of a given event or scenery. He sees himself transferred to the center of traffic in a city where vehicles and pedestrians converge from all sides, to aerodromes, where air-ships and aeroplanes unceasingly perform their maneuvers, to horse-, bicycle-, and automobile-races, football matches and other sporting events, processions, popular festivals, expositions, etc. He is afforded an opportunity of watching from the 'Officers' Hill' the strategic operations of armies, and from the conning-tower of a battle-ship the maneuvers of a fleet. He is able, in the moving-picture theater, to fancy himself aboard a steamer or in an open carriage, traversing the most fascinating scenery.

"Panorama films may as well be cut into sections and projected intermittently on a plain screen, like ordinary cinematograph pictures."

FOR INTERNATIONAL QUARANTINE

A PLAN for a Pan-American quarantine to take the place of the present control by individual nations, which is declared to be costly, disorderly, and unnecessarily severe, is put forward editorially by *The Modern Hospital* (Chicago and St. Louis, August). In its September issue this paper further announces its intention of pushing the matter and stimulating its discussion so that the next Pan-American Sanitary Convention, in Montevideo next December, may formulate a plan for a constructive quarantine that can be enforced—not for repressive segregation, but to the end that there shall be absolute confidence in the methods employed, which will permit uninterrupted intercourse. Quarantine, the writer points out, is to prevent the spread of disease, but the idea that this may best be done by absolute restriction is declared to be antiquated and false. He says:

"In the days before we knew the cause, course, and pathology of the communicable diseases, the best quarantine officer of any country or port was he who could raise and maintain the highest, strongest, and most formidably 'hog-high' barrier against intercourse of any kind with an afflicted, helpless, and needy neighboring State or port. That time, thanks to our present-day scientific knowledge, as well as our humanitarianism and common sense, has gone by, and we know now that scientific quarantine contemplates the largest possible measure of uninterrupted intercourse, the freest possible interchange of commodities, the greatest measure of helpfulness to the afflicted people, and at the same time the employment of the most highly developed methods of prevention of the spread of the disease.

"Unfortunately, we have not been cured of our habit of panic in the face of a danger. . . . In the case of an epidemic this habit of panic takes the form of a declaration of quarantine long before it is definitely determined that such a course is necessary. . . .

"Is it generally known that a declaration of quarantine against a South- or Central-American port very often means financial ruin of the country dependent on it? And is it generally known that very many of these quarantines are false alarms, and that the dreaded disease was not present at all, or, if present, was also present in quite as aggravated form in the ports which cut off communication? And is it generally appreciated that a little intelligent cooperation with the afflicted people would have stamped out the trouble in its incipency, before it got to be a menace? A case in point: three cases of plague developed in New Orleans within the month; the Surgeon-General of the

Public Health Service was on the ground and at work before the public knew about the cases. If those cases had occurred in a Venezuelan port, quarantine regulations would have closed the door of every other port in the world against the already afflicted people, and it would take years for them to recover, altho not another case of the disease were to develop.

"Then, why not go about this quarantine business in an orderly fashion, and as tho all the people in this hemisphere were indeed fellow human beings entitled to thoughtful consideration—one of another?"

"How would it do to create by governmental initiative an international quarantine commission, with a representative from each independent State, nation, and island? This commission would operate something like our own Interstate Commerce Commission; it would have an expert in diagnosis of the quarantinable diseases in every port on the American continent. A school would be maintained for the training of these experts, or arrangements would be made for that purpose with existing schools. No expert would be qualified for appointment except after a thorough examination. Under such a scheme each port or country participating would send, say, two men from each port to be examined, and, if not qualified, to be trained—trained not only in diagnosis and treatment of these special diseases, but schooled in the prescribed methods of procedure in case of an outbreak. It would take perhaps a year or two to create a chain of experts competent to handle any situation. The commission would have its permanent headquarters at some central or desirable point, and the moment its expert reported by wire the presence of an outbreak, or threat of an outbreak, anywhere, it would take charge of the situation, direct a comprehensive program, and send proper help if necessary.

"In such a system every country would want to participate, because failure to do so would render it liable to the infliction of the outrageous quarantine regulations that now operate against all.

"Costly? Certainly, but not 1 per cent. as costly as the present financially ruinous and humanly ruthless system."

In its September issue the same journal calls attention to the fact that existing agreements between the countries of North and South America do not provide for such uniformity of quarantine, as many persons apparently think. The sanitary convention of 1905 formulated excellent rules, but they are advisory only, and the governments that adopted them, while agreeing on their desirability, have never put them into effect.

SUPERIORITY OF ELECTRIC PULL—The following note is *Railway and Locomotive Engineering's* answer to a correspondent who wants to know why an electric locomotive will draw a heavier train than one operated by steam. The correspondent, employed on a road that uses electric motors for certain work, holds that power applied to the draw-bar ought to produce the same effect, be it originated by steam or electricity. He adds that the subject has been discussed frequently by the engineers and that an impression prevails that some electric condition of the rails and wheels causes the difference, but he does not believe it. Says the railroad authority:

"There is no doubt that the difference in tractive power exists, but it comes about in this way: The rotative power applied to the wheels of an electric locomotive or motor is constant, whereas the power of the steam-locomotive is intermittent. To make the difference plain we will suppose that the steam-locomotive has a single cylinder and the power required to draw the train is 700 pounds. The force exerted by the pistons would be 0 when the crank was on the dead center and 1,100 pounds at the maximum, so that while the electric motor doing the same work would exert only 700 pounds toward turning the wheels, the steam-locomotive, with one cylinder, would at times exert a force of 1,100 pounds. It is true that steam-locomotives are not worked by one cylinder, and at first sight it would seem that that makes a vast difference, and that with two cylinders the impulse to turn the wheels is almost constant; but even assuming the steam-pressure to be constant, there is a vast difference in turning effort between the time that the pistons are nearest to the dead center and when they are nearest to the middle of the stroke with the cranks at the points of their maximum power."

RUBBER FOAM: A GASEOUS SOLID

WHILE THE INVENTION of a solid with some of the properties of a gas is an interesting laboratory experiment, it is not impossible that a product of this kind might prove useful and even valuable. For one thing it would appear to solve the problem of a non-puncturable automobile tire. Such a substance, we are told by Paul James, writing in *The Scientific American* (New York, September 19), is "rubber foam," a much modified form of the product known as "rubber sponge"—now fairly familiar to all—at least, all who bathe. Speaking of the use of this substance in tires, Mr. James reminds us that while all the other parts of automobiles have been brought so nearly to perfection that it is possible to travel thousands of miles without making repairs, the tires still constitute sources of delay and accident. He says:

"None of the many spring devices proposed as substitutes for pneumatic tires has given good results in practice. A good pneumatic tire should be both flexible and elastic. India-rubber is flexible enough, but it is not sufficiently elastic.

"The solution of the problem appears to be furnished by a new material of remarkable properties, which is produced by an ingenious process in Paris. This product consists essentially of india-rubber containing multitudinous minute bubbles of gas, distributed throughout its mass. The material resembles a rubber sponge in which the cavities are separate and do not communicate with each other. Hence it has received the name 'moutchouc mousse,' or rubber foam.

"The process of manufacture is based on the increase of solubility of gases with increase of pressure. Rubber in the pasty stage of vulcanization is inclosed in a steel tube with nitrogen at a pressure of 3,000 to 4,000 atmospheres. The compressed gas dissolves in the semiliquid rubber, which, when the tube is opened, expands to four or five times its former volume and solidifies, imprisoning in its mass myriads of little gas-bubbles.

"The material, in fact, combines the properties of its two ingredients. It is as flexible as rubber and as compressible as a gas, so that it may be employed, in the form of a solid ring, in the place of the air-tube of an automobile or bicycle tire. A tire so constructed is non-collapsible, for a puncture affects only a few of the innumerable gas-bubbles.

"Another valuable property of rubber foam is its lightness. Its density varies from 0.4 to 0.17, according to the quantity of gas forced into it. Hence, it is an excellent material for life-preservers and small folding life-rafts. It is also a very suitable filling for cushions and chair-seats, and especially for horse-collars, as it is light, imputrescible, and does not scratch or gall the skin if the cover is broken. It is also used in shoe-soles, tennis-balls, etc.

"Rubber foam possesses still another valuable property. It is the best heat-insulator known, and about twice as efficient as its nearest competitor. It has already proved its excellence as a lining for ice-boxes and refrigerating apparatus. Ordinary glass bottles, covered with a layer of rubber foam, keep liquids hot or cold."

RUBBER FOAM AS IT APPEARS UNDER THE MICROSCOPE.

THAT the habit of chewing gum has spread widely in Europe during the last five years, and is especially in favor among soldiers, is reported by the author of an article entitled "The Story of Chewing Gum," printed in *The Housewives' League Magazine* (New York). The writer says

that until the introduction of chicle, now almost universally used for chewing, gum was monopolized chiefly by children. The extension of the habit to adults is credited to a Cleveland druggist, who was the first to add pepsin to the concoction. Medicated gums, however, we are told, are usually not medicated at all, or not sufficiently "to do any harm," or any good. To quote the article:

"Gum-chewing is admitted to be a habit of American origin, and is attributed generally to American nervousness; but there is another and quite rational reason for its use. Spanish explorers reported that they found the Indians five hundred years ago using the gum of the sapodillo to relieve exhaustion and quench thirst. The Indians probably did not chew the gum, as their descendants to-day do not chew it. They only hold it in the mouth, which has the effect of provoking a flow of saliva and thus keeping the throat moist in the absence of water. It is for a similar reason, doubtless, that cyclists and baseball-players chew gum and soldiers on the march find solace in it.

"Originating in America, the habit of chewing gum long ago passed the national boundaries, and during the last five years it has spread enormously in foreign countries. Tons of chewing-gum are now used in England, Australia, Cape Town, and Germany, while in Greece it is said to be dispensed as a regular ration to the army.

"Its introduction into the Balkans was a result of the recent war. The Greeks who returned from America to fight for their native land carried chewing-gum with them, and found it such a comfort amid the hardships of warfare that other soldiers asked for it. No chewing-gum could be had in Greece. The Queen cabled to a Greek newspaper in New York asking that a shipment of it be forwarded to the troops. Mystified by the order, the editor of the paper cabled back for explanation. The order was confirmed, and a consignment of chewing-gum was promptly forwarded with the compliments of an American firm. In due time the donors received from the Hon. Angelica Contostavlos, lady in waiting to Her Majesty Queen Sophia of Greece, the following note:

"DEAR SIR:

"Her Majesty the Queen desires to convey to you her sincerest thanks for your most generous donation of chewing-gum

for the use of our army. Her Majesty fully appreciates your promptitude to offer such a liberal quantity of an article so useful to our soldiers in the field.

"Believe me,

"Sincerely yours,

"ANGELICA CONTOSTAVLOS."

"Since this occurrence it appears that the Greek Army has never been without chewing-gum. Who shall say how much this humble confection had to do with the fall of the Turks?"

RUBBER EXPANDED INTO FOAM OR SPONGE.

By the infusion of gas under pressure the rubber is expanded to four or five times its original size.

THE INSPIRER OF PAN-GERMANISM

GERMANY has always presented a close association between ideas and action, says a writer in the *London Nation*, in pointing out how the invasion of Belgium and France is completely forecast in Bernhardt's "Germany and the Next War." This book has become tolerably familiar, since August of this year at least. Our readers had a digest of it in our issue of May 4, 1912. While this book, which Mr. William Archer calls "an engaging little treatise," is, as he says, "now in everybody's hands, except, apparently, in those of the German theologians, who seek to make England responsible for the war," little is probably known of the name which occurs more frequently than any other in Bernhardt's treatise—Heinrich von Treitschke. This professor of modern history at the University of Berlin, who died only a few years ago, was curiously more Slavie in blood than Germanic, yet he was Germany's foremost apostle of world-empire, and is now called "the chief inspirer, on the spiritual side, of Germany's present mood." Of course, Germany disclaims that she is embarked on a war of aggression and declares that she is fighting defensively to stem the tide of Russian barbarism. Von Treitschke it is, says Mr. Archer in the *London Chronicle*, who "has provided militarism with a pseudophilosophy, and enabled it to drape its naked aggressiveness in phrases about the mission of German culture." He has, we are told, "extracted from history the doctrine that the lust for power is a virtue and its gratification a duty—for Germany." Mr. Archer's estimate of him is, of course, distinctly British, and hence scarcely sympathetic:

"Treitschke was eminently typical of the Germany of to-day, inasmuch as he was spiritually a product of Sadowa and Sedan. He was thirty-two when Sadowa, to use the words of the French critic, Guillaud, 'performed the prodigy of converting him from a liberal monarchist to an authoritarian Caesarist.' Up to that point his views had been comparatively human. He had been inclined to rationalism in religion, and had not yet become a devotee of the tribal God who smiles upon all carnage that is commanded by the pious House of Hohenzollern. He had not yet developed to the full, at any rate, that bitter hatred of England which breathes from his later writings.

"But the years 1866-70 wrought a sinister change in his spirit. They left him, as they left the German nation, *siegestrunken*—drunk with victory. He came to think of ruthless, aggressive war as the noblest of national functions, and the instrument by which Germany was predestined to impose her incomparable culture upon a temporarily recalcitrant but ultimately grateful world. This is no caricature of his doctrine. He clothes its wickedness in all sorts of fine phrases, and would have us understand that, for all non-German peoples, to be ruined by Germany is the first step to moral and intellectual regeneration."

Mr. Archer's tone is obviously not one of a calm neutral, but he bolsters his view by a quotation from Professor Guillaud, who sets forth Treitschke's view of the English. The words were written in 1900, "before the Entente Cordiale was dreamed of at the time when Frenchmen were not themselves dis-

posed to regard the British with a very favorable eye." Professor Guillaud wrote:

"We see clearly that, for Treitschke, the great crime of this Coburg [Prince Albert] was to have become an Englishman. A double-dyed Prussian, our historian was one of the heads of that group sufficiently numerous in Germany, which sees in the Briton the national enemy. He detested the English. While he recognized certain qualities, even in the French, . . . in the English he could see none at all. For him the Englishman was 'a Baconian, a low utilitarian, a narrow and selfish islander, a hypocrite, who, with the Bible in one hand and an opium-pipe in the other, diffuses throughout the universe the benefits of civilization.'

"This hatred of the English people . . . Treitschke displays without stint throughout his history. As soon as an Englishman appears, he ridicules or denounces him. He makes an exception only for Carlyle, 'the only Englishman,' he says, 'who has thoroughly understood the Germans, and the first foreigner who has risen to the heights of German thought.'

"As for British politics, the Prussian historian sees in them nothing but mercantilism, immorality, and arrogance, pitiless to the weak. . . . Speaking of the Eastern Question, he declares that Europe ought to have seized the opportunity of setting bounds to British ambitions by putting an end to the crushing domination of the British fleets."

This is the view, declares Mr. Archer, that Treitschke's position as "the most popular lecturer in the University of Berlin gave him ample opportunity of inculcating." Fearing that the reader may suspect prejudice on the part of a French interpreter,

Mr. Archer lets Treitschke speak for himself in a passage from his paper on "The Beginnings of German Colonial Policy," written after the acquisition of the Cameroons and Angra Pequena:

"If our Empire ventures resolutely forth upon the path of an independent colonial policy, it must inevitably face a conflict of interests with England. . . . How long has Germany, in all seriousness, believed that this island people, indubitably the most selfish of all the nations of Europe, was a magnanimous champion of the freedom of all nations? Now at last our eyes begin to open, and we realize, what clear political thinkers have never doubted, that English statecraft, since the days of William III., has never been anything else than a wonderfully astute and wonderfully unscrupulous commercial policy. The astonishing successes of this policy have been bought at a high price. In the first place, by a long array of crimes and horrors. A still heavier price lies in the fact that her transatlantic successes have cost England her position as a European Great Power; in the transactions of the Continent her voice has no longer any weight."

Treitschke, it seems, also paid his respects to us in words that Mr. Archer quotes with the observation: "If America fancies that she is exempt from the Teutonic scorn that falls so crushingly on France and England, let her note such a passage as this":

"To civilization at large, the Anglicizing of the German-Americans means a heavy loss. . . . Among Germans there can no longer be any question that the civilization of mankind

HEINRICH VON TREITSCHKE.
For many years Germany's most popular university lecturer and England's most inveterate enemy.

(*Gesittung der Menschheit*) suffers every time a German is transformed into a Yankee."

In a recent number of *Harper's Weekly* Mr. Norman Hapgood gives a vivacious characterization of the man who has been called Germany's stormy petrel:

"He was an odd little man, with a voice so bad it could hardly be understood in college lecture-rooms. As a youth he had a natural tendency toward learning, but a natural tendency also toward using his facts to prove what he liked to believe. After Bismarck's first great exhibition of masterly wickedness, when he tore Schleswig-Holstein away from Denmark, the youthful Von Treitschke lost whatever liberalism he had and became excited over the possibilities of war, compulsion, and aristocracy. He did not go geographically crazy, like the Pan-Germanists, but stuck to Bismarck's principles, emphasizing, however, the warlike and chauvinistic side of them, and doing it with such brilliancy that he most of all made intellectual Germany drunk with the idea of her so-called destiny. He taught her that all history led up to the leadership of the Teuton. Little of his work has been translated. The style is full of color and movement, brilliant, and thought-abounding; nervous, energetic feeling swings the reader along; vast learning is wholly digested and bent to the author's purpose. Germans quote him as no historian is quoted by the English or the French. In interpreting history, he is their Bible. Their political thinkers never tire of him. The true historian Ranke protested against the appointment of Von Treitschke to the University of Berlin, on the ground that he was no historian at all, but a polemical writer. Whatever made against militarism he derided. It was characteristic of his philosophy, for example, that he attacked the decay of dueling. He deplored the advance of women, being Kaiser Wilhelm's precursor in wishing them to remain limited to kitchen, church, and children.

"He belittled England's services in developing constitutional government. He started the studied hate of her which has gone so far that the crazy Pan-Germanists, altho they count on political influence in almost the whole world, including our own hemisphere, look upon England, Germanic as she is, as merely something to be crushed. Says Von Treitschke: 'Shall the glorious many-sidedness of the world's history, which once began with the rule of the monosyllabic Chinaman, after running its joyless course, end with the reign of the monosyllabic Briton?'

"Von Treitschke first popularized the idea that British naval supremacy must be destroyed. In 1884 he said: 'We have reckoned with France, Austria, and Russia; the reckoning with England has still to come; it will be the longest and the most difficult.'

"Von Treitschke sat in the Reichstag and supported legislation to suppress the Socialists, Poles, and Catholics. In every branch of politics he taught the gospel of crushing. Of course he was religious. . . . Bismarck, altho he was the wisest of them, and altho he knew the limits of the doctrine he used so ably, declared that if he did not believe in God, he would favor a republic! Von Treitschke said: 'I have gratefully seen the work of Providence in the fortunes of my country, as well as my own house, and I feel more keenly than heretofore the need of bowing humbly before God.'"

The *Boston Herald* finishes off a survey of the Berlin historian in these words:

"Treitschke died in 1896, looking forward with confidence to the day when, as Geibel sang, the world would find healing at the touch of the German character. He looked forward to this day in a pious, prayerful mood, 'God will see to it that war always recurs as a drastic medicine for the human race.' That Treitschke was not spared to be the head of the German press bureau in 1914 is a severe loss to the cause of Pan-Germanism."

THE FORTUNES OF WAR FOR ART

WE ARE STILL a good six or seven weeks from the opening of the art season—that is, the commercial art season, and *The American Art News* (New York) hopes the skies will be somewhat cleared by then. "The worst storm blows itself out the quickest" is the maxim upon which it bases those hopes. It recalls that "the foundations of the

WAR'S HISTORY WRIT IN STONE

Should the ruin wrought at Reims turn out to be predetermined, says Thomas Hardy. "It will strongly suggest what a disastrous blight upon the glory and nobility of that great nation has been wrought by the writing of Nietzsche, with his followers, Treitschke, Bernhardi, etc."

fortune of the Duveen firm, one of the greatest of international art dealers, were laid in the days just following the Franco-Prussian War of 1870," and, with a glance at the future that implies the misfortunes of some while it records the opportunities of others, says: "Business is bound to improve, just so sure as there are any sure signs of peace, the auction marts, at any rate, will be lively and the bargain-hunter is always with us." On the other hand, it can not be denied that artists will be pretty hard hit. Still, "art will benefit," says Mr. C. H. Baker, in *The Saturday Review* (London), "if the war be great enough to engrave the mind deeply."

"Art is not a national affair; it is universal; and if we take the widest view we see that it is immaterial whether the great

tidal wave of art to be thrown up by the eruption of our western world be Teuton, Slav, or Anglo-Saxon. Many writers have generalized on the relation of art to political and social environment, and history warrants the deduction that after a period of public stress, exaltation, and emotion, art is manifested in a remarkable release of energy. As this is the most natural thing in the world, it needs some explanation, I suppose.

"Without engaging on a solemn academic discussion as to the nature of art, we may admit that it is merely one vent for the universal human need of expression. Artists are but specialized instruments for one aspect of our general need. It follows that when the shock and friction of national peril, disaster, or triumph have so shaken the soul of a society and so whetted its susceptibility and intelligence that its awakened genius seeks freedom, then naturally every vent is used. Given certain conditions, war and periods of precarious existence have always produced a fine temper of intelligence and a rare susceptibility. But, such is human providence, we always hasten to secure ourselves from the hardening benefits of adversity.

"One of the strangest things in humanity is its apparently imperishable enthusiasm for pure ideals: ideals, that is, untinged by commercial considerations. No matter how 'effete,' how deeply sunk in slothful satisfaction, is this or that society, somewhere or other, at a word, this divine enthusiasm breaks out again. Nearly the whole of Europe is thrilled by an emotion of this kind. Who will wonder that at the end, when the necessary conditions for the practise of the arts reign once more, this emotion will be reflected in music, architecture, and the other branches?"

Neglecting for the purpose of his thesis "the subconscious cause of war," and waiving any effort "to discover whether, after all, there be some still closer and more inevitable relation than cause and effect between the fermenting warlike spirit of a people and the subsequent manifestation of artistic genius," the writer finds it "convenient to regard militant enthusiasm as the cause of artistic outbursts, tho perhaps in a truer view they are an identical wave seen at different points" and wonders "if this giant struggle may not be the inevitable impact needed to bring to a head that vague and chaotic grouping toward a new impression in art with which we have become familiar these last few years." Mr. Baker continues:

"If only the ordeal be terrible enough to recast men's minds we may confidently expect not only a new society and a changed outlook, but also, as a consequence, the universal expression in art of this new mind and vision.

"It is a hundred and twenty years since a situation such as this war may bring faced the art market. From 1700 till after Waterloo, England was importing from Spain and France pictures of the first rank. More than likely as a result of this incomputably ruinous war, many private galleries all over Europe will be broken up. In such an event we should see in the clearest light what an enormous change has come over art collections. Unless Napoleonic piracy were adopted and pictures in national museums treated as spoils of war, the bulk of the treasures in circulation during the wars of a century ago is secure in inviolable galleries. The outstanding pieces of first rank are either across the Atlantic or else so scattered and so rare that nothing approaching the trade in old masters carried on by Bryan and Buchanan will be possible. The turn of modern masters may perhaps come, and of these only the British school of the close of the eighteenth and the beginning of the nineteenth centuries, Goya, the Barbizon, and the Impressionists, have the kind of reputation to make sensational sale catalogs.

"One other consideration may occur to us: the danger involved by the concentration of old masters to which I have just alluded. A shell bursting in a museum might at once do more havoc than all Napoleon's campaigns together. Imagine this carried to the lengths described in 'The World Set Free,' and the galleries of Berlin, Paris, Belgium, Italy, Holland, and London finally demolished. For art the effect would be more catastrophic than a similar annihilation of all European libraries would be for literature. Indeed, I should imagine that the destruction of, say, the Michelangelos in Florence and Rome, or the Rembrandts in Holland, Paris, Berlin, London, and St. Petersburg, would mean to art what the complete loss of every work by Beethoven would mean to music. But whereas many musicians could write out the scores of his works from memory, who could give us back Rembrandt or Michelangelo? This, however, I admit, is simply looking for trouble."

UNFULFILLED FEARS FOR MUSIC

MANY of the singers and instrumentalists who are reported as active in the war zone do not intend, it appears, to disappoint us when the concert season comes around. We find that veteran music critic, Mr. H. E. Krehbiel, insinuating that we shall probably have all the musicians from abroad that we want—and perhaps a few over. The opportunity that seemed to offer itself for the native product is rather discounted by this writer. "Certain it is that artists are arriving here on nearly every foreign steamer, and that it has not been said of one whose participation in the next season had been announced that he or she would have to cancel all engagements." Mr. Krehbiel suggests that our hearts have been wrung over reported disasters to musical favorites only for box-office purposes. "Your publicity agent is not averse to twisting even so dreadful a thing as war to his uses." The *Tribune's* critic offers the encouraging news that "we are likely to hear some, perhaps many, artists whom we had not counted upon."

"On the Continent of Europe the artist's occupation is gone, for the time being at least; other fields must be sought, and a plethora instead of a dearth is what may fairly be expected in the country which has always been looked upon as the musician's El Dorado. There has been talk in the music-trade journals about the war opening a great opportunity for native talent, and there is, in truth, something a bit alarming in the prospect of an irruption of young artists from end to end of our country. If there should be such an irruption, it is much to be feared that the woful results which follow a meeting of overweening ambition and unscrupulous management, frequently deplored in the past, will be magnified. It will, therefore, be the course of wisdom for our budding geniuses to wait. They are not likely to hear a cry to supply the demand created by a shortage of imports loud enough to make the public forget that there is scarcely room here for the best that the world affords, and hence none for inferior goods, even tho they be domestic products."

Mr. Krehbiel is thoroughly convinced of our neutrality in music and declares that neither audience nor orchestra leaders will be "swayed by the chauvinistic spirit which has already found public expression in London this year, and which put Paris in a pitiable light after the Franco-Prussian War of 1870."

"Dr. Muck [of the Boston Symphony Orchestra] is a Bavarian, and therefore a German subject, albeit one of a people whose fondness for Prussia is not much greater than that which the devil is supposed to feel toward holy water. Mr. Strinsky is a Bohemian, and therefore, willy-nilly, a subject of Austria; Mr. Damrosch is politically and sentimentally an American through and through, tho he spent his childhood in that part of East Prussia which is rapidly being ensanguined by the armies of Russia and Germany. All three have open minds and open arms for examples of the highest class of music, no matter where they come from. For them there is neither Slavic nor Germanic peril; in fact, if the supremacy in instrumental music is threatened by the Slav it is a matter which has confronted Germany for so long a time that its terrors are long since gone, so far as the American people are concerned.

"It is more than a generation since Dr. von Bülow said that the best German music was coming from St. Petersburg, and a quarter of a century since *The Tribune* gave the warning, 'Look out for the Muscovite!' The German classics are safe, for, being classics, they belong to the world. When the German publicity bureau got busy in the early days of the war, American sympathy was asked for Germany as the land of Goethe and Beethoven. But until Bonn became famous as the birthplace of the great composer the family history of the Van Beethovens revolved around Rotselger, Læfdal, Berthem, Malines, Louvain, and Antwerp. How have those traditions been respected by the Germans? The question is of no consequence, however; Beethoven's genius was not a national gift, nor is any one people its custodian. What he gave directly and what he inspired belongs to the world, and is cherished by the world. His spirit will be operative in the rejuvenation of art which will follow the awful blood-letting of to-day."

THE RESPONSE OF OUR UNIVERSITIES

A SECOND STATEMENT has issued from the pens of Professors Eucken and Haackel making a direct appeal to American universities. They reiterate many of the arguments contained in their earlier pronouncement which was quoted here, but in this case they address a particular audience, who, they feel, will be inspired by the ties of common intellectual aims at least to sympathize if not to encourage Germany in her present efforts. If from any quarter of the world, they say, it must be from the American universities that is to be expected "the right comprehension of the present situation and present attitude of Germany." Inasmuch as—

"Numerous American scholars who received their scientific training at our universities have convinced themselves of the quality and the peaceful tendency of German work, the exchange of scientists has proved of deepening influence on the mutual understanding, the lasting intercourse of scholarly research gives us the feeling of being members of one great community; this is why we entertain the hope that the scientific circles of America will not give credit to the libels our enemies propagate against us.

"In the face of all envy and hatred, all brutality and hypocrisy, Germany feels unshakably conscious of serving a righteous cause and of standing up for the preservation of her national self, as well as for sacred goods of humanity; indeed, for the very progress of true culture. It is from this conviction that she draws her unrelenting force and the absolute certainty that she will beat back the assault of all her enemies. This conviction does not stand in need of any encouragement from abroad; our country absolutely relies upon itself and confides in the strength of its right.

"Nevertheless, the idea of our American friends' thoughts and sympathies being with us gives us a strong feeling of comfort in this gigantic struggle. We both of us feel especially justified in pronouncing this as being the conviction of all German scientists, as so many scientific and personal relations connect us both with the universities of America. These universities know what German culture means to the world, so we trust they will stand by Germany."

Already many of our college presidents and professors had given expression to the thoughts that war has moved in them. They are not unmindful of the duties that Europe's abdication of civilized leadership seems to impose. President Nicholas Murray Butler, of Columbia, calls it a "wicked and causeless war," and declares that "a final end has now been put to the contention, always stupid and often insincere, that huge armaments are an insurance against war and an aid in maintaining peace." To him "it seems pretty clear that no civilized people will ever again permit its government to enter into a competitive armament race." He adds:

"The time may not be so very far distant when to be the first moral power in the world will be a considerably greater distinction than to be the first military power, or even the second

naval power, which latter goal is so constantly and so subtly urged on the people of the United States. How any one, not fit subject for a madhouse, can find in the awful events now happening in Europe a reason for increasing the military and naval establishments and expenditures of the United States is to me wholly inconceivable."

President Hibben, just returned from the theater of the war, tells his students on the opening day that we "can not remain indifferent to the march of events and all that they signify for the present and the future."

"It would be for America a greater tragedy than this war of

BEFORE THE DÉBÂCLE.

The interior of the now ruined library of Louvain which housed priceless books and manuscripts of the fifteenth century of which the world is now permanently bereft.

nations is for Europe if the results of it all should be that Europe emerges finally from this experience chastened and purified, and that with all their losses the nations in arms should nevertheless show a substantial gain in character and self-reliance, in loyal devotion and useful helpfulness, while we, far removed from these grim and desperate scenes, should remain insensible to our great opportunities and responsibilities, and continue in our habits of self-seeking and self-indulgence and self-concern."

Dr. V. C. Vaughan, President of the American Medical Association and Dean of the Department of Medicine and Surgery in the University of Michigan, says in the *New York World* that "if America is going to carry the burden of civilization for the world, she must take stock of her own defects and set about their remedy." Dr. Vaughan feels deeply the loss of German men of science, and understands what that loss will mean to the world, since German laboratories were exchanged for battle-fields whence few will return:

"The greatest scientific discoveries of the world have been made in German laboratories, and now her laboratories and her universities are closed.

"To-day Germany is at war to extend a petty political power, and after this some other country must take her proud place, must dominate the scientific world. This should be America. The disheartening part is that there is a serious question as to whether this country is big enough in other ways to warrant our faith in her in this crisis."

RELIGION-AND-SOCIAL-SERVICE

WHY WE PRAY FOR PEACE

MANY EARNESTLY BELIEVE that the united supplications for peace continued since the special day appointed by the President must bear an early fruitage. If this expectation fails, there is assurance that the reflex action on the American people will at least deepen their spiritual life. The response to the President's call "could not have been more general or more fervent," says the *New York Times*, "in an era when unbelief has seemed so common and the things of the spirit so lightly esteemed." The efforts will be continued, it is

the affairs of men; otherwise they are no better than the peace parades and the children's peace cards and other similar manifestations of misdirected zeal with which we are now familiar.

"People think they are doing their duty when they are simply indulging the luxury of expressing their own emotions in public. To expect such prayer to be answered is folly on the part of the ignorant and blasphemy on the part of those who should be wiser."

In an editorial expression *The Sun* observes that "even tho immediate visible result be lacking, no one need doubt that

bounteous response will be made to the prayers for peace which went up from all quarters of this country." Providence has its own subtle ways of distributing its mercies, and "tho we may little know them in the larger sense, there are some which even the dim eyes of reason may perceive":

"Thus in its reflex action upon the American people themselves this great, united act of devotion must have a purifying and elevating influence. The unselfish purpose, the abstraction from material considerations, the sense of brotherhood with the suffering, the uplifting of spirit toward the higher realm of ideas wherein hatred, anger, and revenge have no part, can not fail to exalt the national consciousness and stimulate its progress to lofty aims and standards in its organic life.

"Piety will confidently hope that the massed supplications of an entire people may have a direct influence upon the fearful struggle that is being waged in Europe. Nor is there any good purpose served in casting denial or doubt upon a faith so full of beauty and comfort. The question penetrates into the region of the unknowable, and the answer of the heart has as much authority as that of the cervical cortex.

"But there is one view in which all can place themselves in accord with each other and with the great Destiny that guides the affairs of nations and of men. All must agree that as the war with all its cruel features must have its place and purpose of good in the universal plan, so it will be stopt by universal Wisdom at the moment of highest good to all the creatures of God and to the plans he has made for their ultimate perfection. To those who hold this trust the prayers of the nation will be of great sweetness as a means by which men may put themselves in an attitude of spiritual submission to the Will of the universe."

In answer to those who ask why we pray at all, since God will work out his own purposes without interference, *The Living Church* (Milwaukee) responds:

"We mistake the nature of prayer if we assume that it compels us to advise Almighty God as to his functions. Rather it is chiefly communion with him, converse with him; the offering up of our problems and difficulties to him; the quiet waiting for him to speak to us; the conversation of sons with their Father. We shall best observe the spirit of the President's proclamation if we shall go to our day of intercession chiefly to try to learn what God would have us do to promote international peace, rather than to instruct him how to proceed. We need not presume that God will be better able to govern his world as a result of our prayer; we may rather hope that a subdued, contrite, inspired American people will be better prepared to do their part; and that the way of making a lasting peace in which the problems of Europe shall be solved will gradually be unfolded."

PRAYERS OF THE AFFLICTED.

A peasant population near Senlis, France, a town destroyed by the invaders, joining in supplication for an end of the war

believed, in widening scope. Special prayers "of uncommon eloquence and beauty of phrase" had been prepared for special use on Peace Sunday by Cardinal Farley and Bishop Greer, and for the Carnegie Hall meeting Rabbi Wise framed a plea for freedom for the "common man" and for confirmation in the American people of "a settled hate for war."

The ultimate good of such observances is debated in some minds. The view of the helplessness of such appeals is perhaps best stated by President Hadley, of Yale, in his matriculation sermon to the university student body. As the *New York Sun* reports him, the Doctor says:

"With our illusions shattered and our very ideals shaken, we crave helplessly for peace; and as far as the mere craving goes we are ready to pray for it.

"But how little this mere craving amounts to! What effect will it have on Englishman or German, Frenchman or Russian, each desperately convinced of the righteousness of his own cause, for which he has already suffered and is prepared to die if need be, that prayers for peace are offered by members of other nations comfortably distant from the fray and from the passions that evoked it? No direct effect whatever.

"It is wrong to dignify this profitless expression of desire by the name of prayer. Unless we follow up our prayers by intelligent help in promoting peace on earth they are but the 'vain repetitions' of the heathen. They may have a certain use as a public recognition of the controlling power of God over

FIGHTING PARSONS

THE RELIGIOUS PRESS of Great Britain has so zealously upheld the present war that many of the nation's clergy are plunged in a curious predicament. If this is a holy war, they are asking, should they not enlist? The London correspondent of the *New York Evening Post* reports that martial ardor burns most fiercely in Scotland, where a number of clergymen under forty have proposed forming a battalion. In the *Manchester Guardian* a country rector writes that if a clergyman takes up arms and is killed on the field, he is only obeying the words of his Master, "Greater love hath no man than this, that a man lay down his life for his friend." Many clergymen, of course, are regimental chaplains, and this involves the necessity of their service when their regiment takes the field. Pictures show the Bishop of London going about at present in his army uniform. The Archbishop of Canterbury, however, does not look with favor upon the enlistment of clergy, declaring that "the position of an actual combatant in our Army is incompatible with the position of one who has sought and received Holy Orders." "Those who have been ordained to the ministry of Word and Sacrament ought, even in time of actual warfare, to regard that ministry, whether at home or on the field, as their special contribution to the country's service." The *Church Times* (London) prints a letter from the English chaplain of St. George's, Rue Auguste Vacquerie, Paris, containing a tribute to the French priests who are serving in the ranks:

"I have read with interest the correspondence on the subject of the clergy serving in the Army as combatants. It may interest your readers to know that the *Service Militaire* has drawn into the ranks of the French Army no fewer than 22,000 French priests. I was in the Caserne des Invalides and at the cavalry barracks of the École Militaire yesterday, searching for strayed English Tommies who constantly straggle into Paris from the battle-field, having been cut off from their regiment. These poor fellows are often in a pitiable plight. I was talking to a group of these English soldiers in the caserne when two French Tommies came up and spoke to me, having recognized that I was an Anglican priest. One explained to me that he was a Jesuit priest, a missionary from China, and introduced his friend as a Dominican prior. The Jesuit told me that two of his companions had just been killed in action. These two priests welcomed me in the most brotherly and affectionate manner, and insisted on taking me to their harrack-room and giving me tea (the English drink). . . . They told me that their fellow soldiers came to them for their confessions. They showed me a supply of little blessed medals which they distributed among their fellows. Enormous numbers in the ranks seek the ministrations of their combatant priests before going into action, and I should not be surprised to find after the war is over that the attitude toward the Church is far more friendly than in the past."

A writer, possibly a clergyman, writing to *The Church Times*, cites some examples to support his evident warlike impulses:

"Before accepting the invitation of President Davis to take command of a Confederate Army, Bishop Polk sought and obtained the approval of his Metropolitan Archbishop of Virginia. The disapproval of the bishops and clergy of the Northern States was quite natural, and quite ineffective. Bishop Mewes, of Winchester, took part in the Battle of Sedgemoor in 1685, the last battle actually fought on English soil. Bishops and clergy of the Orthodox Church took a prominent part in the Hellenic War of Independence, and in the long resistance to Ottoman rule. Are we now expected to remain unmoved and passive witnesses of the destruction of churches and cathedrals, and of nameless sacrilege and horrors besides, by the Germans?"

BLAMING NIETZSCHE FOR IT ALL

IT LOOKS as tho Nietzsche might find himself erected as the patron saint of the present war. British religious journals such as *The Church Times* and *The Christian Commonwealth* devote considerable space to the consideration of this war as the logical conclusion of the Superman cult. They overlook one thing in this mad philosopher's writing, which was brought forward by a correspondent of the *New York Evening Post* in the early days of the conflict, showing this preacher of the right of might as a counselor warning the German

ONE OF THE STRANGE FORTUNES OF WAR.

Madonna's image and shrine in a convent of Termonde that escaped unhurt amid the general destruction about it.

nation after her success in the Franco-Prussian War not to mistake their triumph at arms for a triumph of their culture. It was then, he declared, that they had greatest need to guard against the pitfall of the conqueror, and that "a great victory is a great danger." Nietzsche is here dealing with the sinister effects among the Germans of the victory over the French, and is translated thus:

"Public opinion in Germany almost forbids discussion of the evil and dangerous consequences of war, especially of a war victoriously ended; but all the more willingly are those writers received who know no weightier opinion than the public one, and therefore vie with each other in extolling the war and in jubilantly following its influence on morals, culture, and art. In spite of which, be it said, a great victory is a great danger. Human nature bears it harder than defeat; yes, it seems even easier to achieve such a victory than to bear it so that from it no more serious defeat results. But of all the evil consequences which follow in the wake of the latest war with France, perhaps the worst is a wide-spread, a universal error: the error of the public mind and of all publicly minded, that German culture also has won in this fight, and must therefore now be decorated with the wreaths suitable to such extraordinary achievements and successes. This illusion is most pernicious; not indeed because it is an illusion for there are most salutary and beneficent errors—but because it is in a position to turn our victory into total defeat; into the overthrow, indeed the extirpation of the German spirit in favor of the 'German Empire.'"

"For one thing, even assuming that two cultures had fought with each other, the measure for the worth of the winner would always be very relative and, under circumstances, would by no means justify an exultation of victory or a self-glorification.

For it would depend upon knowing what this subjugated culture was worth; perhaps very little; in which case the victory, even with the most spectacular success of arms, would include no invitation to a triumph. On the other hand, there can be no question in our case of a victory for German culture for the simplest reasons, because French culture continues as before and we depend upon it as before.

"One might, perhaps, expect that the dangers of such an abuse of success would be recognized by the more prudent and educated part of the cultivated Germans, or that at least the painful aspect of the spectacle presented would have to be felt; for what can be more painful than to see the misshapen strutting like a cock before the mirror and exchanging admiring glances with his image? But the learned professions like to let come what may, and are sufficiently concerned with their own affairs, without undertaking the care of the German spirit. As for that, their members are convinced with absolute certainty that their own culture is the mellowest and loveliest fruit of the time, yes, of all time, and they apprehend no concern for universal German culture, because individually and among the multitudes of their kind they are far beyond all anxieties of this sort.

"Moreover, it can not escape the more careful observer, especially if he is a foreigner, that, between what the German scholar now calls his culture and this vainglorious culture of the new German classicists, a contrast exists only in respect of the amount of knowledge; wheresoever not knowledge, but solidity, not information, but art, comes into question, that is, wherever life should bear witness as to the manner of culture, there is now only one German culture—and has this, then, triumphed over France?

"This assertion seems so utterly incomprehensible; for it is precisely in the more comprehensive knowledge of the German officers, in the better instruction of the German rank and file, in the more scientific warfare, that the decided preeminence has been recognized by all unbiased judges, and finally by the French themselves. But in what sense can German culture still claim to have triumphed if one should choose to dissociate from it German erudition? In none; for the moral qualities of sterner discipline, of cooler obedience, have nothing to do with culture, and distinguished, for example, the Macedonian armies against the incomparably more cultured armies of the Greeks. It can only be a confusion of terms to speak of the triumph of German civilization and culture, a confusion which rests on the fact that in Germany the clear conception of culture has been lost.

"Culture is above all unity of artistic style in all the activities of a people. But to know and to have learned much is neither a necessary means of culture nor a mark of it, and if need be agrees excellently with the opposite of culture, barbarism, that is, absence of style, or the chaotic mix-up of all styles.

"But in this chaotic mix-up of all styles lives the German of our day; and it remains a serious problem how it is possible for him with all his learning not to notice this, and on top of it all heartily to enjoy his present 'culture.'

"Even if we had really ceased to copy them [the French], we would not thereby have prevailed over them, but would merely have freed ourselves from them; only after we had forced an original German culture upon them could there be any talk of a triumph of German culture. In the meantime, let us bear in mind that we still depend upon Paris in all matters of form, and that we must so depend; for so far there is no German original culture."

It must take some sort of a mental somersault to see the preacher of the above doctrines as the guiding light of German expansion, yet so he is regarded in many places. In *The Christian Commonwealth* (London), Dr. E. Griffith-Jones records his observations of seven years ago at German universities, when "studying the main currents of thought among the *gebildeten*, or cultured classes." "I was struck by the considerable emphasis laid by several of the leading men with whom I came in contact on the extent to which the cult of Nietzsche was in the ascendant among the ruling and official classes." He now observes that "Nietzsche has had an enormous vogue in his own land—not indeed among responsible thinkers, but among the class who have shaped German international policy and erected the system of cast-iron militarism."

The Churchman (New York) quotes Mr. Oscar Levy, editor of the authorized English translation of the works of Nietzsche as rejecting the charge that German militarism is to be traced back to this philosopher. We read:

"According to him, Nietzsche is honored to-day less in Germany than anywhere else. He calls attention to the fact that the German Emperor is a devout Christian, a ruler who at the beginning of the war urged his people to go to church, and would certainly take amiss any accusation of Nietzscheism. The German people are largely Socialists, one-third of all voters in the Empire being members of that party, and Socialism, Mr. Levy says, has nothing whatever to do with Nietzsche's gospel. German professors, too, have been and are still very hostile to Nietzsche's creed and would almost to a man repudiate any connection with the teacher of the Superman. The belief that the Germans are a race predestined to conquer does not originate with Nietzsche, and it became wide-spread, after the Franco-Prussian War of 1870, long before Nietzsche was heard of. These were the times of Treitschke, Lagarde, and Von Harden, and the German writer of English origin, Houston Stewart Chamberlain, whose book, 'The Foundations of the Nineteenth Century,' was sent by the German Emperor to every school in the Fatherland and has become the Bible of every modern Teutomaniac. Mr. Levy asks those who wish to gain an unbiased opinion to read Nietzsche's attack on this national mania in his book called 'Ecce Homo.' He adds that Friedrich Nietzsche is the only German writer who openly and courageously attacked the romantic school—the school that has provided the idea behind the present aggressiveness of Germany."

HUMANITY'S SPIRITUAL LOSSES

THE PSYCHOLOGICAL and spiritual reaction of wholesale slaughter upon humanity is the aspect of the war that, to Miss Jane Addams, of Hull House, Chicago, overshadows all other considerations, even the daily horrors and the toll of lives and goods exacted by the struggle. To a reporter of the *New York Evening Post* she expresses her appalled sense of the throwback to an archaic period and the return of an ancient mode of viewing life. All the social gains of the past, she believes, will experience a reverse and the cause of the social worker languish for years. She observes:

"All is out of joint, out of character. Human sensibilities are more acute than ever before. The comradeship, the friendliness between nations has been brought upon a basis of mutual understanding further than ever before. By mechanical means we have been brought closer together in communication and in sympathy. Either we ought not to have equipped ourselves with these fine sensibilities or we ought not to face the horrors now confronting us. It is a too terrible inconsistency against which we should protest."

The world had reached a consciousness of strong social obligation, the effect of careful nurturing through years. But Miss Addams sees this work reduced to chaos, and is confronted by the conviction that public opinion will have to be worked up anew. Mentioning a few examples:

"The various woman's movements are greatly crippled, but that is only a small part of the harm done. One has a sort of vested right in the finer sensibilities of the human race, which are to be called upon for aid in the betterment of the conditions under which people live. Then comes along a thing like this war, and makes its appeal to brutish instincts, and we are thrown back. We get back to where we were once in perceptions and sensitiveness.

"When a million men are suffering in trenches, wet and cold and wounded, what are a few children suffering under hard conditions in the factories? Take old-age pensions, upon which England, France, and Germany have been working. With widows and fatherless children numbered by the thousands in each of those countries, what are a few old people more or less? It will be years before these things are taken up again. The whole social fabric is tortured and twisted.

"Infant mortality is one of the things which we are just beginning to deal with. We are trying to learn why such numbers of little children under two years of age die. In Germany, the nation's statesmanship was challenged in the Reichstag because, out of approximately 2,000,000 children annually born in that country, some 500,000, or one-fourth, die. But what are half a million new-born children in comparison with such a slaughter—the hideous, wholesale slaughter of thousands of men a day?"

REVIEWS - OF - NEW - BOOKS

THE NEW STANDARD DICTIONARY*

Reviewed for THE LITERARY DIGEST by
ELMER ELLSWORTH BROWN

A DICTIONARY is a democratic institution, if it consult the convenience of many users, who are subject to a great variety of limitation as regards time and acquired experience and even technical education; but its democracy will not excuse any remissness as regards the accuracy of the information which it undertakes to convey.

That it is a book for the people, in this sense, is one of the first impressions one gains of the Standard Dictionary, and it will be regarded from that standpoint in the present review.

To pass at once to a typical instance, we note the abandonment of the principle of historic sequence in the arrangement of the several meanings of a given word. The "common, present-day meaning" is given first and obsolete meanings left to the last. There are many of us who find in this innovation an affront to one of our scholastic prejudices. The long hours spent in boyhood with our Autenrieth, and for some of us the prolonged effort a little later to ground our classes in the original meanings of the words of Vergil and Horace, as recorded in a sizable volume attributed to one Andrews—such experiences as these have prepared us for protest against the new arrangement. Yet, when we come to think of it, there is much to be said for the change. It is doubtless only a small minority of dictionary-users to whom the historic succession of meanings is of significance, and only a minority of this minority take account of that succession habitually in their daily use of such a volume. The arrangement here adopted probably represents some saving of time, enough saving to be worth while. Besides, a historical arrangement is liable to be very uncertain and at times misleading, especially after the first number of any given series; and so far as the etymology of the words is concerned, the present volume deals with the matter concisely and clearly, after the definitions instead of before them. So the general arrangement here is, after all, roughly historical, running backward from the present to the past, in place of the traditional sequence from the origins to the present usage.

Another popular characteristic of this work is the employment of all manner of devices for conveying information vividly to all manner of readers. The formal definitions of individual words are, of

course, fundamental. But these are supplemented, where possible, with an astonishing multiplicity of picture illustrations run into the text, clear, simple illustrations that illustrate. There are numerous full-page groups of illustrations, and these depart freely from traditional standards, in the endeavor to impart information for which there may be considerable demand. The pages devoted to systems and apparatus for fighting fire in cities offer a conspicuous example, as do those representing various phases of the modern police and postal services. Modern steel construction is illustrated by a striking view of the Woolworth Building, New York, alongside of a section of the Metropolitan Tower, together with numerous cuts representing details of such construction. Dr. George F. Kunz's unlimited fund of information regarding precious stones and jewels has been drawn on freely, the result being presented in a remarkable plate representing the most famous diamonds in the world, and in a colored plate of other representative gems.

Altogether, there are more than fifty of these full-page plates and illustrations. Included in the number are those relating to aeronautics and aviation; types of cattle, horses, sheep, dogs, and fowl; motor-vehicles, railroad equipment, passenger-steamships and ships of war, telegraphs and telephones (both the wiry and the wireless variety), forms of bacteria, and types of mankind. There is no occasion to enumerate all of them. But why should not even the dispassionate reviewer indulge the sentimental reflection that, even in these days of pictures innumerable, there will be youthful enthusiasts for this branch or that of the world of nature and the arts, who will pore over these plates and the text which accompanies them, and will get from them some of the real stuff of their interest in life? There is certainly much of definite and useful information which the same plates and their accompaniments will furnish to more mature and experienced students.

Another device that is freely employed is that of concentrating in tabular form considerable masses of information regarding topics sufficiently unified to admit of such treatment. As examples, taken almost at random, may be mentioned the tables of national legislatures; of coins and moneys of account; of varieties of apples, plums, and other cultivated fruits and vegetables; of varieties of explosives, grasses, cheeses, gums, soaps, wines. There are not far from four hundred, in all, of these comprehensive groups and tables, and they constitute a valuable feature of the work.

Some of the most interesting and useful of the tables are joined with full-page illustrations, such as have been mentioned. As examples, may be named the ethnological plates and tables, supplemented by tables, in their appropriate places, of African and American-Indian tribes, as

well as by text regarding philological and anthropological classifications; the elaborately analyzed chart of hand-made laces, with its page of dainty illustrations; the comprehensive color charts (under the word *spectrum*), supplemented by such extensive tables as those of the varieties of black, blue, brown, green, lake, orange, red, violet, white, yellow, and of the classes of dyes.

Some of these are instances in which the volume wanders freely afield from the narrower lines of word-study into whatever of related information may be sought by the users of a dictionary. There are other instances in which, quite apart from any pictorial illustration, there is tabular matter joined with historical and analytical notes which give, in extremely compact form, a really encyclopedic treatment of the subject in hand. As notable examples of such treatment, reference may be made to the presentation of physical measurements, under the entry *unit*, and, together with this, the comprehensive tables of *weights and measures*, under these respective word-entries; to the matter under *steam*, *steam-engine*, and *locomotive*; as also to the less systematic and imposing but very useful matter entered under the words *case*, *plow*, *degree*, *steel*.

But within the definite domain of words and the use of words there is presented a really remarkable development of such information as men and women in all walks of life have need of for every-day speech and reading and writing. Here we find set forth the prepositions which appropriately accompany different words in their different meanings. Here are not only extensive comparisons of synonyms, but numerous antonyms are also presented. Here are many lists of words connected with the name of some occupation or craft, or some form of construction or science. Interesting examples may be found under the words *architecture* and *building*, with all manner of supplements under such entries as *carpentry*, *molding*, *screw*, *arch*, *bond*, *brick*, and *plumbing*. Other examples equally suggestive may be found under the words *wire*, *golf*, *blacksmith*, *automobile*, *chess*, *music*, *agriculture*, *mining*. Here is a proper economy of space in the listing of many words, a good part of them self-explanatory, and so requiring only such listing, under a common prefix, as *un-*, *semi-*, *arch-*, or *anti-*. Somewhat similarly, long lists of brief definitions are in some cases condensed under the entry of a common initial syllable which is not in the nature of an ordinary prefix; as we find, near together, the groups of the Greek derivatives in *chlor-*, *chloro-*, *chol-*, *chondr-*, *chromo-*, *chrono-*, and *chryso-*. In general, also, there is a very convenient and satisfactory grouping, under the appropriate words, of the related compounds and phrases.

These various devices of presentation are not mentioned here as, all of them, new things under the sun. That goes without saying. But they are so extensively

* New Standard Dictionary of the English Language, upon original plans designed to give, in complete and accurate statement, in the light of the most recent advances in knowledge, in the readiest forms for popular use, the orthography, pronunciation, meaning, and etymology of all the words, and the meaning of idiomatic phrases, in the speech and literature of the English-speaking peoples, together with proper names of all kinds, the whole arranged in one alphabetical order. Prepared by more than 380 specialists and other scholars under the supervision of Isaac K. Funk, D.D., LL.D., editor-in-chief; Calvin Thomas, LL.D., consulting editor; Frank H. Visetelly, Litt.D., LL.D., managing editor. Also a Standard History of the World, complete in one volume. Large quarto. Illustrated with many full-page plates in color and in black and white, and also textual figures. New York and London: Funk & Wagnalls Company.

"We Demand Our Rights"

Kellogg's TOASTED CORN FLAKES

THE ORIGINAL NESTLE'S NESTLE'S NESTLE'S

W.K. Kellogg

MADE IN THE U.S.A.

DATE OF PREPARATION

"— we want more KELLOGG'S! Since they came in that new WAXTITE package, daddy and mother eat two bowls a-piece every morning an' Bettie 'n I aren't getting what we used to. An' KELLOGG'S tastes better 'n ever now—um-m-m!—so crisp. If this outrage keeps up we'll write to

W.K. Kellogg

employed and organized in this work as to earn for it real distinction as a dictionary convenient in use and of very wide usefulness.

The discussion of the various uses of a word in its different meanings and relationships are in some instances particularly instructive. And this treatment is carried to the length of conveying warnings against common errors of speech, of giving rules for the formation of possessives and plurals, and presenting a variety of information regarding grammatical and rhetorical construction. If some of this should be thought unnecessary to readers of ordinary education, the objection is one that quickly melts away. This is information of a kind that is widely needed. And the supply of such information in a dictionary is not merely an immediately practical service. The relationships of a word are as important as its etymology and its definitions. What we have here set forth is a kind of ecology of language, a thing nearly if not quite as significant as the anatomy and physiology of language.

There are various other devices of arrangement which conduce to convenience, but need not be enumerated here. One, however, calls for special mention, and it appears to be a new thing in works of this kind, namely, the entering of all word-lists under a single alphabet. In this case the fact that a proper noun is proper does not exclude it from the body of the work; and real personages, or even mere persons, living or dead, if they be named at all, are no longer consigned to a side-show, but are admitted to the main tent along with all the gods of all the mythologies. There are *pro*s and *con*s regarding this innovation, but, personally, I find that I like it. There are doubtless good logical reasons for still putting off the glossary of foreign words in a place by itself, but so far as mere convenience of reference is concerned there would seem to be no reason why these immigrants into our language might not be domiciled among our citizen-words.

We have been considering thus far a kind of democratic character in the work as regards devices of arrangement and varieties of information imparted.

The ultimate test of any work of reference, however, as has been noted above, must be the accuracy of the information it conveys. One hundred per cent. of accuracy can not be demanded, for it is never attained and probably never can be attained in a work of such dimensions. But a very high percentage is demanded, and justly so; a proportion so high that the lapses shall be inconspicuous if not practically negligible.

The best assurance of the prevalent accuracy of the New Standard is the high character of the scholarship employed upon the work in its several fields of information. Even a cursory examination of the composition of the editorial board, including some three hundred members, reveals the great care which has been exercised in the organization of this undertaking. Names long familiar in the world of science and letters start out at one from every column, and other names known to but comparatively few beyond the circle of their respective specialties are equally an assurance of thorough workmanship. Taking account only of those engaged upon the present edition, one is arrested at first glance by such names as those of Professors

Dowden, Gayley, Schelling, Francis H. Stoddard, and Calvin Thomas, of Sir James Crichton-Browne, of Professors A. D. F. Hamlin and C. L. Bristol, of Doctors Harvey W. Wiley, Leland O. Howard, and Charles E. Munroe, of Samuel Macauley Jackson, of Lord Avebury and Douglas Hyde and Henry Gannett and George Otis Smith, of Professor Mahaffy and Cyrus Adler and Frank Wigglesworth Clarke, of Judge Gary and Dr. George T. Stevens and Dean C. Worcester, of Henry van Dyke and Morris Hillquit and Sir David Bruce; not to mention many others as eminent or as competent as these. It is evident, too, that the connection of such authorities with the work is not merely nominal, a fact which goes far to account for the wide use of this democratic work in technical and university circles.

From quite another point of view, it is interesting to see how many departments of our Federal Government have been drawn upon for expert guidance. The advance of scientific work at the National Capital has, indeed, been painfully slow, but it has also been inevitable and irresistible. There is now a fairly large group of scientific bureaus and laboratories at Washington in which the best work in this country is done, or work abreast of the best, in the branches of science with which they have to do. The stamp of a government office upon work of a scientific character has not always, in the history of this country, been an assurance of standard quality; but the change for the better in this respect is already far advanced in our States and municipalities as well as in our national life. The editors of the Dictionary before us have done well to draw so largely on the departments of our Federal Government.

The difficulty of keeping all subjects equally advanced in successive editions of such a work as this is undoubtedly great. It is illustrated in the present instance by one subject in which the present reviewer is particularly interested, namely, in pedagogy, with the branches of learning most closely related thereto.

Possibly specialists in various fields could point to deficiencies from the point of view of their several subjects, as is the case with any extensive work of reference. But the conviction abides, after due allowance for all such adverse judgment has been made, that we have here a valuable apparatus of public education and enlightenment, a work for the use of scholars in many fields, and notably a reference-book for the widest popular use, which will be found surprising and well-nigh inexhaustible in the wealth of information which it has to offer.

The necessary limitations of space compel the omission in this review of certain topics which are vital to the making of a dictionary. Among the most obvious of these are those relating to the treatment of the pronunciation of words and the judgment exercised regarding the inclusion of dialectic forms and current colloquialisms in both the forms of words and phrases and the meanings attached thereto. While the New Standard has taken decided ground of its own in these matters, and such as must inevitably call forth conflicting opinions, the present reviewer does not find that, on the whole, an extended survey of these topics would lead him to any fundamental modification of the estimate of the work as a whole which has been indicated above.

OTHER BOOKS WORTH WHILE

Fraser, John Foster. *The Amazing Argentine.* Pp. 291. Illustrated. New York: Funk & Wagnalls Company. \$1.50 net.

This volume should go far to dissipate any idea that there is not much of any consequence south of the Rio Grande besides the Panama Canal. In the story of his journeyings over the length and breadth of this enormous country—twice the size of Mexico—Mr. Fraser paints us a picture of a progressive people, and a country that is rapidly assuming a position as the foremost producer of the world's meat-supply. Stretching from the Atlantic to the Andes Mountains and from north of the Tropic of Capricorn to the Straits of Magellan, it supports 30,000,000 cattle, over 80,000,000 sheep, and 8,000,000 horses. The railroads, in which the British have invested £300,000,000, are among the best equipped in the world, and carry annually 40,000,000 tons of freight, with approximate receipts of £25,000,000. The export trade is advancing by leaps and bounds, and in 1912 the value of wool exports was £50,000,000, live-stock products £35,000,000, and agricultural produce £53,000,000; while the extent of the frozen-meat business may be gauged from the fact that £11,000,000 is invested in freezing-houses. The book is a distinct help to Americans in showing them a little more of the great country that is opening up to their enterprise.

Van Dyck, John C. *New Guides to Old Masters.* 16mo, 12 vols., cloth. I. London, \$1; II. Paris, \$0.75; III. Amsterdam, The Hague, Haarlem, \$0.75; IV. Brussels, Antwerp, \$0.75; V. Munich, Frankfurt, Cassel, \$1; VI. Berlin, Dresden, \$1; VII. Vienna, Budapest, \$1; VIII. St. Petersburg (in press); IX. Venice, Milan (in press); X. Florence (in press); XI. Rome (in press); XII. Madrid (in press). 1911. New York: Charles Scribner's Sons.

For those of inquiring mind, but of limited time in European art-galleries, this series will be found most useful, providing one has a completely blank mind upon entering and is in no mood to argue. Mr. Van Dyck's idea is to "deal with pictures from the painter's point of view, rather than that of the ecclesiastic, the archeologist, or the literary romancer . . . that shall have a critical basis for discrimination between the good and the bad." His judgments are concisely and cleverly expressed, and ought to be of service to the traveling public as well as to the art student. Only the best pictures among the old masters in each gallery are chosen for comment. They are discussed in alphabetical order, and the books are to be used in connection with the regular guide-books. The first of the series, London—the National Gallery—contains an introduction giving a brief sketch of such things as methods of painting and forgeries, and is expressed in a way to meet the requirements of the beginner.

Bruce, H. Addington. *Adventurings in the Psychical.* 12mo, pp. 318. New York: Little, Brown & Co. \$1.35.

The skill with which Mr. Bruce narrates strange things and leaves the reader to make his own solution of the problems they present is really admirable. The tact with which he handles various themes of the abnormal is praiseworthy. He comes down to grim fact when he bursts many a bubble by giving the scientific explanation of some among such phenomena. The subjects dealt with as given in the index must pique the curiosity and rouse the interest of the most blasé reader of recent books. We quote them as follows: Ghosts and Their Meanings; Why I Believe in Telepathy;

Potting the young plant.

Setting it out in the field.

Gathering the perfect fruit.

Labelling the Campbell Can—One Machine labels 17,500 cans in one hour.

The HISTORY of the FINEST TOMATO in NEW JERSEY

(As told by himself)

"MY ancestors were the aristocracy of their race—developed through years of cross-breeding in the Experiment-Station of the Campbell farms.

"The parent-vine on which I grew was nurtured and cultivated with unceasing care until I with my brother-tomatoes arrived at complete maturity—red-ripe, juicy and of a most enticing flavor.

"Then we were gathered at early dawn, carried in baskets on wagons direct to the Campbell plant, plunged into a refreshing bath of crystal-clear water from artesian wells, and finally transformed into the most famous and popular of all the Campbell kinds—

Campbell's Tomato Soup

"Is it any wonder that we now commingle at the festive board with the best society of our native land?"

21 kinds
10c a can

Campbell's SOUPS

LOOK FOR THE RED-AND-WHITE LABEL

Fair Play in Telephone Rates

IT is human nature to resent paying more than any one else and to demand cheap telephone service regardless of the cost of providing it.

But service at a uniform rate wouldn't be cheap.

It would simply mean that those making a few calls a day were paying for the service of the merchant or corporation handling hundreds of calls.

That wouldn't be fair, would it? No more so than that you should pay the same charge for a quart of milk as another pays for a gallon.

To be of the greatest usefulness, the telephone should reach every home, office and business place. To put it there, rates must be so graded that every person may have the kind of service he requires, at a rate he can easily afford.

Abroad, uniform rates have

been tried by the government-owned systems and have so restricted the use of the telephone that it is of small value.

The great majority of Bell subscribers actually pay less than the average rate. There are a few who use the telephone in their business for their profit who pay according to their use, establishing an average rate higher than that paid by the majority of the subscribers.

To make a uniform rate would be increasing the price to the many for the benefit of the few.

All may have the service they require, at a price which is fair and reasonable for the use each makes of the telephone.

These are reasons why the United States has the cheapest and most efficient service and the largest number of telephones in the world.

COURAGE—HONOR—MANLINESS

Here Are Three Books That Will Inspire These Things In Your BOY

"The Boy's Book of Battles"

By ERIC WOOD

Stirring stories of great battles on land and sea. True to historical facts. INSTRUCTIVE and vivid descriptions of famous battles, such as: Marathon, Hastings, Spanish Armada, Trafalgar, Waterloo, Gettysburg, Omdurman, and many others. Beautifully illustrated in color and half tone.

Large 12mo, Demy, illustrated, cloth, 12mo, \$1.25 net, by mail \$1.37.

"The Boy Scouts' Roll of Honor"

By ERIC WOOD

The stories of a multitude of scouts who, true to their record, at the risk of life and limb have saved life on land or sea. Beautifully illustrated. Lieut.-General Sir Robert Baden-Powell, Chief Scout, has written the foreword. 12mo, cloth, \$1.25 net; by mail \$1.37.

"The Boy's Book of Adventure"

By ERIC WOOD

True tales of actual adventure make up the many thrilling chapters of which this book is composed. Man-eating Lions in East Africa; Roosevelt's Ride for Life; Sir George Grey Attacked by Australian Aborigines; Fire at Sea on the Stricken "Clydesdale"; Tracked by Wolves; A Leap for Life; A Treacherous Guide, etc. Beautifully illustrated. 12mo, cloth, \$1.25 net; by mail \$1.37.

At all Bookstores or the Publishers

FUNK & WAGNALLS COMPANY, 354-360 Fourth Ave., NEW YORK

Clairvoyance and Crystal-Gazing; Automatic Speaking and Writing; Poltergeists and Mediums; the Subconscious; Dissociation and Disease; the Larger Self, etc.

Bolton, Florence. *Exercises for Women*. Pp. 141, appendix, illustrated. New York: Funk & Wagnalls Company. \$1 net.

In this little book Miss Bolton has provided a scheme of mat exercises that can be made of service to a vast number of women unable to take a course in a gymnasium. The exercises are peculiarly adapted to a woman's physical needs, and they have the advantage of requiring no apparatus. The instructions are couched in simple language, and the author describes the end to be attained by each separate movement. The appendix includes a series of three sets of chest-weight exercises, differing widely from those commonly given.

Lindsay, Judge Ben B.; Markham, Edwin; Creel, George. *Children in Bondage*. Pp. 102. New York: Hearst's International Library Company. \$1.50 net.

This is a "complete and careful presentation of the anxious problem of child labor, its causes, its crimes, and its cure," edited under the auspices of the National Child Labor Committee.

This committee was organized in 1904 and has secured some improved laws in various States and improved enforcement of existing laws, but there is much left to do, and it has to contend with "tradition, indifference, and greed." The authors cite the actual conditions of 2,000,000 little children who are wage-earners, and the facts are appalling beyond description. The cotton-mills, glass-factories, coal-mines, canning-factories, and the night-messenger service offer the greatest perils and contaminating influences, and our youth are helpless under such deteriorating forces. The reader, horrified by the revelations, can not say, "Thank God, our children are not affected," for our children are in danger; the book proves conclusively that crime, vice, and horrible diseases spread relentlessly through cities. Not even the innocent may escape.

Scott, Leroy. *No. 13 Washington Square*. Pp. 281. Boston and New York: Houghton Mifflin Company. \$1.35 net.

"No. 13 Washington Square" is reminiscent of "Seven Days," "Seven Keys," and other modern novels and plays, although it copies none of them except in its foundation idea. Supposedly closed for the summer, while its owner goes abroad, 13 Washington Square harbors not only the lady herself, but her maid, coachman, her son Jack and his newly acquired bride, her lawyer lover, and a gentleman crook of many aliases, who for perfectly plausible reasons, seek the protection of its shuttered exterior, and attempt to avoid one another. The story is so full of laughable situations and so many tragic-ludicrous complications that the reader accepts without question the disguises consisting only of "lowered veils" or "muffled tones," and considers them sufficient to conceal mother from son, sweethearts from one another, and the police from their victims. There are no dull moments, and especially in the scenes dominated by "Mr. Pyecroft," who is equal to any and every emergency. In the end every one is happy, but it takes a well-developed story finally to unravel all the many tangled threads.

CURRENT POETRY

THE first volume of the poetry produced by the present European war has been published. It is called "Poems of the Great War," and it bears the imprint of Chatto & Windus. Mr. John Lane has in preparation a similar book. He will have no difficulty in filling it, for war-poems of merit are now appearing in England at the rate of about six a day.

Of the seventeen poems in this volume (the net profits from which, by the way, are given to the Prince of Wales's Fund for National Relief), several have already been quoted in these columns from the newspapers in which they originally appeared. Of the others, the most effective surely is that of Mr. Gilbert K. Chesterton. Its humanness gives it an appeal lacking from formal statements of national feeling, and it is free from the loud invective and accusation with which the English poets have of late occupied themselves.

THE WIFE OF FLANDERS

BY GILBERT K. CHESTERTON

Low and brown barns, thatched and repatched
and tattered—

Where I had seven sons until to-day—
A little hill of hay your spur has scattered—
This is not Paris. You have lost your way.

You, staring at your sword to find it brittle,
Surprised at the surprise that was your plan,
Who, shaking and breaking barriers not a little,
Find never more the death-door of Sedan.

Must I for more than carnage call you claimant,
Paying you a penny for each son you slay?
Man, the whole globe in gold were no repayment
For what you have lost. And how shall I repay?

What is the price of that red spark that caught me
From a kind farm that never had a name?
What is the price of that dead man they brought
me?
For other dead men do not look the same.

How should I pay for one poor graven steeple
Whereon you shattered what you shall not know?
How should I pay you, miserable people,
How should I pay you everything you owe?

Unhappy, can I give you back your honor?
Tho I forgave, would any man forget?
While all the great green land has trampled on her
The treason and the terror of the night we met.

Not any more in vengeance or in pardon
One old wife bargains for a bean that's hers.
You have no word to break, no heart to harden.
Ride on and prosper. You have lost your spurs.

Gilbert K. Chesterton's brother Cecil is known in the United States chiefly through his brilliant weekly, *The New Witness*. That he is a true poet, as well as an able journalist, is shown by these stirring stanzas.

FRANCE

BY CECIL CHESTERTON

Because for once the sword broke in her hand,
The words she spoke seemed perished for a space;
All wrong was brazen, and in every land
The tyrants walked abroad with naked face.

The waters turned to blood, as rose the Star
Of evil fate denying all release.
The rulers smote, the feeble crying "War!"
The usurers robbed, the naked crying "Peace!"

And her own feet were caught in nets of gold,
And her own soul profaned by seats that squirm,
And little men climbed her high seats and sold
Her honor to the vulture and the worm.

And she seemed broken and they thought her dead,
The Overmen, so brave against the weak.
Has your last word of sophistry been said,
O cult of slaves? Then it is hers to speak.

THE life of a locomotive is 30 years *plus* because it travels over smooth steel rails, while the life of an automobile is 5 years *minus*, unless equipped with the

Truffault-Hartford SHOCK ABSORBER

It's all a matter of vibration. In the instance of the locomotive, the smooth, even rails minimize vibration; in the instance of the automobile, the rough, uneven roadbed intensifies it into jolt and jar. The use of Truffault-Hartford means the minimization of vibration and a 25% prolongation of the automobile's life. It means comfortable riding on the roughest roads.

Used by 250,000 motorists

Don't Throw Away Your Worn Tires

For over three years European motorists have been getting from 10,000 to 15,000 miles out of their tires by "half-soling" them with Steel Studded Treads.

In eight months 3,000 American motorists have followed their example and are saving \$50. to \$200. a year in tire expense.

We Ship On Approval without a cent deposit, prepay the express and allow you to be the judge.

Durable Treads double the life of your tires and are sold under a signed guarantee for 5000 miles without puncture. Applied in your own garage in 30 minutes.

Special Discount offered to motorists in new territory on first shipment direct from factory. A postal will get full information and sample within a week. State size of tires. Don't wait—write today. Address nearest factory office.

Clear the slow mists from her half-darkened eyes,
As slow mists parted over Valmy fell,
As once again her hands in high surprise
Take hold upon the battlements of Hell.

Here is a poem in more popular vein.
Mr. Vernède's verses have a music that
Swinburne might envy and that poet
never wrote with greater feeling.

ENGLAND TO THE SEA

BY R. E. VERNÈDE

Harken, O mother, harken to thy daughter!
Fain would I tell thee what men tell to me,
Saying that henceforth no more on any water
Shall I be first or great or loved or free.

But that these others—so the tale is spoken—
Who have not known thee all the centuries
By fire and sword shall yet turn England broken
Back from thy breast and beaten from thy seas.

Me—whom thou hearest where thy waves should
guard me,

Me—whom thou suckled'st on thy milk of foam,
Me—whom thy knees shaped what while they
marvel me,

To whom thy storms are sweet and ring of home,

"Behold," they cry, "she is grown soft and
strengthless.

All her proud memories changed to fear and fret."
Nay, thou, who hast watched through ages that are
lengthless,

Whom have I feared, and when did I forget?

What sons of mine have shunned thy whorls and
races?

Have I not reared for thee thine and again,
And bid go forth to share thy fierce embraces,
Sea-ducks, sea-wolves, sea-rovers, and sea-men?

Names that thou knowest—great hearts that thou
holdest

Rocking them, rocking them in an endless wake—
Captains the world can match not with its holdest.
Hawke, Howard, Grenville, Frobisher, and
Drake?

Nelson—the greatest of them all—the master
Who swept across thee like a shooting star,
And, while the Earth stood veiled before disaster,
Caught Death and slew him—there—at
Trafalgar?

Mother, they knew me then as thou dost know me,
Then I cried, Peace, and every flag was furled;
But I am old, it seems, and they would show me
That never more my peace shall bind the world.

Wherefore, O Sea, I standing thus before thee,
Stretch forth my hands unto thy surge and say:
"When they come forth who seek this empire o'er
thee,

And I go forth to meet them—on that day

God grant to us the old Armada weather,
The winds that rip, the heavens that stoop and
lour—

Nut till the Sea and England sink together,
Shall they be masters! Let them boast that
hour!"

Many English poets are expressing their
sorrow for the youth who refuses to enlist.
Mr. Stephen Phillips's poem (from the *London Daily Mail*) is a forceful piece of irony.

THE SHIRKER

BY STEPHEN PHILLIPS

He moves the skiff within the cooler gloom
Of river branches, unaware of doom;
Cushioned he lolls and looks in faces fair,
Nursing with placid hand anointed hair.
It seems he scarcely can uplift the weight
Of summer afternoon, far less of fate.
So the young Briton, sprawling in his strength,
Supports a heavy Sabbath at full length,
Till sinks the sun on more than that sweet river,
Perhaps upon our day goes down forever.
But tho' that orb may on an Empire set
Tomlinson lights another cigaret.

President Wilson's request that all
American citizens observe strict neutrality
"in speech and in thought" during this
astounding war has not kept two Amer-
ican poets from writing splendid and vio-
lently partizan poems. Like Mr. George
Sylvester Viereck's ringing tribute to the
German Emperor, the beautiful and pas-
sionate verses which follow appeared in Mr.
Don Marquis's column, "The Sun Dial,"
in the *New York Evening Sun*. Inci-
dentally it may be remarked that there are
few American magazines that print more
good poetry in the course of a year than
this newspaper. The initials "F. F. V." evidently are assumed.

AUX ARMES

BY F. F. V.

Your border forts have heard in dread
The wrathful speech of gun to gun,
Across the dawn a flag is spread—
An eagle black that blots the sun!
The heavy surge of marching men
Beats hard against your wide frontier;—
The War Lord hurls his host again
Along its path of yesteryear.

Enchained in links of Prussian steel,
Your Strasbourg calls again for aid,
Once more is raised the iron heel
To tramp your hills . . . draw the blade,
Oh, Frenchmen, that your Bayard swung!
Grasp Du Guesclin's mighty lance!
And with the song your dews have sung,
Go smite and win . . . or die for France!

He rides before you on this day,
Ye men of France . . . he rides alone
And number, in his coat of gray,
With eyes of iron and face of stone—
He knew the road to proud Berlin!
And mark, resurgent from her pyre,
She sweeps across the battle's din,
The Maid of Arr, in mail of fire!

Unleash your souls! Sweep o'er the line
That bars you from your lost Lorraine—
And from your banner, in the Rhine
Wash off the third Napoleon's stain!
The German's pillage-smoke mounts high,
His flame-tongued cannon stab the gloom—
Go teach the foe how Frenchmen die,
And let your Glory be his Doom!

It seems a needless affectation to spell
"memory" "memorie." But this is the
only blemish in Gervais Gage's exquisite lit-
tle song. We take it from his book "From
Far Lands" (The Macmillan Company).

AT A GATE ON THE HILL

BY GERVAIS GAGE

At a gate on the hill in the parting hour,
When the wind blew soft on the sea,
He laid in the maiden's hand a flower:
"O sweet, thy pledge from me!
Years shall be sped, the flower be dead,
But not my love to thee—
O, not my love to thee!
Keep thou it still in a heart on the hill
In a tender memorie!"

At a gate on the hill, in a weary hour
When the rough wind vexed the sea,
She held in her hand the faded flower:
"O sweet, my pledge from thee!
The years are sped, the flower is dead,
But not thy love to me,
Tho' there come no news from the sea—
It liveth still in a heart on the hill
In a quenchless memorie!"

On a grave by the hill he knelt—alone,
The wanderer, back from the sea;
He knelt alone by a white gravestone:
And, carved curiously,
The scroll he read:

— "The flower is dead;
But not thy love in me,
Tho' thou stayest long on the sea:
By a higher hill it waiteth still,
At a fairer gate for thee:
In a deathless trust with thee!"

PERSONAL GLIMPSES

VON HINDENBURG AND RENNENKAMPF

JUST what has been happening in the Russo-German department of the war is more or less of a mystery. If the vague, unsatisfactory, and untrustworthy reports that have reached us are an indication of the information possessed by the War Offices in Berlin and Petrograd, it is likely that the authentic history of these operations can be written only by the soldiers themselves. Of the personality of the two armies on the East Prussian border we know little save the names of two generals on opposing sides, Von Hindenburg and Rennenkampf. The former, who apparently enjoys much popularity in Germany, is called by the *New York Times* the Cincinnatus of the present war. He was called into command after three years on the retired list, given the aid of Major General Ludendorff, the great German expert in tactical investiture, and the support of the army of Schleswig-Holstein, and left to stem by his own strategy the Russian tide threatening Berlin. That he succeeded has been evinced by the extraordinary moderation with which the optimistic Petrograd War Office has announced successes in East Prussia, for where Petrograd can not anticipate a victory and state it as a feat accomplished, there must indeed be little to hope. By his speedy and clever repulse of the threatening Slavs, Von Hindenburg won for himself his third Imperial decoration. The first came in the war with Austria in 1866. We read:

At the battle of Königgratz, with only about forty men under his command he took an Austrian battery without other assistance. He led the charge on this battery, and when three of the guns had been captured he fell, stunned by a bullet in the head. Young Hindenburg lay on the ground for several minutes, and his soldiers supposed him dead. Gradually they began to retreat, but, when the advance guard reached the spot where he lay, he sprang up. It seemed as tho he had suddenly become conscious that the victory he had won was in jeopardy. The bullet had only grazed his head, tearing open the scalp, but not even marking the skull. With fiercer enthusiasm than before he sprang to the head of his men and ordered another charge. This time they took the three remaining guns of the Austrian battery. When that was done young Hindenburg fainted.

A few days later the Emperor conferred on him the Order of the Red Eagle, with Crossed Swords. This is an order that is ordinarily conferred only on majors or officers of higher rank. For a subaltern to get it was most unusual.

In the Franco-Prussian War Hindenburg was a captain, and he took part in the storming of St. Privat, near Metz, one of the bloodiest engagements of the war, in which the German loss was 40 per cent. of those engaged. That was on

I found Rennenkampf a pronounced German type with close-cropped hair like the Cossacks of the Caucasus, but without their beard, and only a heavy mustache, not worn in the German fashion. He was apparently about forty-eight years of age. I remember his eyes as rather large and gray. He wore a general's long military coat with three stars on his shoulder-straps. His other ornaments were a cross

'1200

The new Hupmobile is simply a delight, even to those Hup owners who were completely satisfied before.

It is more than ever the car of the American family, because comfort—the first consideration—has been immeasurably increased; because the cushions are deeper and softer; because there's more room to relax and stretch, front and rear.

It is a bigger car, a better car—and therefore a more faithful friend, a more loyal servant, to the American family.

Hupp Motor Car Co., Detroit

Removable Sedan and Coupe Tops for winter driving at exceptionally attractive prices

of the Order of Vladimir and the St. George's cross. On his left wrist was a heavy gold chain. He had just been attacked by Kuroki and forced to retire, but retaliated and recovered his lost ground. The position he was in looked dangerous on account of the cold, narrow, and difficult pass through which he would have to retreat if pressed. I mentioned this. He made light of danger and the rigors of the campaign, and laughed at my mishaps in the pass. He made a good sitter, changed to a black leather service short coat for another sketch, and autographed my sketches in memory of the visit.

If his fighting qualities are as well tempered for this conflict as they were in 1905, it is safe to say that Germany will find in him a source of most of the trouble and anxiety that she is to suffer in the next few months. The Germans are beginning to demonstrate that they do not know when they are beaten, but General Rennenkampf's attitude is even more decided—he will not be beaten, and apparently refuses to admit the word defeat in his lexicon of war. Mr. McCormick says of him:

His sayings and achievements were discussed throughout the whole Russian position. He was a fierce opponent of retreat. He always protested against retreat, and sometimes, when he would receive a dispatch from some commander on the line saying he must retire unless he receive reinforcements, Rennenkampf would reply that if he retreated his name would be stricken from the army.

At his headquarters he would allow no one to discuss peace. The subject was taboo. In the battle of Mukden, when retreat was ordered, Rennenkampf telegraphed asking the Commander-in-Chief to permit him to hold his position, which he had maintained against daily assaults for eight days. Rennenkampf had a captain of Cossacks who whipt a young noble under him for cowardice under fire. This was against the law of the State. Rennenkampf took responsibility for the act and telegraphed the young man's father that he was whipping his son for cowardice, and got the father's thanks for administering the deserved punishment.

It is said that the Japanese held a small opinion of the military value of the Cossacks, and it was generally supposed that the Cossack had deteriorated as a fighter. That he has not done so the present events seem to testify, and, we are told—

The St. Petersburg correspondents' conception of Rennenkampf's raid to Koenigsburg is that of a Cossack success. They speak of his rush to Gerdauen and his brilliant maneuver in upsetting the German encircling plan intending to flank him, and his rapid return to the Russian fortified position.

But much water has flowed under the bridge of military affairs in Russia since the Russo-Japanese War, and there is another picture of Rennenkampf's raid that is more expressive of his genius than are details respecting Cossacks. It is the reported story from one of the Russian

The Countryside Magazine

FOR TEN YEARS "SUBURBAN LIFE"

LIBERTY H. BAILEY, Contributing Editor

UNDER Dean Bailey, of Cornell, we shall cover the field of the open country, and at the same time continue the housebuilding, garden, and other successful features of Suburban Life. There will be stories of human interest, discussions of legislation affecting the countryside, the conservation of natural resources, problems of the rural community, the farmer who is making good—all these things, and more, handled by an expert editorial staff in a fascinating way.

A Trial Trip with Bailey

Red Cross men, who said: "I was walking beside one of our carts listening to the sound of heavy artillery, when shouts warned us to get off the road. We did so, and not less than a hundred huge motor-trucks thundered past, closely packed, each carrying about thirty men, and traveling at not less than forty miles an hour. That was Rennenkampf reinforcing his threatened flank."

This is a better picture of the methods of General von Hindenberg's opponent, who doubtless has been dispatched to the Russian right flank by the Grand Duke Nicholas for the same reason that Kuro-patkin dispatched him to the Russian left flank. He has been one of the most loyal subjects of the Czar and one of the most determined fighters of all the Czar's chiefs. His military characteristic is that of applying himself intensely to the task of worrying his enemy. He did this in Manchuria, and he appears to be doing it in East Prussia.

SAVING SUNKEN SHIPS

TO read of the smaller craft that cluster about disabled vessels on the ocean and harry them with offers of a tow, one might think that a ship that earns salvage is a sort of conscienceless usurer. The fact that the rescuer of a ship lying at the mercy of the elements usually wants compensation for his trouble and danger seems to the unthinking landsman hardly excusable. But, on the contrary, the salvor really deserves a great deal of praise, as a writer in *The London Magazine* tells us, both for his hardihood and courage and for the ingenuity with which he attacks the problems that sea and storm may weave for him. This is true, at least, of the professional salvor, whose gain is reaped at the cost of infinite toil from the bed of the sea itself. There are few wrecks so broken or so deep that some enterprising salvage firm will not attempt their recovery. In this work various methods are used, but in principle these may be reduced to two. One is to employ the force of the tide against that of gravitation, and the other is to displace sufficient weight of water about a vessel, by the use of water-tight pontoons lashed to the hulk or a superconstructed coffer-dam, to counter-balance the weight of the vessel itself, and so bring it to the surface. The tide is employed as a salvage agent by means of floats ranged alongside the spot where the vessel lies, from which chains are tossed down under the sunken ship. At low tide these chains are made taut, and when the rising tide lifts the floats and the suspended ship together, they can be towed inshore by tugs. Among the numerous wrecks mentioned by the writer an account is given of the salvage of the British cruiser *Gladiator*, sunk in the North Sea from a collision with the liner *St. Paul*. Nearly every known means of raising vessels was used:

The raising of this vessel is one of the

Make your Push Button an Office Telephone

Here is something new for your office—a simple outfit which you can connect to your push-button wires and transform your present call bell or buzzer into a practical telephone line.

Two of these inexpensive

Western Electric Inter-phones

can be easily connected up—one in place of your push button at your desk, and the other where the bell or buzzer is—at your office boy's or stenographer's desk.

All you have to do then is to telephone for what you want, instead of waiting for your clerk to come to you for directions. This simple arrangement saves time at both ends of the line. It costs little to install and no more to keep up than your present push button-buzzer arrangement. A convenience you cannot afford to be without.

We Will Send On Approval

Western Electric Company

Manufacturers of the 8,000,000 "Bell" Telephones

463 West Street, New York
500 S. Clinton Street, Chicago

We will ship you these Inter-phones by parcel post, all ready to connect, on receipt of \$8.75. Your money back if not satisfied. For full particulars and directions for attaching these Inter-phones, write for Booklet No. 60-D.

The Real Latin Quarter of Paris

SEVASTOPOL And Other Military Tales

The Morning Leader, London: "No other modern book approaches 'Sevastopol' in the completeness and directness with which it unveils the realities of war. The strongest meat Kipling can provide is milk beside Count Tolstoy's sketches of war." 12mo, cloth, \$1.50.

FUNK & WAGNALLS COMPANY, New York and London

**\$1.00 Buys
the Best History of
the War.**

*Of Special Importance
to NEW Readers of
The Literary Digest*

A DEMAND has sprung up all over the country for issues of *The Literary Digest* covering the early phases of the war, and these issues are being quickly snapped up.

When the war is concluded the most reliable place of reference for the real facts concerning it will be the non-partisan files of *The Literary Digest*. Back numbers are becoming scarcer every day. When those on hand are sold these issues will be out of print, and no more can be obtained at any price. If you would own what will later universally be sought

as the most reliable and colorful history of the war, this is probably your last chance to get it. Get those ten important numbers of the *Digest* NOW, August 1st to and including October 3d. These ten numbers cover the war from the death of the Grand Duke of Austria to the date of the last *Digest* mentioned. The ten numbers, securely wrapped and prepaid to your address, for \$1.00. In these ten numbers are valuable charts, maps, pictures, cartoons, etc.

Merely send us a one-dollar bill and say, "Send me the ten war numbers of *The Digest*."

354-360 Fourth Avenue

New York City, N. Y.

finest pieces of salvage work ever recorded. The cruiser was not completely covered by water, but was lying on her side, with a little of her gray armor showing above the surface. Upon examination by divers, it was found that a huge hole fifty feet long had been torn in her side, and several of the boiler-rooms were open to the sea. How to get her back to Portsmouth was the question. But an even more urgent matter was to prevent her slipping into deep water, for the sea-bed where she rested shelved rapidly, and the strong currents made of her nearly six thousand tons' dead weight a trifle, to be played with at will.

Accordingly, steps were taken to get her nearer the shore, and to aid this plan the divers began to dismantle the ship.

First of all, the guns and their shields, weighing about fifteen tons each, were slung out of her and salvaged. Then the divers, making great use of submarine pneumatic tools, got to work cutting out various other fittings.

The great funnels were then cut off and hauled out; ventilators were treated similarly; the boats and the davits were retrieved; and so the stripping of the ship went on to completion, not without many delays, for the tides ran very strongly, and the *Gladiator* was in an exposed position, so that often the divers could not work.

Then came the stopping-up of every opening in the vessel. Wooden covers were made to fit where the funnels had been, and wooden covers were made and fitted with bolts to every other opening in the ship until she was water-tight—except for the gash in her side.

To this the divers now turned their attention, and it was found that some of those great thick armor-plates had folded down as the they were but tinfoil.

To prevent any further damage to the hull, these ragged, jagged pieces were carefully blasted away with gelignite, after which two pontoons about fifty feet long, and each capable of lifting one hundred tons, were moored to the wreck to help ease her while an attempt was made to tow her inshore.

A steam-dredger now came on the scene, and began to clear away the sand which the swirling waters had deposited in front of the ship's bow, while five gunboats, each carrying powerful steam-driven pumps, moored bow-on to the *Gladiator*, and waited while the divers placed the suction ends of the pumps in position. It was recognized that tugs alone would not be able to move that vast amount of metal, so two giant steam-capstans were erected ashore, and from them two monster steel-wire ropes were stretched to the wreck, to which they were securely fastened.

The signal was given. All the pumps started to work, the cables stretched to the shore began to strain, and after a time the vessel started to slide and continued to slide—for a distance of just six feet, when she stopt, owing to a projecting part of the ship digging into the sand. So, to prevent her slipping back to deep water, the pumped-out compartments had to be re-filled, and the wreck sank again!

Another and another attempt was made. On one occasion one of the great cables strained from the ship to the shore snapped with a tremendous report. It was lucky no man was in the way as it flashed, writhing like a lash, over the sea, for it would most certainly have cut him clean in two.

Tripods were raised on the side of the sunken *Gladiator*, and by attaching cables

to the masts and over the tops of the tripods it was sought to pull the ship upright. Other pontoons were made, until seven, with a combined lifting-power of about one thousand tons, were fastened to the wreck. To assist the vessel still further to right herself, pigs of iron weighing 280 tons were placed on the keel.

Gradually, inch by inch, the vessel began to assume an upright position, but the upper deck was still several feet under water, and so the salvors, after consideration, determined to cover it in with a big coffer-dam.

At length, after five months of disheartening work, the day of the grand effort dawned. The pumps were started, and water began to pour from the ship. For hour after hour the pumping went on, and at last the salvors found that the six thousand tons of dead weight lying at the bottom of the Solent were beginning to shift and rise. Pumping went on with unabated fury. The water, from a yellow color, turned to gray, and then to black, and the salvors knew they were getting to the bottom of the waters in the *Gladiator*.

Bit by bit she rose until pontoons and pumps had conquered. The tugs fastened on to her, and very carefully, very slowly, the little procession crept across the Solent and nightfall saw the crippled *Gladiator* safe in Portsmouth Harbor.

One unique device in salvage, used when it is deemed possible to make a hulk sufficiently water-tight to permit of its being pumped out, is to send a slate down to the diver, who is inspecting the wreck on the ocean-bed. On this he sketches roughly what repairs are needed, making special specifications of any holes that may be covered by plates. While the workers below are busy removing as much of the ship's cargo as possible, plates are forged in the wrecking-boat's workshop above; later these are sent down, the holes are patched up, and there is left only the work of the pumps to bring the wreck to the surface. Often a salvaged vessel dives back again into the deeps before it can be got ashore. At such times the salvors' work is all to be done over again, perhaps with yet greater difficulties. One case is recorded wherein the salvage crew saw their prize sink four consecutive times just when they had succeeded in bringing her up within sight. They tried a fifth time, and won. Following are two brief accounts of rather remarkable salvages. The first is of the *Milwaukee*, hard on the rocks near Aberdeen on her maiden voyage:

The rocks caught her by the nose, and held her so tight that there was not the slightest hope of ever pulling her away again.

The salvors recognized this in a flash, but they were gifted with vivid imaginations, and they determined on an extraordinary experiment. To save the valuable machinery in the after-part, they decided to cut the ship in two with dynamite.

Accordingly a belt of dynamite cartridges was fastened round the ship just forward of the engine-room bulkhead. These were fired. Then came a terrific explosion, and the salvors had the pleasure of seeing the after-part of the *Milwaukee*

Safety First

You will be amazed to know how Cat's Paw Heels have greatly reduced the number of accidents from slipping on wet sidewalks, ice or polished floors.

The Foster Friction Plug won't let you slip. It is set in Cat's Paw Rubber Heels right where the weight falls—right where the wear comes. Not only prevents slipping but *makes 'em wear longer*.

CAT'S PAW CUSHION RUBBER HEELS

All Dealers 50¢ Attached

Note the three arrows. Each points to a sign of safety.

The first shows the Foster Orthopedic Heel which affords safety against falling arches. Gives extra support where needed. Especially valuable for heavy people and those who are on their feet a great deal.

The second arrow points to the famous Black Cat which is your safe guide in buying. Whenever you see a Black Cat think of Cat's Paw Heels. Wherever you see this sign, you know the genuine are sold.

The third arrow points to the regular Cat's Paw Heel which is "worn the world over."

Insist on Cat's Paw Heels from your dealer. Black or tan, 50c. attached. Cost no more than ordinary kinds. Foster Orthopedic, 75c.

Jackson "48"-Six—\$1650

Jackson
*"No Hill Too Steep,
No Sand Too Deep"*

Gives You More Than Mere Equipment

THE Jackson Models for 1915 have everything you could ask for in the way of equipment, beautiful body design and luxurious comfort. But their real value lies beyond these features.

For those who use the same judgment in buying an automobile that they use in every-day purchases, the chiefest value of the Jackson is its long record of years of dependable service and its economy in operation.

This company's thirteen years of experience in automobile manufacture stand behind the present models; and the extraordinary reputation for dependable service which the Jackson has held throughout its history is your best assurance that the 1915 Jackson car you buy will give you the same efficient service the third, fourth and fifth years as the first. Thousands of Jacksons six, seven and even eight years old are still faithfully doing their work every day.

The prices of the 1915 Jackson are as low as sound engineering principles, honest materials and careful workmanship permit us to make them. By all means see these cars before you come to a decision.

Write us today for the name and address of your Jackson dealer. We will send you the new catalog. Address—

part company with the bow and slide back off the rocks into the sea. They were naturally jubilant. The ordeal of towing the salvaged half of the ship back to the Tyne was eventually accomplished, and in the course of time a new bow was built and spliced on the stern of the *Milwaukee*, making a new ship of her—certainly a most extraordinary feat!

Another case is that of the *City of Paris*, apparently doomed to gradual annihilation by the elements:

The relentless sea smashed her savagely on the cruel Cornish coast. Sharp fangs of rock cut through her hull and held her tight. Her position from the first seemed to be quite hopeless.

But an enterprising salvage firm disagreed with these opinions, and, offering their services on the "no success, no pay," principle, started in to do their best. Very, very carefully and piece by piece the divers blew away with dynamite the rocks that transixed the ship. They had to act very cautiously, for fear of blowing the hull of the vessel to bits. Still they went ahead, and little by little the rock was removed, and the *City of Paris*, afterward known as the *Philadelphia*, was patched and re-floated and towed into Falmouth Harbor for repairs. So she was saved. The salvors earned their reward.

A FOOTBALL PARADOX THAT WORKED

WITH the beginning of the football season is brought to light a hitherto mysterious item in the Cornell victory over Pennsylvania last year. It will be remembered that Cornell has been defeated so often and so consistently that victory for the Ithacans had taken on something of a legendary quality. The whole explanation of their sudden success in 1913 may not be included in the story that the *Philadelphia Public Ledger* prints, but the probability is that the strategy it relates must be given by far the major share of the credit for the victory. It appears that Dr. Al Sharpe, the Cornell coach, unexpectedly breaking through the unalterable law of the training-table, which prescribes rigorous adherence to early hours and dieting for the players, paradoxically and in an apparent spirit of mad abandon, ordered them, under pain of penalty, to break training. As the writer tells it:

Sharpe gathered his men about him on the Wednesday before the game after the last practise at Atlantic City, and said: "Now, boys, I want you to go back to the hotel and eat anything you like, and eat plenty of it."

This remark caused considerable comment, and the players believed that this was sarcasm on the part of Sharpe, because it was rumored that one Cornell athlete the previous year had put himself out of the running by an eating exhibition every meal.

"To-night I want you all to go to a show," added Sharpe, "and I don't care what time any of you get into bed. In fact, if I see a man come into this hotel before 11:30 he'll hear from me, and he won't enjoy what he hears. Some of you

fellows who don't care particularly for the show can get up a regular bowling-match or a pool tournament. If any of you feel that you would like a little ice-cream, just go ahead and eat it."

This took the starch completely out of the boys. They had visions of a scandal. Sharpe would lose his job and there would be trouble in every way. They figured that if the coach, who was drawing down big money and fighting for a reputation, did not want to win, they were helpless. They wished football was over and immediately forgot all about it. This was just the condition that Sharpe wanted to bring about, and he sat in the hotel lobby and watched his men rolling in around 12. The later his stars stayed out, the more Sharpe smiled. Moakley, also, was in the lobby, but made no bones about the fact that he thought Sharpe was plumb crazy.

Orders had been left at the desk that none of the team was to be disturbed on any condition until he awoke naturally. The result was that the majority of the boys did not get downstairs the day of the game until 9:30, instead of 7, as is customary. Sharpe sent each man into the dining-room to eat a big and hearty breakfast, another unheard-of thing. So bewildered were the players at this sort of training just before a big game that they had taken their minds off football. At 11 o'clock the team was hustled off to Phillie and immediately to Franklin Field.

Just a few minutes before the game Sharpe called his men about him and told them that his actions had seemed strange, but that he had a reason. He told them that he was positive that Cornell would win and that he wanted every man to fight to the finish. Al is a second Mike Murphy for arousing fighting spirit, and in a few minutes he told them things that had them fighting mad. They made up their minds that they would win, and did.

The first person to shake Al Sharpe by the hand after the game was Jack Moakley, who loves Cornell as a mother does a child. Sharpe was then asked to explain his peculiar actions, and this is the way Al put it:

"Cornell gridiron warriors had been coming down to Franklin Field too many years with nothing but past reverses on their minds. It took me only one year up there to find out that the night prior to the game and the morning of the game all the men talked about was the way Penn had pulled off lucky victories in the past. Grads would come around to find out what the team's chances were and would then recall some other year when things looked bright but something went wrong.

"The men talked football, dreamed it, and worried so that they could do nothing but lie in bed from 9 o'clock, the usual retiring time, until the wee hours of the morning. They awoke tired out mentally and physically.

"I made up my mind that I would not have the same condition another year, so I did all in my power to get the men disgusted with everything and to forget football. The late hours did not hurt them because they went to bed tired and slept without the usual worry. The big breakfast was digested long before the battle. I was more afraid of the mental than the physical ability of my men, and when I saw them in the dressing-room before the game I felt in my heart that Cornell was to win because the men were absolutely in perfect trim, mentally and physically, while the other fellows did the worrying, I guess."

BE KIND TO YOUR EYES

UNCENSORED BREVITIES

WE think of a world catastrophe like the present war as something in which great masses of humanity are engaged, and hence the most startling moments come when the act of some single individual among all the countless thousands of combatants and non-combatants places him on a par with regiments and armies. Such is the story, received in the midst of cables of terrific fighting near Longwy, France, of the telephone girl in the little nearby village of Etain. The Sioux City Journal describes the situation and comments upon the operator's courage:

Villagers in fear of death were scuttling out of little homes like rats driven from holes by flood.

One person in the village remained at her accustomed post and from time to time recorded into the mouth of a telephone receiver the progress of the conflict, while a French general at the other end of the wire listened. Presently her communications were interrupted. "A bomb has just fallen in this office," the girl called to the general. Then conversation ceased.

It is always that way with the telephone girl when tragedy stalks abroad and there is necessity to maintain communication with the outside world. The telephone girl of Etain may be lionized in lyric literature. She deserves it. The telephone girl of Etain may find brief mention in history. She deserves that much at least. And yet the telephone girl at Etain is but one of her kind the world over.

Frequent comment has been made upon the fact that soldiers in the field for the most part prefer lively tunes of a far from classical nature as a means of inspiration and enheartenment even to the national airs of their country; and word has already come of the English soldiers' preference for "It's a Long, Long Way to Tipperary." A somewhat startling recognition of this idiosyncrasy of the fighters was recently given in one Canadian city, according to the Philadelphia Evening Ledger:

A striking incident occurred at the conclusion of High Mass in St. Patrick's Church yesterday, when the vast congregation was astounded to hear the great organ peal out the tune, "It's a Long, Long Way to Tipperary." St. Patrick's is the largest Irish Catholic congregation in Canada, and thousands of its members are in the contingent of 32,000 Canadian soldiers now on their way across the Atlantic to the war.

As the first notes of the now famous tune were heard the whole congregation stood still, amazed by the unusual non-church music. The feeling of surprise was followed instantly by smiles and every evidence of enthusiasm as the whole congregation fell into step, and many left the edifice singing the song.

Of the minor horrors of war, outside the battle-field, not the lightest are being suffered by the English drill-sergeants, according to the same Philadelphia paper. Hawkins, Smithers, and Scrooge have long

FLEX-A-TILES Make Enduring Roofs

THE hottest sun can't affect the high melt asphalt in Flex-A-Tiles. Won't rot nor rust—even heavy rains can't soak through.

FLEX-A-TILE Asphalt Shingles

Pure wool felt is doubly saturated with pure, asphalt, then coated with rubber-like, wear-resisting Gilsonite. Into this, under tons of pressure, chipped slate or crushed granite is rolled—making each Flex-A-Tile unfading and durable. Choice of red, green, garnet, emerald or brown.

DIRECT FURNITURE COMPANY
5th Ave. and Federal Square Cincinnati, Ohio

answered blithely enough to British roll-calls, but now a new sort of Tommy is in the field—a "Thomas," whose aristocratic name, for example, of Cholmondley does not sound familiar to his ears when pronounced in common-sense, drill-sergeant style. As the story goes:

A sergeant calling the roll for a company of the new "sportsmen" battalion for the first time had a terrible experience recently. Having disposed successfully of a few "Harpers," "Mitchells," etc., he came to the name "Montague."

"Private Montaig," shouted the sergeant.

There was no reply, but when the name was repeated a half-hearted "Here, sir," came from the ranks.

"Why didn't you answer before?" demanded the sergeant. "Because my name is Mon-ta-gue," replied the recruit.

"Well," snapt the sergeant, "you'll do seven days' fatigew."

The next name on the list, Majoribanks, brought no response, for the sergeant pronounced "Majoreybanks."

A second call brought the mild response; "I expect you mean me, sir. My name is Marshbanks."

The sergeant almost reeled, but proceeded bravely with "Colquhoun."

"Private Col-kew-houn," he called. "Coo-hoon, sir, that's me," came a brisk reply from the front rank.

The drill-instructor gave up and, closing his book, he wearily gave the order "number." When this was completed he said:

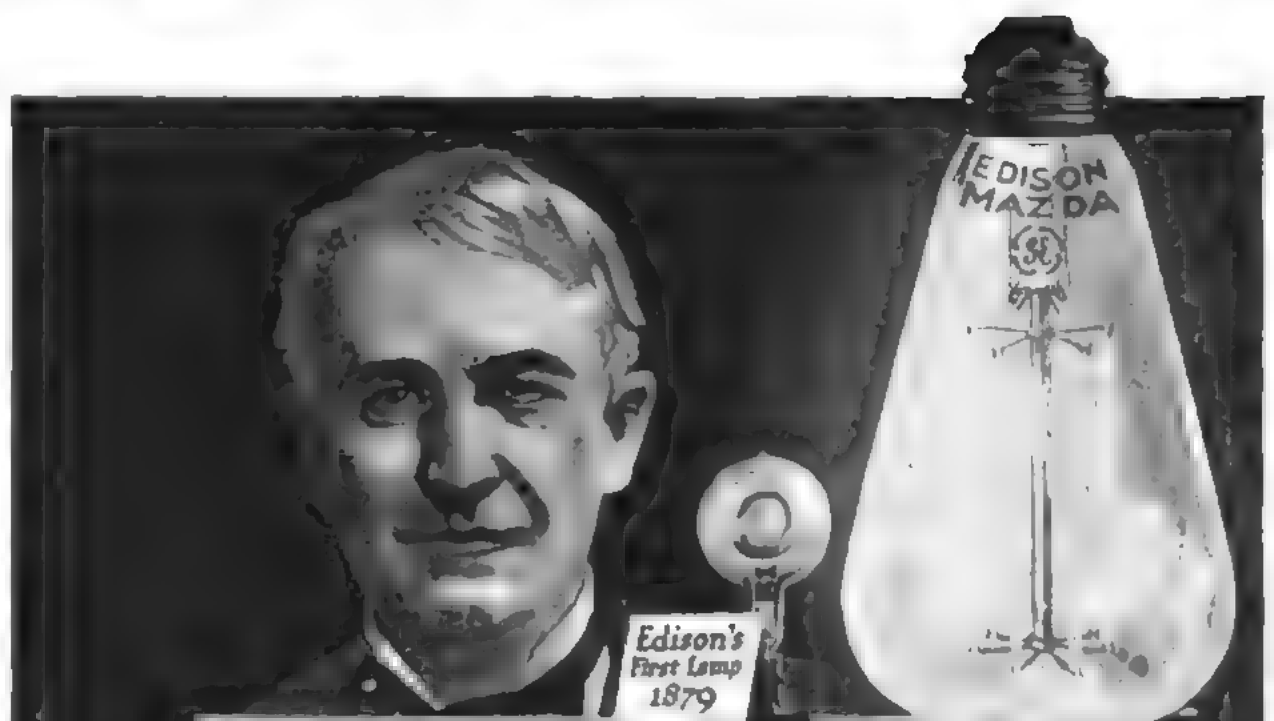

"One hundred and twenty-one. That's right. Now, if there are any more of you with fancy names just come to me after drill and tell me how you would like to be called."

The meager information conveyed by the post-card illustrated below is all that English families and friends of Tommy Atkins will have for many days to tell them of his welfare. Whatever he may have been before enlistment, he is now only a numbered unit in a war-machine, and even the private letters he writes to those most dear to him are stereotyped. The *New York Times* tells the reasons for this, and the precautions that have been taken:

In former campaigns much valuable information has been revealed to the enemy by the capture of mail-bags on the way from the seat of war to the home towns of the soldiers. This was particularly true in the Civil War, and when either side captured a mail-train or wagon, or wrecked them, the letters written by the soldiers to their families and friends at home were carefully examined in the hope of discovering much-needed information.

The presence of a famous Confederate spy in Washington was thus revealed to the Federal authorities in the apparently innocent letter written by a soldier of the Maryland Home Brigade and address to his sweetheart in Richmond.

At the outbreak of European hostilities it was announced that the British soldiers would not be allowed to send home letters from the seat of war, but, in order that those at home might hear from the one in the field, without betraying any information to the enemy, free post-cards were provided in printed form. All that a soldier is

35 years ago next Wednesday

October 21, 1879. Thomas A. Edison gave to the world one of the greatest conveniences of modern life—the incandescent electric light.

So October 21st has been named Edison Day as the most appropriate date upon which to pay homage to the genius of America's great inventor. We can all celebrate the day in a practical way by making our homes lighter and brighter with

*More light, Better Light,
Cheaper Light*

EDISON MAZDA Lamps give from 3 to 6 times as much light as old-style incandescent lamps without using any

more electricity. Get the full benefit of this great economy by putting EDISON MAZDAS in every room—whether the light is on constantly or only occasionally.

EDISON MAZDA Lamps have made electric light so cheap that everyone can afford it. If your house is not yet wired—EDISON DAY is a good time to modernize and economize. Your "lighting man" or electrical dealer will tell you how little the trouble and expense will be.

Cassell's Natural History

By F. MARTIN DUNCAN, F.R.P.S., F.R.M.S.

No study of Nature is so full of interest, none so fascinating, as the study of animal life. Written in a chatty, easy manner, as free from technical terms as the theme permits, Cassell's Natural History places before the reader a graphic picture of the evolution of animal life from the simplest organization to the most complex type.

Professor Duncan is one of the most noted biologists of the day. His knowledge is world-wide—he is a specialist, whether treating of denizens of the deep, the air, the earth, or under the earth.

NIGHT AND MORNING

USE CALOX

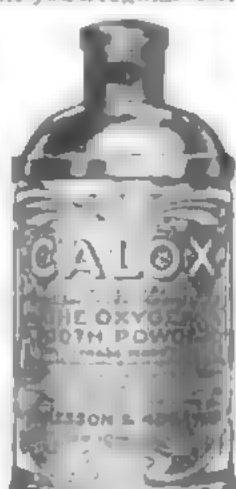

The Oxygen Tooth Powder to secure its full benefit, but particularly at night. The oxygen which Calox liberates puts an end to that decomposition of food particles upon which harmful bacteria thrive. The gums are invigorated, the teeth whitened and you wake in the morning with that sense of freshness and purity which only comes from a chemically clean mouth.

Test CALOX Free
A personal test will make you a regular user.

Send for a copy of our colored booklet, "The Tooth Brush Army," which will amuse and instruct the children; also a dainty sample for trial. A postal brings both free.

I have been advised that I should
get a good rest and am going on well.
I am feeling better and hope to be discharged soon.
I am being sent down to the bank.

I have received your letter
I am sorry to hear that you are not well.
I am sorry to hear that you are not well.
I am sorry to hear that you are not well.

Letter follows at first opportunity.
I am sorry to hear that you are not well.

Signature only *Charles J. Ford*

Date *Sept 6 1914*

(Please do not be present on any letter or postcard addressed to the number of this card.)

While the government card offers great economy of time and energy, it also, by its readiness and facility, invites correspondence, and probably many of those left behind in the British Isles will receive this card who would have waited in vain for a less impersonal epistle. The order at the foot of the card is suggestive: "Postage must be prepaid on any letter or post-card address to the sender of this card." The card itself goes gratis.

Via the New York Tribune comes a Jules Verne story from the North Sea. It is taken from the letter of a naval lieutenant, descriptive of an incident in the fight off Helgoland, and it is, in his words, "the most romantic, dramatic, and piquant episode that modern war can show." He writes:

"The Defender, having sunk an enemy, lowered a whaler to pick up her swimming survivors. Before the whaler got back an enemy's cruiser came up and chased the Defender, and thus she abandoned her whaler.

"Imagine their feelings; alone in an open boat without food, twenty-five miles from the nearest land, and that land enemy's fortress, with nothing but fog and foes around them.

"Suddenly a swirl alongside, and up, if you please, pops His Britannic Majesty's submarine E-4, opens his conning-tower, takes all of them on board, shuts up again, dives, and brings them home 250 miles!

"Is not that magnificent? No novel would dare face the critics with such an episode in it."

A Touching Tribute.—Misha Elman tells a story of his early youth. He was playing at a reception given by a Russian prince, and played Beethoven's "Kreutzer Sonata," which has several long and impressive rests in it. During one of these rests a motherly old lady leaned forward, patted him on the shoulder, and said: "Play something you know, dear."—Argonaut.

SPICE OF LIFE

Lucky Hubby.—**Mrs. GREEN**—"Do you ever flatter your husband?"

Mrs. WYSE—"Yes, I sometimes ask his advice about things."—*Boston Transcript.*

Enough!—"Don't keep pestering me."

"Then you won't marry me?"

"I wouldn't even be engaged to you at a summer resort."—*Louisville Courier-Journal.*

Still Better.—**RICH PAPA**—"You foolish girl, that English nobleman who's courting you really doesn't look on you as his equal."

WILFUL HEIRESS—"I don't care for that, papa, as long as he's my peer."—*Tit-Bits.*

Defined.—**HE**—"Can you suggest a title for my new book?"

SHE—"What is it about?"

HE—"England's most famous battles."

SHE—"Ah! Why not call it 'Scraps of English History'?"—*Tit-Bits.*

Incredulous.—"I was outspoken in my sentiments at the club to-day," said Mrs. Garrulous to her husband the other evening. With a look of astonishment he replied:

"I can't believe it, my dear. Who outspoke you?"—*National Monthly.*

"Hen" Eggs.—**Mrs. X.** relates that while in London she inquired in a shop if they had any fresh eggs.

"Yes, mum, plenty," said the clerk; "them with a hen on 'em are fresh."

"I don't see any with a hen on them," said Mrs. X., looking around for a nest.

"The letter 'hen,' mum, not the bird. 'Hen' stands for 'noo-laid,' mum."—*Boston Transcript.*

The Family Skeleton.—Jokes about cheap motor-cars are as the sands of the sea, but a Kansas City traffic manager believes he has a new one. He met an old friend whom he had not seen for many months, and asked him:

"What are you doing now?"

"Selling motor-cars," was the unenthusiastic reply.

"What kind of cars?"

"Well, er—the truth is," he stammered, "I am selling —(deleted) cars, but I'd rather you wouldn't say anything about it. I don't want my mother to know; she thinks I'm a bartender."—*Kansas City Star.*

As It Goes.—Some nations were fighting fiercely.

"Why are you fighting so?" inquired the bystanders, moved at length to curiosity.

"To save civilization!" replied the nations severally.

Here a draggled figure rose from the mire under the feet of the combatants and limped lamely away.

"And who are you?" asked the bystanders, with a disposition to get to the bottom of the matter.

"Don't speak to me—I'm civilization!" the figure made answer, somewhat pettishly.—*New York Evening Post.*

KRESGE BUILDING—DETROIT—KAHN SYSTEM REINFORCED CONCRETE

KAHN SYSTEM REINFORCED CONCRETE AND UNITED STEEL SASH

HENRY R. SCHOCH BUILDING BROAD ST TOP CO. PHILADELPHIA

Construct your new building with our expert co-operation

As specialists in reinforced concrete, of widest experience, we furnish a service invaluable to yourself and your architects and engineers. Our practical knowledge, gained from thousands of important structures all over the world, enables us to adapt the most modern developments in reinforced concrete to your particular requirements. By calling in our concrete specialists, who co-operate with your architects and engineers, you will secure the best and most economical building.

Fireproofness, permanence, and economy are assured by the use of Kahn System Reinforced Concrete. Our other products, all backed by the same complete service, include United Steel Sash for windows, Hy-Rib, Metal Lath, Highway Products, Waterproofing, Technical Paints, Building Specialties, etc.

No matter what the nature or size of your proposed building, write us about it, and we will send you interesting and specific suggestions without obligating you in any way. Write today.

Can You Carry C A Conversation French—German? Spanish—Italian?

The other day the father of a young lady of our acquaintance promised her a summer in Europe if she would three minutes carry on a conversation in French. The girl had studied the language two winters, and five months had been a pupil of the most fashionable "F" and English boarding-school for young ladies in New York. Her reports showed that she had studied well in French grammar she stood high in her class. She utterly failed to carry on for three minutes only a conversation on a general topic.

In THOUSANDS of "Digest" readers' homes a similar test would have a like result. If you want to speak and understand one of these foreign languages, use the ROSENTHAL METHOD for private study, or organize a ROSENTHAL CLUB among your friends. By the

ROSENTHAL METHOD of PRACTICAL LINGUISTICS you can learn to converse in a new language as naturally and easily as a child learns to speak. Like the child who learns English here you learn the most necessary and most useful words and phrases. You quickly get a mastery of ordinary, necessary conversation and correspondence in the new language with ease.

The ROSENTHAL METHOD is for BUSY men and women—ten minutes three times a day will lead a marvelously short time to complete mastery of every business and social conversation. The study is a pleasure—a task.

If you want to learn to think and talk in idiomatic French, German, Spanish or Italian quickly, pleasantly, and PRACTICALLY, send a postal for DR. RICHARD S. ROSENTHAL'S Free booklet, "Revolutionary Study and Teaching of Foreign Languages." FUNK & WAGNALLS CO., 354-360 Fourth Avenue, New York

Farm Mortgages

In Selected Parts of

Kansas—Oklahoma—Arkansas—Texas

Right in the heart of the districts where record breaking crops of wheat and corn have been harvested.

6%

Secured by improved and productive farms, these mortgages offer an investment affording highest security and stability, with assured income. Proof against disquieting influences of far off

Not to you European troubles.

For 43 years the Maxwell Investment Co. has been making loans in the rich and productive central west. The management of the company is in closest possible touch with the prosperous farmers, and no loans are made except after rigid inspection by our salaried examiners. We put our own money into each loan and loan not more than 30 to 40% of the value of the security.

We guarantee all material statements in reports signed by our examiners. We guarantee the title to each property and that each mortgage is a first lien.

Our service relieves you of all care in connection with your investment, we attending every detail of collection, remittance, taxes and insurance, and sending you 6% interest.

Write for our newest list of mortgages. Complete information furnished concerning any desired loan.

CHICAGO—NEW YORK

INVESTMENTS - AND - FINANCE

THE HOPED-FOR TURN IN THE TIDE

INDICATIONS are multiplying," says *The Wall Street Journal*, that a turning of the financial tide "is in sight." That paper reaches this conclusion, after a study of the October 1 settlements, which show "record shipments of food-stuffs, the beginning of cotton exports, and greater ease in the money market." Furthermore, "the time is not far distant when the retirement of clearing-house certificates should begin," altho at present it does not believe a reduction in the amount of such certificates outstanding should be contemplated. The maximum amount put out in 1907 was \$88,000,000; the maximum for the present emergency is placed at not less than \$60,000,000. It is believed by this writer that the amount of these certificates now in use would have surpassed the amount used in 1907, except for the fact that emergency currency is now used to an extent fully as great as the use of clearing-house certificates. Other items in the improved situation are pointed out by the same writer:

"Applications for exchange to the \$100,000,000 gold pool committee have not come in in the volume expected, and probably for two reasons among others. The outside exchange business is resuming normal proportions with \$2,000,000 in regular bills of exchange sold on Thursday, and notices are being received from the other side that payments due in London are not now so urgently needed. In fact, the British Empire is reaching out over the earth to recover trade, and this means easier credits on London.

"Bankers are sensing the situation and when loans expire on stock collateral they are suggesting to borrowers that perhaps they would prefer a time loan at 6 per cent., instead of the 8 per cent. call rate, and many loans are being renewed in this way at 6 per cent. for over the balance of the year.

"The volume of stock transactions passing through the New York Stock Exchange committee has been much larger than the public has been permitted to know. As high as 26,000 shares in a single day has been done without variation from the closing prices. With progress in privately opened-up markets, and no unforeseen setback, the foundation is being laid for a gradual opening of the New York Stock Exchange.

"The demand for commercial paper at 7 to 7½ per cent. is increasing, and it can be broadly stated that there is no trouble in this country at the present time, except over the cotton situation. This is the fundamental trouble in the foreign exchange market, which for the present is preventing accumulation of credits, which credits are fundamentally necessary to a full opening of the Stock Exchange.

"It should be remembered, however, that the cotton crop has already been financed to the extent of 70 per cent. by the banking interests of the South, who must this year delay their payments to their Northern correspondents. But no trouble can arise from this quarter this year unless something now unforeseen comes into view. The trouble over cotton, if trouble there is to be, must come early next year when the planters apply to their local financiers for funds to begin preparation and planting for next year's crop. It is then up to the bankers to say: 'Strengthen your security by diversifying your crop and not so much cotton, if you please, for 1915.'

Talk of a 17,000,000-bale crop this year may not materialize. No country, however, should be afraid of big crops. There is no waste or shrinkage in cotton on storage except by interest, and quantity, rather than price, makes the wealth of a nation, whether it be cattle, hogs, or cotton. The world in time will use all the cotton that America can produce this year, and if artificial prices are not put up through mistaken philanthropy, cotton will soon find a bottom and stimulate increased consumption, which in time will stimulate the price."

GENERAL INDUSTRY ON A 70-PERCENT. BASIS

Estimates made as carefully as circumstances permit lead to the conclusion that manufacturing in this country, taken as a whole, is now on an operating basis of about 70 per cent. While some lines of business for manufacturing are operating on a basis far below 70, others are considerably above that figure, the average being about 70. In *The Wall Street Journal* are printed some interesting details as to percentages of operation in various lines:

"The steel and equipment companies seem to be about the hardest hit of all lines. This is due as much to the inability of railroads to increase their revenue as it is to the European war. The eastern railroads claim the small increase in freight rates granted by the Interstate Commerce Commission was not sufficient to allow for extensive improvements and new construction. Even on a peace basis, the steel companies would not expect any abnormal demand on the part of the railroads. The war has simply aggravated a serious situation so far as applied to the railroads of the country. Rail-, car-, and locomotive-buying is smaller to-day than it has been in years, and the steel companies say they expect to see nothing encouraging until the greatest steel consumers in the world, the railroads, are granted a reasonable increase in rates.

"The extent to which the equipment companies are suffering as a result of suspended railroad-buying is evident from the fact that the car-manufacturing companies are operating about 40 per cent. of capacity. The locomotive companies are even in a worse position, as they are turning out scarcely 30 per cent. of their normal product.

"The steel companies, which depend largely upon the railroads to take their heavier classes of steel such as rails and structural material, and the car and locomotive companies for plates, have felt this lack of buying power on the part of railroads for two years or more past. It is estimated that the steel companies are operating less than 50 per cent. of their capacity, and the belief is general that 40 per cent. operations will prevail within the next few weeks. One western steel man says his plant is running on a 50-per cent. basis at present and that before the winter is over operations will reach 35 per cent. He bases this prediction on the small amount of business now in sight.

"While the copper producers claim to be operating their mines on a basis of 50 per cent. of normal, consumers of copper are running their plants considerably above that figure. One manufacturer figures that including brass, electric, and other consumers, operations are between 65 and 70 per cent. of normal. As this country's exports of copper since war was declared

... .. for October 11, 1914

DELCO

ELECTRIC CRANKING LIGHTING IGNITION

Five Hundred Complete Electric Starting, Lighting and Ignition Systems are being built every day at Delco factory

Do you realize what this means as an indication of national prosperity?

Do you realize what a satisfying commentary it is upon the character and standing of the motor cars using Delco equipment?

Just now when the whole world stands aghast at the tragedy that is being enacted in Europe—

When the natural tendency is toward unrest and apprehension, the sane, level-headed, broad-minded business men of the automobile industry are showing their faith in the soundness of American prosperity, and have turned what might have been commercial and industrial disaster into another triumph for American optimism.

The automobile industry might well have given way to a feeling of pessimism and apprehension with the sudden cutting off of the entire European market and the threatened tightening of financial conditions.

It took courage and faith and foresight to go forward a month or so ago in the face of the disastrous happenings in Europe.

But American faith has won.

The foundations of American prosperity have stood firm.

The abundant crops with which the country has been blessed have opened up enlarged markets at home.

The shutting down of European factories has paved the way for greatly increased trade in South America and the Far East.

All indications point to a year of exceptional prosperity for the substantial commercial and industrial interests of this country.

Every motor car factory using Delco equipment is working to its full capacity.

The demands being made upon the Delco plant are taxing its maximum production.

And yet it is the largest, strongest, best-equipped organization in the world devoted exclusively to the manufacture of electric lighting, starting and ignition apparatus.

The Delco System is the pioneer in the electric cranking field—

For three years it has maintained its leadership—and today more than 160,000 automobile owners are driving Delco equipped cars.

And the steadily increasing demand for Delco Equipment from the highest type of motor car manufacturers is a gratifying endorsement of the correctness of Delco principles and the quality of Delco apparatus.

But the most gratifying circumstance of all is that now in the face of world wide turmoil every Delco equipped car is finding a ready market up to its full factory capacity—

And the country at large—this splendid peace-loving America of ours—is again demonstrating to the world the soundness of its industrial and financial foundations and the sincerity of the principle of universal brotherhood upon which its institutions are based.

The Dayton Engineering Laboratories Company
Dayton, Ohio

"THEY CALL ME A TIGHTWAD"

WRITTEN BY A TREASURER

WE have a lot of young enthusiasts running departments, who would drive us into bankruptcy in a year if I didn't pose them on the carpet about once a month and put the fear of the Bank Balance into their souls. The President is the worst of the lot. "Get results," he yells. "Hang the cost."

The advertising manager, in his expansive, free-handed way, was going to send out one hundred thousand form letters on our best, lithographed, 18c a pound stationery. After a few kind words from me, he found a splendid paper, firm and fine in texture, with a quality rattle, for about half this price. We didn't save money, for he sent twice as many letters instead. That shows what I have to contend with.

The paper is Hammermill Bond and the form letters are pulling fine.

—A Treasurer.

HAMMERMILL BOND

"The Utility Business Paper"

Hammermill Bond can also be obtained in tablet form, six sizes. Send for a valuable book, "The Signal System," and for a big portfolio of samples.

HAMMERMILL PAPER CO.
Erie, Pa.

have averaged about 50 per cent. of normal, it would seem that copper consumption is running in excess of the 50-per-cent. production of the mines.

"There has been practically a cessation of ship-building all over the world, due to the war. In the war zone ship-building is being confined to completing war-ships and other sea-craft to be used against the enemy.

"According to representatives of the trade itself, the automobile industry, except in isolated cases, has not been hit hard by the war. Many manufacturers of popular cars say they are selling more automobiles than a year ago.

"With exports of raw sugar from Germany suspended, the present activity of the sugar-refining companies of this country is not surprising. With exports from Germany cut off, the ability of the refineries to operate full for any great length of time is questioned.

"At the beginning of the European war the petroleum industry suffered severely, due to the falling off in exports. This came on top of a several months' period of declining prices. But within the last few weeks there has been an improvement in exports, and gains have been made in the production of petroleum and by-products thereof. The fact that gasoline is being sold in New Jersey at 10 cents a gallon gives one a good idea of the slump in the petroleum industry over the last few months. The benefit of this reduction has gone to the consumer, particularly to owners of automobiles. Manufacturers who have adopted automobile trucks as a means of transportation regard this as one ray of sunshine in a gray sky.

"The following table, showing the percentage operations of certain industries, gives one an idea of the present state of business throughout the country:

Industry	Per Cent.* Operation to Capacity
Car-manufacturing.....	40
Locomotive works.....	30
Copper-mining industry.....	50
Steel industry.....	50
Electrical industry.....	70
Can-manufacturing industry.....	75
Sugar refineries.....	100
Corn products.....	85
Air Brake companies.....	65
Tobacco-manufacturing.....	100†

* Estimated.

† Close to 100 per cent. of normal on domestic business, but there is little, if any, foreign business.

SUPPLIES OF WOOL SEIZED FOR GERMANY

Conditions in the wool business abroad appear to be somewhat acute. England early in October strictly prohibited the exportation of raw wool. The announcement of the Government decision was made while auction sales of wool were taking place in London. Just before the auctions began the Government posted a notice prohibiting exportations to countries other than her allies—that is, Russia, Belgium, France, and Portugal. Later in the day, and before the sales were over, it was announced that the Government had prohibited exports of raw wool from England to all countries, and this "caused a sensation." It is not believed, however, that the prohibition will affect the woolen trade in this country. One of the best known men in the woolen business said he understood the prohibition applied merely to wool grown in England, which was wanted for war purposes. The amount withheld from the export trade could not be large; nor could it have any bearing on trade in this country. It appears from an article in *The Journal of Commerce* that large quantities of raw and partly manufactured wool have been obtained by Germany from France, Belgium, and Russia, and are now

being worked up into garments for military uses. Following are items in this article:

"Germany has seized large quantities of wool in the raw and partly manufactured state in France, Belgium, and to some extent in Russia. This material has been forwarded to Germany, where it is being worked up into all kinds of fabrics and garments for military purposes.

"So large have the wool, tops, yarn, and cloth seizures been that an association has been formed in Germany for the purpose of distributing the wool, tops, and yarns among the mills throughout the Empire which have been requisitioned to make woollen goods for the army and navy. According to advices received in this country during the week from German Government officials, scarcely any mills are at present employed on goods for other than military requirements.

"The association formed for the distribution of wool, tops, and yarns is called the Kriegswollgesellschaft, or the War Wool Association. This company has a paid-in capital of 4,500,000 marks. This sum, it is stated, is only a working capital, as the association is primarily a patriotic organization. Among the members are the leading woollen-mill owners of Germany.

"The amount of wool and tops seized in France and Belgium was not divulged by the official who sent this highly interesting information. In one quarter it was stated that the Germans had shipped millions of pounds of wool and tops out of Belgium. Verviers, the leading woollen-manufacturing center of Belgium, was denuded of wool supplies shortly after the German army passed through that city.

"The worsted combing, spinning, and weaving industries of France are located in the northern part of the country. Every good-sized parcel of wool, tops, and yarns lying at Tourcoing and Roubaix has been taken over by the Germans and is now either being turned into war supplies or held ready to send to German manufacturing centers when the exigencies of the situation require additional supplies.

"This condition of affairs was not suspected, even by domestic manufacturers who are in touch with German industrial matters. The result of these wool seizures will be far-reaching. Germany has been placed in a fairly strong position so far as wool stocks are concerned, and France and Belgium have been badly crippled, in the opinion of keen observers. Under these circumstances it is reasonable to presume that it will be impossible for many French and Belgian mill-owners to undertake any export engagements for the spring, 1915, or the fall, 1915, season. Some foreign goods other than British have reached these shores recently, but these goods were evidently woven when hostilities broke out. The leading French mills were located in the heart of the war zone, and, while the latest advices stated that some of these mills were intact, the prevalent opinion here is that much mill property has been destroyed.

"Woollen-producing organizations have been so badly dislocated by the heavy drafts that have been made on the operatives that it will be a long time after peace has been declared before the plants can be rebuilt and reorganized.

"According to private advices from German officials, large amounts of wool and tops were also seized by the Germans in Lodz, Russia, shortly after the outbreak of the war."

FINANCIAL EXHAUSTION THAT MIGHT END THE WAR

It is declared by a writer in the London *Economist* of September 19 that "the possibility that the war may be brought to an end by financial exhaustion far more speedily than people suppose is being a

Where and How to Save Expense

Carnegie once said that he could afford to pay a million dollars for a machine that would cut the cost of steel ten cents a ton.

Applying this principle of machine economy to accounting, a wholesale house of Buffalo, New York, cut its billing cost from \$60.00 to \$30.00 a week by the use of Comptometers on extending and proving bills.

A St. Louis firm, with two Comptometers on like work, saved \$14.75 a week.

Now suppose we put a Comptometer on your billing (at our own risk and expense) and by actually doing the work prove a saving, say, of only 25%—would that interest you? Then with the same machine go right on through all the other figure work of your office—Book Additions, Inventory Extensions, Cost and Percentage Calculations—and keep up the saving all along the line—wouldn't that be a timely help just now?

That's the kind of proof we offer—the kind that leaves no room for argument or doubt.

Comptometer

Adds—Multiplies—Divides—Subtracts

Isn't it good business judgment at least to investigate a proposition like that? Now is the time to do it. Bigger business is on the way. The cheaper you can handle it efficiently the more profit it will yield. Comptometer speed cuts the cost; Comptometer accuracy prevents mistakes; and don't forget that Comptometer service carries these money-saving advantages to every form of figure work in your office.

Write for Folder

"Some Everyday Uses of the Comptometer"

—tells where and how the Comptometer saves Time, Labor and Expense on all your Accounting Work—describes method of Proving Daily Postings, Balancing Ledger Accounts, Taking Trial Balance, Making up Payroll, Cost Work, Billing, Etc.

good deal distrust in the City." Several interesting points in that paper's discussion of this subject are given below:

"The German campaign was, of course, based on the assumption that they could master France in a few weeks, and then, after granting pretty favorable terms, like those given to Austria in 1806, return with their whole force against Russia. This plan has now failed.

"How, we may very well ask, are the prodigious sums required by the four chief belligerents to be obtained?" It seems plain that each will have to raise the funds at home. This is only a half statement of the difficulty; but it is worth while to pause upon the fact. In the war of 1870, for instance, Lombard Street was open and Great Britain was very prosperous, while the cost of that war was but a tiny fraction of this Armageddon. In the Boer War, another comparatively small affair, the cost was so great that we were glad to raise a loan in the New York market. But the leading case for a war being financed in neutral markets was the war between Russia and Japan, when Russia drew on Paris and Japan on London. When Japan found that more funds were not forthcoming she had to make terms of peace and relinquish her hopes of an indemnity.

"For the first time in modern financial history all the important Stock Exchanges of the world are closed, and it is hardly expected that any of them will be reopened in the full sense before the end of the war. At the same time, the delicate machinery of international credit has fallen to pieces. In almost every important country there is a moratorium, or its equivalent, to prevent the disclosure of innumerable bankruptcies, and to disguise the real dimensions of the crisis from the eyes of the people. Then, again, except Holland, every country which exports capital freely in times of peace is now at war. And it would be absurd to suppose that France and Belgium could give much financial aid to Russia, or that Germany could lend freely to Austria. President Wilson is discouraging the New York bankers from lending either to France or Germany, tho no doubt usurious rates of interest could be obtained. A depreciating paper currency is the disease that has attacked Germany, and must already be causing acute suffering and acute embarrassment to the German Government. That Government, indeed, is now trying to raise an internal loan of fifty millions, no doubt to avoid a further debasement of the currency. The financial strain in Berlin and Vienna must become more and more severe as the weeks pass by. France will manage better, for the people have more free savings. Russia will have to use its big gold reserves freely. We shall stand the strain longest, tho we have the Belgians to help, as well as to maintain our Navy and the Expeditionary Force."

WARNING:

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even tho they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. THE LITERARY Digest mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

POMPEIAN OLIVE OIL

**I Make It
Easy to Try**

Since I began offering these cigars—my private Havana leaf, put up under my monogram band—I have found thousands of men with tastes like mine. Men who took no enjoyment in strong, heavy cigars—who wanted a mild, sweet smoke, with a delicate aroma and exquisite flavor.

But I know there are many more who would enjoy this smoke. If they knew of it. So I am extending my offer. Here it is:

Five Cigars FREE

If you will send me 10 cents—just to show your sincerity—I will mail you trial cigars. Smoke five with me—convince yourself. The price is \$5 per hundred, \$2.00 for 50—all charges prepaid. Use your letterhead, please—stating your position—or your business card, when you write.

A Millionaire's Cigar

I list among my patrons many men of standing and wealth. They can afford cigars of any price. So they must buy my cigars purely for the satisfaction and delight they get out of them. I believe you'll enjoy them too. If you wish to try them, write me today. The coupon for your convenience.

CURRENT EVENTS

EUROPEAN WAR

THE CAMPAIGN IN FRANCE

- October 1.—The battle line is given as stretching from the Belgian frontier near Valenciennes to the juncture of the Oise and the Aisne, thence eastward along the Aisne toward Sedan, and south-east along the Meuse to Toul.
- October 2.—The attempt of the Allies to turn Von Kluck's right continues, with fierce fighting at Roye, twenty-five miles southwest of St. Quentin, where the Germans are trying to pierce the Allies' line.
- October 3.—The Battle of the Aisne today becomes the longest battle in history, exceeding the former record of twenty days of the Battle of Mukden in the Russo-Japanese War.
- October 4.—In the north the center of fighting moves to Arras. Berlin reports the Allied turning movement once more checked.
- October 6.—French forces are reported still extending the Allied line north of the Somme River. Along the Meuse the Germans claim the capture of Fort Camp des Romains, near St. Mihiel.
- October 7.—The German Army Headquarters states that in the Allied outflanking movement their line has become extended north of Arras, in the neighborhood of Lille.

BELGIAN OPERATIONS

- October 1.—The German forces here are very nearly linked continuously with their army in France, as they are reported to be moving their base from Brussels to Namur, and to be building pontoon bridges across the Meuse and Sambre, at the same time that they are occupying northwest Belgium and continuing their stubborn assault on Antwerp.
- October 3.—The Belgian line of defense falls back from the Senne to the Nethe before the German artillery.
- October 4.—Berlin announces officially that two of Antwerp's forts have fallen.
- October 5.—Berlin declares the inner circle of forts about Antwerp now open to attack.
- October 7.—The Belgian Government moves to Ostend from Antwerp.

THE RUSSO-GERMAN CAMPAIGN

- October 2.—Petrograd reports the Russian advance in Galicia at Bochnia on the Raba, a southern branch of the Vistula. Reinforcements are approaching south along the Nida, toward the Vistula, whence they will proceed southeast to join the army in front of Jaroslaw and Przemyśl. In Silesia, Posen, and West Prussia, the Germans and Austrians are reported to be massing 2,500,000 troops along the line of Krakow, Breslau, Posen, and Thorn.
- October 3.—In the north the German Army of invasion has apparently occupied a position near the Niemen River, in the Russian Polish province of Suwalki. Bucharest reports a new Russian advance through the province of Bukowina over the Karpethians, via the Rodna Pass, into Transylvania in Hungary.
- October 5.—Persistent reports rumor a decisive repulse of the Germans and a Russian advance into Prussia and Silesia.
- October 7.—Petrograd announces that German reinforcements from Königsberg are materially checking the Russian advance to the north.

Stopping Store Leaks

Some suggestions for getting leak stopping business building information in the Retail Store

Private

Self Examination Sheet

— for Retailers

INFORMATION SHEET for Retailers private study of his own business

What Do You Know

About Your Store—positively—
Besides Its Location?

Going down to the store in the morning, you don't have to guess at the street and number—that saves a lot of time. But once inside, doesn't the guesswork commence—to your danger? Don't you guess that certain lines are profitable when they may be very unprofitable? Don't you guess at the amount of stock on hand—at the actual net profit for the day, at the relative value of different clerks, at the amounts you owe and that are owing you—today?

Wouldn't you rather *know*? Then read our "Retailer's Self-Examination Sheet" and answer the questions honestly to yourself. Then you will know just how much you are guessing and just how much you actually *know* about your business. You will also get a clear idea of the appalling danger of *guessing* in business.

It's easy to know the facts about your business. Columns of figures need have no terrors for you. The Burroughs Adding Machine has taken all the drudgery

out of bookkeeping and the exact compiling of daily records. With less time than is now spent on your books, you can also learn all the essential facts about your business. We show you just how to get these facts and how they may be used to protect profits. We do this before we ask you to buy a machine. When you know just what the Burroughs will do, you will not hesitate.

Send also for an invaluable pamphlet, "Stopping Store Leaks." Both are free to all retailers.

BURROUGHS ADDING MACHINE COMPANY

NERVOUS BREAKDOWNS

And How to Avoid Them.

By Charles D. Musgrove, M.D.

**"It is
Worry
and
Not
Work
That
Kills."**

Any man who sets out to accomplish important, and therefore necessarily trying work, is obliged to equip himself with some knowledge of the nervous system—its possibilities, capabilities, and its liability to exhaustion.

Truly, as Dr. Musgrove says, "It is the natures of finest fibres which accomplish the most, and it is they who are most liable to give way beneath the strain. A common mug may fall to the ground unharmed, where a piece of costly china would be smashed to atoms."

He is neither "preachy" nor "scary," but informing, inspiring, and helpful throughout.

12mo, cloth, \$1.00 net; by mail, \$1.07.

Stump & Walter Co.

30-32 Barclay St.

New York

GENERAL

October 1.—The Austrian Government expresses its regret to the Italian Government for the damage done to Italian shipping in the Adriatic by Austrian mines, and promises an indemnity.

October 6.—The Japanese announce the occupation of Jaluit Island, the seat of government in the Marshall Archipelago, but explain it as a temporary strategic move.

October 7.—The British Admiralty announces the sinking of a German torpedo-boat destroyer by the submarine E-9. From Rome is rumored the sinking of four Austrian torpedo-boats and two Austrian torpedo-boat destroyers in the Adriatic, as a result of striking contact mines perhaps laid by the Austrians themselves. Japan announces officially the sinking of two German gunboats and a cruiser in Kiaochow Bay.

The Japanese occupy the island of Yap, another German possession in the Pacific, also for temporary strategic purposes only.

GENERAL FOREIGN

October 1.—Carranza-Villa peace emissaries agree that all troop movements shall cease until after the general convention of Constitutionalist chiefs.

October 5.—The resignation of General Carranza as First Chief is rejected by an almost unanimous vote at the Mexico City convention.

DOMESTIC

October 1.—Representatives of one of the warring nations have ordered 110,000 barrels of flour from a St. Louis concern.

James W. Osborne, Assistant District Attorney of New York, is chosen to conduct the Government's prosecution of the New Haven road directors.

October 2.—The House of Representatives rejects a proposal to neutralize the Philippines.

October 3.—The Rockefeller Foundation announces the purchase of 85,000 acres of land in Louisiana to be used as a refuge for wild fowl.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall's New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"M. L. D." Douglas, Ariz.—"In addressing a single person is 'You was directed' correct?"

"Was" was formerly used, but has long since been superseded by *were*. It may be found in old English, but its use now is considered improper.

"M. J. G." Hartford, Mich.—Oleomargarine is pronounced *ô'li-o-mar'ga-rin*—"o" as in no; "i" as in habit; "a" as in obey; "a" as in far; "ga" as in magazine; and "in" as in in.

"L. B." Stoneham, Mass.—In the sentence you quote "of men" is understood. The sentence written in full should read: "He was a pleasant-looking man, one of the sort of men who always appear to be on good terms with themselves."

"G. M. A." Washington, D. C.—"Kindly decide whether the use of the word 'brought' under the following circumstances is correct or not: A and B are together in one room. A leaves the room, returns and, while near B, says, 'I brought a case to Mr. Blank in the next room.'"

A person speaking may bring something to a person spoken to, but carries it to a person spoken of.

"H. L. A." New York—"Should 'v' be capitalized in sentences beginning with the word

It is delicious

The Right of the Child to be Well Born

By
GEORGE I. DAWSON, Ph.D.
Professor of Psychology, Harvard School of Religious Pedagogy

This new book on the new Science of Eugenics has a distinct mission in the world of men and women. It looks to improvement and preservation of the race in the natural, normal way. It recognizes moral economy on a biological basis. It urges parenthood as the supreme object of being, fit selection and wise preparation as a necessity thereto. 12mo, cloth. 75c net; postpaid \$1.00.
Funk & Wagnall Co., 354-360 Fourth Ave., N. Y.

"Von" as a part of a name; e.g., "von Behring discovered that . . . ?"

When preceded by a title or first name, as "Baron" or "Adolph," a lower-case "v" is commonly and correctly used. When neither precedes, a capital is correct at the beginning of a sentence according to English typographical custom.

"J. C. S." Copan, Okla.—"Will you kindly tell me which is the light and which is the dark of the moon in speaking of the different quarters?"

That side of the moon that shines by reflected sunlight when the sun and the moon are aligned opposite is the light side of the moon. Our view of the moon is limited to a single hemisphere. She keeps the same face always turned inward because her rotation proceeds synchronously with her revolution. The illuminated portions of the moon are those portions of it that the sun illuminates by its rays. The darkened part is due to the fact that the sun's rays can not reach the moon. When the moon is between the earth and the sun no part of her illuminated disk can be seen from the earth.

"T. H. J." Andover, Mass.—"Please inform me whether or not the modern name 'tango' is derived from the Latin verb 'tango, tangere,' to touch."

The word *tango*, sometimes spelled *tengo*, is not recorded in Spanish or Portuguese dictionaries. It is said to be a Spanish-American word which may have come from the Latin as you suggest.

"L. S." Milwaukee, Wis.—"Which is correct—'Relieved from care' or 'Relieved of care'? We say 'Relief from.' May we say 'Relieved from'?"

We may. Both, however, are right.

"H. B. J." New York.—By an unfortunate printer's error the form of the word *pugger* cited as favored by Yule and Burnell was printed "pugry" in THE LITERARY DIGEST for September 12. It should have been *pugry*.

"E. L. V." Ludington, Mich.—"Kindly tell me the meaning of the word *mart* in the little poem 'Cotton' in THE LITERARY DIGEST of February 7, 1914."

In the poem you refer to *cotton* is personified. The words "throbbing mart" mean literally "active market."

"A. D. C." Fort Wayne, Ind.—"As the word *Kansas* is pronounced as it is spelled, why is the word *Arkansas* pronounced *Arkansaw*? Also, is North and South America termed one or two continents?"

The pronunciation of *Arkansas* is a matter of usage, perhaps determined by the citizens of that State to distinguish it from *Kansas*, as the two resemble each other somewhat closely when spoken. America consists of two continents—North America and South America.

Velie "Biltwel Six" \$1595

"The Final Development of the 'Light Six'"

A jury of automobile experts passed this verdict. The endorsement of our engineers was not enough. They built the car. Their judgment was biased. We secured unprejudiced opinion from the master minds of the automobile world.

We avoided haste

and sacrificed the early sale of hundreds of these cars, waiting until every detail of design had been perfected.

Until power and weight were in perfect balance we held back, for economy of operation had to be maintained, and with 40 h. p. this new car weighs but 3,150 pounds.

Stamina had to be definitely proven, for the continued satisfaction of Velie owners must be maintained.

Price had to be low, for the Velie has always represented the utmost in real usable value.

Now we are ready. Every detail is right—price, stability, power, equipment, design are all that they should be.

The best we can build

We stake our reputation on this "Light Six." Our best work has gone into it. It is the result of years of automobile building. Big successful years of hard work.

Only the best has been used. Before the first car was built expert engineers examined the working plans. Specialists in every department were consulted.

The experimental cars were put through heart-breaking tests. We tried to break them up. We tried to wear them out. We tried to prove them unfit. And they kept on running perfectly. We found unexpected speed, wonderful power on hills, remarkable get-away, and easy riding was a feature we all talked about. You are certain of these qualities.

Roomy Bodies up to Six Passengers

Bodies include five and six passenger touring cars, two passenger roadster, two passenger convertible roadster. (Additional price for six passenger touring car and enclosed cars.) There is more room in the driver's seat than in any other car we know of. And there is room and perfect comfort in the rear seats. "Unusual Comfort" was the verdict of the jury of automobile engineers who passed on this car.

Specifications are exceptional

Here are a few of the most important specifications: 40 real horsepower; 124" wheelbase; 34"x 4" tires, with "non-skid" rear tires; 32" rear springs; 40" front springs; Gray & Davis starting and lighting unit power plant; spiral drive gears in Tinklen rear axle.

A car of distinctive beauty

Automobile owners who want real quality demand distinctive body design.

So we searched Europe for the true stream line body, and put it on the Velie "Light Six."

Even the radiator is designed as a part of the body. We know of no other "light six" that has gone this far.

High sides, tapering upholstery, clear running boards, spare tires at the rear—these are exclusive features.

Our jury of experts called them "distinctive notes of real beauty."

The public has approved their verdict.

Advanced mechanical features

The Velie "Light Six" would have been impossible a year ago. The big features have been developed in the past few months.

Motor is of the famous European type—small bore, long stroke, high speed—the motor of maximum economy. Copper-aluminum and pressed steel are used in engine base and oil case. Real engineering design—light weight with great strength.

Drive is by the famous French Hotchkiss system used on the highest priced American built cars. The springs carry the driving power—easily and without driving shocks.

A tubular drive shaft is used. The side members of the frame are not offset. 25% greater strength is the result.

61 New Features

found in combination only in the Velie

Hotchkiss type of drive.
No strut rods.
No torque arms.
Tinklen axles.
Spiral drive gears in rear axle.
Special Stromberg carburetor.
Dash adjustment for carburetor.
Automatic advance of ignition.
Auxiliary battery for emergency.
Reversing current switch.
Pressed steel oil case.
Aluminum crank case.
Phosphor bronze backed, babbitt lined crank shaft bearings.
Tubular propeller shaft.
Spicer universal joints.
F. & S. annular bearings in transmission.
Junction boxes for easy inspection of wiring.
All electric wiring in metal conduits.
Concealed head light wiring.
Power tire pump.
Self-lubricating bushings in steering gear.
Self-lubricating bushings in pedal shafts and brake rocker shafts.
Muffler cutout.
Gasoline gauge.
Double acting foot brake.
Hot-air intake through cylinders.
20 gallon gasoline tank.
Vacuum feed.
Rocking gear shift lever.
Double bulb headlights.
Single prop headlight supports.
Radiator blending with body.
Ventilated engine hood.
Rear springs set adjacent to wheels.
25% increase in axle strength.
No offset in frame side members.
Front springs inside frame.
Short turning radius.
"Rest-foot" pedals.
Cowl lamp.
Inspection lamp operated from cowl.
Ventilating rain-vision wind shield.
Wind shield support fastened to body sills.
Extra tire carrier at rear.
Clear running board.
One-man top fastened to wind shield.
Concealed door hinges and handles.
Genuine leather upholstery.
Leather covering on back of front seat.
Crowned fenders.
Extra deep front seats.
Endless demountable rims.
Horn button in center of steering wheel.
Lighting circuit fused.
Any combination of lights controlled from dash.
Dash light and tail light in series.
Storage space under front and rear seats.
Hand operated tire pump.
Motor driven electric horn under hood.
Tools carried in cases in front doors.
Radiator mud apron.

ANTWERP

THE MEANING OF ANTWERP'S FALL

THE SWIFT COLLAPSE of Antwerp's defenses beneath the rain of German shells drives home to our press experts the lesson of Liège, Namur, and Maubeuge, that supposedly impregnable fortifications are powerless to resist the terrific bombardment of Germany's new huge siege-guns. It also evokes from editorial observers and military writers a number of extremely interesting surmises concerning Germany's motives for turning back to the attack of Antwerp after ignoring that city so long, and the probable consequences of its fall. Recalling Napoleon's remark, that Antwerp in the hands of a strong Continental Power would be "a pistol pointed at England's heart," some regard its capture as the prelude to a direct German attack against England by air and sea. Other interpretations are that the German forces are maneuvering for another dash against Paris; that they are preparing the way for a retreat; that they desired Antwerp for its own sake as a prize of war, and as virtually completing the occupation of Belgium; and that they needed it as the right base of a new and stronger line of defense against which the Allies are expected to spend their strength in vain, while Germany devotes her chief attention to crushing the Russian armies in the East.

Antwerp, one of the great gateways of Europe's trade, was regarded by many as the most effectively fortified city in Europe. In addition to its surrounding circles of powerfully armed and armored forts, planned by the famous Brialmont, it enjoyed the protection on more than one side of extensive diked meadows which could be flooded at will, like the fields of Holland. According to the official report from Berlin, the first shot against

Antwerp was fired on September 28, and the German infantry were able to occupy the city without opposition on the afternoon of October 9, most of the half million inhabitants having fled to Holland or England, and the defending forces, Belgian and British, having made good their retreat after a heroic but hopeless defense. When a breach had been made in the outer line of fortifications, the city itself, which had already endured a bomb attack by *Zeppelins*, was bombarded by artillery, the shells falling in the city, according to one correspondent, at the rate of twenty a minute. But this terrific fire, Berlin reports tell us, was directed against certain limited areas, the desire being to spare historical monuments. As a consequence, only 150 houses, chiefly in the southwest quarter and the suburb of Berchem, were destroyed. A German official report of the capture, as cabled by a correspondent of the *New York World*, reads:

"The first shot was fired on September 28 at the outer line of forts. On October 1 the first forts were taken by assault. The River Nethe was crossed by the German infantry and artillery on October 6 and 7.

"On the 7th Antwerp was notified that a bombardment was imminent, and this was begun at 12.30 o'clock on the morning of October 8. Simultaneously an attack was made on the inner forts.

"On October 9 two of the inner forts were taken. At 2.30 o'clock on the afternoon of October 9 the city of Antwerp was occupied by German infantry, without resistance on the part of the Belgians, whose conduct was valiant. However, the effect of the German artillery, infantry, and marine division in the first attack was such that resistance was futile.

"A large quantity of supplies was taken by the Germans. The

efficiency of the German troops was recognized by the Emperor in conferring on General von Beseler the Order of Merit."

The following impressive picture of the entrance of the Germans into Antwerp is from the pen of an eye-witness, E. Alexander Powell, a correspondent of the *New York World*:

"Hard on the heels of the infantry rumbled artillery, battery after battery, until one wondered where Krupp found time or steel to make them. These were the forces that had been in almost constant action for the last two weeks, and that for thirty-six hours had poured death and destruction into the city, yet the horses were well groomed and the harness well polished.

"Behind the field batteries rumbled the quick-firers!—the same pompons whose acquaintance I had made at Weerde and elsewhere. And then, heralded by a blare of trumpets and a crash of kettle-drums, came the cavalry, cuirassiers in helmets and breastplates of burnished steel, hussars in befrugged jackets and fur busbies, and finally the uhlans, riding amid forests of lances under a cloud of fluttering pennons.

"But this was not all, nor nearly all, for after the uhlans came the bluejackets of the naval division, broad-shouldered, bewhiskered fellows, with caps worn rakishly and a roll of sea in their gait. Then the Bavarian infantry in dark blue, the Saxon infantry in light blue, and Austrians in uniforms of beautiful silver gray, and, last of all, a squadron of gendarmes in silver and bottle-green.

"As that great fighting machine swung past I could not but marvel at how the gallant, chivalrous, and courageous but ill-prepared little army of Belgium had held it back as long as it had."

Driven from Belgium's last and strongest citadel, the Belgian Government moved to Ostend, and later, by the courtesy of France, to Havre. In the retreat of the defending army some 20,000 Belgians and 1,500 British were forced across the border into Holland, where they will be interned until the end of the war. According to Mr. de Cartier, a Belgian diplomat, his country still has "an army of 80,000 men, which is practically intact, headed by the King, and prepared to fight until victory is finally achieved."

As the sinking of three British cruisers by one German submarine a few weeks ago brought into question the value of battle-ships in modern naval warfare, so the continued success of the great German siege-howitzers, culminating in the battering down of Antwerp's "impregnable" forts, raises grave doubts concerning the value of strongly fortified positions in modern warfare on land. "More and more it is being demonstrated that forts are helpless before modern artillery," remarks the *Paris Temps*, and the *Liberté*, of the same city, says that Antwerp's fate marks "the final victory of attack over defense in the long struggle between guns and armor." The big military lesson of this war, thinks the *New York Telegraph*, is that "no fortress or fortification yet devised by man can withstand the artillery devised by man." "Heavy fortifications and long sieges are things of the past," remarks the *St. Louis Globe Democrat*, and the *New York Times* points out that "to fortify is to invite attack." "The defenses of Antwerp occasioned damage beyond hope of repair, while Brussels stands unharmed to-day because unfortified," notes *The Times*, and adds: "What

Paris with its great muniments barely escaped is now seen in the fate of Antwerp." A Paris dispatch quotes a Colonel Rousset as saying that Antwerp teaches "the futility of permanent fortifications," and that "the real safeguard of a nation is an effective military force that can stay an army of invasion." He predicts that permanent fortifications will be superseded by "rude works of easy and quick construction, which can be placed anywhere according to the need of the hour." And in the *New York Tribune* we read:

"The French quickly learned the first big lesson of this war and abandoned to the enemy the other frontier fortresses which they could not defend with the aid of mobile troops. They evacuated Lille, Laon, La Fere, and Reims when they were obliged to fall back before Von Kluck's advance. They clung to Verdun and the other eastern frontier strongholds only because those formed a part of the actual battle-line. Verdun has not yet been isolated, and the Germans have never been able to gain positions from which they could bombard it at leisure with their big guns. It would doubtless fall, as other fortresses have fallen, if it should be once stripped of the defense which the presence of large bodies of mobile troops has assured it."

On the other hand, the *Brooklyn Standard Union* thinks that "the experience of Antwerp, Liège, and Namur does not spell the end of fortifications at vantage-points, but it does make it imperative that they be equipped with weapons which equal the range of the besiegers' guns." That forts "have served and are still serving a very useful purpose in the present campaign" is affirmed by the *Philadelphia Inquirer*, which argues that,

"Had it not been for the fortifications at Liège and Namur the German armies would have swept through Belgium like a flash in accordance with the original intention. They would have fallen upon and probably destroyed the French forces be-

fore their mobilization had been completed and before the arrival on the field of the British reinforcements under General French, and the whole course of the hostilities might have taken an entirely different turn.

"What was it that impelled the Germans to affront public opinion and to assume all the risks they did by violating the neutrality of Belgium? It was the existence of the strong fortifications by which the French had sought to safeguard their eastern frontier. It was the chain of forts along the Toul-Verdun-Belfort line. . . .

"Nor does the argument that fortifications are useless find any support in the operations along the Austro-Russian frontier. There the first substantial success which the Russians achieved was in the occupation of Lemberg. This, however, is an open city whose capture presented no difficulty. Had it been as strongly fortified as Antwerp the advance of the Russians would have been indefinitely retarded. Przemyśl is a stronghold, and when they reached there they encountered an obstacle which checked their progress. . . .

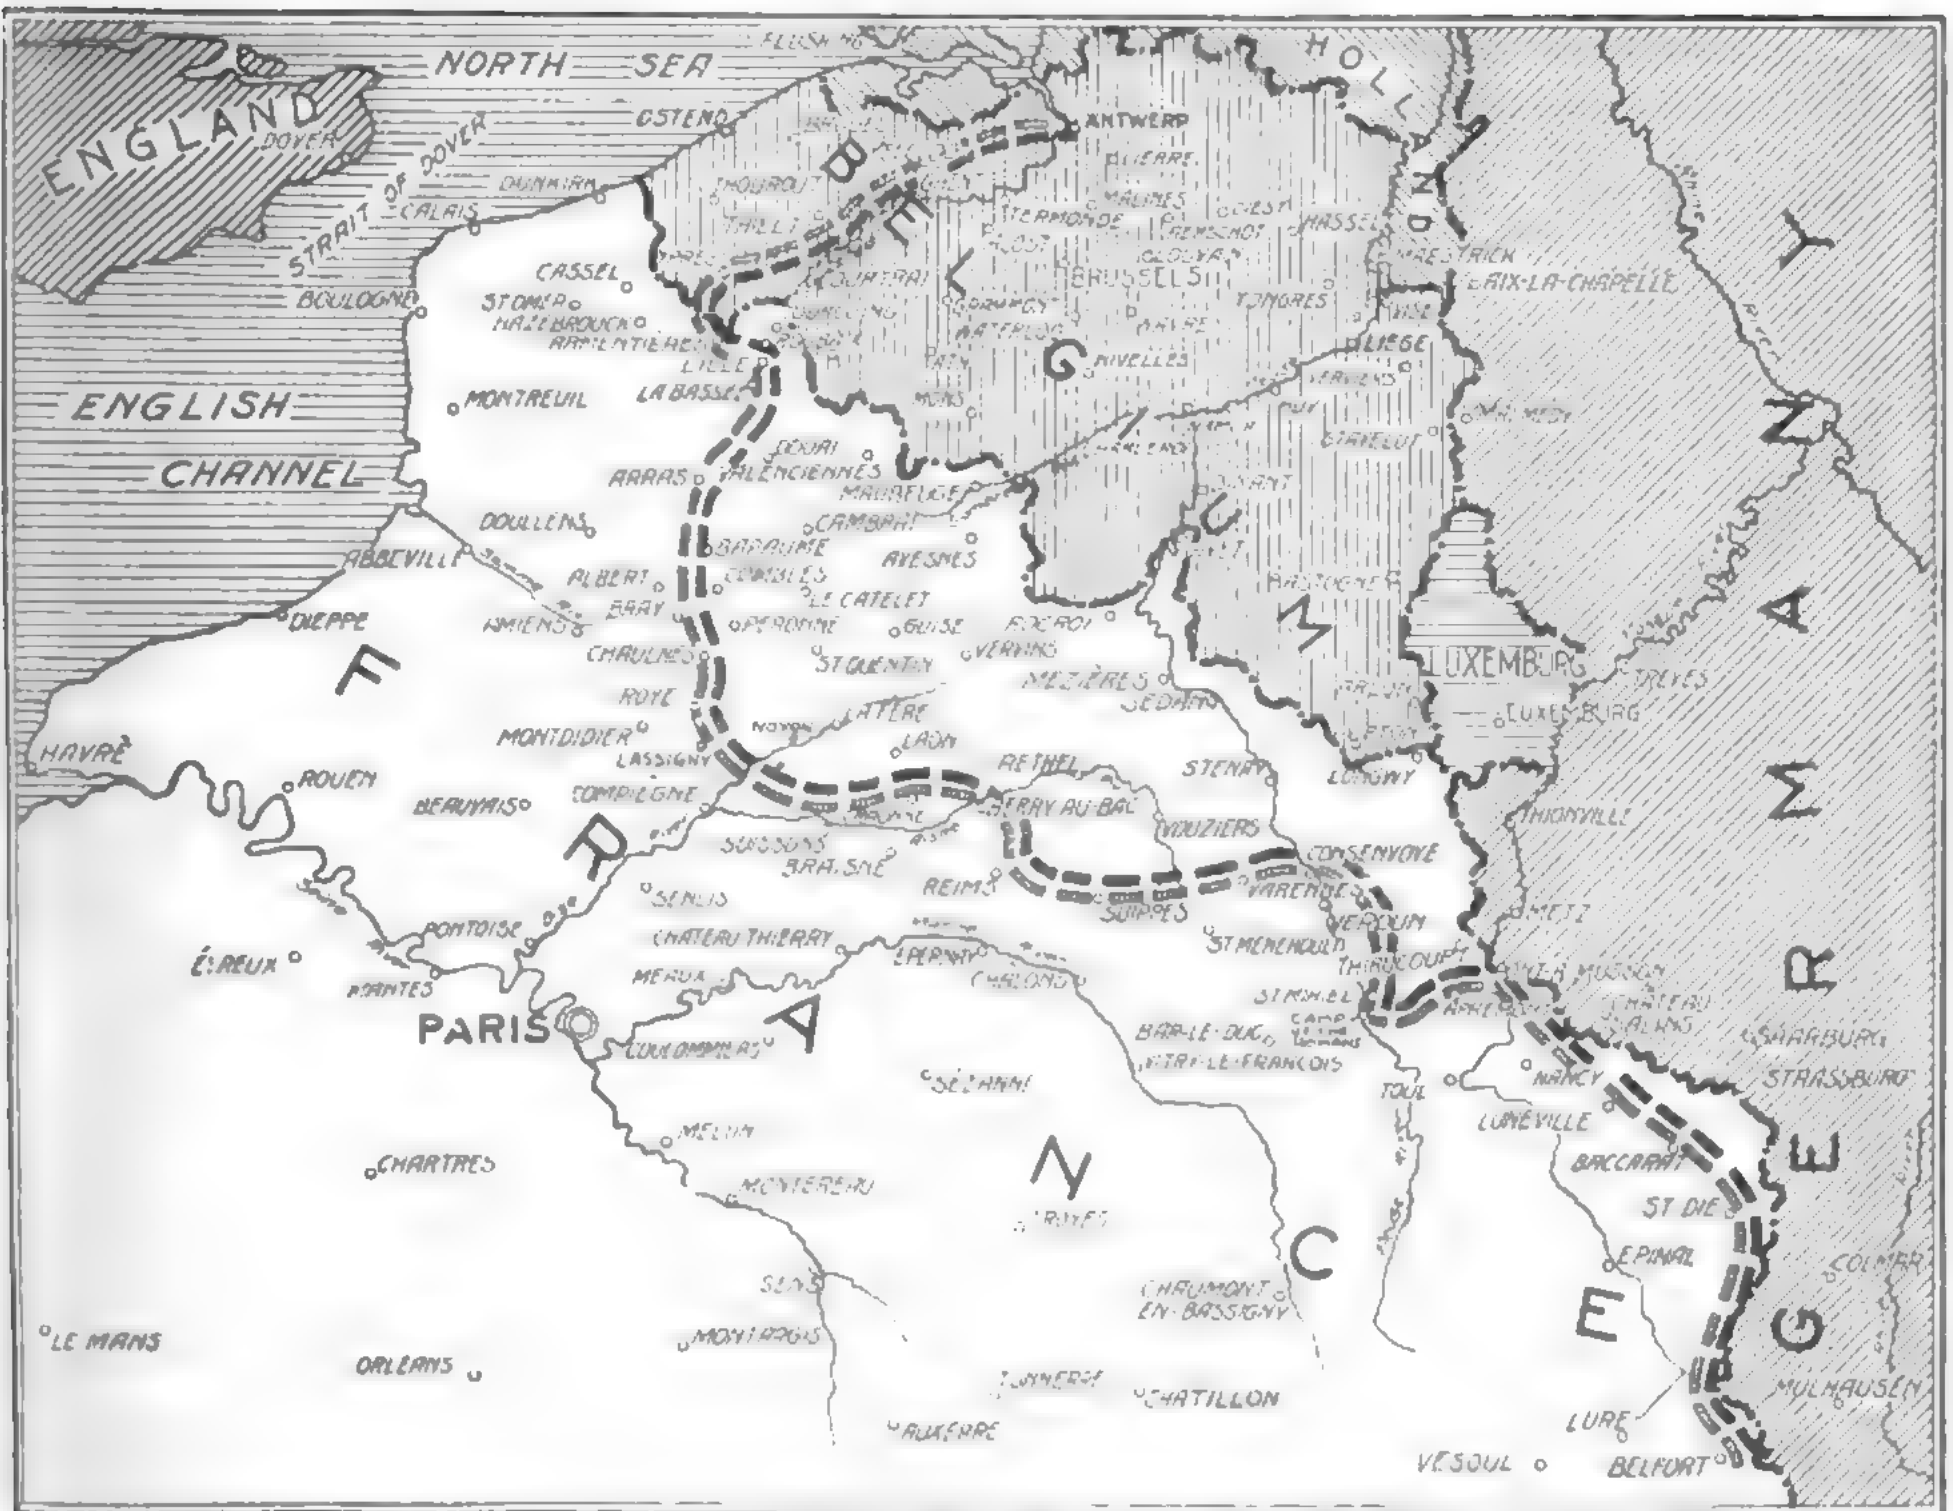

"As for the important part which fortifications are playing on the naval side of the war, there can be no difference of opinion. Why hasn't the navy assumed the aggressive and started in to 'dig the rats out of their holes,' as Mr. Winston Churchill recently declared might become necessary?

"Because those holes are defended by the great guns at the fortifications of Kiel, Wilhelmshaven, Cuxhaven, and Helgoland, and the British are not taking the chances which attack would

HOW THE LINES OF BATTLE STOOD WHEN ANTWERP FELL.

involve. Fortifications have their essential uses, and the case of Antwerp proves nothing to the contrary."

In estimating the value of Antwerp's fall to Germany our editors are of many opinions. "The moral effect will be great, bring the Germans with new enthusiasm and depressing the Allies," says the *Jacksonville Florida Times-Union*. As the *Detroit News* sees it, the main object in capturing Antwerp was "to relieve the German Army in Belgium of a menace on its right which existed as long as the city sheltered the Belgian Army, ready to make a sortie at an opportune moment." The *Philadelphia Inquirer* agrees that the taking of Antwerp is "a success of substantial importance," freeing the German rear and line of communications from a constant menace, and releasing a considerable force of German troops for the reinforcement of the main battle-line. To the rumors that Antwerp will be used as a naval and Zeppelin base for operations against England, editorial observers oppose substantial obstacles. The city, as the *Cincinnati Times-Star* reminds us, is on the River Scheldt, which does not reach the North Sea until it has traversed forty miles of Dutch territory. Therefore it could not be utilized as a naval base without violating Dutch neutrality, an intention which the German Government, according to Berlin dispatches, has officially repudiated. As the base for an aerial attack against England, says the *New York Sun*, Antwerp has no advantage over Brussels, which the Germans already held. As *The Sun* sees it, "the great permanent gain to Germany in the fall of Antwerp, in case of her general success in the war, is the established possession of this important and long-coveted port of sea commerce." And the *Springfield Republican* reminds us that "Antwerp is not only an objective so valuable in itself that the

struggle for its possession has caused many wars and has been the main cause of the neutralizing of Belgium, but it has great defensive value in the present war by definitely covering the northern flank of operations in this field." Walter E. Ives, a former lieutenant in the Prussian Army, writing in the *New York Times*, says that in a military sense Antwerp is "the key of northern France," and that its possession by Germany will frustrate the flanking strategy of the Allies. He contends, moreover, that—

"The Teutons, with their flanks now covered and amply protected, will be able to withdraw their advanced lines of the center by degrees until they reach the line of Antwerp-Mauberge-Mézières-Montmédy-Metz. As they withdraw, their lines will close up and thus gain in firmness and power of resistance in proportion to the narrowing of the territory which they will have to defend."

At the same time, he says, the great guns that overthrew Antwerp are now free for the investment of Belfort or Verdun, and

"Should Verdun share the fate of Antwerp, the way to Châlons and Paris would be opened to the German Army of the left flank, and therefore here, as in the center and the north, the better prospects lie now with the German cause—because of Antwerp."

But despite such expressions of German optimism, many observers regard the fall of Antwerp as prolonging rather than shortening the war. "That the war will be prolonged by German possession of Antwerp is the first reflection the week's developments force upon one," says the *Springfield Republican*, and this view was reflected in the commodities markets, where the price of wheat jumped upward on the announcement of Antwerp's capitulation.

THE BOER DISAFFECTION

THE THREATENED DISORDER in the Union of South Africa—"the other U. S. A."—has come as a shock to Great Britain, it is noted, at the very hour when her pride in the unquestioned and unanimous support of colony, dependency, and dominion had reached its height. Everywhere throughout the Empire, apparently, the call to arms against the Double Alliance had been the truce of private

LOUIS BOTHA.

This Boer commander-in-chief who fought Britain desperately a few years ago and has since become Premier and practical ruler of British South Africa, asserts that the Boers "would to-day ten times rather be under the British than the German flag."

quarrels. In Ireland, Canada, India, Australia, and Africa the individual grievance was laid aside and official assurance was given of loyal support to the mother country. Indeed, as the *Baltimore News* and other papers point out, the attitude of South Africa was especially conspicuous. The public announcement by Premier Botha that the Government of the Union would definitely side with England came as crowning proof that England's generous treatment of the Union since the Boer War had not been in vain. But England's satisfaction has been short-lived, for the open revolt of Colonel Maritz, the apparent implication of German Southwest Africa, and the uncertainty as to the proportion of burghers siding with Botha or Maritz, place England, say several editors, in a position fraught with more danger than is immediately apparent. In the first place, the expulsion of Britain from Africa, with German success in Europe, the *Washington Times* explains, would threaten her whole Empire. Dissolution would proceed inevitably, for "Egypt would be demanded by Turkey, and Turkey, with the backing of a victorious Germany, might take it back. That would mean a German Suez; that, in turn, German domination of the route to India." And this, in contrast to a possible Anglo-French Africa, with Britain in possession of territory extending a thousand miles east and west, and north and south from the Cape to Cairo, is to the Briton unthinkable.

A menace even graver, and independent of the European outcome, is pointed out by other editors. "The revolt itself may not be serious," says the *New York Evening Post*, but "its main importance, at present, is more symptomatic than military." In similar vein the *Baltimore News* explains:

"The danger lies not so much in whatever annoyance Maritz may cause the Colonial Government, but in the precedent and the exaggerated rumors of it that are likely to spread to other sections of the Empire where there is perhaps more real disaffection. It requires no strain upon the imagination to picture the straits Great Britain would be in should her Mohammedan subjects rise. It has been Germany's hope to see them rise; and there can be no question but that once tidings reached them of England's inability to control one of her colonies, the fever of insurrection would spread. History furnishes many an example of heterogeneous empires gone to pieces in just that manner."

The *Post* dwells upon the contagious quality of such a disaffection and asserts that "the nerves of the Empire will be set aquiver. . . . May not the Egyptian Nationalists think to see their opportunity in England's crisis? Despite all that Indian princes and rajas have said, may not the Young India movement show its head menacingly?" And *The Post* is sure that "sober Englishmen are gravely considering the possibilities."

England's chance of avoiding all serious difficulty, others point out, lies in the confidence which it has already won in South Africa, and the fact that the Boers of the Union have grown to believe that Britain means to respect their nationality. Botha's own words were: "Tho many here in the past have been hostile to the British flag, they would to-day ten times rather be under the British than the German flag"—definitely indicating the tremendous change in the Boers' attitude in the last few years. "This change has come about," explains the *New York Times*, "as a result of an act of statesmanship not often equaled in breadth of spirit and in courage":

"By the South Africa Act of 1909 the Colonies of the Cape of Good Hope, Natal, the Transvaal, and the Orange River were united in a legislative union as the Union of South Africa. The popular body of the legislature, the House of Assembly, is elected by the whole people on a broad franchise, and from the start the Dutch Boer members, known as the Nationalists and led by General Botha, have outnumbered all other political factions combined. The English and Dutch languages are both official and are both used in the schools. The Governor-General is appointed by the King, but the English turned over the popular control of the Union to the Dutch, whom they had been fighting eight years before. Now we see the result. These Dutchmen 'would ten times rather be under the British than the German flag.' It is a splendid triumph for the bold and broad statesmanship of the British Empire."

Writing in a German paper, the *Hamburg Fremdenblatt*, a Prof. Paul Gamassa, who has spent ten years in the Transvaal, discusses quite frankly the situation in South Africa, and emphasizes the fact that the Boers are "clinging to the idea of realizing their race and national ideals under the British flag." In addition, he sees no "call of the blood" between the Boer and German. In his opinion, the Boer still recalls Germany's failure to answer to that call and give him expected help during the Boer War. The German Professor foresaw no revolution at the time that he wrote, September 25, but rather an open conflict between the Boers and the Germans.

Such opinions as this indicate that England's fears over the "revolt" may be exaggerated. It has been stated that German Southwest Africa has not the men nor wealth to aid the Maritz faction against the Union, unless a vast number of the Union Boers go over to the German standard. There is, in addition, another consideration that may weigh heavily with the sympathizers of Maritz, and that is the action of Portugal in siding definitely with England. And the *New York World* reminds us that "in that quarter of the world the little Republic has power by no means to be despised."

SECOND THOUGHTS ON ATROCITIES

THE TENDENCY of certain of the warring nations to regard the United States Government as a referee to whom appeals should be made when the other side does not "fight fair" has perhaps given the various atrocity stories especial importance in our eyes. But our press have begun to protest against believing all that the combatants choose to say of each other, and it is noticed that in both England and Germany objections are being heard against taking such charges too seriously. Lord Roberts, for instance, has been telling his fellow countrymen how unsportsmanlike it is to abuse the enemy. We learn from the *London Labor Leader* that the *Berlin Vorwärts*, before its suspension, did good work in investigating "the truth of the various accounts of atrocities on the part of the Allies with which Germany is being flooded just as we are being flooded with stories of 'the Huns.'" Yet at the same time there are fresh "floods." There is the official statement of the French Government charging the Germans with violations of the rules of civilized warfare, and the accounts from several sources of Russian atrocities in East Prussia. A United Press correspondent in Berlin has told of Cossack butcheries and maltreatment of women. The *New York Evening Post* reprints from the *Berliner Tageblatt* Mr. Paul Lindenberg's story of eleven mutilated women found at Soldau. He tells of the devastation of Gerdauen and Nordenburg, and quotes from an official dispatch:

"Two days after the battle of Dorothea, I saw on the Guttstadt-Seeburg road a troop of recruits, about twenty-one men, who the day before had been attacked by Cossacks. Every one of the recruits had had either a leg or a hand cut off, and they had been left so to lie on the road. A gendarme had accompanied the recruits, and he lay upon the road chained in a kneeling position, his hands bound behind his back. His nose and ears had been cut off. Most of these men were still living."

Then the French list of German atrocities, a copy of which has been filed with our State Department, accuses the enemy of violation of the Hague convention of 1907. It cites instances

THE SIGN THAT NEVER STICKS.

—Hanny in the St. Joseph (Mo.) News-Press.

of the killing of wounded and prisoners, of wanton burning and bombardment of villages, and of firing on Red Cross nurses. The charge of systematic and authorized devastation is made in these words:

"From examination of letters written by and found on the persons of German soldiers it appears:

"That the burning of villages has been a general measure.

"That the killing of inhabitants has also been a general measure.

"That these atrocities have been committed exclusively at places defended exclusively by the French Army and not by the inhabitants.

"That the order of execution was given by the commanding officer (a colonel at some places, a corps commander at others)."

But the *Milwaukee Free Press* protests against the "unfair and insincere" emphasis which our newspapers and magazines

THE IRON CROSS.

—Harding in the Brooklyn Daily Eagle.

have laid upon the atrocity charges against Germany. It wonders "what these same publications would be doing if the French and English, or the Russians, were fighting on German soil, if they were besieging and taking German cities. The same destruction that is now visited on Antwerp or Reims would then be the lot, say, of Strassburg or Hamburg." The soil which has the misfortune to be the theater of war must bear the consequences, continues this Milwaukee daily. And,

"To expect Germany, fighting as she is against a world of enemies and for her very national existence, to bombard threatening cities with confetti and spare churches, when they are used by the enemy for military purposes, is to expect something pathetically absurd.

"She is doing only what that enemy would be doing were he fighting for advantage on German soil. If the French or the Belgians think more of their cities than they do of their strategic importance, all they have to do is to surrender them before the work of destruction commences.

"The horror and the waste of war can not be minimized, but it is no evidence of either the sanity or fair play of certain numerous American journals when they emphasize the havoc wrought by the triumphant German arms as if somehow that reflected upon the character of their warfare or the civilization of the nation."

Even in England there is a manifest weariness of atrocity charges against the nation's enemy. It is being suggested that the Press Bureau might censor some of the obviously fabricated mutilation stories, for instance, and give the nation a little more news about the fighting. And *The Labour Leader*, a London Socialist weekly, which opposes the war, accuses the daily press of the country of "organized unfairness" on this subject. "The 'atrocities' are the excuse for the assertion that we are fighting a holy war." But to *The Labour Leader* the idea of "a holy war with the aid of Russians, Servians, Japanese, Turcos, and Gurkhas is very funny." And it continues with a few pointed

words on the subject of British unfairness and hypocrisy. In the Boer War, for instance:

"We ought surely to remember that we were credited with atrocities pretty much on the same level as the German atrocities of to-day, and that in France pictures of our soldiers tossing up Boer babies and catching them upon their lance-points were printed; and remembering these things, we ought to receive accounts of German doings with caution. . . ."

"Considering that Germany is fighting for life against six nations and a horde of savages, it is not surprising that her methods of war are brutal—they have to be. Lord Kitchener said that war was not fought with rose-water. He has taken care that this war shall not be fought with rose-water. He and his fellow Cabinet Ministers are responsible for the fact that Japanese and Indians have been brought into a European war, and it is with the connivance of Britain that Turcos are fighting for France. Britain has lost all claim to be considered a civilized nation henceforth. The methods of Turcos and Gurkhas are a horror, and the press do not attempt to deny the fact, but expect us to applaud stories of Turcos cutting off the heads of wounded Germans and flourishing them about. It is not long since France denied that she had any intention of using Turcos in European warfare. . . ."

"But this is a holy war, and a war of civilization! As General Villa, the Mexican bandit, has recently expressed his sympathy with Britain and his horror at German atrocities, it is a matter for surprise that he has not been asked to join the rest of our gentle and civilized Allies."

Nevertheless, there are a number of papers in this country which deplore the inhumanity which they believe characterizes some of the combatants in Europe. The *New York Tribune*, for instance, is moved to ask:

"Is the Kaiser going to prosecute this war to an end on the theory that Germany's adhesion to the modernized rules of war is also not worth the parchment it was written on? Civilization's progress is slow, and in no field slower than in the amelioration of the savageries of war. But the code of 1907 was an advance on all previous codes, and was therefore a signal gain for humanity. Is Germany willing to take the lead in neutralizing that gain and dragging war back to the levels of medieval barbarity?"

And the *Providence Journal* sums up an editorial discussion of the subject with the words:

"All the tramping of Germany's legions, all the thunder of her bombs and batteries, can not drown out the cry of one little Belgian child."

THE NEW WAY WITH THE TRUSTS

PRESIDENTS and Congresses have won or lost elections and reputations by their handling of the trust problem. So when, by the passage of the Clayton and Trade Commission Bills and the abandonment for the nonce of the railway-securities measure, Congress and the Administration submit to a waiting nation the fulfillment of a party promise and a Presidential policy, that nation looks up from its war maps and its editorial representatives forget for a moment the armies before Przemyśl and Verdun. The severest critics of the new legislation are, on the one hand, the indignant radicals who denounce it as a surrender to big business, and, on the other, the apprehensive and conservative ones who consider it "the capstone of the series which hinders prosperity by its threats against big business." Among the former, on this occasion, is Senator Reed (Dem., Mo.), who rose to the rhetorical height of describing the Clayton Bill as a "sort of Hague propaganda promulgated under a white flag to the soothing melody of 'Peace on earth, good will toward the trusts.'" Among the latter is the *San Francisco Chronicle* (Rep.), which comes out of the West with a vigorous editorial thumping this "utterly vicious" legislation with its "muddling interference" with business, its gross class discrimination, its "outrageous interference with the constitutional powers of the States" which "should make the bones of Thomas Jefferson turn in their grave." Big business itself, as represented by the papers the big business men read, is inclined to think the Clayton Omnibus Bill harmless and futile, but mischievous in so far as it is effective. "Toothless" is the favorite adjective of the New York editorial writers. The *New York Herald* (Ind.) also uses "unnecessary," *The Evening Mail* (Prog.) "inopportune, flabby, and ineffectual," and *The Journal of Commerce* "unworkable." The Democratic *Brooklyn Eagle's* highest praise is that "it might have been worse," which is hardly more commendatory of its framers than the *New York Tribune's* plain words calling it "a muddle and a sham," an unquestionable masterpiece as a "breeder of litigation" and "clearly the most unnecessary and the least intelligent achievement of the present Congress." All these papers profess to believe that this law supplementing the Sherman Act will be practically a dead letter. But the real trouble, according to the *Chicago Tribune* (Prog.), is that "it is as vague in its phraseology

AN UNCOMFORTABLE POSITION

—Berryman in the *Washington Evening Star*

"HELP!"

—Bushnell for the *Central Press Association*

"IN DUTCH."

as it is drastic in its intent—it is a leap into the worst jungle of the twilight zone." It took decades, as the *New York Times* (Ind. Dem.) notes, to understand the short and simple Sherman Law, and here is each of the two supplementing statutes "longer and more complex and fuller of doubtful points than the law which it is to clarify!" We are given, says the *New York Sun* (Ind.), speaking for the business man, "a vast labyrinth of prohibition and restriction through which every concern above the level of a corner grocery will have to feel its way. The inevitableness of contravention of some clause by almost any business man is evident until the whole field of affairs is plotted and mapped by means of administrative rulings and court decisions."

Well, replies the *Columbia State* (Dem.), to the critics asserting ineffectiveness, "there may be few teeth in the Clayton Antitrust Bill, but they are probably wisdom teeth." Similar mild commendation and guarded praise accompanied by criticism of some features of the law comes from such important dailies as the *New York Evening Post* (Ind.) and *Commercial*, *Philadelphia Record* (Dem.), *Toledo Blade* (Ind. Rep.), and *Indianapolis News* (Ind.).

That the Clayton Bill satisfies the majority in Congress may perhaps be indicated by its final passage after conference changes by a vote of 35 to 24 in the Senate and 244 to 54 in the House of Representatives. Only three Democrats voted against the bill in the Senate, while in the House 22 Republicans and 5 Progressives joined the solid Democratic majority in support of it. And among the Democratic newspapers we find the *New York World* rejoicing in the success of this "triumph in lawmaking":

"In most respects it is a remarkable example of constructive legislation. It reaches real evils without creating greater ones. Shorn of the violence reflected in many of the propositions advanced during its consideration, it is worthy to rank with the Sherman Law, which it supplements."

The *World* can hardly understand the radicalism of the Senators who denounced this "epochal measure" as a surrender. Their grievance, it declares, "is that it does not bristle with new punishments; that commerce and industry are not to be langed, drawn, and quartered, and that enterprise, possibly unlawful, is not to be subjected to a summary tyranny."

Flatly contradicting some of the previously quoted critics, the *Dallas News* (Dem.) tells its readers that the Clayton Bill "will clear the horizon of uncertainties to a degree that it has not been clear in twenty years, and thus enable business enterprise to advance with something of that courage which comes of knowing that it is not treading ground which conceals legal pitfalls and ambushes." So, too, the *Brooklyn Citizen* (Dem.) points out that the new statute "substitutes certain fix requirements for a loose and frequently changing body of regulations," and "the law will from this time forth be at least understandable, which is what in some respects it has not been." This "well-considered, conservative measure" is accepted by *The Citizen* "as the most effective step taken for several years past toward the rehabilitation of general trade." No less pleased is the *Atlanta Journal* (Dem.), which sees the Administration's

record rounded out and business relieved. After the adjustments necessitated by war conditions,

"we shall have a clear, unshadowed path to prosperity. Tariff agitation, banking and currency agitation, trust agitation, are all done with. Business will know precisely the standards to which it must measure, precisely the way it can go, and it will move forward in new freedom and cheer."

This Wilson trust program, explains the friendly tho impartial *Springfield Republican* (Ind.), "carries into effect a policy resting on two rather distinct principles":

"One principle is that of competition reinforced and safeguarded against monopolistic practises in the industrial world. From this point of view the Clayton Bill seeks to strengthen the present antitrust law. The courts are no longer left without legislative guidance in interpreting and enforcing a law whose extraordinary simplicity and remarkably sweeping scope has been regarded by many as its strongest point. In a real sense Congress has now asserted its right to legislate with more or less precision in a field where the courts have actually legislated to a degree by judicial interpretation. Congress has endeavored to penalize monopolistic tendencies in trade and industry more severely; and it has sought to diminish the pressure of the Federal law upon organized labor while increasing the pressure upon organized capital."

The excuse for such legislation, continues *The Republican*, "is that the principle of competition should be given a complete test before being virtually abandoned in the laws of the country."

"That even the Administration responsible for this new measure is not wholly confident concerning its ultimate success

is proved by the passage of the Trade Commission Bill, a companion measure for the Federal supervision of large interstate corporations. The second principle embodied in the Administration's policy at this point appears. This is the principle of regulation of monopoly; and the two principles referred to are popularly blended by the political catchwords, 'regulated competition.' The real significance of the Trade Commission Bill is that it establishes a Federal machinery capable later on of a development that would make government regulation and control of great industrial corporations as complete as are government regulation and control of railroads to-day.

"Thus a new effort to destroy monopoly in trade and industry is inaugurated, while, at the same time, some provision is made against the failure at any point of the antimonopoly policy. . . . With the Federal Trade Commission established, the country will doubtless see from time to time the powers of that commission so enlarged that it may regulate and control any great industrial corporation that can not be restrained in its monopolistic practises by the Antitrust Law. Assuming the policy to be carried out in the future, the country now enters a period of experimental restraint of industrial monopoly, with such changes of particular industries from the régime of competition to the régime of regulation as experience may require in the public interest."

The Trade Commission, it should be noted, will, when the five members are chosen, take over the powers of the present Bureau of Corporations, and will have the most complete investigatory powers, besides being expected "to prevent unfair methods of competition in commerce." Its chief function, explains the *New York Journal of Commerce*, "will be to inquire into alleged or suspected unlawful combinations with a view to possible proceedings against them." A typical newspaper criticism is that of *The Journal of Commerce* that there may be some use

THE NEW OFFICER.

—Culver in the *Los Angeles Express*.

for it "in securing a more thorough application and enforcement of such laws against restraint of commerce and monopoly as are necessary or workable; but power is given to it for a great deal of harmful meddling, if it chooses to exercise it. . . . It can make a bugbear of itself to all large or complex operations of business."

The provisions of the Clayton Antitrust Law, which, with the old Sherman Law, is henceforth to be the nation's defense against the evils of monopoly, are thus summed up by *The Journal of Commerce*:

"The bill makes it unlawful for any person to discriminate in price between different purchasers of commodities, where the effect of such discrimination may be to substantially lessen competition or tend to create a monopoly.

"It is unlawful to lease or make a contract for sale of goods, machinery, or supplies, whether patented or unpatented, or fix a price charged therefor, on condition that the lessee shall not use or deal in the goods, machinery, or supplies of a competitor. . . .

"No corporation shall acquire directly or indirectly the whole or any part of the stock of another corporation where the effect of such acquisition may be to substantially lessen competition. . . .

"That whenever a corporation shall violate any of the penal provisions of the antitrust laws, such violation shall be deemed to be also that of the individual directors, officers, or agents who shall have authorized or done any of the acts constituting in whole or in part such violation. Upon conviction therefor such director shall be punished by a fine not exceeding \$5,000 or by imprisonment.

"No preliminary injunction shall be issued without notice to the opposite party. No temporary restraining order shall be granted without notice to the opposite party unless it shall clearly appear from specific facts that immediate and irreparable

injury will result to the applicant before notice can be served and a hearing had thereon."

Interlocking directorates are forbidden (with certain exceptions) between large banks, large commercial corporations, and between railroads and certain classes of corporations dealing with them. The much-debated labor clause opens with Senator Cummins's amendment declaring that "the labor of a human being is not a commodity or an article of commerce," and continues:

"Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, or horticultural organizations, instituted for the purposes of mutual help, and not having capital stock or conducted for profit, or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof; nor shall such organizations, or the members thereof, be held or construed to be illegal combinations or conspiracies in restraint of trade, under the antitrust laws."

Labor leaders are said to be happy over this outcome, while the *Springfield Republican*, *New York Globe and World*, and *Chicago Post (Prog.)* consider it a notable triumph for labor, and, in the *World's* words, "a victory also for the American people." The *Albany Journal (Rep.)* and the *Philadelphia Public Ledger*, on the other hand, find the clause discriminatory and un-American. A consistent critic of organized labor, the *Los Angeles Times*, tells the labor leaders, however, that they have won "an exceedingly barren victory." So, too, thinks the *New York Journal of Commerce*, which says this section "is practically meaningless, except as a sop to a 'class' of voters seeking a special privilege or immunity," while "the final clause is ambiguous."

FOREIGN COMMENT

MULTIPLY THIS BY HUNDREDS.

TO REALIZE THE DEVASTATION IN THE REGION OF WAR. A VILLAGE IN NORTHERN FRANCE WHEN THE PEOPLE CAME HOME AFTER THE BATTLE.

EUROPEAN NATIONALITIES TO REMAIN INTACT

TO PRESERVE the distinct nationalities of Europe and not to change natural frontiers, governments, or language is one of the main objects of the Allies in their present struggle with Germany, and in case of victory over that country and Austria there will be no attempt made to erase from the map or subjugate the realms of the vanquished, said Mr. Winston Churchill, head of the British Admiralty, in a recent speech delivered in the Manchester Tournament Hall. Germany is needed in Central Europe as holding an outpost against Slavic or Asiatic aggression. Germany is the depository of many treasures of learning, literature, art, and religion, and civilized nations must needs keep this treasury intact and leave the territories of Francis Joseph and William II. very largely as they are now. Both the Governments of Berlin and Vienna may be powerful agents in securing and maintaining European peace. Such, too, are the views of Ferdinand Schevill, Professor of Modern History at the University of Chicago. In a pamphlet published by him under the auspices of the Germanistic Society of Chicago we read:

"To talk of peace while the cannons fill the earth with their roar may look almost like a savage hoax, but peace, a durable peace, should even now be hopefully looked forward to as the only reasonable end of all these calamities. I have no desire to speculate as to what the war may bring, what territorial

changes may be effected, and what awful price will be exacted of the vanquished. I would merely like to point out that, above all speculation, one thing is certain: governments may pass, dynasties may vanish, but the peoples of Europe will remain substantially as they are, within their historic boundaries. But these battered and impoverished peoples will be preserved for no other purpose than for new wars and new disasters if they do not fit themselves out with a new mind. And that means that the individual—for everything depends in the last analysis on him—must learn the lesson of peace and love for which in Europe, much more than in America, he is as yet not greatly receptive. If the European man does not acquire a new set of dominant ideas, the present war, irrespective of who wins or loses, can only add another mass of terrible rancors to those already existing. Rancor piled on rancor—that way madness lies. Europe has followed a wrong track and must imperatively call a halt."

WHEN BUSTER PLAYS SOLDIER.

"You naughty boy! Can't you spare the family bedchambers!"

—Amsterdammer.

While a premature and probably insecure peace would be useless, an end of the present war will doubtless result in the attempt to establish some more permanently pacific arrangement than before among the nationalities concerned, and England will certainly welcome such an arrangement, says the First Lord of the Admiralty, whose authoritative words we quote as follows:

"We do not seek in this war the subjugation of the German and Austrian peoples. Nothing is farther from our intention. However complete our victory may be, however shattering their defeat may be, they need never

fear that the measure which they meted out to Alsace or to Denmark, to Italy or to Transylvania or to Poland will be meted out to them. Their independence, their customs, their language, all that they care about in their own Government, their rights as citizens and freemen will never be assailed by us.

"We shall hold these rights inviolate and inviolable even if the last Prussian soldier has been forced to capitulate and the last German ship has been sunk. Those rights stand not on the basis of the struggles of nations but on the necessary vital

foundations of human society. We are fighting for the elementary rights of civilized men and States. We are not going to give them up, no matter how bitter our defeats may be, and we are going to maintain them, however complete our victory. The ultimate exaction which the victorious Allies will inflict upon the peoples of Germany and Austria is the liberation of the imprisoned nationalities within their grip.

"The result of this war will not be unworthy even of the prodigious sacrifices demanded. Across the smoke and storm of the battle-fields one can see the great dim structures of a new and better Europe, of a new and better Christendom than we had ever known before. We see emerging from the conflict, so far as it has gone, first, the great principle of the rights of nationalities; second, the great principle of the integrity of States and nations; and we see also the sanctions of international law so established that the most audacious Power will not be anxious to challenge them. We may see a Poland united and in loyal and harmonious relations with the Crown of Russia. We may live to see a federation of the Christian States of the Balkans restored to their proper racial limits. We may see an Italy whose territory corresponds with the Italian population. We may see France restored to her proper station in Europe, and we may see that old England had something to do with it all."

RUSSIA'S WAR FOR "CULTURE"

THE BITTER STRIFE of revolutionary parties in Russia seems to be drowned in the enthusiasm of all the people for the war. Dispatches say the Czar can actually now ride about his capital, unguarded, in safety. The press of all factions are not only unanimous for war, but proclaim the advance on Germany as a crusade for culture and civilization, with heaven favoring the Russian cause. A Russian triumph, it is made clear, would usher in a European millennium, while a Russian defeat is not mentioned. Just as the strife in Ireland ceased at the outbreak of war, so a spirit of unanimity has pervaded the hostile political camps in the Czar's Empire. Mr. V. Nabokov, a prominent publicist and a leader of the Constitutional Democrats, writes in the *Ryetch* (Petrograd):

"The Imperial manifesto invites us to forget our internal conflict. In that current of social thought which we represent, the consciousness of historical responsibility has always been strong; always hateful has been the kindling of passions, the disorganization of social forces. Uniting with all those to whom the life of our country is dear, we do not give up a single one of our slogans, do not forget a single one of our idealistic problems, do not abandon a single one of our positions. . . . In due time and place we will remain the champions of our political ideals, of that better future to which our best citizens have given so much strength, have brought so many sacrifices. But we are filled with the consciousness . . . that above individual political ideals . . . stands one thing—the life and greatness of the Fatherland. At present it is in danger. And all of us, her sons, are needed by her wholly, without reserve. All of us, without regard to political faith and sect, each one in his place, . . . will serve to the full extent of our strength and ability."

The claim of each Power that it desired peace, but was forced into war, is echoed in Russia by the *Russkiya Vyedomosti*, the leading Liberal organ of Moscow, which adds the familiar idea that it is a war for "culture":

"Russia did not seek war. She is drawn into the bloody conflict against her will. The consciousness that Russia is not only not guilty of the European conflagration, but that she has tried by all means to avert it; that in the events of the last days she stood for the interests of right and culture, and that now the question is of the defense of our Fatherland against the invading enemy,—this consciousness creates a great moral force which will unite all the Russians, without regard to their opinions, into one mighty whole. Russia is courageously meeting the situation, and each one of us will do his duty."

Even the radical *Sovremennoye Slovo* (Petrograd) rallies to the side of the Crown thus:

"There is not a single man in Russia who does not feel the deep justice of the words of the Imperial manifesto that 'now we have not only to intercede in behalf of an unjustly abused country, but to defend the honor, the dignity, the integrity of Russia and her position among the great Powers.' Therefore, the call from the heights of the throne to 'forget at this terrible hour of trial the internal strife' will meet with a hearty response in all cities and villages of great, limitless Russia. At the first signs of the oncoming storm in the minds of Russian citizens was born this consciousness of the necessity of internal unity for the successful resistance to the external enemy."

The *Russkoye Slovo* (Moscow), a Constitutional-Democratic organ, would aid in "liberating" the German people from militarism. It cries:

"Rise, ye great Russian people! History is calling you to perform a great feat before which all that the world has ever seen will pale. We must fight not only for our honor, but for our very existence as a State and a nation. We will fight for the bright future of all humanity, for the annihilation of the monstrous nest of militarism, and for the liberation of the German people from the yoke of military caste. We will fight for the sacred cause of liberation of humanity from the burden of violence and eternal threat. The road will be difficult, the sacrifices will be heavy, but the recompense will be great."

The *Novoye Vremya* (Petrograd), one of Germany's bitterest

enemies, details as follows the high and knightly motives of the Allies and the deep iniquity of their enemies, as perceived from Petrograd:

"The present war, the most terrible in its proportions, in the unheard-of number of participants, has one good side which sharply distinguishes it from all the preceding wars. If brought to a successful and worthy termination, it can be the last war in the history of Europe. In the mist of coming events there can be seen the end of the bloody nightmare which has for many centuries oppressed the nations by its approach and finally become a terrible reality. One more heroic effort, and the European peoples will emerge from the sea of blood which threatens to drown all contemporary civilization, and set foot on solid shore.

"The breeding-place of international violence will be crushed by the gigantic strength of the northern people, the life of nations will enter upon the course of justice and humanity, and on the sinful earth . . . there may be established, perhaps, eternal peace.

"Only the blind can not see that in reality Europe is engaged in a war against war. Always knightly and disinterested in her foreign policy, Russia has unsheathed her sword for the protection of peace so insolently violated by the Austrian attack upon tiny Serbia. France taking part in it solely through the instinct of self-preservation, because the growth of German power threatens her very existence. Lastly, England is supporting the Allies out of a wholly sane calculation, being ready at the first possibility to check the development of Germany's naval power which menaces her world position.

"In all Europe since the time of Prince Bismarck there has been only one center of militarism—Berlin. For almost half a century it kept in fear all nations, threatened the common safety and peace. Is it to be wondered at that under the less capable successors of Bismarck all the countries have united . . . and formed an alliance for self-protection?

"This is the inner meaning of this war. A general war against war can not but end in victory for lasting peace. It is necessary

WILL THIS GERMAN PREDICTION COME TRUE?

"The old lamplighter is back at work once more."

—O Kladderadatsch (Berlin).

that all the nations of Europe who have combined into a formidable coalition against ever-aggressive Germany should be pervaded with a clear consciousness of the high humanitarian idea of this war. Then the alliance of nations will turn from a triple into a universal one."—*Translations made for THE LITERARY DIGEST.*

HOW AUSTRIA MEETS THE WAR DEARTH

THE DEMAND for millions of soldiers to carry on the present great European War has naturally weakened the industries, both agricultural and manufacturing, by which such a vast territory as that of Austria-Hungary was enabled to subsist. The Austrian Government has taken careful

Copyrighted by the International News Service.

INDIA'S REPLY TO RUMORS OF REVOLT.

Sikhs marching to join the battle-line in France.

measures to remedy as far as possible the diminished supply of labor as well as of food for man and beast. This problem is stated by the *London Economist*, an organ which spares no trouble in obtaining information, and in an article procured from Vienna expounds the industrial and financial conditions in the Dual Monarchy, as follows:

"In Hungary the Board of Trade Minister published a circular to the owners of all industrial concerns imploring them to make all the sacrifices in their power and to refrain from closing their establishments. The working men and women, he argues, will be content with a shortening of the days or hours of labor and a reduction of labor, if only the possibility of keeping themselves and their families is given to them. Hungary's industry is so young that even a temporary cessation of work would spell ruin to it.

"When the war broke out and the necessity for millions of soldiers arose, the fear was generally entertained that there would not be hands enough to work the concerns which must be kept going; now that the war is in full swing we have found out that it is work which is not forthcoming for those who do not go to the battle-field and yet must keep alive.

"To-day the works for the fortification of Vienna begin; 20,000 unemployed men are to be engaged for these works, which are carried out by a military organization, and do not concern the capital itself, but the approaches to it at some distance. Even if these works prove entirely unnecessary they will not have been undertaken in vain, since they give employment to so many needy hands. Another 10,000 men are to be employed for correcting parts in the course of the River Danube, work which should have been done long ago, but was always postponed on account of the expense, which must be shared by the city, the province (Lower Austria), and the State. The municipality has for many years preferred to spend money solely on improving the appearance of the city."

The principal question, of course, in Austria-Hungary is the supply of grain for feeding men and horses, and we find from the writer in *The Economist* that there is a danger of a shortage in this particular, and that the Austrian Government has done

all it can to remedy this shortage, which nevertheless weighs heavily upon the population. We read:

"There is not sufficient corn in Austria and Hungary to last for more than ten months, even if not one hundredweight is exported. The Army will certainly consume a much larger proportion of wheat and oats than men and horses would be content with in ordinary times. The big stores of wheat and oats are the result of the Hungarian harvest, the Austrian production amounting at the best to about one-third of the Hungarian, whereas the Austrian population is about 65 per cent. of the total figure of Austria-Hungary. The Vienna Corn Exchange has voted unanimously that the Government shall be requested to abolish the duties on fodder and corn during the war, so that foreign corn may be imported from neutral countries and the

SIEGFRIED SPLITS THE ANVIL,
And the British Dwarf gnashes his teeth in helpless rage.

—© Kladderadatsch (Berlin).

price of corn and fodder may be regulated by competition. Of course, such a measure can not be adopted by one country unless the other approve. It is very unlikely that the Hungarians will be willing to let the price of corn fall. The sacrifice on their part would be so very much heavier than on the part of Austria, which has other sources of wealth to rely upon. The Austrian agriculturists, in voting for the abolition of the corn duties, most distinctly declared that they only voted for a temporary suspension of the duties, which they considered the most valuable privilege of their class, obtained after long and bitter years of fighting in Parliament. They could prove their sincerity if they allowed frozen meat to be imported, whether with or without duty.

"The greatest marvel which we have witnessed in these days is, of course, the fact that in the short space of three weeks ten million men have been made to meet along the frontiers of belligerent and neutral countries, provided with all that war requires. But is it not quite as marvelous that the intensely complicated organization of trade and finance, the work of a century, should have come to a standstill within a few days? It is as tho the 100 billions which are in constant movement round the globe in ordinary times had been engulfed by an earthquake. Telephone and telegraph that circulated the economic blood of the world are choked up, and for weeks the Continent was kept in ignorance of the Bank of England's rate of interest, which is the standard of credit all the world over. And yet there are people who say the days of wonders and miracles are over!"

AS THE TURK SEES IT

TURKEY has from the time of her European conquests been somewhat lightly regarded as a moral and political Power on the Continent. This anti-Moslem sentiment has always been resented by the race who were once the educational leaders of Spanish intellectualism, whose universities illuminated the twilight of European civilization while the green flag of Mohammed stood uncaptured over a hundred battle-fields. It is no wonder, therefore, that the Turk watches with an air of half pity, and some spice of gratification, the struggle which seems to be in exact contrariety to the rule of Christianity, a struggle conducted with apparent relentless cruelty by the leading nations of Europe who profess to uphold the doctrine of Christ. We are, therefore, not surprised to read the comments of the Turkish press, retaliatory as they may seem. Thus in the *Tanin* (Constantinople) it is said of the European Powers during the present European agony:

"They would not look at the evils in their own countries, or elsewhere, but interfered at the slightest incident in our borders; every day they would gnaw at some part of our rights and our sovereignty; they would perform vivisection on our quivering flesh and cut off great pieces of it. And we, with a forcibly controlled spirit of rebellion in our hearts and with clenched but powerless fists, silent and deprent, would murmur as the fire burned within: 'Oh, that they might fall out with one another! Oh, that they would eat one another up!'

"And lo! to-day they are eating each other up, just as the Turk wished they would. Whatever people may say, there is in the nature of things an essential justice that will at last come to light. To the benighted and the victims of injustice it brings a smile on the face and a joyous lightening of the heart.

"This being the case, there is in our hearts a new feeling of mercy. We can not forget what an eternal and inextinguishable torch of learning and the arts France has always been. We can not be blind to the fact that Germany with its brains and its industry is a highly civilized nation. We will not be behind in praising the high position the English hold in the civilized world, even after they have basely betrayed a trust committed to their honorable keeping. For this reason, while we pray that this awful war may be taken out of the way as soon as possible, we also hope that in some way or other out of this stream of innocent blood may shine forth the light of a strong and lasting peace and righteousness."

Of the influence which the present war is likely to exercise over the Balkan nations in their present condition of restlessness the *Tasfiri Efkiar* (Constantinople) writes:

"One does not have to be a great scholar to see that the Balkans, after giving rise to the European War, could not remain in quiet and tranquillity. We are now in presence of effective proofs of this evident truth which we have often maintained. The efforts of Russian envoys to gain Bulgaria, the continual concentration of Greek troops on the Bulgarian border, the explosion of bombs placed by Bulgarian *comitadjis* that have blown up the bridges at Demir Kapou and Gevgeli, the active negotiations by certain Balkan statesmen, the panic that has seized the Greeks of Macedonia, are all proofs of this. It is already clear that the peninsula can not keep itself clear of the troubles which the general conflagration will let loose. Events that will necessitate territorial changes as important as those that have recently taken place can not be prevented. All the Balkan States, with Roumania in the lead, want these territorial changes to assume such shape as to satisfy them. As one thinks of this new phase of the Balkan affairs, he is forced to recognize that the Bucharest Treaty is null and void, in face of the general mess that is to reshape Europe.

"Only the Ottoman Empire, Bulgaria, and Roumania are to-day in a position to regulate the new Balkan situation. It is at present very difficult and perhaps impossible for Greece and Serbia to sit around the green table also and take part in the negotiations. Indeed we do not doubt that these three Governments will decide the lot of the Balkans by mutual agreement, and that they will adopt, thanks to this agreement based on reciprocal interests, a policy concerning even still more general interests. We have always considered as idle and injurious Bulgaria's desire to get back the Balchik-Tutrukan line. Even in Bulgaria the conviction is growing that this line

TURKISH RECRUITS FLOCKING TO THE COLORS.

CELEBRATING THE REPEAL OF THE CAPITULATIONS.

STIRRING DAYS IN CONSTANTINOPLE.

is not worth the friendship of Roumania. Sure, then, of her frontiers to the south, Roumania will seek to get other advantages. So the Balkan States may, if they will, not only assure Balkan equilibrium, but also play an important part in the question of European war or peace."

ADMIRAL MAHAN ON SEA WAR

ADMIRAL MAHAN, whose books on sea supremacy have been so largely responsible for the development of European navies, has declared to a correspondent of the *London Daily Mail* that England, if she wishes to remain a world Power, must fling her preponderating navy against the sea-power of Germany. If the correspondent is correct, the Admiral deviated enough from the strict line of neutrality enjoined by the President to show that he condemned Germany. "Admiral Mahan," we read, "in common with the vast majority of Americans, regards the present war as one of calculated aggressiveness by Germany and as an inexcusable act. He expresses the opinion that the absence of the Kaiser from Berlin at the time of the Austrian ultimatum to Serbia was an act cleverly designed to deceive." He thinks that the struggle between Germany and the Allies must be decided in the North Sea, and he expects a German defeat. To quote his words:

"For a long time it has been the German policy to keep the navy ready and virtually cleared for action, and we may expect any minute, apparently, to get word of a great engagement. I should expect the British fleet to win."

"The Kiel Canal would undoubtedly be used in the German naval strategy as affording access to the North and Baltic seas, but not as a deciding movement. England can not, as I have said, throw a preponderating fleet into both seas, and Germany's

hope is to strike immediately. It is a question of existence for her, the stagnation of her carrying trade on the seas must threaten her very life, and neutral shipping, already taxed to its limits, can not bear the additional burdens of supplying Germany."

"The suggestion that has been made that Germany might demonstrate with her fleet in the Baltic is not tenable. The Russian Fleet, with only eight predreadnoughts, no dreadnoughts, and battle-cruisers, however much of an absurdity that type may be, is negligible. Germany could achieve nothing with a fleet in the Baltic, for it is a principle of warfare that, under modern conditions, no nation can afford to waste its navy in operations against fortifications."

Admiral Mahan is of the opinion that all the different departments of naval warfare will be proved and their efficacy decided by this coming struggle between England and Germany. This, he thinks, will be the final test of all the series of naval wars. He dwells particularly upon the point that aircraft and submarines have to be reckoned with.

"This question of the use of the increased efficiency of the submarine is assuredly one of the most important to be tested in actual warfare. They had, of course, no opportunity in the Russo-Japanese War. But in the present confined theater of operations they should be seen at their best."

"I do not share Sir Percy Scott's views of the surpassing power of the submarine to the complete effacement of the battle-ship. . . . But most of these problems of the technical science of warfare are too abstruse for the general observer—they are really too technical for the experts to agree on. As General Sherman said: 'One may demonstrate something in maneuvers, but you really need the element of human fear to be conclusive.'"

"The mooted question of big guns has also to be tested. For my own part I have always believed that the volume of fire was the determining fact. The number of hits, and not the single shots, is the most important element. I believe, however, all those things we shall soon know, perhaps any minute."

"DUMDUM" BULLETS FOUND AT LONGWY THAT INSPIRED THE KAISER'S PROTEST TO PRESIDENT WILSON.

The French reply that these were for target practice only.

SCIENCE - AND - INVENTION

THE SAD RETURN OF THE FAIRIES

THE THEORY that fairy-tales are racial memories of the prehistoric swarthy dwarf races of Europe has been alluded to several times in these columns. According to an editorial writer in *American Medicine* (New York, September), these dark-skinned dwarfs are tending to reassert themselves and to congregate in their old haunts. This explains what the writer calls "the pigmies of London"—the prevalence of undersized dark-skinned types in certain parts of the city, "clothed in rags and begging an existence." They no longer tend to die out, for survival is not now, as it once was, dependent on size and strength. But tho they survive, these dwarfs add nothing to the general efficiency or intelligence of the nation, or to its capacity for defense. If we do not attend to the matter, the writer thinks, we in America may have also to contend with a return of the pigmies, dwarfs, pixies, or whatever we choose to name them. We read:

"English anthropologists and physicians have noticed for a long time that the prehistoric, small, dark types which were submerged by the Celtic and Teutonic invasions have been reasserting themselves numerically and have also been percolating back to the areas from which they were driven by these bigger, fiercer, blonder immigrants. Much of this is due to the more perfect adjustment to the climate of the oldest stocks through hundreds of millenniums of survival of the fittest, whereas the last invasions have brought in types which are just enough unfit for the new climate to lose ground in proportion to the rest. The big blonds are not dying out by any means; indeed they might be increasing, and their control of national affairs is stronger every decade perhaps, but the smaller, darker types are apparently getting more numerous in special positions which kill off the more recent Teutons. The pigmies, on the other hand, are apparently small sizes of all the types which make up the population, tho no exact observations have been made of their physical characters. No one knows what causes such variations, but we can well imagine a thousand things which may happen to check growth, and, as the unfortunates are largely in the lowest social classes, we are justified in suspecting disease and underfeeding as the most common. Very small or dwarf specimens are found in every species, and in every litter of pigs there is a 'runt.' The phenomenon seems to be universal, and there is no reason to doubt that dwarfed types have appeared in England ever since man was man. If he was too little to hold his own in those fierce days, he perished; if too big, he was likely to become too aggressive and to be laid low by strategy. As a fact prehistoric skeletons of one locality and time are remarkably uniform, as also are the modern savages of one tribe. In modern civilization, on the other hand, size has absolutely no bearing upon the survival, for no matter how little or how big a man is, he can find some way of making a living and some climate which will not hurt him. Industrialism furnishes innumerable opportunities for little men who have sufficient intelligence, and they do not have to resort to tailoring, shoe-making, or servile attachment to the more efficient big men. Their numbers ought to increase, and perhaps they are increasing throughout northern Europe, which has formerly been fit for only the big types but now puts subsistence within the reach of millions of little men, some of whom can not even shoulder a gun to keep out invaders. If the dwarfish types are not gifted with enough intelligence for skilled labor, they are in a pitiable condition, for they can not do hard laboring work. A big imbecile can shovel dirt, but the little man can not prosper without brains. These stupid dwarfs, clothed in rags and begging an existence, are the most pitiable sights in London.

"Will America furnish pigmies when the price of food advances to the high relative level of Europe? We have always prided ourselves on the good physique which comes with our more liberal feeding, but there is a suspicion that we have seen our best days. We are beginning the successful importation of meat from Argentina, and it stands to reason that, as in London, here will be some men too feeble mentally and physically to

get enough of it for their children. Most of our little people are foreign-born, but the native-born are not sizing up as formerly, and some time ago the manufacturing tailors reported that the demand was for smaller sizes of boys' clothes for age than formerly. The process of dwarfing must then have been going on for some time unnoticed. It is not possible to get exact data on this subject, as no records have been kept of weight and height for each year, but our 'child welfare' folks are doubtless collecting such information for future use. The matter ought to be looked into now, as it is quite disconcerting to think that the pouring of hordes into the 'melting pot' is to result in undersized people as in Europe, even pigmies as in London. Every immigrant may help to shovel dirt for railroads, but he brings one more mouth to fill while the meat-production is diminishing. It is all very well to say we will give these poor failures of Europe a seat at our table, but what if our own children go to school hungry?

"Boys can not grow into good citizens without plenty of food, and if we can not increase the food, then we must decrease the immigration and the birth-rate. No matter what we do, our population in the end will settle into layers as in England, where stature increases with social rank from good feeding as well as good inheritance of stock that has 'made good,' but let us try to keep up our bigness and physical equality as long as possible."

THE OLDEST PORTRAIT

PERHAPS THE EARLIEST artistic representation of the human figure was not long ago unearthed in France. It is a drawing, incised on a piece of bone, of a man and a woman, made by a prehistoric artist of the Aurignacian epoch of what geologists know as the Quaternary period. This is by no means the only prehistoric drawing of the kind, but none of the other finds has come from so early a geologic stratum. A writer in the *Revue Scientifique* (Paris) thus describes it:

"Two distinguished prehistoric archeologists, Messrs. Lucien Mayet and Pissot, have just published an Aurignacian design, traced on a flat mammoth bone, that possesses remarkable interest for students of the beginnings of art. The drawing represents a man and a woman and constitutes the first document representing, in an engraved form, man of the middle Quaternary period.

"The name 'Aurignacian' has been applied to the beginning of the Post-Glacial epoch. . . . Aurignacian engravings of the human body are now known to a considerable number. Every one knows about those discovered by Piette at Brassempouy in the Landes. . . . The drawings of a man and a woman discovered by Mayet and Pissot at La Colombière, near Poncein, recall those representing hunters or men wearing ritual masks, found at Mas d'Azil and Altamira. There is the same very inferior technique, contrasting strangely with contemporary ivory carving. The design found at La Colombière is thus described by its discoverer: 'A man is lying on his back. Above him is depicted, vertically, the body of a woman. The man's right arm is raised vertically, and his hand, with the fingers extended, touches the woman's body. The profile of the man differs absolutely from the Neanderthal type and recalls, in great measure, the Chancelade skull: the head is rather large, with a convex forehead rising somewhat obliquely, and a very high face . . . clearly prognathous. The chin is prominent and bears a short beard, indicated by little strokes; the nose is long and very large; the eye, shown by two curved lines, has an indefinable expression. The trunk is represented as very hairy. . . . The contour of the woman recalls in no wise the enormous matrons, with voluminous breasts and hips, with whom the Aurignacian sculptors of Brassempouy . . . have made us familiar. The upper part of the body is relatively slim, almost graceful, and has a youthful appearance, altho the lower limbs are coarser. . . ."

"Besides its artistic interest, which is considerable, this find possesses great geologic interest, for it comes from a veritable archeological section, carefully studied by the authors."—*Translation made for THE LITERARY DIGEST.*

WAR AND WEATHER

A COMPLAINT that our press reports of the great European conflict give little information of weather conditions, "which have everything to do with military operations," is made by an instructor in the United States Army service schools at Fort Leavenworth, Kansas, in a letter to the *New York Times*. He adds that to army officers in particular the daily temperature, rainfall, direction and velocity of the wind, in all parts of the theater of war, are of more importance and interest than columns of material regarding skirmishes, reconnaissances, etc. Such data are difficult to get after the occurrence, and any record that aims to be of permanent historical value should contain them. Commenting upon this complaint, *The Scientific American* (New York, October 3) says in its editorial column:

"It is true that the weather has occasionally cropped up in the war news, tho so casually and modestly that its immense importance in shaping the course of events has been, apparently, quite lost sight of. Thus we gather that a dense fog greatly hastened the fall of Namur, by enabling the Germans to place their siege-guns in an advantageous position without danger to themselves. The persistent drenching rains that fell during the long battle of the Aisne must have so impeded the movements of artillery, as well as other operations, as to modify materially the strategy of the commanders, tho details on this subject are still lacking.

"The oppressive heat of the early days of the war in Belgium is also a matter of record. These bits of information have been, however, quite exceptional; as a rule the weather has been altogether ignored by the correspondents.

"Turn the pages of history and you will find that weather has always been a factor of prime importance in the conduct of war, playing a rôle analogous to, and coordinate with, that of topography, tho, strange to say, military writers usually exaggerate the relative importance of the latter. It would be easy to compile a long list of battles in which the weather has actually been the decisive factor. Take the effects of rain alone: Heavy downpours and resulting floods led to the total destruction of the three Roman legions under Varus, in A.D. 9. Fifteen hundred years later persistent rains saved Vienna from capture and destruction by the Turks. In 1692 an English army was prevented by heavy rains from crossing the Meuse to relieve Namur, then besieged by the French, and the city fell. It would however, be tedious to enumerate all the instances under this head.

"The progress of military science has by no means rendered armies less susceptible to the effects of the elements. If the introduction of motor-vehicles has facilitated the transportation of artillery, so has the use of heavy guns in the field increased, and muddy roads remain a serious obstacle. The deadliness of modern ordnance, as well as the use of search-lights and aeronautical fire-control, makes it imperative to keep troops under cover to a far greater extent than was once the case; but a fog, or even heavy rain or snow, furnishes an ideal cover which does not entail immobility. Besides these and other physical effects of the weather upon military operations, the physiological and psychological effects of weather upon fighting men are still much the same as they were a thousand years ago.

"It is evident that the modern commander must reckon with the weather in making his plans. If a body of troops is to be moved from one point to another, a heavy rain may make a difference of hours or days in the time required for this movement. An aerial reconnaissance, most desirable at a certain juncture, may be prevented by violent winds. A body of water, that to-day offers an impassable barrier to the enemy, may be to-morrow a practicable highway of ice. And so on.

"A corollary to these considerations is the fact that it behooves military men to possess a knowledge of meteorology, and thus to be able to foresee changes in the weather, so that they may shape their strategy accordingly. It has, in fact, been recently suggested by an Austrian military expert that a competent meteorologist ought to be attached to the headquarters of every army. When the history of the present European conflict is written, it will be interesting to see what part scientific weather-prediction has played therein. It is a safe guess that the Germans, at least, have already realized the possibilities of military meteorology and are utilizing this inchoate branch of applied science."

SUN-SPOTS AND THUNDER-STORMS

THAT THE ELECTRICITY which manifests itself in the powerful discharges of the thunder-storm has its origin not on earth but in the sun, is the belief of Sir Oliver Lodge, the eminent English authority on electricity. It has long been known that the spots on the sun, which are great cyclonic storms in the solar atmosphere, produce disturbances of the earth's magnetic equilibrium. Professor Lodge believes that they do this by actually bombarding the earth with streams of electrified particles, projected across the millions of miles of space that separate us from our chief luminary. Says H. Marchand, who contributes to *Cosmos* (Paris) an exposition on this and other views of Professor Lodge on the electrical phenomena of the atmosphere:

"The violent electric phenomena of the atmosphere, such as thunder-storms, are very probably due, in the first place, to the influence of the ultra-violet light, and in the second place, to the wind. The ultra-violet rays favor the transportation of the earth's negative charge to the neighboring air, while the wind, by agitating the atmosphere, brings together masses of it with opposite charges. Above the sea or deserts, where the emission of negative electricity is less strong, thunder-storms seem to be less frequent than over ordinary land.

"The electrification of the earth and its atmosphere has often been attributed to phenomena of evaporation or of condensation of water, and to other effects of the same kind, but we must rather suppose, according to Sir Oliver Lodge, that it is due to cosmic and not to local causes. 'I believe,' says the great English physicist, 'that it is largely or principally due to particles coming from the sun. The study of sun-spots has shown that emission of electrons takes place there, producing magnetic fields of great intensity, and we know that when one of the torrents of electrons that the sun thus hurls into space reaches a point near the earth, magnetic storms take place. We know also that hot bodies emit electricity. The sun must throw out alpha and beta rays; when these meet the terrestrial beta rays, the electrons (negative particles) are transported toward the poles, along the earth's lines of force, where they are probably the principal cause of the aurora borealis. As for the positive particles, they are not so easily deviated, and they reach the earth in tropical regions. The positive and negative charges thus carried to the earth then tend to reunite through the earth's crust or in the atmosphere, which explains, I think, the positive electrification of the upper layers of the earth's atmosphere. The rain brings down the negative electricity to the ground, leaving the positive in the higher regions of the air.'—Translation made for THE LITERARY DIGEST.

WHY SOME SWIMMERS DIE—Not all swimmers drown who die suddenly in the water. None of the reasons heretofore adduced to explain death of this kind, says a writer in *The Medical Record* (New York, October 3), is completely satisfactory. He goes on:

"One of these has never received the attention which it merits. In 1881, Von Troltsch asserted that in a number of such accidents death was due to vestibular irritation as a result of the penetration of cold water into the ear. To offset this view, however, is the common observation that children with large perforations of the drumhead swim and dive with impunity, and this despite the fact that otitis from bathing is by no means rare, and that old otitides are lighted up by the same exposure. At a meeting of the Berlin Otological Society held last spring Gütlich revived the view that sudden death can follow vestibular irritation in swimmers with perforated ear-drums. . . . [This] renders the patient helpless—he can neither swim nor reach the surface. He makes motions, but there is complete loss of orientation. A second rotary reaction now occurs, the swimmer turning on his own axis. . . . While this accident menaces chiefly those with perforated ear-drums, it could readily, in divers, follow an acute traumatic perforation in the water and perhaps occur exceptionally with intact drumhead. Sudden helplessness in the water is better explained as a vestibular phenomenon than by the view of total or subtotal tonic cramps, affecting the respiratory muscles. However, if the patient first becomes helpless when his head is above water, the vestibular explanation will hardly answer."

FILMS AS SALESMEN

THE USE of moving pictures to sell goods, especially in the engineering and allied industries, where the salesman can not carry his goods around with him, is no new thing, as moving pictures go. It has received great impetus of late, however, by improvements in the manufacture and reduction in the cost of both the films themselves and the ap-

SELLING GOODS BY FILM

The machine is so small that the salesman carries it in his handbag.

paratus for showing them. Employment of this kind of demonstration, too, is facilitated by the rise of business concerns ready to organize a business campaign with the aid of the "movies," to furnish the mechanical and photographic supplies, and to act in an advisory capacity to the man or the company that is anxious to try this new plan. Writes a contributor to *The Engineering Magazine* (New York, October):

"The testimony of an eye-witness is always the most convincing. That the most direct route to the brain is through the eye is a fact admitting of no argument, and that is why large manufacturing concerns are realizing more each day the great advantage of moving-picture films as clinchers of business.

"To the machinery-manufacturer, especially the producer of automatic machines, no more convincing method of proving the advantages and efficiency of his products exists than the showing of a machine in actual operation. One visit of a prospective purchaser to a plant to see a machine operating under actual working conditions is worth more than a dozen calls of salesmen upon him. In the past the difficulty has been to accomplish this, to always be able to show the machine in operation to the prospect and thus let his eye tell his brain.

"For example, take the enormous saving afforded manufacturers by the new principle and practise of chain-drive assembling, so successfully employed at the Ford plant. While this practise is widely applicable to machine-shop and manufacturing operations, it must be seen to be fully appreciated, and offers enormous possibilities for business to the manufacturer of driving-chain or link-belt. Once seen in operation the chain-drive is commercially convincing, yet, in what way other than by a visit to the Ford plant, where this new practise has been so highly developed, could a manufacturer of such chains show their possibilities for this service to such advantage as by a rightly made motion-picture film?

"The uses of the film as an instructor are well understood and appreciated, its service in the selling field of machinery and mechanical devices is being rapidly extended as it has been found that such films prove the most valuable aid ever employed by the salesman who, when equipped with a portable projecting machine, which is inexpensive, can show a film in a hotel room, or in a buyer's office, the prospect not even having the trouble of leaving his desk.

"Not only as an aid to salesmen, but as a salesman the film

is proving its value. In cases where, owing to distance, the sending out of a personal sales representative would be out of the question, a machinery concern can mail a film to a prospective customer thousands of miles away, who, on its receipt, can arrange with a moving-picture house in his own town to run the film, thus allowing him to study just how the machine operates, grasp all its strong points, and note the advantages of its use in his plant.

"The moving-picture film has proved its value as a clincher of business, but for such service the films employed must be made so as to afford proper exhibition effects, and their production is a separate and distinct business from that of the producer of films for entertainment purposes, an art in itself.

"Manufacturers who are using films for the purpose of sales-promotion are looking closer into the quality and merits of the films used, and realize that such work demands special study and experience on the part of the film-manufacturer, in order to obtain the most convincing results."

There are now firms, the writer goes on to say, who devote their entire energy to the production of films showing complete processes of manufacture from raw material to finished product, or actual operation of automatic machines. They also prepare scenarios if desired and weave a story into the background of any business, thus emphasizing important features. Much study is devoted to the many problems that enter into the production of successful commercial moving-picture films, and detailed information is furnished concerning the best uses to be made of films depicting any industry. Suggestions are offered for new and novel ways of using these, and estimates of the cost are made. To conclude:

"Such films are generally made in units of 1,000 feet, each unit for about twenty minutes, and, once the picture is completed, duplicate films in such quantity as may be desired can be secured at low cost.

"To the manufacturer, the moving-picture film is now rendering a service equally as important as it is to the scientist and the teacher, and the great strength given to selling campaigns

LIVING MODELS ON THE SCREEN.

Clothes can be displayed in this way to an advantage unknown before.

through the use of properly made industrial films is being better appreciated each day."

One of these machines, we learn, is operated with arc-light, gaslight, or a mazda bulb light, and even fitted with "felt-shod feet, that will not mar the highest polished table or desk."

THE DUCK AS A FEBRIFUGE

HE WHO FEARS malaria or yellow fever should keep ducks. The duck is one of the greatest known enemies of the mosquito and, therefore, of the two diseases just named. Moreover, the duck has possibly one of the widest geographical ranges of any of the birds. It is even found in the arctic and antarctic regions; also in Australia, where bird

Courtesy of the Mutual Film Corporation, New York.

A SALESMAN'S FILM WITH A SPECIAL APPEAL.

No one who loves children would be indifferent to it.

life is so peculiar. Writes Dr. Samuel G. Dixon, State Health Commissioner of Pennsylvania, in *The Journal of the American Medical Association* (Chicago, October 3):

"After trying the ability of fish to devour larvæ and pupæ of mosquitoes, with varied success, I built two dams near together on the same stream, so that each would have the same environment for the breeding of mosquitoes. Each covered nearly 1,400 square feet. In one, twenty mallard ducks . . . were permitted to feed, while the other was entirely protected from water-fowl, but well stocked with goldfish. . . .

"The one in which the ducks fed was for several months entirely free from mosquitoes, while the pond protected from ducks and stocked with fish was swarming with young insects in different cycles of life.

"To the infested pond ten well-fed mallard ducks were then admitted, and as they entered the pond they were first attracted by the larval batrachians, tadpoles. They, however, soon recognized the presence of larvæ and pupæ of the mosquito and immediately turned their attention to these, ravenously devouring them in preference to any other foodstuff present. At the end of twenty-four hours no pupæ were to be found, and in forty-eight hours only a few small larvæ survived. The motion of the water, made by the ducks, of course drowned some of the insects—what proportion can not be estimated.

"For some years I have been using ducks to keep down mosquitoes in swamps that would have been very expensive to drain, but I never fully appreciated the high degree of efficiency of the duck as a destroyer of mosquito life until the foregoing test was made. . . .

"Mr. William Lockwood, of Boston, an artist who made a hobby of raising aquatic fowl, also expresses an opinion that the spoon-billed duck is particularly adapted to the destruction of mosquito larvæ resting on the surface of the water.

"Mr. McAtee, of the Biological Survey, found mosquitoes in the gizzard of the mallard duck. While other birds, fish, spiders, batrachians, arthropods, and reptiles are all enemies of the mosquito, none of them has the wide geographical range and the capacity of devouring large numbers of the larvæ and pupæ on land and water as the duck.

"Ducks can be used in ponds, swamps, both open and in jungles, and can be driven from place to place. Not only can they be generally used to keep down mosquito life, but they also furnish a delicious and valuable foodstuff."

THE CREATIVE MACHINIST

A DISTINCTION is drawn, by a writer in *The American Machinist* (New York, October 1), between the man who makes a machine and the one who runs it. The machinist creates; the operative merely watches the machine create. The creative mind is pictured as likely to leave its owner a poor man, but such a mind is itself a rich possession. The writer continues:

"Every time a new machine is invented to take the place of 100 men, we hear mutterings in the air from the other 99, which are only stilled when 100 machines are built and they are called upon to run them. We also hear rumors that the machinist has worked himself out of a job. Soon, they say, all machinery will be made by standard processes and there will be no place for any but operatives, who simply sit and wait.

"The machinist who practises watchful waiting to the exclusion of capable creation is an operative, but he doesn't know it yet. Every time the machinist digs a hole and gets in and draws the hole in after him, he pops up with another labor-saving machine, and that gives him a new lease of life until he has invented all the improvements and made all the labor-saving devices he can for its manufacture. Then he must look for new worlds to conquer. He is tired of it, it no longer has life in it; he is through with his work.

"Like every other creative mind, he has to pay the penalty of seeing some one else get the reward for what he has done. A machinist is a poor man; a man always with visions of things he must create, and yet always seeing a new vision before the old one is made real. He may leave the shop and get rich, but not as a machinist. As a machinist he has learned many things that no other industry could have taught him. He has more

MACHINERY SHOWN IN OPERATION.

The salesman could not carry this machine, but can carry a moving-picture apparatus to show it.

openings, more breadth of opportunity that he could have got in any other trade. To get riches he must leave it, but he need not forget that it was there that he learned to create things, that he learned to see in his mind's eye the things that afterward materialized in iron and steel, and that moved in the way which he saw them move before there were more than a few lines on a piece of paper to indicate what was wanted. He compares his work with that of the artist or the sculptor who has his model from which to work, and whose greatest hope is that he may closely copy nature, while he has nothing in nature to copy, but has to strike out into fields that have never been explored and originate things purely from his own imagination."

LETTERS - AND - ART

ART AND GERMANY'S SAVANTS

THE ANSWER of learned Germany to foreign protests against the ruin wrought by her arms comes signed by many of her distinguished names—Harnack, Sudermann, List, Hauptmann, Roentgen, Humperdinck, and Behring. They pay their tribute to art, but admit the superior rights

Germans, together with 'Wilhelm Meister' and 'Der grüne Heinrich.' France became your adopted fatherland; therefore your heart must now be torn—and your judgment confused. You have worked with zeal for the reconciliation of both peoples. In spite of this, now when the bloody quarrel has destroyed your fair concept of peace, as it has so many others, you regard

our nation and our people through French eyes, and every attempt to make you see clearly from the German point of view is absolutely certain to be in vain.

"Naturally, everything you say of our Government, our Army, our people, is distorted; everything is false; so false that in this respect your open letter seems to me a black and empty surface. War is war. You may lament war, but must not wonder at things which are inseparable from this elemental consideration. Assuredly it is tragic when, in the hand-to-hand confusion of conflict, an irreplaceable Rubens is destroyed; but—with all honor to Rubens!—I am of those in whom the shattered breast of his brother compels a far deeper pain.

"And, Herr Rolland, it does no good for you to adopt a tone that implies that the people of your land, the French, are marching out against us with palm-branches, when in reality they are plentifully furnished with cannon, with cartridges—yes, even with dumdum bullets. Certainly you have grown fearful of our heroic armies. That is to the glory of a Power which is invincible through the justice of its cause. The German soldier is unsullied by the loathsome and puerile were-wolf tales which your lying French press so zealously spreads abroad, that press which the French and the Belgian people have their misfortune to thank. Let the idle Englishman call us 'Huns'; you may, for all I care, characterize the warriors of our splendid landwehr as 'sons of Attila'; it is enough for us if this landwehr shatters to hits the ring of our merciless enemies. Far better that you call us 'sons of Attila,' cross yourself in fear, and remain outside our borders, than that

you indite tender inscriptions upon the tomb of our German name, calling us as 'the beloved descendants of Goethe.' The epithet 'Huns' is coined by people who, themselves Huns, find themselves disappointed in their criminal attacks on the life of a sound and valorous race, because this race knows how to parry a fearful blow with still more fearful force. The impotent take refuge in curses."

Then follows Hauptmann's tribute to the question of Belgium and her sufferings:

"I say nothing against the Belgian people. The peaceful passage of German troops, a question of life for Germany, was refused by Belgium because its Government had made itself a tool of England and France. This same Government then organized an unparalleled guerrilla warfare, in order to cover its indefensible position, and by that act—Herr Rolland, you are a musician!—struck the horrible keynote of conflict. If you are at all in a position to break your way through the giants' wall of anti-German lies, read the message to America, by our

ANTWERP'S CATHEDRAL, SAVED FROM SHELLS.

Tho the shells rained upon the Place Verte, facing the structure, it is reported uninjured. "It must be said in the Germans' favor," says Arthur Ruhl, of the New York Tribune, who just escaped the Germans in Antwerp, "that they tried to protect monuments and cathedrals."

of armed conflict. "If in this frightful war objects of art are destroyed, every German will regret it, but, little as we allow any one to override us in love of art, the preservation of art is not to be bought at the price of German defeat." This collective statement is particularized by one of their number, Gerhardt Hauptmann, who publishes in the *Vossische Zeitung* (Berlin) his reply to Romaine Rolland, whose open letter we reproduced last week. Hauptmann recalls that Rolland addresses him "in public words which breathe the pain of this war (forced by Russia, England, and France), pain over the endangering of European culture and the destruction of hallowed memorials of ancient art." He replies:

"I share in this general sorrow. What I can not consent to is to give an answer whose spirit you have already prescribed and concerning which you wrongly assert that it is awaited by all Europe. I know that you are of German blood. Your beautiful novel, 'Jean-Christophe,' will remain immortal among us

Imperial Chancellor, of September 7; read, further, the telegram which on September 8 the Kaiser himself addrest to President Wilson. You will then discover things which it is necessary to know in order to understand the calamity of Louvain."

The manifesto of the savants appears in the *Berliner Tageblatt* and declares that "Germany will fight to the end as a cultured nation, which has the might of Goethe, Beethoven, and Kant, who are to it just as holy as its hearths and homes." It makes these further claims:

"It is not true that our conduct of the war does not recognize the rights of the people. Can any one point to an example of our ferocity? But in the East the earth has drunk the blood of hordes of women and children slain by the Russians. In the West dumdum bullets tear open the breasts of our warriors.

"Those who associate with Russians and Serbians and offer to the world the spectacle of letting loose mongrels and niggers on the white race have the least right to call themselves defenders of European civilization. Our hypocritical foes say the fight is against our so-called militarism and not against our culture, but without German militarism German culture would long ago have been trodden into the earth. Militarism has gone out in defense of culture, in defense of the land which has for decades proved such a home for art as it will never enjoy anywhere else. The German Army and the German people are one."

The *New York Sun* remarks that "the sophistry" of the statement "is unworthy of the eminent men" who signed it, for "at Louvain and Reims there was no question at all of sacrificing works of art to save the German legions from defeat."

The renunciation of scholastic honors conferred by English universities upon German scholars meets with pretext from the astronomer, Dr. Wilhelm Foerster, now in his eighty-second year. In the *Berliner Tageblatt*, which the *New York Evening Post* translates, the aged savant offers counsels of moderation:

"It would surely not be difficult to collect a number of signatures for a declaration conceived in an entirely different spirit from that of the renunciation recently made public by Prof. J. Schwalbe. But since I can not devote my time to the collecting of signatures for such a purpose, I must at least, as honorary doctor of the University of Oxford, emphatically protest against the manifesto mentioned. I trust that even in these days of terrible excitement it may be possible for a solitary voice to produce some soothing effect. The question involved is to what extent the world of scholarship may claim and evince an interest in the social and political destinies of the State. Now, the manifesto of renunciation before us says distinctly that we are well aware that renowned English scholars, with whom German science had for years been united in fruitful labor, are opposed to a war so wickedly begun, and have publicly denounced it. And these, on the whole, are the men from whom emanated the honors bestowed on German scholars—honors which we now throw so contemptuously at their feet. The world of German scholars is happily at one with all the other classes of our fatherland, in its view of the war and the immediate future. The world of English scholarship is evidently not of the same mind as regards the policy of its fatherland. Is it not then unwise thus to separate us so sharply from a community of scholars so closely related and so sympathetic to us, because of the truly harmful public policy of their country, instead of recalling our English friends, by a vigorous appeal, to a sense of effective common loyalty? It is a law of human nature that such an appeal produces a much more powerful and a more permanent effect than a manifestation of temporary and grossly exaggerated indignation. Would that our friends across the sea might see Germany's united front in its true light, and spread among their own people the lessons of a truly enlightened public policy, in place of a policy which, in its essential features, is still purely selfish!"

BERNHARDI TO AMERICA

THE ONE BOOK which English librarians report is read in England more than any other at the present time is Bernhardi's "Germany and the Next War." There is reason for this, of course; and perhaps if it becomes known that the author pays his respects to this country in a number of passages, the book will have a keener interest for us. The militaristic author of this work has a high admiration for war as the great instrument of idealism and culture, and does not withhold his exasperation at peace congresses, arbitration schemes, and pacifist movements that occupy the dominant thought of America to-day. Von Bernhardi declares that

Which contains one of the rarest collections on the history of printing in Europe. This building was the office of the Plantin printing firm, famed for the beauty of their texts, from 1579 to 1875, when it was made a State museum.

"efforts directed toward the abolition of war must not only be termed foolish, but absolutely immoral, and must be described as unworthy of the human race." He quite frankly disbelieves that nations can be honest in their desires for peace, and looks upon their efforts in that direction as subterfuge. Thus:

"Pacific ideals, to be sure, are seldom the real motive of their action. They usually employ the need of peace as a cloak under which to promote their own political aims. This was the real position of affairs at the Hague Congresses, and this is also the meaning of the action of the United States of America, who in recent times have earnestly tried to conclude treaties for the establishment of Arbitration Courts, first and foremost with England, but also with Japan, France, and Germany." (p. 17.)

A historic instance is cited to point his belief in the hypocrisy of such efforts:

"Theorists and fanatics imagine that they see in the efforts of President Taft a great step forward on the path to perpetual peace, and enthusiastically agree with him. Even the Minister for Foreign Affairs in England, with well-affected idealism, termed the procedure of the United States an era in the history of mankind." (p. 17.)

America is thereupon warned that her peace policy may prove fatal to her "moral development":

"From this point of view, efforts to secure peace are extraordinarily detrimental to the national health so soon as they influence politics. The States which from various considerations are always active in this direction are sapping the roots of their own strength. The United States of America—e.g., in June, 1911—championed the ideas of universal peace in order to be able to devote their undisturbed attention to money-making and the enjoyment of wealth, and to save the \$300,000,000 which they spend on their Army and Navy; they thus incur a great danger, not so much from the possibility of a war with England or Japan, but precisely because they try to exclude all chance of contest with opponents of their own strength and thus avoid the stress of great political emotions, without which the moral development of the national character is impossible. If they advance farther on this road they will one day pay dearly for such a policy." (p. 28.)

To a growing and aspiring nation this policy is particularly hurtful:

"Arbitration treaties must be peculiarly detrimental to an aspiring people which has not yet reached its political and national zenith, and is bent on expending its power in order to play its part honorably in the civilized world. Every Arbitration Court must originate in a certain political status. . . . In this way every progressive change is arrested, and a legal position created which may easily conflict with the actual turn of affairs, and may check the expansion of the young and vigorous State in favor of one which is sinking in the scale of civilization." (p. 32.)

America has a chance still to save her soul through her natural resources and her "unscrupulous" character:

"Facing her (England), between the Atlantic and Pacific Oceans, linking the West and the East, the United States of North America have risen to be an industrial and commercial Power of the first rank. Supported by exceptionally abundant natural resources, and the unscrupulously pushing character of her inhabitants, this mighty Empire aims at a suitable recognition of her power in the council of the nations, and is on the point of securing this by the building of a powerful Navy." (p. 68.)

For this reason England can be nothing but America's natural enemy, and Von Bernhardt sees England unmindful of her once great opportunity:

"Since England committed the unpardonable blunder, from her point of view, of not supporting the Southern States in the American War of Secession, a rival to England's world-wide Empire has appeared on the other side of the Atlantic in the form of the United States of North America, which are a grave menace to England's fortunes." (p. 94.)

Such a blunder ranks with one of Germany's own, for which this author rebukes his native country:

"It was, in my opinion, the most serious mistake in German policy that a final settling of accounts with France was not effected at a time when the state of international affairs was favorable and success might confidently have been expected. There has, indeed, been no lack of opportunities. We have only our policy of peace and enunciation to thank for the fact that we are placed in this difficult position, and are confronted by the momentous choice between resigning all claim to world-power or disputing this claim against numerically superior enemies. This policy somewhat resembles the supineness for which England has herself to blame, when she refused her assistance to the Southern States in the American War of Secession, and thus allowed a Power to arise in the form of the United States of North America, which already, altho barely fifty years have elapsed, threatens England's own position as a world Power." (p. 239.)

Bernhardt looks ahead for this country as a reason for the preservation of the German fleet:

"England may have to tolerate the rivalry of North America in her Imperial and commercial ambitions, but the competition of Germany must be stopt. If England is forced to fight America the German Fleet must not be in a position to help the Americans. Therefore it must be destroyed." (p. 97.)

Germany is exhorted to further her influence on American politics:

"The further duty of supporting the Germans in foreign countries in their struggle for existence and of thus keeping them loyal to their nationality is one from which, in our direct interests, we can not withdraw. The isolated groups of Germans abroad greatly benefit our trade, since by preference they obtain their goods from Germany; but they may also be useful to us politically, as we discover in America. The American-Germans have formed a political alliance with the Irish, and, thus united, constitute a power in the State with which the Government must reckon." (p. 78.)

GERMANY'S DEBT TO FRENCH CULTURE

THE SUDDEN REARING again of the spiritual ramparts dividing nations that had tended in recent years to become lowered or done away with altogether is what we seem to be witnessing in the intellectual world. Warring nations have all, except perhaps Servia, hung out the banner of "culture" as the cause for which they fight, and thereby seem to imply a native product that is self-productive and self-sustaining. Of course it would be admitted in ordinary times that the culture of nations is a reciprocal product and borrowing and repaying is a grateful occupation. It happens that just prior to the present outbreak a French professor, M. L. Reynaud, head of the department of German lectures in the Faculty of Letters of the University of Poitiers, published a book, a résumé of which appears in *Les Nouvelles de France* (Paris), upon the indebtedness of Germany to French civilization. He does not contend, of course, that the obligation has been all on one side, but holds that France's earlier spiritual and intellectual development naturally makes her the source of many of Germany's intellectual possessions. No doubt, however, he goes much further than patriotic Germans would go with him. He shows how the debt began early:

"It was Charlemagne, a Frank in origin and in language, but profoundly Romanized by ecclesiastical influence, who first brought civilization by conquest to Germany. By fire and by sword Charlemagne brought the Saxons into submission. He never crossed the Rhine except as an enemy; he imposed upon the vanquished the Roman faith and all that remained of the ancient idea of imperial civilization. Germany was able to add nothing of her own to the Carolingian principles; the epoch of the Otos is but a continuation, a tardy flowering of the Carolingian civilization.

"France, on the contrary, as early as the eleventh century, gave to the world a complete civilization, 'new in word, new in expression,' and the French culture passed over the borders of Germany. The tourney (*conflictus gallicus*) began to mingle its gallant note in the Germanic festivals. Our courteous [*courtoise*] poetry is the school to which the Minnesingers came for instruction. Treatises were written in Germany on the French *courtoisie*, our romances, our poems, and our songs were translated. More than 500 French words passed into the German tongue. In art, Germany is clearly the vassal of France. The monks of Cluny introduced there the rich *bourguignon* style. It took Germany a hundred years to adopt the Gothic style, which she termed the French style (*opus francigenum*) and which she boasted later of having invented.

"To the brilliant French expansion of the thirteenth century—one of the culminating periods of our history—succeeded the disasters of the Hundred Years' War. The French kingdom, ruined, lost the scepter of the arts, which passed to Bourgogne and Flanders, and French influence no longer illumined Europe. Then Germany lived its own life. The German villages grew populous and rich. The *bourgeoisie*, charmed with realities, cared little for the chivalrous ideal of the French. They were concerned with enjoying life, lodging well, dressing well, etc. . . .

"However, even this period of autonomy is not entirely exempt from French initiation. The Emperor Henry VII. of Luxemburg spoke and wrote nothing but French. The Emperor Charles IV. was raised at the Court of France and fought in our ranks at Crécy; he founded at Prague the first German university and ordained the use there of the statutes of the University of Paris. Maximilian I., the husband of Marie of Bourgogne, spoke and wrote French. Charles V. was given a

French education by his aunt Marguerite; his political ideal was the same as that of Francis I., and Germany made war against him rather than accept imperial unity.

"In the seventeenth century Germany, in its turn, passed through a terrible crisis. The Thirty Years' War, instigated and maintained by princes, left her ruined, dismembered into 2,000 territories, of which 300 were sovereign states! By the side of this country chopped into fragments, France shone resplendent, unified, victorious, rich, cultivated, 'lifted above herself by that incomparable stimulant, glory in arms.' Germany commenced to imitate France again. Every German prince played at being Louis XIV., and wished to have his functionaries, his army, his court, regulated by a severe etiquette."

No German state owes more to France than Prussia. Says the writer: "Frederick II. was French from head to feet; he thought and wrote in French; he spoke German only to his soldiers and his servants; he declared even in 1781 that it was a loss of time to learn German." Further:

"France delivered Germany from theological quarrels, and from the insupportable pedanticism (*Schulfächererei*) which at that time infested the most cultivated society. In the seventeenth century the Emperor, on inviting his generals one day to dine with him, had sent to them a printed list of 'grossesses' to be avoided in his presence. At the end of the eighteenth century the best society in Germany was as cultivated as French society. Our books had been translated, our arts, our manners, and our modes had been copied; more than 70,000 foreign words had invaded the German tongue, the majority of them French. . . .

"However, the military power of Prussia and the awakening of the Protestant spirit roused in Germany the sentiment of national existence; little by little she recovered from the frightful crisis of the Thirty Years' War; she was repopulated, repaired her fortunes, aspired to live her own life and disengage herself from the foreign influences so long predominant. After all, nothing could be more legitimate, but who could teach her to emancipate herself from French tutelage? Who? . . . Why, France! Again the France whose hand is found in every German initiative.

"The military power of Prussia is due to the study of the monarchy of Louis XIV. and to the French genius of Frederick II. The pietist Protestant movement had its origin in the mysticism of St. Francis de Sales. Mme. Guyon and Fénelon had but a limited success in France; in Germany they were translated, commented upon, and became an inspiration. It was Voltaire who revealed to Germany Shakespeare and Milton, whose influence was so considerable in the renovation of German literature. It was Diderot who taught Lessing how to criticize our classic theater; it was he who praised the *bourgeois* drama to him. It was La Chaussée who was the father of the weeping drama so dear to Teutonic authors. Finally, it was Rousseau who put in circulation all the paradoxes, all the sophisms, which Germany took so seriously and whence sprang the nationalist *Sturm und Drang* movement. Nearly all the combatants of that heroic epoch had a French education and were subject, despite themselves, to the influence of our poets, our writers, our thinkers, and our savants. Goethe himself does not escape the general rule. It was the cathedral of Strassburg which made conquest of him for Germanism, and the Strassburg Cathedral is a work of French art. 'Götz von Berlichingen' saw the light after the appearance of Du Bellay's 'Gaston et Bayard.' 'Werther'

directly imitates 'La Nouvelle Heloise.' Rousseau, Diderot, Lessing, Beaumarchais, Rotrou, Brunoy furnished Goethe with subjects, episodes, situations, characters. The influence of the Court of Weimar turned him toward our classics; he studied Racine at length. In the last years of his life he read Geoffroy de St. Hilaire and Sylvestre de Sacy. He defends himself from the charge of being a gallophobe, and says nobly: 'How should I be able to hate a people to whom I owe such a great part of my intellectual formation?'

The author even declares that Germany owes an immense

debt to the first Napoleon, that he reassembled the German territory and taught her the value of political unity, of regularity of administration, and of a relatively rapid and economic process of justice. He adds that it was the German princes who took their people to battle against Napoleon by the promise of liberty, a promise forgotten when the great enemy was at last overwhelmed. He believes, too, that it was French ideas which came near liberating Germany in 1848, and that it was again the German princes who prevented this, "as they still prevent her from becoming a nation free and the mistress of her own destiny." In conclusion, he says:

"How is it that, owing to us such a good part of what she is, Germany should have given to her patriotism so marked and so displeasing an anti-French character? It is because German patriotism has for its first source pietistic Pharisaism, and for its instrument the Prussian rancors against France. Then, too, it is because we rarely love those

who have done too much for us, given us too much, and advised us too much. Misunderstandings of all sorts separate France and Germany to-day. . . . Is it quite certain that it must always be thus?"—Translation made for THE LITERARY DIGEST.

PROFESSORS STILL EXCHANGED—The system of exchange professorships between Germany and our own Harvard and Columbia will continue despite the war. The Chicago News sees these exchanges as admirably cultural:

"A more general exchange of this sort among all the nations would go far toward dispelling antagonism and preventing war. Fundamentally, it was race hatred, based on misunderstandings, that brought on the present conflict. Knowledge and appreciation of the arts and learning and social customs of other people does much to bring nations together.

"The close relations in matters of education between this country and Germany have done much to produce a good understanding. The United States has drawn heavily for its own uses upon German culture and scholarship. American students in large numbers have profited by the learning at German institutions.

"Until the Rhodes scholarships were founded comparatively few Americans attended English universities. Cecil Rhodes, with his broad vision, had in view the breaking down of cultural antagonisms when he planned the famous scholarships for foreigners at Oxford. National and race hatreds soften under the influence of intimate acquaintance. Since it is not possible to carry student bodies across seas, a useful substitute has been found in the exchange of professors."

THROUGH REIMS'S RUINED AISLES.

The story of this tragedy and the indignation of the world perhaps saved the cathedral of Antwerp.

RELIGION-AND-SOCIAL-SERVICE

THE WAR AS SEEN BY THE NON-RESISTER

THE DUTY OF THE CHRISTIAN CITIZEN is one of paramount interest in the world's present throes. Germany, from all accounts, is showing a unanimous allegiance to the dominant idea represented by the State; France is in a similar mood, but England has a number of dissentient voices. One of those is Dr. Alfred Salter, who dis-

LOOKING DOWN ON REIMS'S RUINS

The main hall of the Archbishop's palace next to the Cathedral is seen here in ruins. Few neighboring houses escaped.

cusses in *The Labor Leader* (London) the duty of the Christian citizen. This question, he declares, is one always answered by one's religion, and it is "for each man to answer for himself at the bar of his conscience, not to be led away by the press, by the Prime Minister, by the Labor party, by the recruiting-officer, or by any one else." In answering the question for himself he tries to picture Christ as an Englishman, with England at war with Germany. His confronting situation is drawn from actuality. "The Germans have overrun France and Belgium, and may possibly invade England by air-ship and drop bombs on London. What am I to do? Am I to answer the Prime Minister's call, make myself proficient in arms, and hurry to the Continent to beat the Germans off?" This is what he sees:

"Look! Christ in khaki, out in France thrusting his bayonet into the body of a German workman. See! The Son of God with a machine gun, ambushing a column of German infantry, catching them unawares in a lane and mowing them down in their helplessness. Hark! The Man of Sorrows in a cavalry charge, cutting, hacking, thrusting, crushing, cheering. No! No! That picture is an impossible one, and we all know it.

"That settles the matter for me. I can not uphold the war, even on its supposedly defensive side, and I can not, therefore, advise any one else to enlist or to take part in what I believe to be wrong and wicked for myself. A country, as an individual, must be prepared to follow Christ if it is to claim the title of Christian."

A great place is waiting in history, declares this writer, for "the first nation that will dare to save its life by losing it, that will dare to base its national existence on righteous dealing and not on force, that will found its conduct on the truths of primitive Christianity and not on the power of its army and navy. And there is a great place waiting in history for the first political party that will dare to take the same stand and will dare to advocate the Christian policy of complete disarmament and non-resistance to alien force." He continues:

"No nation and no political party (and for that matter no Church either) is at present prepared to do that, altho they all, more or less, profess to be Christian. The inference is irresistible that the nations of Christendom, the orthodox political parties, and the organized churches believe in the religion of materialism, and not in God.

"For myself, I can see no logical or practical half-way house between the policy of being always antiwar (anti-every-war, including this war), a policy based on the teaching of Christ, and the policy of Lord Roberts, Lord Charles Beresford, Lord Muxse, and General Bernhardt, based frankly on material self-interest. The latter policy requires the keeping always ready of the maximum possible army and the maximum possible navy, equipped with the maximum possible efficiency. If we are to rely on force at all, then we ought clearly to see to it that we have a greater force on our side than our enemies can put forward. If it is right to defend one's country by taking part in war at any time, it is right and wise and necessary to begin the defense when it can be begun with real hope of success, not at the last moment. If it is right to recruit now for national defense against Germany, then we ought to have listened to Lord Roberts and the others and have had our million men armed and trained ready before the crisis arrived. We ought to have had their equipment, barracks, officers, and so on, in being now, instead of hurriedly improvising a scratch army at the fifty-ninth minute of the eleventh hour. If the defense is right now, the Radicals, the Labor party, and the Socialists have been wrong all along in opposing increased armaments and general military service. When this war is over the Roberts-Beresford-Blatchford party will demand, and consistently demand, that we should immediately commence to arm as never before in order to protect ourselves against the next war. That is the obvious logic and worldly wisdom of the situation, if you admit the use of force at all.

"But I do not base my position on logic or worldly wisdom. I base it simply on the command of God and the teaching of Christ. Christ's teaching applies as much to defensive as offensive wars; in fact, his precepts are directed mainly to the method of defense. 'Render not evil for evil,' 'Overcome evil with good,' 'Love your enemies,' 'Unto him that smiteth you on the one cheek,' are all commands which imply antecedent offense on the part of the enemy and specify the method of defense on the part of the Christian. To the great majority of the people all this sounds utter foolishness in face of the present situation, but the divine sense has always been hidden from the wise and prudent, and has only been revealed to the babes of simple faith and childlike heart."

Dr. Salter contemplates two uninviting alternatives of his policy. "If I refuse to fight or support measures of defense, then I may get shot by the enemy as an act of war, or I may be shot by the authorities of my own State as guilty of treason—

"Very well. I say deliberately that I am prepared to be shot rather than kill a German peasant with whom I have no conceivable quarrel. I will do nothing to kill a foe directly or

indirectly, by my own hand or by proxy. So help me God. Never.

"If the Socialists of Germany had felt able to take this line there would have been no European War. Many of them would, doubtless, have been executed by the Kaiser, but there would have been no war, for over two-fifths of the German Army consist of Socialists. I believe that such an action would not only have made war impossible, but would have meant the speedy triumph of Socialism in Germany, instead of its indefinite postponement. But the German Socialists were not able to take such a line because of their religion. They hold the materialistic faith. To-day Socialists of all nations are fighting and stabbing one another as eagerly as the nominal Christians—for the same reason.

"We are told that Germany is arrogant, brutal, overbearing, and tyrannical, threatening Europe with the menace of militarism, and that this war will free the whole world from this menace. You will not redeem the world from the tyranny of force by employing force; you will only enthrone force in another place. You will not eliminate militarism from Europe by opposing to German militarism a superior British-French-Russian militarism. You will simply establish militarism securely in England. You can not cast out Beelzebub by calling on the name of Beelzebub.

"You will only overcome force by love. (A silly, sloppy sentiment, you say!) You will only overcome arrogance by humility. You will only conquer brutality by kindness. You will only supersede militarism by developing in the hearts of all peoples the spirit of brotherhood and forbearance. War does not do that. This war will not do that. It will leave instead a bitter heritage of hate to bear more fruit in due season.

"Many newspapers and many Socialists are saying that the success of the Allies in the war means the smashing of Kaiserism in Germany. Only the German people themselves can smash Kaiserism in Germany, and if they had been left alone they would have done it inside the next ten years. But if the Allies are to smash Kaiserism they can only do it by smashing the German people first. May God prevent that crime! For the German soldiers are just plain folk, the very same as our Bermondsey working folk, with the same hopes, the same fears, the same weaknesses, the same virtues, the same passions, the same sorrows, the same humanity as ours. God made the Germans, and made them in his own image, as well as the British and the

Communist manifesto: 'Workers of the world, unite! You have nothing to lose but your fetters. You have the world to win!' Now almost every Socialist leader in every land is saying: 'Workers of each country, unite with your masters against the workers of other countries. You have everything to lose unless you blast the others first.' The Socialists equally with the churches are now blaspheming against their own gospel, and are denying in practise everything they have proclaimed in theory. The

ONE WAR EFFECT ON TURKISH MISSIONS.

This newly completed hospital built by the American Board at Marsovan has been requisitioned as a barracks for soldiers.

Socialist organizations are as morally bankrupt as the churches, but Socialism is no more bankrupt than true Christianity.

"Friends, the only path of safety, of sanity, of salvation, is faith in God! Believe and obey. Do his will and take the consequences. Be sure that those consequences will be the best for you and for the world. He that would save his life shall certainly lose it, but 'he that will lose his life for my sake shall save it.'"

THE WAR AND MISSIONS

IT IS TOO SOON to estimate the effects of the European War on missionary work, but some of the immediate results are already apparent to writers in the periodicals devoted to missions. They note that the resources available for missionary effort in men and money are being sacrificed in war. Even more serious than the material losses they consider the imperilment of moral interests. The spiritual tone of our civilization must suffer, writes J. H. Oldham in *The International Review of Missions* (Edinburgh) which he edits, for "it is difficult to engage in so unchristian a business as killing other men, even tho it be for the sake of a just cause, without becoming tho worse for it," and "the wild passions that have been aroused will leave their aftermath of blunted sensibilities and embittered feeling." And one of the saddest results of the war, as this editor sees it, "is that it will make cooperation in service between the Christians of different nations immeasurably more difficult." The war, admits this English editor, may be just, honorable, necessary, patriotic, from the view-point of those engaged in it, yet he can call the scenes of the past two months nothing but "an abomination in the sight of God," a "proof of the refusal of the Christian nations to be ruled by the law of Christ." Like characterizations come from the editor of an important missionary organ in this country, *The Missionary Review of the World*. But he goes on to outline certain specific hindrances to missionary work:

"First: The attention of men and women in Europe and America will be diverted from missionary effort to follow the fortunes of the armies and navies. In the present disturbed state of the world men will not devote their attention, even as much as formerly, to spiritual work.

"Second: Money will be difficult to obtain for home and foreign missions. The high prices, taxes, absence of wage-earners, depression of business, and many calls to relieve distress will cause such financial stringency that the work of Christ faces a serious crisis. Deficits, retrenchments, and unmet needs stare the mission boards in the face.

"Third: There will be, as there is, especially in Europe, a

THESE DIED—

THAT THESE MIGHT LIVE.

—Caption in the New York Sun.

French, and we dare not do despite to that divine image in any human creature.

"Yet English and Germans, Austrians and Russians are praying to the same God, praying to be enabled to defeat one another. Every nation is deliberately putting its trust in the power of material force, and yet pretending to itself that it is trusting in the power of the Divine Spirit. I fancy God will take those prayers at the right valuation.

"For years the Socialists have been using the words of the

diverting of men from spiritual Christian campaigns to fleshly, murderous warfare. Volunteers can not go, if they would, and many who might be our future officers of societies, missionaries, and philanthropists must perish by the hands of their brothers.

"Fourth: Communication with the mission-fields is already made difficult, and in some places impossible. Even American mission boards are sending no new missionaries at present to the Near East. Fortunately, the rumors of a Moslem uprising against Christians seem thus far without foundation, but there is a possibility that Turkey will espouse the cause of Germany against Russia, France, and England. The way is also temporarily closed for sending missionaries eastward to India and South Africa, and none can be certain when steamers may fall into the hands of an enemy. There are also missionaries in the disturbed lands—in Austria, Serbia, Germany, and Russia, as well as in Armenia and Turkey. These are suffering from lack of funds.

Fifth: The transfer of German possessions in the Pacific to the control of the British and French (and possibly the Japanese) would have an influence on Protestant missionary work in these islands. . . . The missionary work of Germany, France, and England is almost paralyzed because of war's insistent demand for men and money.

"Sixth: The demand for other forms of Christian service comes in the need for ministry to the wounded on the battle-fields, for Bibles to be distributed to the soldiers, for the care of destitute widows and orphans. It rests largely with Christians of America and of the warring nations to manifest the love of Christ and to preach the gospel of Eternal Life through Christ to those for whom true light and life have suddenly become obscured.

"Seventh: One of the worst phases of the present conflict is the opportunity it gives to heathen peoples and unbelievers to say 'Ah!' and scoff at the so-called Christians who are so savagely departing from the teachings and spirit of our Lord Jesus Christ. In place of using the fires of hatred in the work of combating sin, men are allowing them selfishly to destroy their fellow men. In place of using men and money to advance the Kingdom of Christ, they are foolishly wasting life and lucre in the battle for national supremacy. Such an exhibition can scarcely fail to cause the heathen at home and abroad to laugh at Christians, and to retard greatly the progress of Christianity—the religion of love and peace."

It is just here, agrees *The Missionary Voice* (Nashville), representing the Methodist Episcopal Church, South, "that missions will probably suffer most." As it observes:

"We know very well that the whole spirit of Christianity is against war, and particularly against wars of aggression, jealousy, and self-interest. We know that the millions now battling in Europe are for the most part fighting not because they want to, but because for one reason or another they feel themselves forced to it. We know that the crime of this war, with its unspeakable destruction of human life, is not the crime of the many, but of the few, and that each of these is perhaps deluded with the notion that his cause is just and holy. We know that multitudes of the contending forces go into battle with a prayer that God will forgive and speedily end the awful carnage.

"But can the missionary make these things clear to the Mohammedan, the Buddhist, and the pagan? Will they not rather see in the war a breaking down of the fabric of Christianity, leaving only a futile theory?"

At present these American editors can see "only one side of the tapestry of history." But in the article previously quoted the editor of the *Edinburgh International Review* tries to point out some causes for hopefulness. He says:

"The war with all its evils has been a means of quickening forces of good. It has released unsuspected moral energies. The spirit of sacrifice has sprung to new life. The sons of almost every nation in Europe can say with pride to their native land:

They that love life best
Die gladly for thee.

Peoples have been awakened from dreams of pleasure and material ease, and brought up against real things. Theories, empty phrases, and catch-words have been brushed away. A world that was in danger of thinking that things could be brought about by writing and talk has been aroused to the supreme significance of action. The new spirit that is abroad is a soil favorable to the growth of the missionary idea. . . .

Another real gain has been the clarifying of issues. The war, closed, like a search-light, the yawning gulf which exists

between the gospel of Jesus and the principles by which Western society has allowed itself to be governed. A penitent and converted Church will find itself possess of undreamed-of powers for missionary service. In missionary work in the past we have in practise proceeded on the assumption that our primary requirements were more missionaries, more money, and better organization. We may yet learn to our encouragement how much more potent than any of these things is the moral power of the naked truth, clearly exhibited and intensely believed. . . .

"The missionary witness of the Church has been disastrously prejudiced by the unchristian character of social and national life in the West and by the absence of an adequate and telling Christian protest. The strength of every missionary will become as the strength of ten when the testimony of the Church is unequivocally Christian. . . .

"In regard to the material needs of Christian missions, it is well to remember that the fortunes of missionary work are not bound up with outward national prosperity. Missionary societies can prove from their records that in periods of national crisis their incomes have increased instead of diminished. A number of the larger British missionary societies had their birth amid the convulsions of the French Revolution and the Napoleonic wars. It is often in days of adversity that men's hearts are most open to the claims of the eternal, and that they are found most ready to give largely to the work of God. The present need can not be met except through unwonted sacrifices. But by the grace of God those sacrifices can be made.

"Finally, as the sure and unfailing anchor of our souls, we know that God is working for repair. From the moment that the blow fell all the divine energies have been at work to put things right. Those who, undaunted by scenes of destruction and waste, set their hands to the task of building and repair have God wholly on their side. Failure is not to be thought of. The only possible danger for missionary work is that those engaged in it should have too small a faith in what God's love and power can do."

SPREAD OF THE ADVENTIST FAITH—A successful evangelistic campaign just completed in New York by Prof. C. T. Everson, of the Adventist Church, brings forward facts and figures showing the growth of this denomination in wide-spreading fields. These "carefully gathered statistics," says the Professor, in giving them to *The Evening Sun*, (New York), "show what is going on in our work, all over the world":

"At the close of 1913 the number of communicants was 122,386, a gain for the year of 12,794, and a net gain of 8,180. This is the largest gain of any year since the denomination was organized, fifty-one years ago. Of this number 71,863 are in America, 31,772 in Europe, and 18,751 in other countries.

"The number of churches at the close of last year was 3,589. This is a gain of 715 during the year of 1913, or a gain of nearly 25 per cent.

"The total amount of funds for evangelistic work contributed by the members of the organization during 1913 was \$2,866,727.40, or \$23.42 for each member. Of this amount, 62 per cent. was raised in tithes, which is the main source of revenue of our denomination. A further expenditure of \$411,050 was made during 1913 in maintaining seventy advanced schools and \$52,643 in charity work in connection with our sanitariums, thus making total contributions and expenditures for all purposes within the denomination for the year 1913 the sum of \$4,002,141, or an average contribution for each communicant of \$32.70 during the past year.

"The total value at the end of 1913 of 1,350 church buildings and 106 institutions belonging to the denomination was \$12,812,784, there being added \$729,000 in assets during the year.

"The total number of schools," continued Professor Everson, "conducted by the denomination is 786, employing 1,511 teachers, and having an enrolment of 27,379. From these schools came 828 persons that entered the denominational work last year.

"At the close of last year there were thirty-seven publishing houses and branches having assets amounting to \$1,700,000, employing 734 persons. The total denominational literature sold during the year amounted to \$1,870,000. This literature is issued in 360 books, 325 pamphlets, 1,200 tracts, and 128 periodicals, issued in eighty different languages. This literature is distributed by 2,000 colporteurs. The denomination maintains 1,008 missionaries stationed in sixty-seven different countries. To support this work in foreign lands there was expended \$911,700 in the year 1913."

A War Story of American Enterprise

("PASSED BY THE CENSOR")

Being the Dramatic Romance of How, between the Ultimatum to Serbia, July 23d, and the Declaration of War, August 1st, the mighty Gas Industry of America was Protected, and Cheaper Light was Assured for the American People.

By FRANCIS BELLAMY

THIS is a War-Story of foresight and prompt, daring action.

The foresight of it began a year ago. The sudden, courageous action was a few weeks ago.

The Foresight

A year ago, Mr. Sidney Mason, the president of the Welsbach Company, declared: "A great War is coming, with Germany on one side and England on the other."

"It may be soon, it may be later," he said to his directors (and also to members of a Senate Committee when the Tariff Bill was up). "But it is inevitable; and when it comes, England's fleet will stop our importations from Germany. We must prepare."

Now, all the gas-mantles, which have made gas the softest and brightest light in the world, are made from Nitrate of Thorium. The Thorium ore comes chiefly from Brazil. But the chemical re-agent which reduces Thorium to a Nitrate is made in Germany and Austria. So, the Thorium ore has been sent to Europe, which, in turn, has shipped the finished Nitrate of Thorium to the American manufacturers of gas-mantles.

Thus, for all our gas-mantles we have heretofore been dependent on Germany.

The Effect of Europe's War on Our Gas-Light

"Here is what war between Germany and England would do to America," said Mr. Mason.

"First, that war would ultimately stop the making of gas-mantles.

"Second, the whole gas-lighting industry would be at stake. For this arrest of the supply of gas-mantles would reduce the output of our American Gas Plants more than half. 'Gaslight' now signifies gas-mantle light, and nearly fifty-five per cent. of the whole gas output is burned through these mantles.

"Such a collapse in gas production, all over the country, would menace the American gas industry—involving investments of hundreds of millions of dollars, and the savings of hundreds of thousands of small investors.

"Third, it would mean that every municipality, either city or village, which uses gas (in part or in whole) for public lighting, would suddenly be up against darkness in the streets, or else the costly installation of electric-light systems, with higher taxes.

"Fourth, it would mean that every American home, in which gas-mantles now make a light as soft and brilliant as the day, would be suddenly robbed of that common necessity. Nine out of ten of all who now use gas for lighting would be driven to electricity, with its higher cost.

"Therefore," he argued, "the Welsbach Company, at least, must be prepared for the eventuality of a European War."

There was the proposition: Prepare.

The first step in this preparation for the effects of the inevitable War was the gradual collection of immense lots of Thorium ore. Enough of it is now piled in the space behind

the factory to supply the country with mantles for years to come.

It needed but the chemical re-agent, made in Germany, to reduce it to the essential base from which the mantles are made.

That is the story of the long foresight.

The Rapid-Fire Action

Then something happened overnight.

On July 23d, Austria sent its Ultimatum to Serbia.

Within twenty-four hours the Welsbach Company had ordered its purchasers to buy up every available pound of the imported re-agent, held by jobbers and importers, from coast to coast.

Enough of the chemical re-agent was got within two or three days to make (by its application to the Thorium ore already stored up) enough mantles to supply all America for a year.

The long foresight had gathered thousands of tons of the ore; the quick action got the chemical that could transform it.

But with the two elements together (and in plenty), it became possible at once to avert the national disaster to gas-light which was impending. It also became possible to supply the regular gas-mantle demand until American enterprise shall be able to manufacture enough of the re-agent, here at home, to meet all future demands.

This master-stroke was all between the first little shadow of War on July 23d and the Declaration of War on August 1st. By that time the price of the precious chemical re-agent had jumped 400 per cent.

The Day Was Won

But the Gas-lighting Industry had been saved.

Countless small investors in gas plants in every town had been safeguarded from loss.

Continuance of public gas-light had been insured to all cities and villages.

The innumerable homes where the soft mantle-light is an every-night comfort had been protected.

It was a daring, and a masterly stroke.

But it was the American brand of courage, which sees straight and acts quick.

It was America's first answer to Europe's merciless War: "You shall not fetter American industry, nor cause our people loss. You shall see what Made-in-America can mean."

Thus, the First Act of this new Welsbach enterprise, started by the War, undertaken with American foresight and quickness, has PRE-SERVED a daily necessity to All the People.

What Then?

But if that First Act was thrilling, the Second Act, you will admit, is amazing.

Act I. was an example that our proud old American spirit of "go ahead" has not lost its nerve. Act II. now shows the newer American spirit—that Advance brings with it an

Obligation: that a big Advantage should be made Mutual.

For the Welsbach Company followed its brilliant Made-in-America stroke with a notice of a sweeping Reduction in Prices.

That overnight emancipation from Europe and the simultaneous reduction in prices make a story the like of which has not been seen before in American business.

Look back a minute.

The Welsbach gas-mantles have always been the standard of high quality.

Their prices, for the higher grades, have always been higher than those of other gas-mantles: (1) because of their rare quality and higher cost of production, (2) because they gave a brighter light for every cubic-foot of gas, (3) because they lasted longer.

But long before this War broke out, the Welsbach Company had planned to reduce the prices of their finer grades. By new efficiencies the Company had been preparing for the reduction.

To Dare Again

When the War came, and the revolutionary readjustment became necessary, the Company resolved not to postpone the notice of Reduced Prices.

The Made-in-America operation was an untried path. But there was no dilly-dally about the plan of price-reduction.

Danton, in the most perplexing hour of the French Revolution, said that France's only safety was "to dare, and dare again, and then to dare."

So, too, the Welsbach "dared again, and then dared."

It not only equipped itself, within a week, to cut loose from Europe.

It also enlarged its plant, and hired 800 new workmen, and began to work day and night to supply all America.

The People's Gain

Then the Company gave notice that it would henceforth sell its high-grade Welsbach and Reflex mantles at a reduction of from THIRTY to FORTY per cent. from its former prices. Grades formerly costing 35 cents now sell at 25 cents, and grades formerly 25 cents now sell at 15 cents.

It furthermore pledged the public that every Welsbach mantle made under the new conditions and sold at a lower price, shall be absolutely up to the former standard, which has made the Welsbach reputation.

Why should not the People share in the advantages to come through increased efficiency and greater production?

For it is the People's long appreciation of the Welsbach quality which now enables the Welsbach Company to create its own resource instead of depending on Europe.

Thus the Second Act of this recent Welsbach enterprise—a Forty per cent. reduction in price—is a fair example of how the new adjustments in American business, forced by War, may be made to work to the advantage of All the People.

Pre-eminent in Every Respect

The Overland is one of the handsomest cars in the world. Its modish and modern, full stream-line body design, while possessing inherent grace, artistic beauty and exquisite style, has, above everything else, symmetrical simplicity.

The Overland is one of the easiest riding cars. The newly designed, long, improved and underslung rear springs absorb every shake and shock. Their unusual flexibility make shock absorbers useless, for they elim-

inate every jar and jolt, insuring smooth and even riding.

The Overland is one of the most comfortable cars. The new upholstery, while of the highest quality, has, in addition, greater depth and softness. The seat backs are also higher. There are larger tires and divided front seats.

CURRENT POETRY

OCCASIONAL poetry—poetry, that is, written because of an actual event, not solely because of a creative impulse—has fallen into disrepute of late years. Deftness and epigrammatic precision have come to be the chief virtues of this sort of verse; and these two qualities alone never yet made a true poem.

But in his newly published "Poems" (Charles Scribner's Sons) that accomplished maker of light verse, Mr. Edward Sanford Martin, proves that the occasional poem may be more than a graceful trifle; that it may, indeed, present strong emotion. The delicate yet poignant pathos of these lines is not easily forgotten.

LINES INSCRIBED ON A HOSPITAL CLOCK

(E. B. W., ob., 1907)

BY EDWARD SANFORD MARTIN

Sing, little hours of Edith, as you pass,
Who had too few of you, but those she had
Spent like a Queen of Time.
Sing of her as you chime!
How, as she spent you, generous and glad,
To help the suffering and cheer the sad,
Time turned his glass.

The sonnet, in this artist's skilful fingers, is not a decoration, but a poem. "By the Evening Fire" throbs and glows with "the splendor of humanity."

BY THE EVENING FIRE

BY EDWARD SANFORD MARTIN

If mothers by their failings were condemned,
Oh, what an orphaned planet this would be!
That's not its fate. Their loving makes amend
For all the tale of their deficiency.
The tempers by the long day's cares are tried,
And sharp words sometimes fall, and tears
Emerge;
The hasty tongues unreasonably chide,
And little faults look bigger than is true—
Comes evening and anew with strength equips
Love's steady current strenuous to bloom.
Smoothed, then, Care's lines by childish finger-tips
Cured the heart's pangs by babyhood's carous
Clasped in the mother's arms, close to her breast,
Wrapt in her love, the restless child finds rest.

Of course, European poets can not forget the war. But not all of them spend their time in hurling invectives against their enemies. Katharine Tynan, for example, knows that hate is not the only feeling caused by war. She deals with a novel and true aspect of militarism in this forceful poem in *The British Review*.

IN WAR-TIME

BY KATHARINE TYNAN

Now strikes the hour upon the clock,
The black sheep may rebuild the years;
May lift the father's pride he broke,
And wipe away his mother's tears.
To him, the mark for thrifty scorn,
God hath another chance to give,
Sets in his heart a flame new-born
By which his muddled soul may live
This is the day of the prodigal
The decent people's shame and grief;
When he shall make amends for all,
The way to glory's bloody and brief.
Clean from his baptism of blood,
New from the fire he springs again,
In shining armor, bright and good,
Beyond the wise home-keeping men
Somewhere to-right—no tears he shed!
With shaking hands they turn the sheet,
And his name among the dead,
War of the Army and the Fleet.

They tell with proud and stricken face
Of his white boyhood far away—
Who talked of trouble or disgrace?
"Our splendid son is dead!" they say.

The publication of "Merchants from Cathay" gave pleasure to many a lover of poetry; it established Mr. William Rose Benét as a sincere, imaginative, and accomplished writer. It can not justly be said that his "The Falconer of God" (The Yale University Press) will greatly increase his reputation. The title poem (which was reprinted in these columns from the magazine in which it first appeared) is admirable, but the other poems, altho excellent, are perhaps not sufficiently distinctive to render advisable the publication of this volume so soon after "Merchants from Cathay."

Here are two of the best of them. The first is an exquisite love-song, musical and thoughtful, suggestive of Browning in his gayer and simpler moods. "Mid-Ocean" (also somewhat Browningsque) is picturesquely vivid.

RECALLED

BY WILLIAM ROSE BENÉT

Sing of love, and what sing I?
That the burnished marshes lie
Yonder 'neath a poppled sky:
That the eldritch wind makes free
With the wayward soul of me;
That yon gnarled and crookback tree
Points the way to visions new
Past the luring sea's keen blue—
That the sunset thrills me through!

Sing of love, and what sing I?
To the dusk's soft symphony
I would be in brother tone,
Love can leave no man alone!
Forth fare I, companioned now
By each swayed harmonic bough,
By each precient star aflame.

Yet, with twilight, how she came
Whispering in each breeze, and bowed
From each battlement of cloud.
"You would shut me out, content
With a barren firmament?
See, I call you softly!"

Lo,

Thus I heard her—and I go.

Sing of love, and so sing I:
What worth earth or sea or sky
If her little mortal word
So could still them, and be heard?

MID-OCEAN

BY WILLIAM ROSE BENÉT

Leaning on the rail, looking at the lead,
There was blue water under us, astern, and ahead,
A million miles behind us and a million miles
Before
Water blue as indigo, that never knew a shore!

Where was the sky-line, that shining silver thread?
Blue with blue was blended. Sea and sky were
wed.

Pulsing through that blue abyss Time and
Thought were dead
Steam? We buzzed suspended in Infinity instead

Throbbled the silly engines. Joked the silly crew,
"Sails," with palm and needle, swore—as sailors
do.
"Chips" said, "Well, we've cruised it! We're
coastin' down the hill!"
Liar! In that azure vault we hung stock-still.

Never was I so at peace, never so afraid,
Like the timeless time it was before the world was
made.

Blue oblivion, largely lit, smiled and smiled at
me—

Atom in the void, on the Western Sea!

To Play The Game Well

—in sport or business, requires brains, steady nerves and endurance.

Strength of mind and body comes from food, but it must be the right kind—to keep one "fit."

—everywhere.

An American poet, Mrs. Florence Earle Coates, has put one of the most interesting episodes of the present war into effective verse. The poem, excellently graphic and animated, appears in *The Athenæum*.

PLACE DE LA CONCORDE

AUGUST 14, 1914

BY FLORENCE EARLE COATES

[Since the bombardment of Strasbourg, August 14, 1870, her statue in Paris, representing Alsace, has been draped in mourning by the French people.]

Near where the royal victims fell
In days gone by, caught in the swell
Of a ruthless tide
Of human passion, deep and wide:
There where we two
A Nation's later sorrow knew—
To-day, O friend! I stood
Amid a self-ruled multitude
That by nor sound nor word
Betrayed how mightily its heart was stirred.

A memory Time never could efface—
A memory of grief—
Like a great Silence brooded o'er the place;
And men breathed hard, as seeking for relief
From an emotion strong
That would not cry, tho' held in check too long.

One felt that joy drew near—
A joy intense that seemed itself to fear—
Brightening in eyes that had been dull,
As all with feeling gazed
Upon the Strasbourg figure, raised
Above us—mourning, beautiful!

Then one stood at the statue's base, and spoke—
Men needed not to ask what word;
Each in his breast the message heard,
Writ for him by Despair,
That evermore in moving phrase
Breathes from the Invalides and Père Lachaise—
Vainly it seemed, alas!
But now, France looking on the image there,
Hope gave her back the lost Alsace.

A deeper hush fell on the crowd:
A sound—the lightest—seemed too loud
—Would, friend, you had been there!
As to that form the speaker rose,
Took from her, fold on fold,
The mournful crape, gray-worn and old,
Her, proudly, to disclose,
And with the touch of tender care
That fond emotion speaks,
Mild tears that none could quite command,
Placed the Tricolor in her hand,
And kissed her on both cheeks!

Has Mr. Edwin Markham written a poem on the war? His opinion would be worthier of attention than that of most American poets, who for the most part content themselves with loud repetition of the scarcely novel statement that war is terrible. Here are three excellent examples of this true poet's strong and delicate art. We take them from *The Nautilus*.

THREE QUATRAINS

BY EDWARD MARKHAM

OUTWITTED

He drew a circle that shut me out—
Heretic, rebel, a thing to flout.
But Love and I had the wit to win:
We drew a circle that took him in.

A MYSTERY

God moves among His mighty worlds afar,
Yet shines in every soul a quiet star;
So the huge sun, that climbs the unfathomed blue
Nars glittering in every drop of dew.

ETERNAL EQUITIES

All the poised balances of God would swerve,
Did men not get the blessings they deserve;
And all the vigorous scales of Fate would turn,
Did men not get the punishments they earn.

Look at your roof gutters and drain pipes.

See what happens to ordinary sheet metal.

ARMCO IRON Resists Rust

DO you notice pin holes here and there, crevices, mean little hints of new metal work needed all over the roof?

Then examine your sheet metal range, gas stove or furnace. Perhaps they are starting to rust away, too. The metal lath in your cement walls, ceilings and partitions—is it a mere network of rust? And how about your wire fences, wire netting, nails, refrigerators, ash and garbage cans, galvanized pails? Do they show signs of premature rust?

Every year millions of dollars' worth of sheet metal is destroyed by rust. This waste is unnecessary, and being unnecessary it would be considered criminal but for the fact that the public has not known the cause of rust nor the remedy for it. But there is a remedy—pure iron.

Pure Iron Resists Rust

"Why, then," you ask, "hasn't pure iron been more widely used?"

For two reasons: First—Scientists have only just come to a full realization that it is the purity of iron which enables it to resist rust. Second, until recently nobody knew how to make pure iron in large quantities at a marketable price.

Even today there is but one plant which is equipped with the facilities, knowledge and experience to produce iron of the highest purity—iron in which the things fatal to rust resistance have been avoided.

THE AMERICAN ROLLING MILL CO.

Licensed Manufacturers under Patents
granted International Metal
Products Company

MIDDLETOWN, OHIO

Branch Offices:

CHICAGO: 1206 People's Gas Building
PITTSBURGH: 1435 Oliver Building
DETROIT: 901 Ford Building
NEW YORK: 221 Hudson Terminal Building

CLEVELAND: 942 Rockefeller Building
CINCINNATI: 5101 Loew Central Building

Because of its purity, Armco Iron shows practically no dissolution when the zinc is applied in galvanizing. Therefore, the coating is purer and lasts many times longer than galvanizing does on ordinary iron or steel.

Armco Old Style Tin Roofing or Terne Plate with its base of rust-resisting Armco Iron coated with pure tin and lead, makes roofs that last like those of our grandfathers' time.

How to Get Armco Iron—Armco Iron is sold in sheet form through distributors all over the country. You can obtain Armco Iron products from your hardware store or tinmer. If you have difficulty in getting Armco Iron, write to us for names of dealers and manufacturers who use Armco. For example: Pure Woven Wire Fence Co. use Armco Iron. General Fireproofing Co. make Herring-bone lath of Armco Iron. Imperial Spiral Lath, and several other styles are made of Armco Iron by us.

The trademark ARMCO is used the assurance that iron bearing that mark is manufactured by The American Rolling Mill Co. with the skill, intelligence and ability associated with its products, and hence can be depended upon to perform in the highest degree the most claimed for it.

Write for Free Book—"Defeating Rust"

It tells the complete story of pure iron—Armco Iron and the savings it offers.

IDA M. TARBELL ON BUSINESS

TO-DAY in Europe the triumphs of a thousand years of science are made the instruments of wholesale murder. We call it war.

For two years Ida M. Tarbell in the United States has been visiting the homes of business, big business and smaller business, all over the country, studying actual conditions in the workshops.

She learns this: American employers have discovered that human beings are more valuable than the most scientific machines, and that cold business sense demands that proper care be taken of the men and women who work.

This series of articles by the foremost journalist of America begins with "Our New Workshops."

November American Magazine

PERSONAL GLIMPSES

THE ADMIRABLE VON KLUCK

THE prominence of the name of General von Kluck in the cable dispatches of the first two months of the war has served to impress the American public with a belief in his generalship; and this in spite of the fact that very little has been published concerning this game and clever warrior. The only source of information seems to be "Wer Ist's"—the German "Who's Who." There one learns that Von Kluck is sixty-eight years old, born of a middle-class family, and a soldier since his nineteenth year. He fought in the war with Austria in 1866 and in the Franco-Prussian War. At the outbreak of this war he was in command at Königsberg; since then he has won the attention and the admiration of all observers by his masterful advance on Paris through Belgium. A celebrated military expert in the Netherlands is quoted as asserting that Von Kluck is more than the "buffer general" that some have called him since he has withstood the Allies' major attacks. In a dispatch to the *New York Herald* the Dutch general is credited with the statement that Von Kluck is in reality the Kaiser's only hope in the west. There are too many princes, he says, in command, inexperienced, with an utter disregard for human life, and unacquainted with the men with whom they are fighting. Outside of these, he insists, the German generals now leading the Kaiser's armies are, for the most part, men who have been for some or many years on the retired list. There is left none equal to Von Kluck, who, says the Hollander, would have achieved lasting fame already in his intended capture of Paris, had not the plans of the General Staff been modified. Of his personality and the part it must play in the present situation, we learn:

He is a fine officer, tall, thin, and truly Latin in aspect, except for his spike helmet and his toothbrush mustache. He owes his rank neither to noble birth nor to intrigue. In fact, he had reached the rank of colonel before the Emperor bestowed nobility on him, and he apparently did not care very much about being "Von Kluck" after having been for so many years simply "Kluck."

The General is thoroughly popular with his soldiers, partly because he treats them well, partly because they recognize him as a real chief, a true leader. He is a man of few words. His writings on strategy make him an authority—academically, of course,—on military science.

The Court ignores him because he is "not born," and because he has only been a few years allowed to write the prefix "von" before his name; and they have given him a rude nickname: "General von Unglück" (General Misfortune), but the few unprejudiced people belonging to the military clique in Berlin as well as the military attachés, have always recognized him as an officer of outstanding ability.

He is in many respects, however, an exception in the German officer corps, and should he prove unequal to his rising

reputation, what would Germany do and to whom would she give the command of her army?

I am told that such veterans as General von Bernhardt and General von Pritwitz und Gaffron have been approached and asked if they would consent to place their sword, however rusty it may be, at the disposal of the fatherland. Even the veteran Field Marshal von Haessler, who is eighty-one, has been asked; and it seems probable that they will all accept any command that may be tendered them.

MOBILIZING IN SIBERIA

THERE are doubtless many for whom the name Siberia means little else than desolate wastes of frozen land, inhabited solely by convicts and military guards armed with knouts. That this impression is untrue is well evidenced by the London *Daily Telegraph's* story of the mobilization of the Siberians when Russia declared war. We find, not the sluggishness and fumbling ignorance that some might expect, but instead a readiness and efficiency that is characterized by the writer as not un-American in its aspects. He remarks:

Here in the heart of Siberia the most striking feature, to a foreigner, of the early stages of the war was the remarkably businesslike fashion in which the country tackled the grim realities of war.

We were in Semipalatinsk, 800 miles from the railway, when the war was declared. The news was carried all over Siberia by galloping Cossacks, who, like a multitude of Paul Reverses, spread across the country notifying the farmers and peasants of the little villages and ordering the mobilization.

Omsk, three days' journey from Semipalatinsk, we found humming with well-regulated activity. There were nearly 200,000 reservists already gathering there and being sent westward for drilling in the encampments in southern Russia.

The outstanding feature was the rapidity, precision, and smoothness with which the vast masses of troops were handled. This was an object-lesson in the awakening of the Russian Empire, and a reminder that Siberia is adopting the aggressive American methods of grappling with its vast problems.

The attitude of the Siberians toward this war is very different from their attitude during the Japanese War. Japan meant little or nothing to the Siberian *moujik*, but he knows the Germans. This is no struggle against an unknown foe over an obscure international disagreement, but a war in which the personal equation largely figures. Every man feels that he is going to help his brother Slavs in Serbia, and, at the same time, free Russia from Teuton tutelage.

At Semipalatinsk the breweries and vodka-shops were closed as soon as war was declared. As soon as the reservists began to pour in with the regularity of a well-oiled machine, they were sent in one door of the low building which housed military headquarters, and sent out promptly with instructions where to report for service, with warrants for steamship and railway travel, and with an allowance of twenty-five kopecks a day for spending-money.

It was a thrilling scene as the reservists took the boat for the mobilization point. Great crowds thronged the pier where the

"A Business Man of God"

That Is What He Called Himself Instead of "Reverend" or a Minister

He found himself in a church "left downtown"; surrounded by business. "Dead as a door-nail," they said. "Move" he was urged. "Not much," he returned. Today the church is one of the most prosperous in all the city; alive and tremendously effective. It has even put men at the head of large business interests. How? Read the most inspiring church-story of modern days

in the Smartest Stores is Famous Holeproof Hosiery

In countless stores you will see these hose displayed—to gain other steady buyers.

For, once you try Holeproofs, your whole family will wear them. They are too good to be forgotten.

Six pairs of cotton Holeproofs for men, women and children are guaranteed to wear six months without holes. If any of the six pairs fail within that time, we will replace them with new hose free.

Three pairs of silk or silk-faced—for men or women—are guaranteed three months. Nearly 2,000,000 people now wear them because *Holeproof Hose* last. We pay for our cotton yarns an average of 74c per pound. Common cotton yarns, selling for 32c per pound, will never do for Holeproofs.

At All Holeproof Dealers

The genuine Holeproofs are sold in your town. Write for dealers' names and the free book that tells about Holeproofs. We ship direct, charges paid, where no dealer is near.

\$1.50 per box and up for six pairs of men's cotton Holeproofs; \$2.00 per box and up for six pairs of women's or children's in cotton; \$1.00 per box for four pairs of infants' in cotton. Above boxes guaranteed six months. \$1.00 per box for three pairs of children's cotton Holeproofs, guaranteed three months. \$2.00 per box for three pairs of men's silk Holeproof socks; \$3.00 per box for three pairs of women's silk Holeproof stockings. Boxes of silk guaranteed three months. Three pairs of Silk-Faced Holeproofs for men, \$1.50; for women, \$2.25. Three pairs of Silk-Faced guaranteed three months.

By invitation members of the World Association

Governor, in full uniform, harangued his people in stirring words.

"This is no war of aggression," he said. "You are fighting to crush a cruel oppression, and Almighty God is with you. As for your women folks, who are left, perhaps, to mourn, let them be of good cheer, and by their courage and self-control emblazon the Russian flag with one more instance of the devotion of its womanhood."

As he finished, the band played the national hymn, and the priests, robed in green and gold, advanced toward the ship, giving it and the passengers their blessing.

The Russians have a great advantage in the good feeling between the officers and the men. Their treatment is paternal, almost to the extent of that exhibited in the school-room.

A NEW ORDER OF POLICEMAN

THE policeman who tries not to make arrests, is a phenomenon of Atlanta, Georgia. For twenty years Officer Coogler of the Atlanta police force has been proving by practise the theory that, in small offenses, an ounce of prevention can do away with the need of cure altogether. Officer Coogler discovered this truth for himself, and by accident. A kindly heart and confidence in his estimate of human nature urged him to make the first trial, and since then he has duplicated his first success many times. Bruce Barton, in the *American Magazine* for October, tells of Coogler's start. It was a case of wife-beating, by a husband who was the worse for drink, and Coogler, deaf to the man's entreaties, was leading his captive to the nearest patrol box. Arrived at the corner, the man, now more sober, poured out a torrent of entreaties, promises, and so on, but—

Coogler's hand never so much as hesitated in its progress toward the box; he had heard that plea, in almost those precise words, too many times before. Just at that instant, when the key turned in the door, however, he felt a quick tug on his coat and, turning, found a sobbing little girl looking out of wet eyes into his.

"Please, Mr. Policeman, don't lock papa up again, mama doesn't want you to."

Now Coogler has little girls of his own; no little girl has ever tugged at his coat-tail without getting exactly what she wanted. He looked around at the poor fellow drooping at his side, then down at the little one, and back at the father again.

"Look here, you," he said, with all the gruffness he could put into his tone, "I'm going to give you one chance to make good. In a minute you'll be free; but listen—I pass this corner at seven o'clock every night. Every Friday night, rain or shine, you're going to be here with your wife. As long as you keep sober, I won't trouble you; but the first time you ain't there, or your wife has a kick coming, I'm going to have you over to court the next morning. And it won't be any ten-day outing either. You'll get yours and you'll get it good—understand?"

The fellow said he did, and, with a quick glance up the street to see that no sergeant was in sight, Coogler turned his back and walked away.

Lutton's Miniature Glass Gardens

ordered today will reach you in time to prepare a garden that will supply your table with delicious vegetables and beautiful flowers throughout the long winter months. Frames shipped complete, ready to put together. Quickly assembled, easily ventilated. Built of the same materials as the large ranges of glass which we erect in all parts of the country. Special No. 2

Beginner's Garden

To meet popular demand, we manufacture this special sash and frame. It is 8 ft. 6 in. long and just wide enough to put in a 3 ft. space. Sash has six large lights of extra heavy glass so that plants receive the maximum of life giving sunlight.

Carefully packed, easily set up. Price complete, freight paid anywhere in U. S. For double glazing \$1.00 extra. **\$10.50**

The little girl who cried that night is a mother now. Coogler showed me her picture taken in a family group.

"See the fine-looking old feller holding the kid?" he asked me. "That's the old man. Never missed a Friday night, and ain't had a drink in twenty years."

The "fine-looking old feller" is one of scores. After Coogler discovered how well his system worked, he began letting somebody go almost every week, sneaking around into an alley to do it and holding his breath for fear somebody would find him out. He became the representative of the law in his district in all its majesty: policeman, judge, prosecutor, and jury.

"You're guilty of being a worthless loafer around here that ain't worked for six weeks," he'd say to a young scapegrace. "I have a mind to give you ten days. What's that? You'll go to work tomorrow if I'll let you off? Not a bit of work you'll do. How's that? You really mean it?—I tell you what, young feller, I'll give you a six-weeks' trial. Meet me every Thursday night at eight o'clock: as long as you work, all right; the minute you quit the job it's sixty days for yours out at the Stockade." Coogler had discovered that he could make men reform by holding his club over their heads, better than by beating them with it.

SAVING MEN AND MONEY

UNDER the firm conviction that the ordinary prison system is wasteful both of the State's funds and of human lives, the Probation Commission of New York State has lately been conducting a reform that bids fair to become widely popular and, so far, has more than justified itself. They are attempting to save men from prison. In this they are doing on a large scale what Officer Coogler, of Atlanta, has done for the wrong-doers on his beat, and, apparently, they have not only benefited many human beings thereby, but have as well succeeded in proving to the State that the system of probation is one of pecuniary advantage. The *New York Press* calls this "making altruism pay," and comments upon it editorially as follows:

On the first of August there were at large in this State 10,029 persons who technically should have been in jail, but who under a comparatively new system are trusted with their liberty—who, that is to say, after conviction of crime were placed on probation. Of this number, based on statistics covering the last seven years, 77 per cent., the State Probation Commission reports, may be expected to lead decent lives hereafter.

Reclaiming some 7,000 offenders against law is an important achievement in itself, and cheap at any price, but consider the basic economics, so far as the State is concerned, in the transaction:

It costs \$200.83 to maintain each inmate of a State prison for one year. It costs \$24.42 a year for each person on probation. The difference is \$176.41 a year. The total saving is the respectable sum of \$1,779,215.89 a year.

And this is not counting the net gain to society through having ten thousand persons turning their hands to productive labor instead of being interned behind stone walls.

THE REAL LATIN QUARTER.

BY V. HERBERT SMITH.

Racy sketches of the life and characters of the famous Bohemia of Paris, with 100 drawings and camera snapshots by the author, two caricatures in color by the celebrated French caricaturist Sancha, and water-color frontispiece by P. Hopkinson Smith. 12mo, cloth, 205 pages, \$1.20. Fourth edition. Funk & Wagnalls Company, New York and London.

A Beautiful NEW Book of Intense Interest

Opening up a startling line of Valuable Facts concerning THE GREAT SOUTH AMERICAN TRADE OPPORTUNITY

THE AMAZING ARGENTINE

By JOHN FOSTER FRASER

The New York Independent says about this book:

"Almost the only good thing we can see about the war is the opportunity it brings for the expansion of American commerce into the inviting fields to the south. But the chief obstacle is that we do not know these countries; we have not even learned the A B C's. Let us begin, then, with *The Amazing Argentine*, for John Foster Fraser is a geographic journalist by profession and is able to play up statistics so they stand out like an electric signboard. We get a vivid impression of a land where millionaires are made by magic and there are chances for many more."

REFORMING BASEBALL

"REFORM" is a lady with an unpleasant reputation for sharp-tongued meddlesomeness, but for once her assistance is likely to be sought voluntarily. Baseball is in a state of decline or senility or paralysis or hypochondria—no one seems to be quite sure of the nature of the ailment—and so it is extremely likely, the *Washington Times* tells us, that Nurse Reform will be called in, to administer a few old-fashioned remedies and bring about the patient's recovery in time for next season. The *Washington* editor's diagnosis of baseball's malady is Commercialism. But how to rid the game of the paralyzing effect of this poison is not so easy to decide. He explains:

It is well enough to talk of commercializing the game; but who would attend the sessions of amateur clubs? Public taste and expertness demand the finished product that only highly specialized professionals can provide. It is certain that the game will continue professional and commercial; the question is how to rid it of disadvantageous results of the commercialism.

Frank Chance, in one of his sporting letters, makes one suggestion that ought to be considered seriously. There isn't enough variety in the game; enough gambling prospect of changes in the line-up of clubs. Philadelphia is conceded the leadership of the American League by most people before the season opens; already the sharps are saying that nobody has a real chance against Mack's men for the 1915 pennant. That has been the way of it since the time when memory hardly runneth to the contrary.

Frank Chance, explaining all this, says the first-division teams, anxious to hold their positions, load up unconsciously long salary lists of the best men they can get, and then hold these men to warm benches throughout the season rather than let them go to any weaker club. A second-division team is unable to strengthen itself, while a first-division aggregation is very liable to have the personnel of two complete teams of the first class. The first-division manager, with his eye eternally on the gate receipts and the post-season swag, will not let go even the men he doesn't need; he'd rather pay them salaries in idleness than risk the possibility that they might win a game from him occasionally.

Our attention is called to the *Washington* team, of whom it has been said that they will never be allowed to win a championship, because the attendance in *Washington* is not large enough to make world's series games profitable there. There is really no truth in this, and no Capital fan ought to credit it, but, on the other hand—

Why shouldn't they believe it! The commercial dog-in-the-manger policy that keeps twenty-eight or thirty first-class men on the staff of a leading team, simply for fear they might get away to strengthen a weaker one, is getting its comings-up. The public is tired of it. It wants to see the weaker ones strengthened; to see some more chance injected into the game. It has been pleased as Punch this year over

Boston's sky-rocket performance. If there were two or three performances a season, in each league, more or less like that, it would be the more interested.

It's hard to be loyal to the "home team" at \$1 or so a game when we realize it isn't "our" team at all, that it hasn't a chance above third place, that it isn't intended, in the great scheme of baseball things, that "our town" shall get dangerous to the "big ones," and that the reason for all these limitations and conditions is that the people with the most power in the control of the game want to make the money.

Why not look up Chance's proposal to limit strictly the playing list of teams? Turn loose the good men, let the minors be built up, let the weaker teams have a better chance; let the pennants pass around from year to year. They would do that, as sure as anything, if baseball were more a sport and less a business.

"WHEN THE SLEEPER WAKES"

THE war has no monopoly of horrors. As one Kansas City ballplayer can fervently testify. Horrors sometimes follow a ball game, and tho they may not have all the frightful reality of war, they are no less perturbing to their victim. If they ever happen to Guy Copeland again, it is extremely probable that the Kansas City Auroras will lose one of their leading lights.

Guy found himself in the delicate position of being mistaken for a corpse, and without any satisfactory alibi. His only escape, apparently, lay in flight, to which he took with such persistence and concentration that he nearly discovered a new system of aviation. The Philadelphia Public Ledger explains the incident more fully:

If you were knocked unconscious by a baseball and, with your returning senses, found yourself resting on a marble slab, surrounded by the usual appurtenances of the undertaking establishment, you would be a bit perturbed, now wouldn't you? That's exactly what happened to Guy Copeland, of Kansas City, recently, and his fright under the circumstances was entirely excusable.

Copeland was at bat in a semiprofessional ball game in Kansas City when the pitcher hit him in the temple with a "fast one." The batsman dropt and the players carried him to the morgue, which happened to be near by. There he was stretched out on a slab while physicians were summoned.

The injury was not serious, and Copeland opened his eyes before the doctor arrived. He looked about him with terror in his eyes—saw the caskets and other ghastly things. Then, before the men in the room could say a word, he uttered one piercing shriek and leapt through the nearest window, taking screen and sash with him. His friends gave chase and finally caught him. It required a small army to calm him, physically and mentally.

"I thought they made a mistake and believed I was dead," said Copeland, when he could discuss his experience. "It was not the fright at being in the morgue so much as the fear that I would be unable to convince the people that I really wasn't a goner. I knew I was alive and wanted to get so far away that they wouldn't be able to keep me dead."

HENRY FORD'S FEDERAL

The wizard of the automobile industry—Henry Ford—bought a Federal Truck for use on his large farm at Dearborn, Michigan.

He selected the Federal as the most efficient, dependable and economical means of solving the haulage problems on his estate.

The Federal policy of concentration on one model only was largely responsible for this purchase. The Federal Truck has proven in long active service to be the standard in design, materials and construction.

It is a significant fact that great numbers of the other leading motor car and parts manufacturers have also adopted Federalized Transportation in their own business. They realize that the Federal is built for and gives the service they must have.

Our Transportation Engineering Department will give you facts about haulage in many lines of trade, and show you what Federalized Transportation will save you in your own business.

FEDERAL MOTOR TRUCK COMPANY

SIR JOHN FRENCH AS A WAR CORRESPONDENT

WHATEVER laurels Sir John French, in command of the English troops in France, may win through his military exploits, it will be difficult for him to exceed the fame he has already won as star war correspondent. The *Chicago Herald* calls him a great reporter, and marvels that he can add this absolute command over the English tongue to his sterner attributes as commander of a great army. In admiration for the man's cleverness with his pen *The Herald* exclaims:

No one can read his reports to the British War Office without being struck with his weighty lucidity, his calm mastery of the important facts, the total absence of any attempt at "effect," and the remarkably suggestive bits of pertinent description.

Rivers begin to mean something, towns to take on significance, movements to have an easily discernible object, even regiments to assume personality. Everywhere the reader feels that he is getting a grasp of facts, and of all the facts which it is prudent to make public. At every moment he feels that it takes a big man to speak so simply of tremendous things.

There are few things more difficult than to make military activities clear to even the intelligent layman. That General Grant did this to a remarkable degree, writing of big things with a big simplicity, makes his "Memoirs" invaluable. That Sir John French can do it makes his dispatches models of war-reporting.

Alas for the disillusionments of this matter-of-fact age! No sooner are we rapt in wonder at this prodigy, than Truth, the tactless creature, undresses us. We become dispirited and tend to doubt all miracles. Was not Pegasus, possibly, merely a pre-Langley aeroplane? The agent of our despond is the *New York Evening Post*:

When the Duke of Wellington was once told that he would live longer in popular memory for the beautiful style of his dispatches than for his victories in battle, he replied: "Yes, I didn't think Gurwood had it in him." Now another illusion is shattered in the announcement that the author of Sir John French's remarkable dispatches from the seat of war is not Sir John himself, but a Colonel Swinton, probably Col. Edward D. Swinton. This the War Office itself admits. Thus does history repeat itself. Lord Roberts's South-African dispatches were also not his own, but the work of a gifted subordinate, Lieut.-Col. H. V. Cowen, of the Royal Horse Artillery, whose merits were not so obvious as to have prevented his remaining for seventeen years in the grade of major before Lord Roberts chose him as an aid. So remarkable and so thrilling was the first dispatch from Sir John French telling of the wonderful English retreat from Mons that it was freely hailed as an imperishable contribution to the history of war and to literature itself, and it was thought that the British commander had added himself to those other great generals like Grant, Sherman, and Sheridan who have made their mark as writers as well as soldiers. But the honors this time are plainly not Sir John's, but Colonel Swinton's.

VILLAGE VIEW APPLES

From Old Virginia

Grown in the Blue Ridge Mountains of Virginia
Where Nature has Blessed the Soil

The pungent soil and the crisp, sunny mountain air give them their delicious flavor. ? What Effect has Religion Upon Temperament?

A most interesting and instructive discussion of this problem is contained in the new book

Religion and Temperament

By the Rev. J. G. STEVENSON, B.A.

How far is religion only a matter of temperament? The author has made a careful and scientific study of the various temperaments with which mankind can be grouped—the Sanguine, the Choleric, the Practical—and shows in a striking manner, giving historical examples, the effect of religion on the varied temperaments dealt with.

CURRENT EVENTS

EUROPEAN WAR

BELGIAN OPERATIONS

- October 8.—The bombardment of Antwerp continues.
- October 9.—Antwerp surrenders to the Germans, altho not all of the surrounding forts have been captured.
- October 10.—The German soldiers enter Antwerp.
- October 11.—The Germans are reported advancing on Bruges and Ostend.
- October 12.—It is stated that the Germans are before Bruges, and that German aviators have appeared over Ostend, fourteen miles beyond. The seat of the Belgian Government has been moved to Havre, France.
- October 13.—Several engagements are unofficially reported between Alost and Ghent, with slight German reverses.

THE CAMPAIGN IN FRANCE

- October 8.—Berlin reports the recapture of Douai, in the Department of the Nord, and a successful stand in the Argonne and Verdun regions.
- Paris reports an advance at Arras, fifteen miles southwest of Douai. The Germans are still occupying in force the region between the Oise and the Somme.
- October 9.—A spirited artillery duel is in progress in the Woivre district.
- October 10.—Both sides report progress in the neighborhood of St. Mihiel.
- October 13.—Paris reports its left wing between Hazebrouck and Bethune engaged against the enemy, mostly cavalry.
- A German army corps is reported in possession of Lille.
- October 15.—Unofficially the Allies' left is reported as sweeping around Lille and occupying Ypres.

THE RUSSO-GERMAN CAMPAIGN

- October 9.—Petrograd reports the Russians in possession of Lyck, in East Prussia.
- October 11.—According to Petrograd, Russian Poland between Warsaw and the Prussian frontier is clear of the enemy.
- October 13.—In contradiction to this, the American Consul at Warsaw notifies the State Department that the British Consul has requested him to take over his office in case of emergency. He reports similar requests from consulates in neighboring cities, indicating a German advance on Warsaw.
- Berlin insists that all of Russian Poland west of the Vistula is in her possession.
- Ambassador Dumba at Washington announces that the Austrian troops are at the river San and have succeeded in raising the siege of Przemyśl, Galicia.
- October 14.—Vienna states that the Russians occupy now only the eastern position before the fortress of Przemyśl.

GENERAL FOREIGN

- October 10.—Charles, King of Roumania, dies in Bucharest, at the age of seventy-five and in the forty-ninth year of his reign.
- The United States demands of General Carranza an immediate answer to the questions already submitted to him concerning his attitude toward the Vera Cruz situation.
- October 12.—During an attack by Villa

Serve a "Universal" Breakfast

Without Going Near the Kitchen

With a UNIVERSAL Electric Percolator, Grill, Toaster, and Egg Cooker you can serve a complete breakfast without once leaving the table or striking a match. The following menu is but one of the many varieties which may be prepared:—

Cooked Cereal—Grilled Bacon—Hashed Brown Potatoes
Boiled, Fried or Poached Eggs—Toast—Coffee

The name UNIVERSAL is a guarantee of first quality materials and the highest standard workmanship. Each appliance bearing the UNIVERSAL Trade Mark is guaranteed by us to perform its work to your entire satisfaction. As a safe, convenient and practical method of cooking, UNIVERSAL Electrics stand alone. The cost of operation is but a few cents per meal.

Which Will Succeed?

Each has only a few hurried moments for reading.

One spends *all* his precious moments with the daily paper.

The other, little by little, is gaining that knowledge of a few truly great books which will distinguish him always as a *really well read* man.

What are the few great books—biographies, histories, novels, dramas, poems, books of science and travel, philosophy and religion—that "picture the progress of civilization"?

Dr. Charles W. Eliot, from his lifetime of reading, study and teaching—40 years of it as President of Harvard University—has answered that question in

The Famous Five-Foot Shelf of Books

"418 Masterpieces at the Cost of 40."

If you expect ever to buy another book, you should know what few books in the world are really worth buying.

You should have the expert advice on your reading that is here offered free.

A Free Booklet—For You

Accept with our compliments the interesting story of the Five-Foot Shelf of Books; it tells how Dr. Eliot, from his years of experience, chose the best possible library for the modern busy man.

The booklet is free; no obligations, merely clip the coupon.

INFLUENCE OF THE MIND ON THE BODY
By Paul Dubois, M.D. 12mo., cloth, 64 pages. 50 cents.
FUNK & WAGNALLS COMPANY, Publ., NEW YORK

Exercises for Women

For EVERY WOMAN, EVERYWHERE, who desires PHYSICAL GRACE and POWER, and the mental satisfaction consequent upon both.

Most women are very definitely in need of some sort of simple and suitable exercise that can be done in the home, without apparatus if necessary. This new book by Florence Ballton, A. B., formerly Director of Women's Gymnasium, Stanford University, outlines and pictures an excellent series of plain, practical exercises, adapted to meet the peculiar requirements of women. The combination of exercises includes many for reducing flesh, and others bound to result in the securing and preservation of a full, rounded graceful figure.

12mo. cloth, profusely illustrated.

adherents on the Carranza garrison of Naco, Sonora, shells from Governor Maytorena's guns fall across the border line into American territory.

October 12.—The new King Ferdinand of Roumania takes his oath of office.

October 13.—Governor-General Buxton, of the Union of South Africa, proclaims martial law throughout the Union, following a small rebellion rumored to be under German instigation.

Cardinal Pietro Gasparri is selected as the new Papal Secretary of State at Rome.

October 14.—The resignation of Carranza as First Chief is submitted to the Aguascalientes peace conference and accepted, according to a dispatch from northern Mexico. Antonio Villareal is nominated for the Provisional Presidency.

Brazil announces a censorship of cablegrams for or passing through that country.

General Botha is reported as sending a strong detachment to quell the uprising in the Union of South Africa.

DOMESTIC

October 9.—In twenty-four hours Seattle receives \$1,750,000 in gold from miners' claims throughout Alaska.

October 10.—A tornado sweeps over Kansas, killing five and injuring twenty.

October 12.—The Supreme Court convening, Associate Justice McReynolds is sworn in.

October 13.—Missouri readmits the International Harvester Company on its promise to obey the laws.

A petition for State-wide prohibition is submitted to the Illinois legislature by 1,300 convicts in the Joliet State Penitentiary.

THE SPICE OF LIFE

Women's Wrongs.—"Just my luck! Sez 'e can't go to the front because 'e's a married man."—*London Opinion*.

Smart Alec.—Says a newspaper: "Once again England is faced with a crisis. There has been nothing like it since Alexander the Great burned his boats and crossed the Rubicon."—*Boston Transcript*.

Up-to-Date.—FIRST METROPOLITAN DRUG-STORE PROPRIETOR—"I see there is going to be a great scarcity of drugs."

SECOND METROPOLITAN DRUG-STORE PROPRIETOR—"Fortunately that doesn't affect us, as we stop carrying them long ago."—*Life*.

Of First Importance.—The teacher was examining the class in physiology. "Mary, you tell us," she asked, "what is the function of the stomach?"

"The function of the stomach," the little girl answered, "is to hold up the petticoat."—*Buffalo Express*.

Again the Tempter.—The sailor had been showing the lady visitor over the ship. In thanking him she said:

"I see that by the rules of your ship tips are forbidden."

"Lor' bless yer 'eart, ma'am," replied Jack, "so were the apples in the Garden of Eden."—*Tit-Bits*.

Watch Resinol Soap clear your skin

Try Resinol Soap for a week. You will be surprised to see how it clears and freshens your complexion, even in that short time. Used for the shampoo, it removes dandruff, and keeps the hair live, rich and lustrous. The soothing, healing influence that makes this possible is the Resinol which Resinol Soap contains and which physicians have prescribed in the form of Resinol Ointment for years in the care of skin and scalp troubles.

Work the creamy, cleansing lather gently into the skin and scalp. It can not irritate because it contains none of the harsh, drying alkali so commonly found even in toilet soaps.

Resinol Soap is not artificially colored, its rich brown being entirely due to the Resinol it contains. Twenty-five cents at all druggists and dealers in toilet goods. For a guestroom size trial cake, write Dept. T-C, Resinol, Baltimore, Md.

The Fireplace that HEATS the HOUSE as well as the HEARTH

Requires less than half the fuel and gives 85% of the heat uniformly into the room instead of 15% given by all other grates.

Burns any kind of fuel. Keeps fire over night. Requires no special chimney construction. Made for old houses as well as new.

Will heat upper or adjoining rooms in addition to the room in which it is installed. Satisfaction guaranteed or money returned. 60,000 now in use.

RATHBONE FIREPLACE MFG. CO.
5011 Clyde Park Ave. Grand Rapids, Mich.

Send for the **ALDINE BLUE BOOK** and see how the ALDINE FIRE PLACE will heat your house.

No, Indeed!—"It seems to me," remarked Mrs. Wood B. Highbrow, "that those Russian Cassocks do not seem to be any match for the German Oologs."—*Kansas City Star*.

Consolation.—"How did your novel come out?"

"Well," replied the self-confident man, "it proved beyond all doubt that it isn't one of these trashy best-sellers."—*Washington Star*.

See America First.—As against Przemyśl and Irkutsk and Crwyzvdt, we have Cuttyhunk, Manayunk, Kokomo, Schenectady, and, not to forget, Skaneateles, Canajoharie, Waxahachie, Kankakee, and Ishpeming.—*Philadelphia Ledger*.

Small Honor.—MAGAZINE EDITOR—"No, we can not accept this story."

AGENT—"But the author is a man who has acquired a great reputation."

MAGAZINE EDITOR—"Yes, but only in literature."—*Boston Transcript*.

Provident Father.—SETTLEMENT WORKER (visiting tenements)—"And your father is working now and getting two pounds a week? That's splendid! And how much does he put away every Saturday night, my dear?"

LITTLE GIRL—"Never less than three quarts, ma'am!"—*Tit-Bits*.

Outclassed.—"My dear," said the proud father, "I can not understand your objection to young Prudely as a suitor for your hand. I am sure that he is a model young man."

"There is no question about his being a model," replied the bewitching beauty; "but, father, dear, the trouble is that he is a 1912 model."—*Buffalo Commercial*.

Tit for Tat.—A noted wag met an Irishman in the street one day, and thought he would be funny at his expense.

"Hello, Pat!" he said. "I'll give you eight (in) pence for a shilling."

"Will ye, now?" said Pat.

"Yes," he replied.

The Irishman handed over the shilling, and his friend put eight pence into his palm in return.

"Eight in pence," he explained. "Not bad, is it?"

"No," answered Pat; "but the shilling is!"—*Tit-Bits*.

Try It Yourself.—In Missouri, where they raise more mules and children than in any other place in the world, a certain resident died possessor of seventeen mules and three sons. In his will he disposed of the mules as follows: One-half to the eldest son, one-third to the next, and one-ninth to the youngest.

The administrator who went to divide the property drove a span of mules out to the farm, but when he went to divide the seventeen into halves, thirds, and ninths he found it was impossible with live mules; mules not being very valuable, he unhitched one of his own, putting it with the other seventeen, making eighteen, when he proceeded to divide as follows: One-half, or nine to the eldest, one third, or six, to the next son, and one-ninth, or two, to the youngest. Adding up nine, six, two, he found that it made seventeen, so he hitched up his mule and went home rejoicing.—*Ladies' Home Journal*.

A NEW ERA FOR US AFTER THE WAR

WHAT it calls "a page for the pessimist" is printed in *The Investors' Magazine*, with a note of comment saying any one who has pessimistic feelings about present conditions in this country should study the facts therein presented as follows:

	United States	World
Area (square miles)	3,600,000	75%
Population	102,000,000	6
Corn product (bushels)	2,600,000,000	86
Wheat product (bushels)	911,000,000	20
Cotton product (bales)	14,000,000	61
Sugar product (pounds)	3,557,000,000	25
Tobacco product (pounds)	791,000,000	35
Number of cattle on farms	39,900,000	15
Coal product (short tons)	634,000,000	40
Petroleum product (bbls.)	238,000,000	63
Copper product (pounds)	1,343,000,000	24
Iron ore (long tons)	37,000,000	21
Gold product	\$63,000,000	20
Stock of gold	1,990,678,304	23 1/2
Value of all farm products	\$751,000,000	No data
Value of manufactures	\$0,672,000,000	No data
Imports in fiscal year 1914	1,994,000,000	9%
Exports in fiscal year 1914	2,365,000,000	12
Foreign trade, fiscal year 1914	4,359,000,000	10
Domestic trade, fiscal year 1914	40,000,000,000	No data
Railways (miles)	259,000	28%
Aggregate wealth, estimated	140,000,000,000	No data

The same magazine follows this table with an article in which the writer declares that this country "is soon to enter the greatest era of prosperity and expansion in its history." No such opportunity, in this writer's judgment, has come to us since the commercial and industrial developments in the great West that followed the Civil War. While the present war in Europe has caused "stringency and forced retrenchment in many lines of business," it must eventually come to an end, and then "the opportunity will be ours." Following are passages from this article:

"Even the victorious nations will be exhausted by the struggle, whether it be long or short. Their finances will be benumbed, and they will lack both the money and the initiative to take advantage of the opportunities that lie before them. The fate of the defeated nations can only be left to the imagination. It is certain, however, that their international trade will be utterly destroyed, their industries left shattered and prostrate, and their people burdened with an indebtedness so enormous as to check their development and growth for a generation to come. A group of nations on one side or the other is going to be blotted out so far as international commerce is concerned. The needs of other nations, now at peace near and far, must be taken care of. This is our opportunity. Unless the old pioneer spirit—the spirit of enterprise, of initiative, of discovery and of development—is utterly dead in American hearts, we will ourselves capture the major portion of the trade opportunities abandoned by the defeated belligerents, and repay ourselves for our losses many times over.

"At the time of this writing German commerce had been swept from the seas. Germany supplied the world with potash, with ferromanganese, with innumerable necessary drugs, with anilin dyes, with various supplies of iron and steel, with a thousand and one finished metal products. Germany's trade with South America, China, and Japan and the isles of the Far East has been many times our own. 'Made in Germany' has been a victorious commercial slogan, against which our exporters have made little headway for many years. Now the sign 'Made in Germany' is gone. If Germany is defeated,

it will be gone for a generation. If Germany wins, it still will be gone for years because even a victorious Deutschland can not recover from the destruction of the conflict for a long period of time.

"At the present writing the English fleet rules the sea, and English commerce is still going about its way, though greatly diminished in extent. If England wins, we will dispute with her for the lost German trade. Even if victorious, Great Britain's monetary loss will have been so great that the advantage will be all on our side. If defeated, we will see British commerce prostrated for a quarter of a century, and perhaps forever. Whatever may be the outcome of the European War, we shall, we possess the energy, the initiative, the knowledge, and the salesmanship, achieve greater commercial conquest within the next few years than any we have achieved in the past. There is no reason to believe that the American character has lost these qualities. They are the foundation of the prosperity and wealth which we have built up during fifty years of practically uninterrupted peace.

"During the first two months of the war there naturally was dulness in business. When we reflect that at the outset our foreign trade was entirely cut off, we will agree that conditions could not be other wise. But soon the nations with their preponderant naval power locked up the war ships of their enemies. The ocean's lanes were reported safe for travel, and American exports gradually began to flow abroad. Our wheat and corn were shipped in steadily increasing amounts until, by the first of September, ten million bushels a week were flowing across the ocean, each bushel representing approximately \$1.25.

"The national Treasury Department, together with the banks, made arrangement for financing the cotton, tobacco, and other crops for which the foreign market had been greatly limited. Our exports continued to increase and conditions in this regard more and more nearly approached normal.

"As the only one of the really great Powers of the world which has remained at peace through this unparalleled conflict, we have gained immensely in international prestige. We are bound to gain likewise in commercial and financial prestige, if we govern our moves with ordinary common sense and prudence, and act with reasonable energy and patience. Our store of capital is the only great store of capital which will go through the present conflict practically unscathed. As a result we shall become the dominating financial power of the world. The financial center of this globe will move from London to New York. We shall definitely pass from a debtor nation to a creditor nation, not immediately, and not without effort and intelligence, but eventually, and when this comes to pass the United States will have entered on its greatest period of prosperity, of expansion, and of business activity in its entire, wealthy, prosperous, and happy life."

EVERYBODY ECONOMIZING—AND TO GOOD PURPOSE

Writers and financiers have discovered that people in this country since the war began have entered upon the practice of economy with remarkable unanimity. In this fact Mr. Moody, in his *Magazine*, finds one great cause of contraction in trade. He believes that during the months immediately ahead of us not only will imports in consequence be small, but "the domestic demands for everything but bare

The Literary Digest

IN

The Public School

TO THE PARENT:

Do you know that The Literary Digest is widely used in the Public School as a Live Text-Book on Current Affairs?

That it has been pronounced, by a great number of Teachers, Principals and Superintendents, the best Text of this kind anywhere found?

That its use, within the last few years, has extended into the Public Schools of almost every State?

That wherever used in this manner it has helped the Pupils, inspired the Teachers, and become a new educating force?

That the reflex benefits of its use in the School have been felt in the Home, through deepened interest there in the outside world?

Do you realize how History is being made to-day, all round the globe, of which you and your family should be informed?

That the History now being written overseas is of tremendous import to the human race?

That your child should understand this, and should profit by such understanding?

That The Literary Digest in your School and Home will promote this understanding and insure this profit?

That on request from you or your child the Principal may introduce it in the School, to your child's great benefit?

TO THE PRINCIPAL:

Have you delayed introducing The Literary Digest into your School as a Text for your Pupils?

Have you considered with care what a help it would be to them and you, in either History, Civics, or English?

Do you know that hundreds of Teachers and thousands of Pupils have been helped and inspired by it?

Have you read any of the handsome testimonials to this effect which have been given by Teachers and Principals?

Are you not impressed with The Literary Digest's broad, high character, its comprehensive outlook, its freedom from bias?

Do you not realize how it gives all sides of all questions, without any editorial opinions of its own?

Can you not imagine its influence upon your students for good reading habits, for clear thinking, for correct speech?

Can you not anticipate the fresh eagerness with which your classes will come to recitation when The Literary Digest allures?

Can you not foresee the zest which it will add to your own work when you have made it a class factor?

Will you not let us send you such further information about it, with Special School Terms, as we have not space for here?

May we not tell you what so many of your fellow-Principals have told us?

 **"Pupils are Always Glad When The Literary Digest Class is Called"**

Says Principal H. W. Puckett, Clinton, Ky.

 **"We are Getting More out of The Digest than from any Text-Book in Use in Our History Course"**

Says Lewis S. Haight, Superintendent, Alton, Ill.

FUNK & WAGNALLS COMPANY, Publishers, 354-360 Fourth Avenue, New York

One temperature —all winter

What can be better in winter for little and big folks than a home always evenly warmed?—no overheating, no fuel wastes, no chilly hours, no sudden changes! You hold to one temperature when the

IDEAL SYLPHON REGITHERM

automatically controls your boiler dampers. All night and all day this little metal servant (usually set at 70 degrees) feels the temperature of the room; if weather conditions change the temperature indoors even one degree the REGITHERM quickly brings the temperature back to 70. Keeps your rooms equally temperate in mild or severe

weather; no running downstairs to change dampers. No batteries, or clock-work to wind up, regulate or wear out. Fuel saved repays the moderate purchase price. Easy to put on old heaters.

Let us mail booklet "New Heating Aids" (free), telling about REGITHERM, also about the SYLPHON PACKLESS Radiator Valve, that never leaks; also tells about highly improved NORWALL Radiator Air Valves, etc. Write today.

FOR FACTORIES—for varnishing, painting, cooling, drying, any degree from 50 to 250, REGITHERM saves labor, insures workmanship. (Send for special booklet, free).

necessities will contract to very small totals." So far from deploring this economy, Mr. Moody maintains that, in the long run, as practised by the average man, it "will be a splendid thing for the United States." It is now at least ten years since "the careless extravagance and improvidence of nearly everybody have been undermining the whole country." Meanwhile, the corollary of extravagance, which is high finance attended by speculation, "has steadily made the situation worse." But so long as the people can be got into the habit of living within or a little below their incomes, instead of above them, as in the past, our future "will be bright."

Parallel with Mr. Moody's remarks are points contained in an address recently made by A. M. Harris, the New York banker, at a convention, in Richmond, of the American Bankers' Association. He fully confirmed all that Mr. Moody says as to the wave of economy that has set in among all classes in this country. He regards this as giving excellent promise of better times in the investment world. Following are passages from the address:

"Few realize what a wave of economy is sweeping over this country and the effect it may have on the amount of new available investment capital. It is unquestionably true that never before in the history of this country has there been such a wide-spread movement of economy, which extends not only to personal expenditures, but also to the expenditures of corporations and business houses generally.

"The economic and industrial conditions at the present time are not to be compared with those following the panic of 1893. Aside from certain industries and businesses which have been especially affected, there is employment throughout the country. The wave of economy, therefore, means a much more enormous and rapid accumulation of capital than ever occurred before.

"The economic losses resulting from wars are usually exaggerated, as shown by the industrial conditions which exist when peace is restored.

"This wave of economy which is sweeping over the country is of the greatest importance to you. It means that persons who have never previously been in the habit of saving will begin opening savings accounts, and that others who already have savings accounts will increase the size of these accounts. If this result occurs it will mean that you will not be called upon to sacrifice your holdings of high-grade investments at the present depressed prices.

"In other words, you will not be called upon to suffer any actual losses in your investments, but will be able to continue to hold these bonds until they mature, when you will receive in payment their par value or just what you expected when you purchased them. In addition to the wave of economy there is the wonderful outburst of individual enterprise that invariably follows a war. Explain it in whatever way you please, it is nevertheless a fact that invariably the greatest enterprise, the greatest energy, the greatest ingenuity immediately follow a great war."

Pertinent to the points made by Mr. Moody and Mr. Harris are the results of inquiries recently made by *The Journal of Commerce* among savings-banks in New York City as to actual withdrawals of money after October 1, under the sixty-day notice required by the banks at the beginning of the war. It appears that the amount of actual withdrawals has been much below expectations. They are de-

If your dealer cannot supply you, send us 25c and we will mail you postpaid two sets of Feltoid Tips for demonstration in your home. Send for Booklet No. 9.

THE BURNS & BASSICK CO.
Dept. C. Bridgeport, Conn.

scribed as "comparatively insignificant." While the sixty-day notice is still in force, it is kept up merely as "conservative action on the right side." Deposits since August 1 are described as having been "well sustained." Many orders for withdrawals have been canceled. So well established is confidence that some bank officers believe that before long they will be able to use money not wanted by their depositors in the investing field. Since July the savings-banks have been practically out of that field.

SAVINGS-BANK DEPOSITS IN EUROPE

It is believed by *The Wall Street Journal* that the war in Europe "is fairly certain to reduce the available deposits of the peoples immediately involved." In the countries at war are populations aggregating 426,000,000, who have savings that in total are believed to fall little short of \$9,544,000,000, Germany leading, with Austria next, and then follow Great Britain and France. Average deposits are highest in Hungary, where they amount to \$372.44. Below is a list of the countries at war, including Japan, with their populations, number of depositors, total savings, and average deposits.

	Population	Depositors	Total Savings	Av. Deposit
Austria	28,572,000	6,769,713	\$1,421,789,000	\$209.42
Belgium	7,579,000	3,062,025	215,045,000	167.75
France	39,602,000	14,362,533	1,063,300,000	172.49
Germany	64,142,000	22,349,570	4,241,500,000	189.78
Hungary	21,030,000	2,069,498	672,611,000	\$372.44
Japan	51,646,000	20,655,830	177,953,000	8.58
Russia	167,920,000	8,189,734	784,117,000	95.74
U. Kingdom	45,963,000	14,251,537	1,148,086,000	109.50

* Communal and private savings-banks only.
† Government savings-banks only.
‡ Private savings banks.
§ Postal savings only.

As to conditions in this country, it is interesting to note that the above figures compare with 11,097,000 depositors in America with \$4,861,200,000 deposits, the average for each depositor being \$439.07, these deposits being in mutual and stock savings-banks only.

A Voluntary Confession.—A more than usually frank affidavit is on file in the Keystone State. It runs as follows:

"Star Junction, Pa., 5-22-1902.

"This certifies that Anna Francis died on August 7, 1898, and that Mrs. Kate Francis died December 19, 1899.

"J. L. Cochran, Attending Physician.

"Personally appeared before me, a notary public, J. L. Cochran, who, being duly sworn, did say that the above is his act and deed.

"Joseph L. Luce, Notary Public."

—*New York Evening Post.*

A Word to the Wise.—"Do you know, Bill, I nearly lost a sovereign to-day."

"How was that?"

"Well, you see, I went to call on a friend of my wife's, and he asked me to lend him a sovereign. 'Yes, certainly,' says I, and I brought out a sovereign, but it never got no farther than my hand."

"How was that?"

"Well, you see, one of his daughters commenced to sing 'Kathleen Mavourneen.'"

"Well, what has that got to do with lending a sovereign?"

"Everything, Bill, for she started like this: 'It may be for years, or it may be for ever,' so I popped the quid back in my pocket."—*Tit-Bits.*

Packer No. 8 Hears from a Pipe-Lover

To insure the complete satisfaction of every smoker of Edgeworth tobacco and as part of the guarantee that goes with every package a small slip is packed into every large tin or humidor package of Edgeworth. This slip urges a return of the tobacco if it is not satisfactory and bears a number that identifies the packer.

Here is, in part, what one smoker had to say when he read his slip:

Packer No. 8,
do Larus & Bro. Co.,
Richmond, Va.

Sir, Madam or Miss—I have just dug down to the bottom of a one pound can of "Edgeworth" evidently packed by you, and I found the enclosed notice, where, in your box, as you say, to notify them in case I found any irregularity in the box in which the notice was packed. As I found no irregularity and as they asked for nothing more I thought I would tell you what else I found; e. g. "The Best Hunch of tobacco I ever smoked." A friend, (I was going to say a true friend, but then I reserve that expression for my old "dudeen" exclusively) gave me this pound box of "Edgeworth"—hence this letter, and now it's a me for more as the last smoke was as good as the first, just as moist and held the same quality and flavor—you can tell your "bos" that there was no irregularity—no, it was all regular—yes, a regular find.

Yours in a decent smoke,

A. J. M.

Not every man is as fortunate as Mr. A. J. M. He was lucky enough to have a friend who introduced him to Edgeworth by presenting him with a full pound.

There's no need for you to wait until some acquaintance yields to an inspiration and gives you a package of Edgeworth to judge.

You can get it from us by asking for it. Just put yourself in a receptive frame of mind, say to yourself, "Well, since it costs nothing, I will give this Edgeworth a trial," then send us a postcard

with your name and your dealer's name on it.

We will promptly send you a package of Edgeworth Ready-Rubbed Smoking Tobacco, free. Whether you will like it or not remains to be seen, but you should see some of the glad letters we get from men who have found Edgeworth just what they wanted.

Don't you think it's always worth while to try out a pipe tobacco?

Edgeworth is made from the finest tobacco that grows on the ground, and it comes in two forms, Plug Slice and Ready-Rubbed, and is on sale practically everywhere.

The retail price of Edgeworth Ready-Rubbed is 10c for pocket size tin, 50c for large tin and \$1.00 in handsome humidor packages. Edgeworth Plug Slice is 15c, 25c, 50c and \$1.00. Mailed prepaid where no dealer can supply. A sample of Ready-Rubbed is free if you mention your dealer's name. If you love good pipe tobacco, you will really favor us by asking for this sample.

Write to Larus & Brother Co., 5 South 21st Street, Richmond, Va. This firm was established in 1877, and besides Edgeworth makes several other brands of smoking tobacco, including the well known Qboid—granulated plug—a great favorite with smokers for many years.

To Retail Tobacco Merchants—If your jobber cannot supply Edgeworth, Larus & Bro. Co. will gladly send you a one or two dozen carton, of any size of the Plug Slice or Ready-Rubbed, by prepaid parcel post at same price you would pay jobber.

THE - AUTUMN - TRAVELER

THE CHARM OF AUTUMN TRAVEL

THE day is passed when American pleasure travel was limited to the three hottest months of the year. It ended a quarter of a century ago, when people began going South for the winter months—first to Florida and the northern Gulf coast—and the tourist wonderland of California was discovered. Of course the school-vacation season is still a great factor in determining the limits of the summer outings of many Americans. It makes thrive by the hundreds resort hotels that are closed and deserted for the nine other months of the year; it adds special cars and extra trains that roll and thunder east and west, north and south, through July, August, and September, and then silently, sometime about the fall equinox, slip off the railroad schedules. But that "sometime" is a distinct blessing. The man or woman who is able to choose the autumn for a vacation season is fortunate indeed. The rush and bustle of the summer are gone with the heat; trains and boats are no longer apt to be rather uncomfortably crowded. One can travel in comfort, and will have his rewards. In the early autumn, North and East are at their best. A few prime hotels remain open, so that their late-staying patrons have the benefits of reds and yellows in the foliage. Out in the West, up in the Rockies, if you please—the year is then at its very prime. The midsummer rains are over, there are crispness and clearness in the air that bring distant peaks and ranges, as if by magic, almost within a seeming stone's throw. The real mountaineer begins to breathe along about the first of October.

But how about the man whose vacation is set for a date late in the autumn, perhaps well into December? There are many such, and they are a factor not to be ignored. In the complete development of American tourist facilities within the past few years, no longer is he ignored. And in a year, when facilities for foreign travel have been largely denied him, he will find

that America stands ready, even in the late autumn, to give him an outing brimful of zest and variety. Of course if he must go to a foreign country, the mere fact that almost all Europe seems to be in battle array is not a deterrent. For there is a foreign country within two days and two nights by boat from New York that does not lack for charm and distinction.

TOURIST DESCENDING CATHEDRAL STAIRS, HERMIT TRAIL, ONE OF THE ENDLESS WONDERS OF THE GRAND CANYON OF ARIZONA.

THE CALL OF BERMUDA

Bermuda is just beginning to be appreciated, not only by New York, but by the rest of the United States. Because of that beginning in appreciation, the steamer service to that small group of British islands just off our east coast has been greatly increased and improved within the past few years. The hotel facilities at Hamilton, their chief city, have kept pace with this improvement. Yet nothing has been done that might rob the islands of their charm. Carts still patter through the narrow roads, that have been cut so easily from the soft coral rock and will remain splendid highways forever. The wind in Bermuda has a way of rustling the tall palms on a moonlight night that becomes a perpetual delight to the tourist from

the "States." The islands are distinct tropical, with all that this may imply abundant verdure, a surrounding sea turquoise blue, sunshine, and a mildness in the air in December, January, and February that is like early September, or Indian summer in the North. Add to this setting the folk of a typically smart British province, a touch of the red-coated British Army, the swagger of a bit of the navy, wonderful negroes who have already begun to be born with cockney accents, the coinage and phraseology of old England herself, and you begin to have reasons why more and more Americans go to Bermuda each year. Ten days or a fortnight out of New York will give you a good look at the islands. But when you are there you are apt to find yourself using the cable and beginning to delay your return home from one steamer to another.

FROM NEW YORK SOUTHWARD

Of course there are many such steamer trips out of New York Harbor—ships bound to Jacksonville, Mobile, to three or four dozen ports in the West Indies—sleepy, fascinating ports each one of them voyages to the little-known great cities of South America—cities that are fascinating and yet as wide-awake as our own Chicago, Kansas City, or San Francisco. Then there are the playgrounds of Florida, which will be visited by an unusually large volume of travelers during the coming winter season. The operating head of a railway system serving the East Coast resorts of Florida said the other day that not only is his railroad not suffering from hard times, but that the outlook for the coming winter is the best in its history.

"We propose," he said, "to increase our train service. There are from 150,000 to 200,000 Americans who are in the habit of spending the winter in Europe. They have got to go somewhere else. We figure that a great many of them will come to Florida or go to Cuba, and we are getting ready for them." Most of the far points will fall within the province of a travel article to appear in *The Literary Digest* late in the season. For the present, one can no longer forbear calling attention to a delightful short sail out from the harbor of New York. You take a steamer, which leaves the crowded West Street pier at three o'clock every afternoon, and the next morning at daybreak you are entering Hampton Roads—the great gateway to more than two thousand miles of inland navigable

tars, rivers, and canals. Before darkness comes on, you have a chance to have a good look at a stretch of the North Jersey shore, and if you bring your camera with you, you are sure to take a snap of the Sandy Hook lightship. In the morning the scene is changed. The roll of the sea is gone, for Hampton Roads is generally as peaceful as the proverbial mill-pond. Facing you are Old Point Comfort and historic Fortress Monroe, with the red bulk of the big Hotel Chamberlin rising up beside them. Off in the distance are the spires and smoke of Norfolk and Portsmouth, two typical Virginia tide-water towns, while somewhere back of the gray fortress is Newport News.

The Chamberlin is the tourist meeting-place for all these points, altho Norfolk boasts several modern and attractive hotels. The entire region has many and varied delights. Not only are there historic arm and a brisk military and social life in Fortress Monroe, but the other arm of the service is apt to be represented in a battleship or two lying at anchor in Hampton Roads. The country round about is filled with interest and fairly dolent in history. It is only yesterday since it was all a great battle-field—you still can see the iron heel-marks of McClellan—and if you would go back of yesterday you can take a motor-car and in an hour or more find yourself in Yorktown—a sleepy village, far removed from the railroad, living only in the memories of the day when it was a real port of entry and the theater of one of the most momentous of dramatic moments in American history. And if Yorktown and its associations are still too modern for you, you can jump back into your motor-car and in the course of seven miles of travel across the Virginia pine forest may come to Williamsburg, the colonial capital of the Old Dominion, where are carefully preserved all the relics of her one-time greatness. Seven miles beyond Williamsburg you come upon the James River and a place that vies with Yorktown for distinction in its history—Jamestown Island. Much care and no little expenditure of money have gone toward the preservation of this earliest English permanent settlement in America.

The water routes from Old Point Comfort are quite as varied and as interesting as those that run inland. A steamer plies to the James River as far as Richmond. It stops not only at Jamestown Island, but at several historic manor-houses that are in plain sight from the deck—Westover and Shirley among them. Other vessels run up other waters that empty into Hampton Roads—there are particularly handsome boats to Baltimore and Wash-

ington each night of the year. A return by either of these cities makes a pleasant variation to the trip to the Old Dominion.

AUTUMN AND WINTER TRAVEL IN THE EAST

For those who enjoy winter sports in the crisp, invigorating air of our Northern mountains, several hostelries keep open house. Notable among these is the Fort William Henry at Lake George. Here a varied assortment of winter fun is available, including skiing, tobogganing, snow-shoeing, hockey, ice-boating, skating, and sleighing. In the heart of the Adirondack Mountains the principal winter centers are Saranac Lake and Lake Placid. The Lake Placid Club on Mirror Lake boasts of a winter colony of from fifty to seventy-five "zero lovers." All forms of winter sports are enjoyed here, and in addition picturesque Christmas, New-year, Twelfth-night, and Candelmas ceremonies and pageants reviving old English and Scandinavian customs. Saranac is another of the Adirondack Mountain winter resorts which offer a revelation to the winter vacationist. Here will be held late in January or early in February, 1915, the famous biennial midwinter carnival with its storming of the ice palace, fancy skating, hockey, skiing, tobogganing, and other amusements. To those who prefer the wilder regions of the North Woods, Fulton Chain, Big Moose, and Long Lake hold forth strong inducements.

To old-time habitués of New York's famous spa it might seem an anomaly to speak of Saratoga as a winter resort. Yet since the Springs have been restored to their old-time glory by the New York State Reservation Commission winter has become no longer a closed season. The Saratoga bath-house, equipped to give the Nauheim baths, will remain open all winter. In Central New York at Glen Springs, adjacent to Seneca Lake and Watkins Glen, patients may receive during the winter months hydropathic treatment similar to that given at the leading baths of Belgium, France, and Germany. The Nauheim Spring here is almost identical with the famous brine springs of Nauheim, Homburg, Rheme, etc. The waters of Deer Lick Spring show analyses similar to those of the famous salines used abroad as drinking cures, while Glen Kissingen is identical in its constituents to the famous Kissingen Springs in Germany and also the springs at Halle, Austria.

For tourists from North or East there are vacation delights even nearer. The great hotels at Lakewood in the New Jersey pine forest are hardly more than an hour's run by fast express train from the west bank of the Hudson. By November

Plymouth Furs

they are in fine running order for the long season—which lasts until the schools are closed and the purely summer hotels open once again. Lakewood to the city man means golf, polo, long hours in the saddle or automobile, and hotels which for comfort and luxury are quite the equal of the best.

Beyond Lakewood is Atlantic City. You who have perhaps only known Atlantic City in the crowded summer-time, or the distinctly fashionable spring season, can not easily realize its comfort and charm in November, December, and January when the crowds are gone. No longer is it a test of physical prowess to breast the human tide down the boardwalk from the Rudolf to the Brighton. The white beach is no longer infested by tens of thousands of human beings in bathing-suits, but it is now the plaything of the ocean, the loafing-place of the favored few. When you roll down the boardwalk in your chair, you may not meet fifty other chairs the whole length of that famous promenade, but you will be sure to find yourself rejoicing in that very fact. There is room on the boardwalk, and room in the hotels. The urbane gentleman behind the register no longer shakes his head sadly at sight of you and your luggage and says he will try to "fix you up before night," but places you forthwith in the best the house affords. And yet when you come to look around, you find that the hotel is by no means deserted, but comfortably filled with bright and companionable folk. There are new plays in the theaters along the boardwalk, and the wonderful shops between are open and filled with allurements. The man who has not been to Atlantic City in winter and there seen her dignity and charm can hardly say that he has really come to know her.

We were speaking of tide-water Virginia. There are playgrounds in the Virginia hills that are not second in promise to the oceanside of the Old Dominion, while over, across, and beyond the famous valley of the Shenandoah are watering-places which for distinction and elegance have no superiors in America. You can reach these in an afternoon and a night on a through train from New York, or, better still, you can follow the water route to Old Point Comfort that we have just indicated and proceed to Richmond either by rail or by the steamer up the James River. From Richmond the Chesapeake & Ohio offers an excellent service to the mountain watering-places—Virginia Hot Springs and the White Sulphur Springs the best known among them. These resorts are not new. Like Saratoga in the North, they have been popular for at least a century. But great modern hotels, put up within the past few years, have brought to them an even larger degree of popular favor than either had known in the most

rosate of bygone times. Motor-cars are finding their ways to them in increasing numbers each year, and there is hardly a time in fall or winter when two or three or more private cars are not stationed on the nearest railroad sidings. These resorts in late autumn have the charm and distinction of Lenox, Newport, or Bay Harbor at the height of the summer season.

IN THE LAND OF THE SKY

They stand in the wonderful ranges ■ the Appalachians that for three hundred miles farther south are the delight of tourists. When this great mountain range finally breaks south of Virginia and into the Carolinas, they begin to call it "The Land of the Sky," and a more poetic or truthful appellation could hardly be given to one of the nation's great playgrounds. Asheville, N. C., is the gateway to "The Land of the Sky." It is dominated by several great modern hotels. Of these the newest and already the most renowned is Grove Park Inn.

This great hotel, standing at an altitude of more than five thousand feet above sea level, is not yet two years old. Yet from the careful manner of its building it has acquired an unusual distinction among its fellows. In its architecture it is far removed from the typical boxlike type of wooden structure that formerly distinguished pretty nearly every one of our resort hotels. At Grove Park the desire was to produce a hotel that would be in architectural keeping with its wild mountainous setting. The walls were wrought of boulders of native stone from near-by hillsides, while floors and roof were fashioned of concrete in an effort to make the huge building as nearly fire-proof as such a structure could be made. The same care and taste went into the furnishings of the house. The four hundred rugs for its floors were woven to its own order, while skilled artisans fashioned the furniture and hammered out the fixtures, knowing that they were destined, not for a fashionable hotel in New York or San Francisco, but for a house on a hillside into which was to be wrought something of the rugged character of its setting. The result of this care and taste has been something rather more than a mere success.

Asheville, with not only its new hotels but also a number of other hotels which vie with it in attractiveness, its marvelous scenery and the great Vanderbilt estate "Biltmore," near by, is not however, the only point of interest in "The Land of the Sky." Many travelers who wish to visit these high-set hills make them an autumn stopping-point on their journey toward a midwinter to be spent in Florida, or on the Gulf Coast. These not only come flocking

GOLFING IN THE LAND OF THE SKY—ON THE LINKS IN THE MOUNTAINS OF NORTH CAROLINA AT ASHEVILLE.

San Diego Panama California Exposition

Now you can afford
to see California

and

Her Great Expositions

Celebrating the opening of the Panama Canal

THE year 1915 is the year of decision—the year you have been planning for always. You have always wanted to see California. The land of sunshine and orange blossoms.

Especially have you determined to see Southern California, because—you know—that is the California you have read and heard about. Now you can readily afford to gratify your heart's desire. The railroads and the hotels have arranged to meet you half way.

Furthermore, everybody is going to the Exposition and you can't afford to be a "stay at home" and listen in wide eyed amazement to the tales of this Wonderland, when your friends return. The San Diego Exposition is a dream city of the old world. A city of Spanish Mission Colonial architecture with Mission bells in low towers around which hover flocks of pigeons. Rug draped balconies twined by banks of purple bougainvillea.

No tired and footsore spectators will emerge from the gates of this Exposition. Intense interest and enlightenment mark every exhibit. No other Exposition, past or present, resembles it. Instead of finished products, the things we use and wear and eat are made before our very eyes by machinery transplanted from the throbbing factories of the world.

And perhaps—very likely—you will find in this land of promise during your visit, the opportunity you have sought to free yourself from the bondage of your present business struggle for financial independence.

California spells opportunity and her arms are extended in hearty welcome to you in 1915. Your nearest railroad ticket agent will tell you about the low rates.

each November and December to Asheville, but to Hendersonville, Waynesville, Tryon, Brevard, Saluda, Hot Springs, and Flat Rock. All these points are situated amid picturesque settings and have excellent hotel facilities arranged with a special eye to the comfort of travelers.

PINEHURST AND SOUTHWARD

For an autumn or spring tarrying-point, Pinehurst in the forest portion of North Carolina shares the popularity of the high hills at the back of that State. Pinehurst is a sort of fall and winter capital for the great game of golf, altho its authority is sometimes disputed both by Sumner and Camden, in South Carolina. Summerville is also a South Carolina resort of distinction. It is only twenty-two miles back of the ancient port of Charleston and stands in the heart of a dense and wonderful forest of live oak and pines. Its own particular lion is the wide-spread garden of Dr. Shepard, the only point in America where tea-cultivation has been carried on successfully.

Charleston itself has many charms for the tourist, altho he will probably find himself wishing that the town could be provided with a modern hotel such as has been given to nearly every one of her sister cities in the South. Still the appeal of the town's personality is so potent that he will soon forget any slight inconveniences as to food and lodging. His interest soon becomes centered on the splendid old churches whose Georgian spires give accent to the Charleston sky-line, the fine old houses, the harbor with its forts and its charm of shipping. The town has such variety that interest does not cease quickly or easily.

One other South Carolina resort should claim the attention of the autumn traveler. This is Aiken, which long since became known as the most exclusive and aristocratic of the several Southern colonies of Northern folk. Aiken, like some resorts in the North, is not hearty or warm in her first greetings. But once you come to know her, you are apt to love her. For the man or woman who is genuinely fond of sport, she can not be excelled. There is good hunting in the forests round about, and regularly there is riding to the hounds. That means excellent mounts, and at certain high tides of the season smashing good polo.

Savannah is not unlike Charleston, altho there is an old-time rivalry between these seaport cities. Savannah has excellent hotel facilities. So has Augusta, the inland Georgia city which of late years has come to have many pretensions as an autumn and winter resort. The fact that Augusta stands at an elevation of more than 1,200 feet above the level of the sea means that its winters are not only warm, but crisp and bracing as well.

Into these three States having late autumn resorts—Virginia, North Carolina, and South Carolina—as well as into that still more southerly clime, Florida, which does not spring into social brilliancy until after the beginning of the New-year, three railroads stretch from the North through the Washington gateway. These are the Seaboard, the Atlantic Coast Line, and the Southern. Each is a network of lines, main trunks, and feeders, and each offers from October to May a glittering array of through trains. Not quite all of these trains go through Washington. Some are routed from Chicago and St. Louis through Cincinnati, Louisville, or Memphis, and

Advice to a Wife
on the Management of Her Own Health and On the Treatment of Some of the Complaints Incident to Her Sex. By Dr. P. H. Channing, F.R.C.S. Covers a wide variety of subjects that have an intimate relationship with the married state. Every woman, old or young, can profit by the wise counsel and advice given in this volume.

form direct routes to the southeastern States from the central and western portions of the country.

In the central portion of the country are several all-the-year resorts. Perhaps the best known among them are the springs at French Lick, Ind., at Excelsior Springs in Missouri, and those at Hot Springs, Ark. Of these the two first are particularly favored by Chicago folk who are able to get away from business cares for a few days, or even a fortnight, in the late autumn or early winter. French Lick has an environment not unlike that of Lakewood. The wonderful qualities of its waters are far too well known to need further comment here.

Excelsior Springs, altho less known generally, has come into a wide degree of favor. Within the last year or two there has been built at this point a hotel which in architecture, fittings, and operation compares favorably with those at larger and more famous resorts. There are several other houses of more than ordinary excellence. For a resort which has sprung from a Missouri farm since some time after 1880, Excelsior Springs has done remarkably well. Travelers who go to it come home singing its praises in no uncertain tones. Some of them who have traveled in England have not hesitated at comparing its surrounding country, set in the gently wooded hills and ravines that line the valley of the Missouri, to that of Devonshire.

Hot Springs, Ark., is as well known and as favorably known as any similar resort. With its group of great hotels, its bath-houses, and military hospitals, it long since grew from a mere country town into a small but smart and busy city. It is a great Mecca, not only for those suffering from the wide variety of ailments to which its powerful waters seem to give instant and permanent relief, but to many thousands of tourists. There is little about the city to suggest suffering of any sort. On the contrary, it is, in its way, as brisk and gay as Atlantic City, or any other of the pure pleasure resorts.

would be such a bad time in which to go out to California. The railroad agent if he knows his business, or even pretends to know California, will reply that the late autumn is one of the finest seasons of the year on the West Coast. The cold, wet fogs that sometimes make the San Francisco climate in July and August trying for the Easterner are gone, and in their place is a fine, sunshiny season. There will have been three or four rains—enough to take away the parched look that the foliage acquires through the long dry season—yet the rainy season with its heavy downpours very rarely arrives until the beginning of the year. September and October are, oddly enough, apt to be the warmest months of the year in San Francisco. November and December offer a climate all the way from San Diego to Oregon that is well worth the usual California superlatives that are applied to climate.

So it is a wise man who packs his trunk, bags, and golf-sticks and starts west in the late autumn. Before he comes to Chicago—or perhaps to St. Louis—he will find quite a wide variety of pathways at his service. From Chicago there are three routes through the northern tier of American States confronting him, in addition to the great main stem of the Canadian Pacific. These three routes are the Northern Pacific, operating out of Chicago in a close traffic agreement with the Northwestern system; the Great Northern, which starts its best trains out over the rails of the Burlington; and the Chicago, Milwaukee & St. Paul, which boasts that it is the only railroad operating entirely over its own tracks all the way from Chicago to Seattle and Tacoma. In the summer-time the Northern Pacific seeks to attract through passengers by the promise of a stop-over at the Yellowstone National Park, the Great Northern offers as its very own side-trip a journey into the less-known but equally wonderful Glacier National Park, while the Milwaukee claims the superb Mount Ranier as its own great attraction. At this season of the year all these three great parks are closed. But the three transcontinental railroads that serve them are not less attractive as through routes for the traveler who is California-bound, and all these, including the Canadian Pacific, are much patronized on account of their grand and varied scenery by tourists either going to or returning from California. The wonders of the mountain scenery that one may view from their train windows are on exhibition the whole year round.

The average California traveler bound west from Chicago is apt, however, to take one of the more southerly routes—possibly the Union Pacific, which boasts that it is the shortest line from Lake Michigan to the Golden Gate, as well as that it possesses direct connecting lines from Ogden, southwest to Los Angeles and northwest to Portland, Tacoma, and Seattle. As a matter of fact, the Union Pacific extends from the Missouri River to Ogden, and is in reality only the main stem of a well-located and central system of railroads. Its two crack trains—the Overland Limited and the Pacific Limited—run over the tracks of the old Central Pacific, now a part of the Southern Pacific system from Ogden to San Francisco. Its entrance from Omaha to Chicago is gained over the

HOTEL WOODSTOCK, NEW YORK,
Comfort Without Extravagance.

southern main stems of two equally important and excellent railroads—the St. Paul and the Northwestern. In addition to its main line, however, it has an important branch, from Cheyenne south to Denver and east to Kansas City. From Kansas City it enjoys traffic rights into St. Louis over the lines of the Wabash system. And any traveler going west over this central and popular system will do well to see that his ticket from Denver to Ogden reads over the Denver & Rio Grande which, for the grandeur of its scenery through the Rocky Mountains, is only equaled by the Canadian Pacific. The Denver & Rio Grande, by means of the newly built Western Pacific extending west from Salt Lake City, also enjoys an independent route to San Francisco.

The Santa Fé reaches direct from Chicago and St. Louis, by means of excellent connections, to Colorado, Los Angeles, and San Francisco. It dips well to the south on its way from the head of Lake Michigan, down into Lower California, and threads a land that for romance and charm has not its superior on this continent. You may ride for a whole day on the Santa Fé across the rolling, grazing lands of New Mexico, and from your car-window see small Indian towns of adobe, quaintly fashioned and wonderfully constructed, that will live long in your memory. And you will be accused of no lack of wisdom if you go out over one of the Santa Fé's slower trains, which means that you stop at the Harvey eating-houses all the way out, and so not only break your journey most comfortably, but eat eight or ten times at the best-conducted and most remarkable chain of restaurants in America.

One other road runs by the southerly route from Chicago to California the Rock Island. Its own rails end somewhere down near the west border of Texas, but its through trains continue on over the rails of the El Paso & Southwestern system to El Paso, and thence up into California over the rails of the Southern Pacific. The Southern Pacific's own main line threads such important Texas cities as Houston, San Antonio, and El Paso, and has its east terminal on the bank of the Mississippi at New Orleans. For a winter traveler bound from New York or New England to California there is no more pleasant route than to take one of the Southern Pacific steamers out of New York Harbor to New Orleans, where connection is made for through trains for Los Angeles and San Francisco. The water journey takes exactly five days. The steamer follows the shore all the way south to Key West, so closely at times that down at Palm Beach you almost feel that you might recognize friends bathing in the surf. The vessels in the service are all excellent; three of them—the *Creole*, the *Antilles*, and the *Monus*—are of transatlantic proportions.

Such then, in a word, is the variety of routes that offer themselves to a man California bound. But he will make a mistake if he merely boards a train at Chicago, or Kansas City, or New Orleans and shuts his eyes until the mountain ridges are crossed and the palm-trees are washing the car-sides. There are enough interesting things on the way to justify his stopping over not only once but several times. If he goes across Texas without stopping at Houston or San Antonio or El Paso he can not say fairly that he has seen Texas.

A Check for
\$12,000

A Big Help in Time of Need

ONE man in seven is accidentally killed or injured each year. You may be the one.

Would your wife then be able to write a letter like this?

This man took out a policy for \$5,000 a little over two years ago. Because it was an Aetna Accumulative Accident policy, it increased \$500 a year in value and his premium stayed the same. He was killed in a railroad accident, so both policy and increase doubled, making the payment \$12,000.

For \$25 a year, in "Preferred" occupations, this policy brings:—

\$5,000 to \$10,000 for accidental death or loss of two limbs or eyes. Add \$400 to \$1,000 to this for every year you renew the insurance up to 5 years.

Half the above for loss of one hand, foot or eye.

\$50 a week as long as you live if you're disabled from railway, steamship, or burning building accident. \$25 a week for any other accident.

The Aetna Life Insurance Co.

Gentlemen—

I cannot express my astonishment and thanks. The check for \$12,000 came and I am so bewildered even yet to quite understand why you sent me so much.

I did not even know that my dear husband had an accident policy. It is a comfort to know that through his foresight I am provided for. I was like him.

Again thanking you.

I am

Yours sincerely,

Mary A. Hall.

AETNA-IZE

THE LURE OF THE SOUTHWEST

Houston is only a commercial city, to be sure, but only fifty miles distant is Galveston—Galveston, which is not only the second busiest port in the whole land, but, with its great concrete sea-wall and new hotel, a tourist resort of consequence as well. And as for San Antonio, it is the great playground of the Texans, who, being a discriminating folk, would not be apt idly to make choice of a playground. You may leave the train at San Antonio and plan to stay there a few hours, or even a day and a night—better a longer time. Its narrow streets, its solid stone houses, set close to the walks, reminiscent of Spanish architects, with private gardens hidden by high, forbidding walls from the gaze of vulgar passers-by, its countless little squares or plazas, the indolent river running at will through the congested heart of the town, give San Antonio an appearance more foreign than American. Nor do the folk who walk those narrow streets, or loiter underneath the shade of the tropical foliage of the plazas, belie that first impression of the town. More than half of those who live in San Antonio are Mexicans. The women wear at all seasons of the year the bright velvets of their race, while department-store hats have never outstript the mantillas in their affections. Men may wear blue jeans, but can not be weaned from steeply-crowned sombreros. Love for that stupendous sort of headgear is born in their blood.

If ever you should tire of the town itself, its cathedral, its historic shrine, the Alamo, its brisk and cosmopolitan streets, there are other interests near by—Fort Sam Houston, bravely and gaily military, and a chain of missions, some of them ruined and one or two intelligently restored, which are almost as interesting as those you will see in California. And then there is the open country—the open country for motor-car or pony-back—the open country with its width of vision and its gentle slopes grown with sage-brush, chapparal, and mesquite. It takes a Northerner to come down to and love the open country that surrounds San Antonio. The Texans love it, too; but have been born to it, and perhaps can not remember the exultations with which they witnessed it for the first time.

El Paso is the chief land gate to our troubled neighbor on the south—Mexico. So the wise traveler, not permitting himself to be hurried in his journey across the continent, will alight from his train at that busy junction-point and make a little journey into Mexico. It can be as long as his time, his courage, and the movements of the various guerrilla armies that are constantly sweeping along the south bank of the Rio Grande will permit. In any event he can probably visit Ciudad Juarez, which is Mexico's city snuggling close up on its reservation to El Paso.

Juarez may give him all that he wishes to see of Mexico. The transition is instant. From El Paso you leave sky-scrapers, brick pavements, taxicabs, modern hotels, French styles and bungalow houses, and in a short mile your trolley-car crosses a rickety wooden bridge over the "silvery Rio Grande," once recommended by Mr. Dooley as the "finest river for pedestrianism in the world," and you go back a century. There are no sky-scrapers, no pavements, merely adobe houses, painted in a variety of colors, pink and sky blue vying for popularity, and a road dusty or

PORT & HOLT LINE

muddy as the weather may be overhead. The moving-picture theater has given way to the bull-ring. On Sunday afternoons there are bull-fights—chiefly arranged for the benefit of American tourists. On other days the tourist must be content with buying souvenir post-cards, or Mexican trifles, with gazing at the ruins of the post-office, prisoners behind the bars of the prosperous-looking jail, with peering into the shadowy recesses of interesting old churches, and with glancing back to see over the tops of cottonwood trees, the tops of sky-scrapers in the United States. He will soon be content to return to his native land, and yet he will feel not a single regret for his short excursion into old Mexico.

New Mexico, together with its close neighbor, Arizona, offers much of the charm of old Mexico, with none of its present-day inconveniences and dangers. The tourist, California bound, who passes through Tucson and Santa Fé without looking at either, has missed his thorough look at America. Tucson is on the main line of the Southern Pacific, while Santa Fé is a very short distance away from the main line of the great railroad to which it has given its name.

Tucson is the larger of these two cities, whose boast it is that they can count three hundred years of civic existence. Back of that time they seem to have lost track of the passing of the years, altho your learned citizen of Santa Fé will tell you in all gravity that he believes that his city was in existence a thousand years ago. As to his proofs for a seemingly astounding statement, more in a moment.

Consider for this moment the very old city of Tucson. It stands in the great desert valley of southern Arizona, an oasis where a bubbling spring made first a halting spot for Spanish caravans, and then, a little later, a Spanish town. The Spanish town is still there, its plaza, its narrow streets, its convent, patios still blooming within the old houses. And when you drive south a dozen miles or so you will see its old church, San Xavier, snow-white and glistening even against the brilliance of the sun-filled desert. San Xavier has been menaced many times since it became an outpost of civilization and Christianity, but the light still burns upon the altar of its faith and so has burned for nearly three long centuries.

Santa Fé has done something more for American history than give its name to a pioneer trail and an excellent railroad. It is only eighteen miles from the main line of that railroad, and should you happen just to miss one of the trains up the branch, you will find at Lamy Junction one of those excellent hotels which have made life in the Southwest worth living. There is a passable hotel at Santa Fé itself, but when you come into that ancient capital you cease to think of hotels. You begin to allow your imagination to carry you back one hundred, two hundred, three hundred years. You wander down the old Santa Fé trail as it comes poking its way into the heart of the little town, and once again you see it peopled with oxen, dirty prairie-schooners, with tired men and women buoyed up by the promise of a new land. You ride up to a plateau, into the ruined embrasures of old Fort Marcy, and find yourself with an invading American army looking down into a tidy Spanish capital, so soon to fall into your hands. You go within the governor's palace and see De Vargas and the other Castilian

Tone up your kidneys and get out of your system all the poisonous products of faulty metabolism which have naturally resulted from a sedentary life. If you suffer from kidney or bladder trouble, strike at the root of the evil by drinking freely of

BUFFALO LITHIA SPRINGS WATER

The pressure of business need not be interrupted while you are making yourself "fit" again.

Buffalo Lithia Springs Water offers the conclusive evidence of thousands of complete cures. For years and years it has been the standard corrective for many ills—particularly of the digestive and eliminative organs. Hundreds of eminent physicians (many of them standing at the head of medical profession) have endorsed Buffalo Lithia Springs Water and prescribed its use for the cure of the disorders mentioned.

HUNTER McGUIRE, M.D., LL.D., *late President American Medical Association*, said: "I know from constant use of it personally and in practice that the results obtained from its use are far beyond those which would be warranted by the analysis given. I am of the opinion that it either contains some wonderful remedial agent as yet undiscovered by medical science, or its elements are so delicately combined in Nature's laboratory that they defy the utmost skill of the chemist to solve the secret of their power."

Your druggist sells Buffalo Lithia Springs Water. Phone for a case note (12 one-half-gal. bottles).

Write for little book, "Springs of Health."

Are You Giving Your Body A Square Deal?

Read

"The House We Live In"

A clever new book of talks on the body and the right use of it, by DR. WM. ELLIOT GRIFFIS—world-famed as a lecturer on various subjects.

The career of Dr. Griffis is a fine example of the proper direction of energy for a high purpose, and what he says should carry weight with all thinking men. He calls his book "The House We Live In". You should get it, read it, enjoy it and profit by it.

Cloth, over 200 pages, 60 cents net;
by mail, 68 cents.

FUNK & WAGNALLS COMPANY
354-360 Fourth Ave., New York

An Advertisement to Manufacturers,
Merchants and Professional Men

1/10 of a cent will buy Prestige

ANY firms who have the best equipment money will buy, who do quality things in a quality way, still buy stationery on price consideration alone, strange as it may seem. And they do this, notwithstanding the fact that the letters they mail are the representatives of their firms who make the most frequent calls on their customers or clients.

Old Hampshire Bond

Take a Pencil and Paper and Figure it Out

A fair cost of ordinary paper is about \$1.50 to \$2.00 per thousand sheets. On that basis Old Hampshire Bond would cost from 1/10 of a cent to 1/20 of a cent more per sheet. Your own figures will prove what would be the cost compared with the paper you use. Not counting your time in dictation, a series of five letters will cost you at the very least 20 cents (for your stenographer's time). To have these letters on Old Hampshire Bond will cost just a 1/2 cent more, or 20 1/2c. For the extra 1/2 cent you have expressed to your five customers, subtly yet forcibly, the standard of your business. The appearance and "crackle of quality" of Old Hampshire Bond cannot be disregarded. No man who is not proud of his business and its good name feels any incentive to use Old Hampshire Bond.

HAMPSHIRE PAPER COMPANY
SOUTH HADLEY FALLS, MASSACHUSETTS

The Only Paper Makers in the World Making Bond Paper Exclusively

If you are a buyer of business stationery, we would like to extend to you the privileges of our Service Department. Simply write us using your present letterhead and ask for our "Service Help" and we will send you from time to time Bulletins of interest to you whether you use Old Hampshire Bond or not. Or a simple request will bring you the Old Hampshire Bond Book of Specimens—a book assembled and bound up to interest business men.

grandeers sent to set up miniature courts in the heart of a little-known and far-distant land. And while you are within that same old palace—nowadays cleverly wrought into one of the most interesting museums in America—you will see models, paintings, and photographs that depict the still earlier folk of New Mexico, those little-known humans who builded six-story apartment-houses and then vanished—a thousand years or more before the coming of Columbus. You can let your imagination go back pretty nearly as far as you wish when you go to Santa Fé. There are accurate proofs of the fact that it was a permanent town hundreds of years before the coming of the white man to America.

WONDERS OF THE GRAND CAÑON

If you stop at Santa Fé you will also wish to stop at the Grand Cañon—just as great a lion, altho in a totally different way. When you gaze down into that great mold from which must have been cast some of the great mountain ranges of America, you will feel that you have reached the ultimate of this world's scenic glories. You may spend a day there or a month. You may only cling to the rail that lines the gardens in front of El Tovar and keeps you from losing your head and dropping down a sheer two thousand feet or more, or you may immediately transform yourself into an exploring party and spend whole weeks on mule-back, seeing the apparently endless wonders of the place. In either event you will find yourself harboring grudges against the train that bears you away. You may find yourself thanking luck—and the Santa Fé—that the railroad station is so near the brink of the cañon that there is sure to be time enough for another run back and a gaze into the great red place, dry as a bone and seemingly as fathomless and as mysterious as the ocean or the blue sky overhead.

It is not the intention of this article to tell in detail of the wonders of California. That task, as has already been said, will be left to the midwinter travel issue of THE LITERARY DIGEST. It is, however, well to reiterate that there is no more charming season of the year along the west coast than November and December. And even those folk who boast that there is not a winter that passes that does not see them crossing California's garden-wall, the Sierras, find a novelty awaiting them this year in the practically completed expositions. For remember that California, who rather prides herself that she never does anything by halves, will speak of expositions in the plural number in the year 1915. Not content with having created one of the most beautiful of world fairs, if not the very largest, and consequently the most tiring, at San Francisco, she has builded a second fair, quite as large as those at Buffalo or at Jamestown, down on the hillsides back of San Diego.

THE TWO GREAT EXPOSITIONS

The two expositions are totally unlike. San Francisco's is a majestic affair, built at the very edge of the Golden Gate—the most wonderful setting ever given to a world's fair. It is wrought in yellow staff, which will only gain distinction and added beauty as the buildings begin to age. And those same buildings are crowned with domes and minarets—domes of a light blue and minarets of reds and browns—until the effect from the residential side-hills of the

FUNK & WAGNALLS COMPANY, Publishers, NEW YORK CITY

town is that of a Turkish city nestling there by the water's edge. San Diego, on the other hand, has fashioned its fair in the soft gray tones of concrete. The more beautiful buildings have not been built of wood and staff to be torn down when the show is over and charged off as architectural and economic waste. They have been built of permanent concrete, and a thousand years hence the San Diegan should be able to take his son up among the hilltops and tell the fancied and fabled story of the exposition of 1915.

From an economic standpoint the San Diego show is perhaps the most interesting. It is not every day that a little town of not more than 50,000 inhabitants and located at the end of a branch-line railroad, builds a five-million-dollar exposition and pays for it before the exposition doors open their gates. Yet that will be San Diego's boast before it opens, on New-year's day next, its World's Fair, which is to run for a year and a day. The term of the San Francisco Exposition is hardly shorter—from February 20 to December. The expectation is that there will be few folk from east of the Sierras who will go to see the one without seeing the other. There is no repetition between these friendly rivals. The one is rather supplemental to the other. Together they form America's great peaceful triumph of 1915—the more triumphant because of the bitter contrast it offers to wreckage and desolation overseas.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"W. M. B." Telford, Pa.—"Please give the various meanings of the word 'creole.' Is it permissible to use the word when referring to a child born in America of parents who come from Germany?"

A creole is a white descendant of French or Spanish settlers of Louisiana or the Gulf States. Also, a native of Spanish America or the West Indies of European (originally French and Spanish) parentage. Under the second definition the term may be applicable to a child of German parentage born in Spanish America or the West Indies, but we have never heard it so applied.

"I. P." Orrville, Ohio.—"Kindly give me the correct pronunciation of *Santa Rosa*."

San'ta ro'sa—first *a* as in *can*, second and third *e's* as in *sofa*; *o* as in *no*.

"R. J. B." Kouka Park, N. Y.—"What is the proper use of the word 'Professor'? Is it wrong to call a high-school teacher 'Professor'? Or, is it true that only a college or university man of many years of experience, the head of a department, and on whom the honor has been conferred, should be called 'Professor'?"

A professor in the specific meaning of the term designates a public teacher of the highest rank who holds an endowed or established chair in a university or one of its colleges. Endowed teachers of higher grades of study are also called professors, and the term is used to designate one who holds a high salaried (or endowed) position as a teacher in an educational institution. The title is higher than those of *Reader*, *Instructor*, or *Lecturer*. As a teacher in a high school is not an instructor of the highest grade, it is technically wrong to style him "Professor," but the word is used sometimes as a title of courtesy, when added to the name of a person spoken to, and, having the sanction of usage, is permissible. If not distasteful to the person to whom it is applied. That it might prove offensive is due to the fact that the term has been much abused, having

See America Now on "A.B.A." Cheques

Now is the time to travel extensively in America, to visit its many great cities, interesting towns and scenes of natural grandeur—now, while European travel is impracticable owing to the war.

On American trips, either for pleasure or business, "A. B. A." Cheques will relieve you of much worry about money matters. They are far safer to carry than currency, which can seldom be recovered if lost or stolen.

No red tape is involved in using "A. B. A." Cheques. The holder simply countersigns a cheque, and pays his bill. It is as easy as signing a personal cheque. "A. B. A." Cheques, however, are accepted where a personal check or a draft might naturally be refused—at hotels and ticket offices, in Pullmans and by the best merchants.

How Prohibitive Price Handicapped the Nation

It made millions of people do without watches.

Every day it wasted minutes and quarter hours for all these millions.

It retarded the growth of punctuality and efficiency in America.

It fostered habits of laziness and sloth.

The price of good watches was prohibitive because it cost so much to make them that millions of people had to do without.

Today the power of the Prohibitive Price is destroyed.

American genius found the way to simplify watch construction while maintaining time-keeping accuracy.

The whole world is better for the invention of the INGERSOLL DOLLAR WATCH.

It is one of the marvels of the age!

It is the great teacher of punctuality and precision.

It has made Time the servant of the millions.

Forty millions of people have bought it, and fifteen thousand more are buying it every day.

It is sold at the uniform price of ONE DOLLAR all over the country, by 60,000 dealers—in every city, town and hamlet—any jeweler can sell you one.

Look sharp for the name INGERSOLL on the dial.

ROBT. H. INGERSOLL & BRO

115 Fourth Avenue, New York

been used by charlatans, magicians, prestidigitators, jugglers, and instructors in dancing, as well as exponents of phrenology without due and accredited title thereto.

"S. F. R." Charleston, W. Va.—"In speaking of measles, mumps, whooping-cough, etc., is the use of 'the' as a modifier proper? For example, 'Ellen has the measles.'"

The use of the definite article emphasizes the character of the disease which its omission would not do. "Ellen has measles" may mean she has French or German measles, or black or confluent measles, whereas the measles designates the disease commonly so called—a contagious eruptive fever affecting children.

"S. W. T." Montreal, Can.—"Kindly decide the following controversy: 'A' claims that it is correct to hyphenate the word 'reasonable,' when there is insufficient space at the end of a line to print the full word in typewritten or printed matter, as follows—'rea-sonable.' 'B' claims that hyphenating the word as shown is incorrect. Kindly express your opinion as to whether 'A' or 'B' is right, and quote authority or rule covering the case."

The word *reasonable* is one of four syllable words—*rea-son-a-ble*, and can be divided *rea-son-able* or *reason-able*, according to space, but not *reasona-ble*. These divisions are governed by orthoepy and typographical usage.

"T. J. C." Conyers, Ga.—"(1) In a recent article the author cites reasons as 'First,' 'Secondly,' and 'Thirdly.' Why should it not be 'Firstly,' if the other two are correct? (2) When is the word 'doubtless' used? Please distinguish it from 'doubtless.' (3) Is it not correct to say 'I feel badly'?"

(1) The words used are correct. The word "first" is itself an adverb and does not need *-ly*. There is a word "firstly," but its use is not common among careful writers, altho its usage dates from 1532. (2) There is no difference between "doubtless" and "doubtlessly"; both are adverbs, and the latter is a mere variant of the former. (3) "I feel badly" is not correct; it is a slang expression for "I feel ill." One may say "I feel bad," but "I feel badly" is as inadmissible as "I feel ily" would be.

"D. A. T." New York, N. Y.—"What was the value of the ducat, and where was it current?"

The Venetian ducat was a gold coin worth in 1284 about 9 shillings, or about \$2.25. In 1387 its value had depreciated to that of half an English noble, which varied from 3 shillings and 4 pence to 5 shillings, or 83 cents to \$1.25. In 1494 its value varied from 4 shillings and 7 pence to 4 shillings and 3 pence. In 1618 it was worth 7 shillings and 6 pence (about \$1.88), and in 1823 9 shillings and 6 pence (\$2.36). But the ducat of Shakespeare's time varied in value from 3 shillings and 4 pence (83 cents) to 4 shillings and 2 pence (\$1.00).

"C. K." Philadelphia, Pa.—"Please translate 'Non ti acordar di me.'"

The phrase you cite means "You do not remember me."

"A. J. F." Americus, Ga.—"Please answer the following: (1) Why do we call some of our paper (writing) foolscap? (2) What causes dog-days? (3) Why does Easter Sunday come sometimes in March and sometimes in April?"

(1) Foolscap is defined as: "Writing-paper about 13 by 16 inches in size, usually folded to make pages 13 by 8 inches: It was formerly watermarked with a fool's cap and bells, whence the name; in England, also, a printing-paper of the same size." (2) Dog-days is a term characterizing "the hot, sultry season of summer during parts of July and August: so called from the fact that the rising of the dog-star (Sirius) is, during that period, coincident with the rising of the sun. Owing to the precession of the equinoxes the date of the heliacal rising of Sirius has varied through the centuries. The dog-days are now usually counted from July 3 to August 11, that is, 20 days before and 20 days after the conjunction. (3) Easter is a movable feast and, according to the decree of the Council of Nice, is the first Sunday after the paschal full moon, that is, the full moon that occurs on the day of the vernal equinox, March 21, or on any of the 28 days following that date. Consequently, the earliest date on which Easter can fall is March 22, and the latest is April 25. It is considered the great movable feast of the Christian year.

TOPICS - OF - THE - DAY

DEMOCRACY'S CASE BEFORE THE VOTERS

THE MOST FORMIDABLE single piece of artillery that has been brought to bear in the campaign leading up to the Congressional elections next Tuesday is apparently President Wilson's letter to Majority Leader Underwood, and as this indicates the Democratic line of attack, so the return fire of the Republican editors reveals, in turn, the caliber of their ordnance and discloses the strength of their position. In this letter—hailed in the Democratic camp as the most convincing record of achievement ever submitted as an argument for continuing a party in power, and belittled by the enemy as a document conceived in an atmosphere of misleading optimism—the President describes the principal results of a year and a half of legislative activity by a Congress overwhelmingly Democratic. In the coming election, for the first time, one-third of the Senators as well as all the Representatives are to be chosen by popular vote, and the President's letter, while addrest to Mr. Underwood, is virtually an appeal to the people of the United States in behalf of his party. Altho the original Wilson program of legislation has already been written into the statute-books, practically in its entirety, in a session of Congress of unprecedented duration, the Democratic editors remind us that in the remaining two and a half years of his Administration many problems will still confront him, and they plead that his task be not made more difficult by the election of a hostile Congress. The President himself is confident that "a practical nation" will realize that the Democracy is the only party now available, and will not "substitute in the midst of great tasks either a party upon which a deep demoralization has fallen or a party which has not grown to the stature that would warrant its assuming the responsible burden of the State."

The single purpose running through the Democratic program, we read in the President's letter, has been "to destroy private control and set business free." The three great steps by which he believes this purpose to have been realized are seen in the Democratic tariff, currency, and antitrust legislation. He laments the fact that the European War has prevented a fair test of the new tariff as a means of stimulating competition, and thereby bringing prices "to their normal level again." The currency legislation he describes as "creating a democracy of credit"—which moves one editor to remark that it is also "a credit to Democracy"—and the new trust laws he characterizes as "an effort to kill monopoly in the seed." This same purpose to destroy private control and set business free, he remarks in-

cidentally, has been the chief object "of the foreign policy of the Government during the last eighteen months." Business, he claims, has already adjusted itself to the changed conditions brought about by the Democratic tariff "with singular ease and elasticity," because "the new conditions are, in fact, more normal than the old." The loss of revenue due to lower schedules, he reminds us, was replaced by an income tax, "which in part shifted the burden of taxation from the shoulders of every consumer in the country, great or small, to shoulders more certainly able to bear it." Then came the war, crippling our foreign trade and necessitating a "war-tax":

"We had time to learn from the actual administration of the law that the revenues resulting from the double change would have been abundant had it not been for the breaking out of the present war in Europe, which affects almost every route of trade and every market in the world outside of the United States. Until the war ends and until its effects upon manufacture and commerce have been corrected we shall have to impose additional taxes to make up for the loss of such part of our import duties as the war cuts off by cutting off the imports themselves—a veritable war-tax, tho we are not at war; for war, and only war, is the cause of it."

The next paragraph is apparently an answer to the Republican assertion that the need of a war-tax is caused not so much by the war as by the defects of the Democratic tariff:

"It is fortunate that the reduction of the duties came first. The import duties collected under the old tariff constituted a much larger proportion of the whole revenue of the Government than do the duties under the new. A still larger proportion of the revenue would have been cut off by the war had the old taxes stood and a larger war-tax would have been necessary as a consequence. No miscalculation, no lack of foresight, has created the necessity for the taxes, but only a great catastrophe world-wide in its operation and effects."

Turning to his party's antitrust legislation, he says:

"With similar purpose and in a like temper the Congress has sought, in the Trade Commission Bill and in the Clayton Bill, to make men in a small way of business as free to succeed as men in a big way and to kill monopoly in the seed. Before these bills were passed the law was already clear enough that monopolies once formed were illegal and could be dissolved by direct process of law and those who had created them punished as for crime."

"But there was no law to check the process by which monopoly was built up until the tree was full grown and its fruit developed, or, at any rate, until the full opportunity for monopoly

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label, subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE** or **CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

had been created. With this new legislation there is clear and sufficient law to check and destroy the noxious growth in its infancy.

"Monopolies are built up by unfair methods of competition, and the new Trade Commission has power to forbid and prevent unfair competition, whether upon a big scale or upon a little; whether just begun or grown old and formidable. Monopoly is created also by putting the same men in charge of a variety of business enterprises, whether apparently related or unrelated to one another, by means of interlocking directorates. That the Clayton Bill now in large measure prevents.

"Incidentally justice has been done the laborer. His labor is no longer to be treated as if it were merely an inanimate object of commerce disconnected from the fortunes and happiness of a living human being, to be dealt with as an object of sale and barter. But that, great as it is, is hardly more than the natural and inevitable corollary of a law whose object is individual freedom and initiative as against any kind of private domination."

Pausing to emphasize "the particular point of principle in which the Democratic party differs from its opponents most sharply," the President says that while "it is our purpose to destroy monopoly and maintain competition as the only effectual instrument of business liberty," the Republicans and Progressives would "adopt monopoly into the realm of law and seek merely to regulate it and moderate it in its operation."

Turning to his party's reform of the currency—a reform the need of which had been admitted for a generation or more—he says in part:

"Let bankers explain the technical features of the new system. Suffice it here to say that it provides a currency which expands as it is needed and contracts when it is not needed; a currency which comes into existence in response to the call of every man who can show a going business and a concrete basis for extending credit to him, however obscure or prominent he may be, however big or little his business transactions. . . .

"I think we are justified in speaking of this as a democracy of credit. Credit is at the disposal of every man who can show energy and assets. Each region of the country is set to study its own needs and opportunities and the whole country stands by to assist. It is self-government as well as democracy."

After expressing gratification that he was privileged "to have a share in such labors," the President continues:

"The Democratic party is now, in fact, the only instrument ready to the country's hand by which anything can be accomplished. It is united, as the Republican party is not; it is strong and full of the zest of sober achievement and has been rendered confident by carrying out a great constructive program such as no other party has attempted; it is absolutely free from the entangling alliances which made the Republican party, even before its rupture, utterly unserviceable as an instrument of reform; its thought, its ambition, its plans are of the vital present and the hopeful future."

The Democratic press add very little to the argument as made by their leader, so we may now turn to the Republican and Progressive papers for their reply. The feature of President Wilson's letter which most opens it to criticism, in the opinion of the Republican New York *Tribune*, "is its tendency to translate laws into results and take for granted that a bill passed is the same thing as a reform achieved." Thus he speaks of the new tariff as an instrument for the curbing of monopoly

and the lowering of prices, but "the brief operation of the law up to the outbreak of the European War showed no influence on prices and no stimulation of the small producer that the consumer could detect." While admitting that the untried Currency Act, "for all its compromises, may well improve our currency system," *The Tribune* dismisses the claim that it will create a democracy of credit as "sheer imagining the pursuit of a phrase." As for the Clayton Bill, it continues, "the only fields of 'fresh individual endeavor' it is likely to open are those of litigation." If business has been set free, concludes *The Tribune*, "it has had to pay dearly for that freedom." Other Republican papers echo these objections and add to the count. "It is hardly worth while to discuss the points of the letter in detail," remarks the *Buffalo Express*, "because it is so far out of touch with the times that even the signature of the President will hardly avail to interest anybody in it." "The real significance of Mr. Wilson's long apology," declares the *Brooklyn Standard Union*, "is that he is scared by the signs of a Republican tidal wave beginning to rise"; and *The Times* of the same city says that in his list of the results of Democratic legislation the President has neglected to enter the following items: "Uneasiness and distrust among our financiers; a deflected revenue and increased domestic taxation; the avenues of employment overcrowded with anxious applicants, and the country facing a season of depression that no high-sounding rhetoric can dissipate or even minimize."

"The people have formed their own judgment about the work of this Congress," says the *Philadelphia Press*, "and the President's fulsome praise of it is not going to make them think any better of it." "A great many thousands of men connected in some capacity or other with the industrial establishments and plants of Pennsylvania can not refrain a smile when they read that 'business has already adjusted itself to the new conditions with singular ease and elasticity,'" remarks the *Philadelphia Inquirer*. The *Tariff Law*, this paper goes on to say, "has been a rank failure and a positive danger"; the *Banking Law* may be of some benefit, but "it has not yet even reached the experimental stage"; and the *Antitrust Law* is merely "one more theory foisted upon the country." Another Philadelphia Republican paper, *The Telegraph*, points out that the measures for which the Democracy claims credit are not yet in operation, with the exception of the tariff, and that any extolling of their virtues is "mere assumption." "The reserve bank system, ten months after the law was passed, is not yet completely organized," it says, and "the Trade Commission authorized has not yet been appointed." The President's reference to setting business free, thinks the *St. Louis Globe Democrat*, would have sounded better a year ago than it will now, "after so many men have been released from the thralldom of daily toil and are now 'free' indeed." His prediction concerning the new Currency Law, says the *Pittsburg Dispatch*, is "a confident view of a question yet to be determined." Moreover, adds the same paper, "he entirely ignores the fact that he and Congress were elected under a pledge to retrench on the large expenditures of previous Administrations, and that this

CARTOON THRUSTS AT GREAT PARTY LEADERS.

pledge was wholly ignored by his party in the present Congress." The *Pittsburg Gazette-Times* affirms that the Wilson Administration has "come nearer to destroying all credit than any Administration since Grover Cleveland's second." And the *Hartford Courant* warns the country that behind Democracy's war on "private control" lurks the menace of "a system of official, bureaucratic control by the political agents of an autocratic Government." "In politics and the policy of the State," affirms the *Hartford paper*, "President Wilson and George III. of England are two of the same kind." And the *Baltimore American*, replying to his argument that a "war-tax" would have been even more necessary under the Payne-Aldrich Tariff, says:

"The President curiously reasons that if the tariff had been higher the reduction of receipts through war conditions would have been greater. Such loss would be purely hypothetical—the actual loss from a gaunt tariff schedule is so real that it is a mercy to the Democrats that the war mantles it. The country is definitely on a deficit footing. What has the country to say?"

Turning to Progressive comment, we find praise mingled with criticism. "Thanks to strikingly able leadership," says the *Baltimore News*, "the Democratic party can go into the campaign with a record of things accomplished that bulk big in the aggregate." It adds that "in the matter of currency reform, admittedly the greatest piece of constructive legislation enacted in many years, the President may fairly point to the indorsement of the law by almost the entire financial world." To the *Chicago Tribune*, on the other hand, "the Wilson letter is not politics; it is poetic literature utterly divorced from reality." And in the editorial columns of the *New York Evening Mail* we find this critical discussion of the effects of Democratic lawmaking:

"Up to the outbreak of the war in Europe, last August, there was an agreed opinion that Democratic legislation, and threats of more legislation, had worked badly. Trade and manufacturing reflected conditions of wide-spread discontent. Every-

body looked for a disastrous Democratic reverse at the November elections.

"The war—not the Democratic 'program'—has changed that situation. The havoc that a Democratic tariff was steadily causing has been lost sight of in the world-wide upheaval. For the present there is a greater barrier to European competition than any tariff ever was. It will remain for a long time to come.

"Because of this barrier no one can estimate how much it would have cost American manufacturers to adjust their product and their pay-rolls to the foreign competition which the Democratic Congress invited. The increasing foreign trade balance against this country, shown by the figures for the first seven months of this year, is only a suggestion of what was in store for us had Europe remained at peace. . . .

"The people will not elect a Democratic Congress committed to 'destroying' business, even tho it be 'big business.' They are now engaged in patiently taking care of such business as the country now has, and eagerly seeking more—not less.

"This year's verdict at the ballot-box will be for constructive, not destructive, measures at Washington."

"None but the intolerant partizan will begrudge the President the satisfaction which he expresses in his letter to Representative Underwood over the achievements of Congress," thinks the *Philadelphia Public Ledger*, an independent paper which of late has seemed to have at least one foot in the Republican camp. The credit for these achievements, it adds, belongs to the President more than to his party. Glancing at other Independent papers, we find many similar tributes to the quality of the President's leadership. "He is not only the ablest advocate, but the most substantial achievement and chief good fortune of his party," says the *New York Sun*, while the *Springfield Republican* finds him worthy of this high praise:

"Both friend and foe may be found testifying that the country has an unusual President. He is fit to lead. He must remain the executive head of the nation through the life of another Congress. It would be a misfortune to deprive him of the support and the freedom of initiative and accomplishment which a friendly Congress would give to him."

HUMANIZING PATCHWORK LAW

SPEAKING as "a lawyer who has reformed," President Wilson, in his address before the American Bar Association, makes a plea for the "humanizing" of the law, which, critics concur, presented concisely and yet appealingly the case for Public Opinion *vs.* Precedent. Tho the Association have heard many pleas of this sort, remarks the *New York World*, never has one been presented to them "in fewer words and more eloquently to the point" than the President's. Public opinion, declared the speaker, is the great tribunal at whose bar we all appear. The opinion of the world "is the mistress of the world; and the processes of international law are the slow processes by which opinion works its will." Public opinion, further, does not hold sacred the forms of procedure nor the ordinary rules of evidence. In short—

"Everything, rumor included, is heard in this court, and the standard of judgment is not so much the character of the testimony as the character of the witness. The motives are disclosed, the purposes are conjectured, and that opinion is finally accepted which seems to be not the best founded in law perhaps, but the best founded in integrity of character and of morals."

The President desired to point out that in our law courts of the present day citations seem to be valued much higher than principle, and that, failing to ally itself closely with the changing generations of humanity, the law now appears to draw its vital stream far more often from books of law than from the current of human life that flows about it.

"Understand me, gentlemen, I am not venturing in this presence to impeach the law. For the present, by the force of circumstances, I am in part the embodiment of the law, and it would be very awkward to disavow myself. But I do wish to make this intimation, that in this time of world-change, in this time when we are going to find out just how, in what particulars, and to what extent the real facts of human life and the real moral judgments of mankind prevail, it is worth while looking inside our municipal law and seeing whether the moral judgments of mankind are made square with every one of the judgments of the law itself. For I believe that we are custodians, not of commands, but of a spirit. We are custodians of the spirit of righteousness, of the spirit of equal-handed justice, of the spirit of hope which believes in the perfectibility of the law with the perfectibility of human life itself.

"Public life, like private life, would be a very dull and dry matter if it were not for this belief in the essential beauty of the human spirit and the belief that the human spirit could be translated into action and into ordinance. Not entire. You can not go any faster than you can advance the average moral judgments of the mass, but you can go at least as fast as that, and you can see to it that you do not lag behind the average moral judgments of the mass.

"I have in my life dealt with all sorts and conditions of men, and I have found that the flame of moral judgment burned just as bright in the man of humble life and limited experience as in the scholar and the man of affairs. And I would like his voice always to be heard, not as a witness, not as speaking in his own case, but as if he were the voice of men in general, in our courts of justice, as well as the voice of the lawyers, remembering what the law has been."

Comment generally applauds the high stand taken by the President in his conception of what the law should be, but at least one dissenting voice, that of the *New York Evening Sun*, insists that the President errs in decriing precedent, upon which the immutability of all true justice is founded. Further, fault is found with the President's statement that "the real moral judgments of mankind" should prevail:

"This implies that the greater the number holding a moral view, the more likely is their opinion correct. At present the great majority of a group of one hundred million persons in Europe are convinced that a second group, of yet greater number, are heinously wrong. The other group reciprocates the feeling toward the first. Mr. Wilson might say that both groups are heinously wrong, but that would not do. He must hold them both altogether right in their moral attitude. Otherwise, if a

hundred million moral senses—or two hundred million, as you choose—can go diametrically wrong, who can look for a standard of justice in mere prevalence of opinion?"

OUR BUSINESS IN WAR-TIME

COURAGE AND CONFIDENCE, as one business authority declares, "are not now exclusively confined to bloody battle-fields," and the better feeling in the business world is reflected in our editorial columns and strengthened by the daily reports of increasing commercial activities. So that after all, as the *New York Sun* thinks, "the war-cloud may prove to have a silver lining, or rather a golden one." "All talk of stagnation in our export trade," according to this daily, "has ceased, and alarm over the settlement of our debts to Europe is disappearing as millions of credits are transferred to New York to pay for the huge purchases that England, France, and Russia are making or planning to make here." The cotton situation is still bad, and business in the South is therefore extremely dull. The "buy-a-bale" movement has as yet had little effect, it seems, tho an English plan for buying cotton on a large scale may help matters, and an increased demand for cotton goods must be felt in time. Railroad officials tell of hard sledding, and industries dependent on railroad orders are compelled to go slow. Imports have, of course, dropt off greatly with Germany's commerce swept from the seas, and the lack of certain dyestuffs and chemicals has seriously hampered manufacturers here and will continue to do so unless our chemists succeed in increasing home production sufficiently to meet the demand. "The man who can use the word 'satisfactory' in writing a review of business conditions must be a Democrat," according to the Republican *St. Louis Globe Democrat*. But another anti-Democratic view-point is that "the war has worked to stop the ravages" of the Democratic tariff upon our foreign trade balance, and it is the combination of big exports and big crops that makes so many trade writers optimistic, tho the *Boston News Bureau* would remind us that business in many of our big Western and Middle Western cities, including Chicago, has never been adversely affected by the war; hence the new factors for prosperity are clear gain.

It is interesting to trace the effect of the big war demand for our products upon the farmers and those affected by their prosperity, upon our manufacturers and wholesalers, and upon financial conditions. There is prosperity in the wheat belt, since a bumper crop is selling at high prices due to Europe's demands. The South is worried because the cutting off of her exports makes her big cotton crop largely unsalable even at lowest prices. Except for cotton, says the *New York Sun*, all forms of rural industry are being benefited by the war:

"September shipments of wheat, flour, corn, and kindred products were two and a half times as great as in 1913. From day to day the demand for export grain is a feature on the New York Produce Exchange. Meat products of all sorts are in huge demand. Foreign officers are buying thousands of horses."

Moreover, it continues:

"The market for manufactured wares appears to be no less. There are very large orders being placed for all sorts of material of war, a term which includes such diverse articles as barbed wire and automobiles. In addition clothing and underclothing for the troops in the field and for civilians at the rear are eagerly sought. The shrinkage in home manufactures compels the belligerent peoples to come here for their supplies. Just now the call is extensive for footwear and underwear of plain, durable quality, 60 per cent. wool. It is said that existing stocks in this country could be sold out completely if the holders did not refuse to risk a scarcity in the domestic trade.

"A banker quoted in *The Sun* estimates that the country's exports will be doubled in the current year, reaching a total of \$5,000,000,000. The figure may be considerably too hopeful, but the fact which it represents is becoming too plain to question, namely, an enormous and profitable increase in the immediate

future in foreign trade. What is more, it is to all intents and purposes cash business through the transfer of foreign credits, and practically every dollar not only tends to diminish unemployment and enhance gains here, but simultaneously helps to reduce the incubus of transatlantic liabilities."

To specify all the things that Europe is now buying, or wanting to buy, from us would perhaps be wearying. But the newspapers have been full of little items telling of orders, or rumored orders. We note a few of these, without vouching for their accuracy in each case, as some reports may have been exaggerated, and some orders may have been canceled, or may even have been only inquiries about goods. Here is a list from an editorial in the *Syracuse Post-Standard*:

"The Bethlehem Steel Company has received an order from France for 1,000 motor-trucks.

"The harness-makers of the Middle West have received orders from Europe for \$50,000 in saddles, saddle-bags, and harness.

"A representative of the Italian Government is in New York to buy aeroplanes and aircraft motors.

"A rush order of 110,000 barrels of flour was received in St. Louis Thursday, the largest single order of flour ever received. Galveston has just shipped a cargo of wheat to Greece.

"Orders have been placed with American manufacturers for 500,000 blankets for soldiers at the front and for 200,000 more for horses. If they can be supplied the War Departments will take a million more.

"The Carnegie Company has an order for 17,000 tons of steel for Australia, on contracts which nations at war are unable to fill. Great Britain has an order in New York for a million dollars in American machinery."

Here are a few more orders for war-time export, culled from various newspapers:

Half a million reels of barbed wire, "measuring approximately 125,000 miles."

Pittsburg—5,000 tons of steel for bayonets.

Philadelphia—6,000 packages of lockjaw antitoxin for French and British troops.

Boston—150,000 pairs of shoes. New England is expected to book orders totaling \$4,000,000.

Chicago—large orders for tinned meats, enough to keep the big packing firms working full time.

South Bethlehem, Pa.—900 six-inch field-guns, at about \$27,000 each.

Contracts with a number of motor-car companies for 1,440 automobile artillery wagons for France.

Several large orders for cartridges. The Smith & Wesson Company, of Springfield, is working night and day in three shifts, turning out revolvers.

A \$1,000,000 order for cotton supplies for hospital and medicinal purposes, to be spread among several producers.

Automobile-trucks, reports the *New York Sun*, are in great demand, and it says further:

"It is estimated that more than \$3,000,000 has recently been spent for horses. The closing of orders for 10,000 mules at \$185 a head, totaling \$1,850,000, in Kansas City and St. Louis is reported. A contract for 20,000 horses for the French Government is reported from St. Louis. Shippers are finding difficulty in transporting the animals. . . . Russia is taking a great amount of machine tools, one order including 800 lathes. . . . Toy-factories here are working night and day to make up the 40 per cent. of the toys imported usually from Germany."

In addition to these actual orders, there is noted in the press a

demand for clothing, both wool and cotton, leather, fresh meats, various steel products, petroleum products, clocks, chewing-gum, and tobacco. The large domestic trade is keeping the harvester plants busy. Reports from Louisiana say that the war demand is helping out the sugar-planters, who saw ruin in the new tariff rates.

Europe, says the *New York Commercial*, is exhausting its supplies of horses, cattle, hogs, and sheep, so that provident farmers are bound to grow rich in the next five years if they will raise cattle.

Such news cheers editorial writers and financial authorities all over the country. Of course all are not equally optimistic. Some Republicans expect the baneful effects of the new tariff to become visible in time. Some take care to remind readers that this export boom can not last. But the note of courage and confidence appears in the editorial utterances of such representative journals in the East as the *Boston Transcript*, *Journal*, and *Christian Science Monitor*, *Springfield Republican*, *New York Times*, *Commercial*, *Journal of Commerce*, *World*, *Herald*, *Press*, and *Telegraph*, *Brooklyn Eagle*, *Syracuse Post-Standard*, *Philadelphia Public Ledger*, *Pittsburg Gazette*

NO TIME FOR CHAIR-WARMERS.

—King in the *Chicago Tribune*.

Times, and *Washington Post*; and farther west and south the *Chicago Tribune*, *New Orleans Times-Picayune*, *Seattle Post-Intelligencer*, and *Portland Oregonian*.

It is the opinion of many of these editors that we have now recovered from the financial crisis which came with the outbreak of hostilities in Europe. So, for instance, contends the *Philadelphia Public Ledger*. It takes a backward look, and notes the sudden blight on our securities and commodities markets, upon our importing and exporting businesses. Then, "with all Europe suspending payment of its own debts and demanding gold instead of merchandise from the United States, a financial strain was put upon this country the like of which had not been seen in fifty years." But, continues *The Public Ledger*:

"In two short months the American people have met this crisis successfully. Our bankers have satisfied New York City's maturing debt of about \$80,000,000 held abroad.

"A syndicate of bankers has also raised another \$100,000,000 of gold to pay off Europe's immediate claims against this country.

"Money is now pouring back into the large Eastern cities. Big deficits in bank reserves have been wiped out."

The shipment of millions of dollars' worth of commodities to Europe, to be paid for in gold, or to balance our debts to Europe, will, as the *New York Evening Post's* Washington correspondent puts it, reduce the problem of our debt to Europe to an academic basis. "Instead of shipping gold in payment of the debt, it will be possible, provided the increase in exports continues at the present, or at a greater rate, to pay the debt in large part with commodities." If commerce continues to improve, an arrangement which will conserve the national gold supply can be made, in this writer's opinion. So, concludes the *Boston News Bureau*, "what was our biggest problem seems now of small and still dwindling proportions." If we can keep up the export movement long enough "to pay our debts with our products and to turn the balance in our favor," then, says the hopeful *Portland Oregonian*, "it will be 'the other fellow's' turn to worry about settlements, and we may let him settle by returning American securities at the deprest prices due to his own bellicose folly."

OUR UNREADINESS FOR WAR

EVER since President Wilson was ten years old he has periodically heard the alarm raised over the unfitness of the nation's Army and Navy to respond to a sudden call to active service. So, according to a White House dispatch, he is inclined to consider Congressman Gardner's (Rep., Mass.) plea for a more adequate preparation for war simply "good mental exercise." But to the press in general, Mr. Gardner's words seem worthy of more serious consideration, tho his outspoken declaration of anti-German sentiments is considered an offense against our neutrality. Even from the Navy Department, which defends the efficiency and "up-to-dateness" of our equipment in official statements, comes Assistant Secretary Roosevelt's admission that seventy-seven of our vessels would be short-handed in case of war, and that 18,000 more men are needed. Army officers, frequently voluble on the subject of our inadequate military establishment, seem to think this a good time for silence, and the Administration is not thought to be considering any call on Congress for increased military appropriations, but among newspaper editors Mr. Gardner's criticisms have started a discussion of the comparative merit of various weapons and methods of attack and defense. This rather naturally leads several writers to suggest that our Government ought to wait till the war is over and its lessons can be heeded before investing too heavily in any new armament, or committing itself to any new policy.

Mr. Gardner admits that he sat "like a coward in silence" for twelve years and listened to false assurances of our safety. But he was in Europe this summer. And now he would open the people's eyes to the true situation—to the fact that "the United States is totally unprepared for war, defensive or offensive, against a real Power." So he asks Congress to create a commission to find out just how unready we are. Meanwhile he is saying some rather uncomfortable things on his own initiative. For one thing, "the time has not yet come when the United States can afford to allow the martial spirit of her sons to be destroyed, and all the Carnegie millions in the world will not silence those of us who believe that bullets can not be stopt with bombast nor powder vanquished by platitudes." We must also remember, to quote a New York Sun transcript of Mr. Gardner's remarks, that no matter which side wins—

"Since the beginning victorious nations have proved headstrong and high-handed. We must begin at once to reorganize our military strength if we expect to be able to resist high-handedness when the day of necessity comes.

"Of course all this is unpopular doctrine. It would be far easier for me to declare that all is well and that our present military establishment, coupled with our National Guard and our Naval Militia, is to be depended upon for our defense. Unfortunately I can not bring myself to believe any such thing."

The next day, after Washington had been set talking by these observations, Mr. Gardner arose in his place in the House to tell his colleagues how our Navy is being allowed to sink to fourth or fifth place among the world's navies; how the belief "that we can create an army and navy when the need arises is wrong from beginning to end"; and how "we have been salving our conscience by trying to persuade ourselves that no nation would be so mad as to attack the United States." Are we so sure of this last fact, comes the question—

"Suppose some powerful nation finds itself inconvenienced by our Monroe Doctrine, will it hesitate to attack us because an idealistic statesman has devised a scheme for arbitration?"

"The United States by the Monroe Doctrine has closed Mexico and South America to colonization. The United States has indicated to the greatest military people which Asia has ever seen that she will have none of them within her borders."

And with these perils confronting us, what have we to depend on? According to Congressman Gardner, we have just about one torpedo for each tube with which our torpedo-boats and submarines are armed; we have just three fast naval scouts,

whereas Germany has five times and Great Britain ten times as many; we have, built or building, 12 vessels of the dreadnought class, to 26 for Germany and 42 for Britain; we are fourth on the submarine list, with 28; we are still worse off for naval armament. And if this fleet of ours can not stop the enemy's fleet, he can land on our coast, "and we have no army with which to oppose him." We are reminded that whereas Germany has a war strength of 4,000,000 trained men, "we have some 85,000 regulars and 120,000 militia, and no one else"; of the militia, it seems, more than half failed last year to qualify as third-class riflemen. As for arms, we are said to be fairly well supplied with rifles, but there is an "alarming condition of shortage," to quote General Wood, in field artillery-guns and ammunition. Alarming indeed, comments Mr. Gardner, in view of the part being played by artillery across the seas. Our main defense must be our Navy, concludes Mr. Gardner, but our land force must also be considerably increased, and we must "keep abreast with the times by providing ourselves with a plentiful supply of the most efficient artillery and the most modern engines of air-warfare." Of course, we are told, the politicians of both parties are to blame for not knowing about the situation and trying

to change it, yet "the root of the whole matter is that—

"The country has never yet been awakened to the understanding that 42-centimeter guns and superdreadnoughts present stronger arguments than past victories and present treaties. The time has come for us to rub our eyes and look about us."

Quite right, Mr. Gardner, says the New York American (Ind.); the attack on the "pinchbeck policy" of Congress is "thoroughly justified." It then asks its readers to take "a trip to the German steamship docks at Hoboken, where the great ships lie idle and deserted at their docks, eating off their value in interest charges as truly as a horse idle in his stall eats off his head," which will give them "an impressive idea of what an inadequate navy is costing Germany." "Follow it by a visit to the English docks or those of the French ships enjoying the protection of the British Navy. You will find the ships running with the regularity and safety that existed before the war." And on land—

"At a moment when by the sheer force of perfect preparedness Germany is winning victories all along the line against the greater part of Europe allied against her, we permit our Army to sink close to the point of inefficiency.

"Nobody questions that the line and staff of the Army are well trained, devoted and patriotic, or that they make the best use possible of the means and facilities placed in their hands by Congress. But there is a growing conviction that the ideal long cherished by this nation of a SMALL BUT EFFICIENT army is

Copyrighted by Harris & Ewing.

"THE UNITED STATES IS TOTALLY UNPREPARED FOR WAR."

Says Congressman A. P. Gardner, who thinks "the time has come for us to rub our eyes and look about us."

conding to be more accurately realized in its smallness than in its efficiency."

Similar views obtain among the editorial writers of the Boston *Transcript* (Rep.), in Mr. Gardner's home State; the Washington *Post* (Ind.), Louisville *Times* (Prog.), and Chicago *News* (Ind.) and *Tribune* (Prog.). Why, asks *The Tribune*, is Congress so "crassly ignorant of this subject?" Because, it answers,

"Because public opinion is indifferent, and there has been no spur upon Congressmen to know anything about it. There is little 'pork' involved. There are no votes to be gained."

Any American, declares the Richmond *News-Leader* (Dem.), should blush to own the truth. And after citing a number of detailed facts supporting Mr. Gardner's statements, it concludes:

"How are these conditions to be corrected? To our mind the answer lies in the establishment of a skeleton for a great Army and in the adequate enlargement of our Navy."

There is a growing feeling, at least so the New York *Times* believes, "that the European War is getting nearer to us." And *The Times* fears that in the event of German success "our cherished Monroe Doctrine may be in peril." All of which the New York *Journal of Commerce* denies, and in a leading editorial it warns the nation against a forced and exaggerated interpretation of the Monroe Doctrine, and then points out that as long

as it continues to be what its authors intended, "strictly the declaration of a policy of common defense," the United States can "count on what would practically be a continental union for resistance to actual European aggression."

Among those who tell Mr. Gardner that he is "unduly alarmed" is the New York *Commercial*, which admits a certain degree of unpreparedness, which should be remedied, but takes pains to point out how very difficult it would be for any European Power or combination of Powers to land troops and make any headway in the continental United States, and also to show how very unlikely it is "that any European Power will either be inclined or able to go to war with us in the next quarter of a century." Thus, agrees the Louisville *Courier-Journal* (Dem.), "there would seem to be little hurry to reorganize, and none at all to mobilize, our military establishment." "The kind of vampirings to which Mr. Gardner gave vent," protests the Baltimore *American* (Rep.), injures "the forces that are making for the upbuilding of the nation's prosperity." It adds:

"As to preparedness for war, the nation has always sought to have this in time of peace, and now, as ever, is doing its full duty, no doubt. But it is a hundred times more concerned to further the peace of the world and to give the hand of brotherly assistance to Belgium, Germany, France, Russia, England, and Austria, after they shall have laid down their arms."

FOREIGN - COMMENT

THE ALLIES AS CHAMPIONS OF THE LITTLE NATIONS

THE ALLIES, and particularly England, appear to be seeking the title of champions and protectors of the little nations. In England, of late, statesmen and men of letters alike have been doing their best to impress neutral nations with this aspect of England's share in the war. Premier Asquith and Mr. Lloyd-George have spoken largely upon this theme, and much has appeared upon the subject in British newspapers and periodicals. Mr. G. K. Chesterton, writing in the *London Daily Chronicle*, ventures the thought that this is "the age of the little nation" and that the smallest Powers, in a manner of speaking, may be considered the greatest. Amplifying this paradox, he continues:

"Belgium may yet solve the problems of the West as Serbia solved the problem of the East. When for centuries the Powers had shown nothing but their powerlessness, the knot that strangled Christendom was cut by the healthy impatience of the little peoples. The lonely little Black Mountain now towers almost as high and as historic as the white mountains of the Alps, and has been more unconquerable. Ireland has got Home Rule, or, rather, she has got much more than any Home Ruler ever dared to promise her. She has got a native army like a sovereign State, and it is a fortunate chance for all of us that the Irish hate the Prussians even more than the English do. And at this moment there is no throne in Europe so begirt with suppliants, or so surrounded with bowing courtiers, as the empty throne of Poland."

Mr. Lloyd-George, as quoted in the English papers, refers similarly to the greatness of the little nations, and dwells eloquently upon England's duty toward them. At a recent meeting in Wales, he said:

"The greatest art of the world was the work of little nations. The most enduring literature of the world came from little nations. The greatest literature of England came from her when she was a nation of the size of Belgium fighting a great Empire. The heroic deeds that thrill humanity through generations were the deeds of little nations fighting for their freedom. Ah, yes, and the salvation of mankind came through a little nation. God has chosen little nations as the vessels by which he carries the choicest wines to the lips of humanity, to rejoice their hearts, to exalt their vision, to stimulate and to strengthen their faith; and if we had stood by when two little nations were crushed and broken by the brutal hands of barbarism, our shame would have rung down the everlasting ages."

While England sees in this view of the war a call to a higher patriotism, Ireland is inclined to see its close application to herself. She, too, is a little nation, only now nearing her long-sought autonomy, and, as one Irish editor remarks in the *Tuam Herald*—

"The continuance of the enjoyment of that right will depend

HOW LONGWY LOOKS TO-DAY

It was a French fortress town near the Luxemburg frontier, taken by the Germans after bombardment. This picture was taken by a German artillery officer in a Zeppelin.

upon the maintenance of the British Empire, and if by any mishap it unhappily ceased to exist and were by any untoward fate crushed and conquered by Germany, with its fall would disappear Ireland's chances and claims to self-government. We should become, if Germany prevailed, a subject province or colony of Germany, ruled with the iron rod that is laid so heavily upon the Posen Province, Prussian Poland, and the two provinces of Alsace-Lorraine."

There are naturally many who fail to see England in the guise of a protector of humanity, but this skepticism is not entirely confined to the German press. The *London Labour Leader* has an unkind word to say upon this subject, referring specifically to Great Britain's past records:

"Britain is now supposed to be the champion of small peoples, yet we have the example of Persia before our eyes to-day. Persia, whose independence was guaranteed by Britain and who has been swallowed by Russia! The neutrality and independence of Korea was guaranteed by Britain, France, and Russia, but Korea was seized by Japan and her Queen murdered by Japanese agents. Morocco was divided between France and Spain with the connivance of Britain. Britain, like every other nation, breaks her treaties when convenient to herself."

The German press is frankly satirical. "England and Russia

arm in arm as deliverers of oppressed peoples!" cries the *Hamburger Nachrichten*. "This picture, actually and diligently proffered in awful and sacred earnest, casts into the strenuous war-tide—a caricature!" It is true that this twain have in their time interfered in the welfare of smaller nations, but that is not the same thing. Both England and Russia, says the writer, dominate subject peoples who sigh for liberty, but is this liberating ardor exercised on their behalf? Not at all—it is peoples subject to other States whose shackles these two nations would strike off. Russia, for instance, he notes, is greatly distressed over Austria's diverse downtrodden peoples, tho she has herself crushed the Poles and reduced Finland to despair. How unconcerned England, the would-be defender of Belgium, is over the distress of her own subject peoples is shown in India. Kaiser Wilhelm headed a contribution for the starving millions of India, we read, while "John Bull stood by, hands in pockets, and did nothing."—*Translation made for THE LITERARY DIGEST.*

DUTCH VIEW OF NEUTRALITY

SURROUNDED on every side by the welter of war, little Holland is trying desperately to maintain neutrality. Various reports have pictured popular sympathy as favoring one side or the other, depending perhaps on the feeling of those the correspondent had been talking with, but reports in the Dutch press appear to indicate strong feeling against both Germany and England—against Germany because of the fear of aggression, and against England because of its interference with Dutch shipping. There is deep sympathy with Belgium and a friendly feeling of long standing toward France. But how strictly the official neutrality is guarded appears in a notice in the Amsterdam *Handelsblad* that the police at The Hague have seized the illustrated weekly *Wereldwee* because it contained drawings, by the celebrated cartoonist Raemakers, which might possibly offend the Germans, the French, or the British. The *Handelsblad* also notes that the editor of the *Nederlandschen Financier* has been sent to jail for three months for an article, as it says, "insulting the German Emperor, head of a friendly (?) nation." The *Weekblad van het Recht*, a law journal, remarks, in a note which names no nation whatever, that the failure

of the Dutch press to protest against atrocities in Belgium is carrying neutrality too far, and may be wrongly interpreted as an expression of sympathy where none exists. The *Handelsblad* thinks Germany might have won Dutch sympathy by a different military course, which it thus outlines:

"Germany always had, and still has, many and good friends in Holland, but their number would have been doubled if Germany had not become the aggressor for fear (excuse the word) of being attacked; if it had respected the neutrality of poor, suffering, trampled, and leviated Belgium—in one word, if it had waited with calm strength for events to come. All the German writers on the war have proclaimed that for Germany's defense this attack was necessary. But we would like to ask: How big, or rather how small, would the army have had to be, calmly to

await the French on the fortified line of Metz? And what a big army would then have been able to enter Russia, before Russia could have mobilized! And does not everybody believe that Germany, attacked this way, would have come out of this war victorious? Would not all the sympathy of Europe and America have gone out to Germany's side? Furthermore, does anybody believe that there would have been much strength in an attack from the French side in an unnecessary general war, not wanted by the French people? Further still, does anybody believe that in a case like that a general war would have been the result? And it certainly is sure that England would not have flung down the gauntlet."

The Amsterdam paper quotes feelingly the hope expressed by the London *Spectator*, that England would not have to "take hasty steps to interfere with neutral trade." And then it adds, still more feelingly:

"1. How and in what way do heathens and uncivilized people fight one another?"

"2. Does any one know if neutrals, besides their 999 'duties,' have maybe one right?"

Then it proceeds to intimate that their commerce might be better off if the Dutch joined the side that controls the seas. As we read:

"There is no position so disagreeable, tame, and discouraging as that of a neutral country whose neighbors are at war. . . . No toasts are drunk to neutrals. There is nothing in neutrality to be so very

proud of. Neutrals are like the servants in Molière's comedies, with their backs always turned, ready for a rain of blows. Holland suffers as a neutral country in its commerce, shipping, and industry just as much as the parties at war, and CERTAINLY MUCH MORE THAN ENGLAND."—*Translations made for THE LITERARY DIGEST.*

THE FORT-WRECKER.

The tremendous siege-gun which shattered the defenses of Liège, Namur, Maubeuge, and Antwerp. The guns of this type are said to have been loaned to Germany by Austria. Their effect on entrenchments has been less decisive.

GERMANY'S DEFENSE OF "MILITARISM"

NOT GERMANY, but German militarism, is declared by British leaders to be the object of their attack. Sir Edward Grey has said this explicitly. Prussian militarism, he avers, has plunged Germany and all Europe into this conflict, and when it is destroyed a brighter and freer day will dawn for the world and compensate it for the present awful sacrifices. Mr. Bonar Law, too, leader of the Unionist party in Parliament, says that the German people have permitted themselves to be made into a military machine that knows no right but might, and "that is what we are fighting." Such talk brings a reply from the *Kölnische Zeitung* which is well worth reading to show Germany's view of its own militarism. Says its semi-official organ:

"It is, of course, easy to see why Prussian militarism should be nerve-racking for Englishmen, and especially for Sir Edward and his associates—that militarism which burst like a storm upon the 'allied armies,' and has reduced the English expeditionary army to hardly half its original strength, and of which the *London Times* said: 'The rapidity of the German advance was, for those who are familiar with the territory and distances involved, only short of the miraculous.'"

"But what can the English shopkeepers, who buy their soldiers as they do their cotton-bales, what can these islanders or whom a common soldier is the most despised being on earth, even remotely know of the self-sacrificing spirit of a people which finds itself wedged in between powerful and jealous neighbors, compelled for the sheer purpose of self-preservation to become a veritable 'nation of soldiers'? Call it militarism or what you will, it is the development of a century of strain and stress, and our system of universal military duty is nothing more than a system of national defense, which for us Germans is a national, an ethical ideal, even the most democratic of all institutions on earth, by which every man, noble and peasant, rich and poor, feels obliged to offer up for his Fatherland his all, his best, his heart's blood! We have nothing but contempt for the English phrase-makers and English business-politicians who with contaminated fingers try to soil our national ideal. Let them but read our list of casualties: princes and nobles, counts and barons, Catholics, Protestants, and Jews, Social Democrats, Conservatives, Centrists, and Liberals, all without exception heroes on the field of honor, martyrs for the Fatherland! Your stakes, O Englishmen, are not equal to ours. Only by enrolling in your army the flower of your people, instead of the scum of your Empire, will you be heard to discuss these things. When

the command 'mobilize' was given, when the military system began to move and operate with the accuracy of a machine, when the German nation as a matter of course transformed itself into an army in gray uniforms, when our youth, singing and garlanded, marched out against our enemies, we overheard an old woman exclaim: 'See what we have for our taxes after all!' That is the spirit of Prussian, of German militarism, the spirit

which animates our entire people, from the Emperor down to the beggar, the spirit which stakes everything on national honor. Follow our example, if you can, O Englishmen, then we can resume our discussion."

Well, then, says the *London Pall Mall Gazette*, if the German people are one with German militarism, so much the worse for them:

"It is not a case of a refined and high-minded people overborne by a single 'caste.' We are fighting with a nation whose moral level is intrinsically low, which has little trace of humane instinct, and still less comprehension of the meaning of honorable obligation. . . . It is not only her rulers, but her people, who have to receive their lesson, and there is but one educational process to which the bully has ever been found susceptible."

LOYALTY OF GERMAN-CANADIANS—The loyalty of many German-Canadians to the land of their adoption is as pleasing to the people of Canada as it is puzzling to witnesses of German-American zeal for the Fatherland. The city of Berlin, Ontario, founded by German United Empire Loyalists at the time of the American Revolution, and still predominantly German by birth or descent, is believed to have contributed perhaps more than its proportionate share of men and money to the British cause. Some would rename their town, but the

Vancouver Sun remarks that its inhabitants have "acquitted themselves so nobly" that "the movement to de-kaiserize the name of their city ought to be abandoned." They set out to raise \$75,000 for the Canadian patriotic fund, and actually took in \$100,000, according to a dispatch to the *London (Ont.) Advertiser*. "Faith in free institutions can not but be deepened and strengthened" by the attitude of these people to the war, declares the *Winnipeg Manitoba Free Press*. It quotes their cabled message to Lord

Kitchener—"Germans want to see militarism in Germany smashed and the good people set free to shape a greater and better Germany"—and it comments approvingly:

"There is no radical disloyalty in this splendid and courageous message. It is precisely such a message as one might hope would

THE ELUSIVE GERMAN CRUISER EMDEN.

Which shelled Madras and raided commerce in the Bay of Bengal. For six weeks the *Emden* had not been heard of. Then she suddenly appeared in the Bay of Bengal, and in five days, between September 10 and 15, captured and sank seven British merchant-vessels, mostly of small size. The *Emden* is a 24½-knot light cruiser of 3,540 tons, with 361 officers and men, and mounting ten 4.1 quick-firing guns. In all she has sunk or taken 21 British vessels.

be sent by people who for several generations have breathed the free air of Canada. The people of Berlin have stood true to the tradition of human freedom which their fathers found on Canadian soil and helped to strengthen."

ARMAGEDDON STILL TO COME

THE press of Germany and Austria make it quite clear that the present war is not Armageddon, since a still more extended conflict is foreseen. A survey of the German press shows that, excepting only the reports of uninterrupted successes of the Austrian-German forces, no subject is more constantly the basis of remark and report than the signs of coming danger to the Allies in their dependencies. According to numerous German and Austrian papers France is to be struck from behind in Morocco, where Kabyles and Arabs are making common cause against her. The *Berliner Tageblatt* reports Jews and educated Arabs reading to the populace in Tangier accounts in local journals of German and Austrian victories, and that a new prophet is "preaching a holy war and urging the Kabyles to drive the French from the country." The *Frankfurter Zeitung* announces "an exodus of foreigners from Tangier to Algiers" in consequence of the unrest manifest among the Mohammedans. And the *Hamburger Nachrichten* asserts that "the Kaiser's picture is being distributed among the Arabs and made the text of sermons urging war upon the French."

England's peril, as discerned by these journals, is vastly greater, since Mohammedans in India, Persia, and Egypt are preparing to throw off her yoke in a Pan-Islamic war. The *Pester-Lloyd Abendblatt* quotes a London telegram to the *Gottenborg Morgenpost* to the effect that "in the London India Office they already have news of the uprising in India." Under the heading of "Ferment in Egypt" the same paper copies a report that "in Cairo Arabs out of work have in four places looted the stores of food and left the foreigners there in a needy condition." The English meanwhile "have in mind to prevent the Khedive, who is in Constantinople, from returning to Egypt." "The Young Egyptian Committee in Geneva has memorialized Premier Asquith to grant Egypt the autonomy promised so long ago. Great Britain is greatly exercised over the breach of Belgium's neutrality, yet continues to tread Egypt under foot and to involve it in the European War." The Vienna *Fremdenblatt* attributes the trouble to the "Young Turks," who have succeeded "in Alexandria and in Cairo in initiating an unusually vigorous movement toward insurrection." The *Osmanische Lloyd* asserts that "affairs in inner Egypt have already reached the stage of bloody revolt." The *Berliner Tageblatt* locates the scenes of looting in Cairo "in Muski Street and in Ben-el-Surein Street, where the English cavalry arrived too late. Meanwhile business is at a standstill, while under the moratorium the customers of the Arabs fail to pay their bills." In other issues the same journal reports Arabs concentrating in many places in Egypt. A long article pictures the Mohammedans of India as normally a support to the English Government as against the dreamy but fanatical Brahmans. But the unrest that began in Turkey in the late nineties of the last century in an attempt to bring Mohammedans everywhere into closer religious touch, and then developed into a political movement centering about Abdul Hamid, has stretched through North Africa, Egypt, Arabia, Persia, Afghanistan, and India. England "protected the antagonists of this movement, limited the freedom of the Khedive, handed over Morocco's Sultan to the French and the Shah of Persia to the Russians, while with Russia England threatened the seat of Islam itself in Europe." The result is described as a Pan-Islamic hatred of Great Britain which bodes ill for her hold on her possessions. Russia's danger lies mainly in Finland, where already movements are under way which may assail her armies in the rear. The Finns, according

to the *Hamburger Nachrichten*, put no faith in Russia's promises, while "Governor-General Seyn is inventing new punishment for the press and *lèse-majesté*. New military officers are in the saddle who assume that "Finland is the home of revolutions." By blood there "may by misinterpretation bring almost any result."

When to these dangers are added the financial and political crises and quarrels of statesmen in France and Great Britain as German editors report, and the misunderstanding between British and French leaders, the complete success of Austrian German plans is confidently predicted.—*Translations made for THE LITERARY DIGEST.*

GERMANY'S FOOD PROBLEM

ALTHO THE GERMANS affirm that their own land is self-sustaining, evidence is not lacking that they are endeavoring to realize more fully all available food resources. An article in the *Hamburger Nachrichten* calls attention to the mushroom as a possible staple of diet. The article makes no specific reference to possible future scarcity due to reverses and the present closing of the oceans to German commerce, and speaks throughout in terms of domestic economy. It calls attention to the "more than 200 edible varieties of mushrooms" that grow in Germany, one-fourth of which have high food value, one-fourth are of moderate worth, and the rest have somewhat lower rating in nourishment. Five of these varieties are very common and are easily recognized. In spite of this, the article regrets, in forest and field many millions of marks go to waste annually in the shape of ungathered fungi, especially in North Germany. Note is taken not only of the condensed nourishment of these products of the wild, but of their rich and varied flavor. The fact is cited that large use is made in Catholic countries, even in South Germany, of mushrooms as a substitute for flesh during fasting seasons. In many parts they are used both fresh and dried, thus being available throughout the year. The article concludes with citations of annual market returns of money from this source—e.g., in Zurich, \$4,000; in Munich, \$60,000, and in Lusatia, \$7,500. The *Kölnische Zeitung*, unlike the *Hamburger Nachrichten*, treats of the food-supply with direct reference to the necessities and scarcity imposed by war. In an article nearly a column long duties to the needy are urged on philosophic and patriotic grounds, and then the value of milk and bread as a diet is set forth. The advice is given to extend the use of sweet milk, buttermilk, skim milk, and *Joghurt*. The outcome of the war, it is urged, may depend upon the staying power of the people; consequently the fullest conservation and employment of this ideal means of nourishment are a patriotic duty. A *Deutsche Gesellschaft* (German Society) has been formed to foster the multiplication of stands for the sale of milk.

Meanwhile the *Frankfurter Zeitung* and the *Berliner Tageblatt* discuss the rise in price of flour and meal, bacon and fresh meat. As to flour, the bakers, when blamed for the high price of bread, alleged that the millers and middlemen were the guilty parties. The Berlin master bakers asserted that since the war began they had had to pay from \$3.75 to \$4.25 more per sack to the millers. Moreover, when they attempted to deal direct with the millers, the latter charged the same prices as the middlemen, thus exacting both profits. The millers on their side charge the farmers with holding back available supplies of grain in order to realize higher prices. The *Berliner Tageblatt* gives tables showing that while in general the years from 1900 to 1913 had shown a general decline in prices, there had been an enormous rise since mobilization. The closing words of one article suggest that the trouble between the farmers and the rest of the population seems not unlikely to be renewed. Nearly the same condition of greatly increased prices exists in Berlin with reference to bacon and fresh meat.—*Translations made for THE LITERARY DIGEST.*

SCIENCE - AND - INVENTION

KNIGHTS OF THE AIR

THAT GREAT BRITAIN shall recognize the services of her military aviators by making them knights—by creating, in fact, a special order of knighthood to which only fliers shall be eligible—is the idea of H. G. Wells, the English writer, who is himself an ardent champion and follower of aviation. His proposal, which is characterized as an “admirable idea” by *Aero and Hydro* (Chicago, October 10), is quoted editorially by that paper as follows:

“The task that we are asking from our military aviators is one of the most dazzling and terrible that men have ever faced. The single combats that distinguished the age of chivalry, when champion rode against champion in front of the closing hosts, were but tame exhibitions before the starry deeds these men will have to do. Up they will go, to dash themselves into *Zeppelins*, . . . to outfly the hostile aeroplanes and pick off the pilots—duels in the giddy void in the sight of armies. So at least it seems to me such fighting must be done. . . .

“And there is something more. We owe these men honor.

Our common men are brave, but these men who will fight in the air will be something more than common men. They will be the aristocracy of the Army. . . . No man fights the worse for the knowledge that the world regards him. Whatever else is kept from us, one thing we must have from the front, and that is the story of every such encounter as I have foreshadowed, and the names of the men who did the thing. Nothing can be too good for such men.

“I want to make a proposal for these men who, more than any others, are destined to save Europe. . . . It is to make for them an order of knighthood. Nelson could be stirred by the thought of a peerage or Westminster Abbey. Every aviator who goes up to fight—I do not mean solely to reconnoiter, but to fight—will fight all the more gladly with two kindred alternatives in his mind—a knighthood or the prompt payment of a generous life-insurance policy to his people. Every man who goes up and destroys either an aeroplane or a *Zeppelin* in the air should, I hold, have a knighthood if he gets down alive. And I venture to say that we shall create thereby the most honorable and enviable order that this world has ever seen.”

The sentiments of the American paper, however, are apparently not shared by its English contemporary *The Aeroplane* (London, September 30), which, under the heading “A Horrible Suggestion,” writes thus of Mr. Wells’s proposed “order”:

“The final example of inhumanity—for to-day anyhow—is Mr. H. G. Wells’s horrible proposition that there should be an order of knighthood for aviators. . . .

“That is Mr. Wells’s idea expressed in an article which contains some sense and a lot of nonsense, culminating with this super-nonsense. There is an old proverb about silk purses and the auricular appendages of feminine pork which makes one fear

that Mr. Wells’s early days behind a counter lead him to place a false value on a title, despite his own reference to provincial mayors and party helpers. There might be a special clasp to the regulation war-medal, or even a special medal, for those who have destroyed an enemy’s aircraft, but the idea of a title for a job which is all in the day’s work is absurd. It is even doubtful whether any special recognition is advisable, for it might lead young and ambitious pilots to neglect their legitimate work of scouting for the more profitable job of chasing hostile aircraft. I am all in favor of a generous pension for the dependents of those killed in action, whether in the air or on the ground, and good service should be rewarded by mention in dispatches and special promotion, but the idea of a special title is nauseating.”

BRITISH IRE AT TRADE OBITUARIES

TRADER PAPERS in Great Britain take exception to the preparations made by American men of affairs to capture the world’s business while their European brothers are engaged in cutting each other’s throats. This division of the estate while the corpse is still lively, they regard

as bordering upon lack of decorum. “All this talk about our being paralyzed,” asserts *The Electrical Review* (London, September 25) with some asperity, “is utterly mistaken.” The Germans may indeed be knocked out from a business point of view, but Britons, we are assured, are still able to put up a good trade fight and will not give up the world’s markets to their American cousins without a struggle. Says the paper just named, in its editorial columns:

“Singular views have gained currency among our American cousins with regard to the European War, especially in respect of the position of the British nation. We have already quoted

some passages from *The Electrical World*, which indicate that our contemporary regards us, industrially speaking, as *hors concours*, and philanthropically calls upon American manufacturers to come to the aid of the neutral nations which can no longer obtain electrical goods and apparatus from the European sources upon which they have hitherto relied. In the same issue Dr. Louis Bell, who is so well acquainted with Europe that he ought to know better, states that the United States is ‘the only nation upon which war has not laid the hand that strangles.’ He remarks that the war ‘removes from the ranks of labor every workman of active years who is not absolutely needed to provide material of war in every country having compulsory military service.’ But it is not true even in such countries. The *Vorwärts*, apparently the only German paper that publishes unpleasant facts, estimates that at least a third of the working-men in all the large towns in Germany are unemployed, and the number is increasing. Germany’s export trade has been arrested by our Navy—but ours has not; we are at liberty to supply goods to the whole of the world that is not at war. ‘So far as active commercial work goes,’ says Dr. Bell, ‘one may as well reckon

Copyrighted by Underwood & Underwood, New York.

SHALL THE AVIATOR ENTER A NEW ORDER OF KNIGHTHOOD?

FRENCH AIR-SCOUTS DIRECTING THE MOVEMENTS OF HEAVY ARTILLERY.

every door as closed in all the warring Continental countries'; but, happily, we are not Continental, and he recognizes that 'such residuum of the British works as may be able to keep up activity . . . will hold up with fair success' since England controls the seas and possesses freedom of transportation. Dr. Bell concludes that the electrical trade of South America will turn to the United States as the only large source of supplies remaining, and urges that the United States should not provide loans for the promotion of bloodshed, but save up its capital 'for the promotion of the world's [sic] industry when peace comes at last.' Other articles in *The Electrical World* are devoted to a study of trade conditions in South America, which certainly seems to be the prize that the United States has its eye on.

"*The Engineering Magazine* for September similarly harps upon 'America's opportunity in an Old-World catastrophe,' and publishes a 'war map of the world,' showing how small a proportion is left open to peaceful commerce. To arrive at this result, not only the European countries, but the whole of the British Empire and all Africa are shaded to show that they are affected by the war—as if Canada, Australia, South Africa, India, and the rest were under martial law!

"We grieve to prick this brilliant bubble, but it is our painful duty to point out to the United States, and incidentally—more important in effect—to all the consuming countries of the world outside Europe, that we are not out of the running. We are giving of the best of our young manhood to the war, it is true, but our manufactories are not idle, our export trade is not strangled, our hands are not tied. We are ready and willing to fill orders for all kinds of electrical machinery and apparatus, cables, lamps, batteries—we want good prices for our wares, but we will supply good value. Our motors are not like the German motors, rated at 5 horse-power and fit to work at 3; our cables are of quality unexcelled. We are at war not only with the sword, but also with the order-book, and we look to all friendly and neutral nations to buy from us the things that they used to purchase from our present enemies. We can make them and we can transport them, and all this talk about our being paralyzed is utterly mistaken. We do not say it is deliberately false, but it is untrue all the same."

DANGERS OF FACE-POWDER—Face-powder has its dangers as well as gun-powder, so we are assured by a writer in *School Science and Mathematics* (Chicago, October). Says this magazine:

"For several years occasional cases have come under the observation of oculists in which the patients, invariably women, complain of vision being blurred, inability to use the eyes for any length of time, and severe itching of the lids. The slightest rubbing of the lids produces a marked redness of the eyes and only aggravates the itching. In severe cases, the lids are frequently swollen from constant rubbing. There is a sticky, elastic secretion which, when being removed, pulls out in long strings. Microscopic examination of the secretion reveals masses of what appear to be crystals. Until recently no satisfactory explanation of the presence of these crystals in the eye has been given. Secretion taken from the eyes of two sisters suffering from this peculiar complaint were submitted to the professor of pathology of one of the university medical schools, who found that the crystals came from rice face-powder. Seven other patients in which the same symptoms and microscopic conditions were found, all used the same make of face-powder. When the powder is applied to the face with a puff a portion of the fine dust is driven upward and lodges on the moist eyeball. The rice powder in the presence of the tears then becomes mucilaginous in character and is not washed from under the eyelids. The powder produces the irritation, which is aggravated by rubbing. Those who use a chamois-skin in applying the powder are less liable to cause the fine dust to arise, which probably accounts for the condition not being found in every woman using face-powder. The condition is quickly relieved

by flushing the eye with boric-acid solution. The irritation rapidly disappears when the eyes are kept washed out with a soothing eye-wash."

SPLICING BROKEN BONES WITH BONE

WHAT is said to be the only real novelty in the treatment of fractures for the last six thousand years has just been introduced by Dr. Charles Davison, of Chicago. Dr. Leonard Keene Hirshberg, who describes the improvement in *The Scientific American* (New York, October 10), says that Egyptian mummies with broken bones in splints, just like those in use to-day, have been found by explorers. In this kind of bone-setting the surgeon must work "sight unseen," which was an advantage in the olden days, because

then an open wound meant sure infection by floating bacteria. With modern surgical methods this danger is no longer present, so that it is possible to expose the bone and splice it intelligently. That is to say, goes on Dr. Hirshberg, by freeing the flesh and bones of all danger from germs, the surgeon may now do wonders with broken bones, instead of dallying and delaying with jackets, casts, and splints. We read:

"When the young and dashing surgeons defied medical standpattism and officious inactivity by the proposal to actually cut into every broken bone and literally to stitch it together as you would a mattress or a split skirt, some of them were ejected from medical societies or otherwise pestered or interfered with.

"Yet the curious part of it all is the fact that no physician thought of this sooner. There they were sawing open the skull, pasting up the brain, gluing together torn nerves, basting the macerated appendix, and doing odd jobs on all the internal structures of your melancholy anatomy, with never a thought of danger to you, yet they forgot the ribs, the shoulder-blade, the funny-bone, and the housemaid's cracked knee.

"Comes now Prof. Charles Davison, the distinguished surgeon of the Illinois University Hospital, Chicago, with an ultra-modern and supernovel way in which to hurry the healing of the hurt humerus, leg-

bones, shin-bones, or any other bone.

"When a simple fracture of a long bone is fixt by splints as physicians do, and have done for millenniums, the internal bone-marrow begins to help to form a plug between the broken ends to hold them in place. In the physiologic way of healing the bone, this internal, natural splint, says Professor Davison, is the mainspring and stronghold of the newly formed bone.

"If this method of living tissue were imitated by the surgeon, according to the excellent results obtained by the Chicago surgeon, broken bones would be as snug and tightly healed very quickly instead of incapacitating the victim for from six to twelve weeks.

"Your earning power and efficiency would be vastly increased, and broken limbs would be quickly forgotten.

"Professor Davison has succeeded in effecting this very thing. If you break your arm, wrist, ankle, leg, or what not, and fall into the hands of a skilled surgeon such as Dr. Davison, he will do as he describes of a number of recently and rapidly recovered patients, namely, cut open the parts, go right down to the bone, and insert pegs of your own or frozen bone saved for just such emergencies, as a 'couple' between the broken parts.

"Six patients with fractures of one sort and another of the elbow, forearm, thigh, hip, and other sections of the skeleton had the broken bones thus 'sewed together.' Pegs or splinters of bone were taken or 'sliced off' from bones nearby, and these were inserted into the middle or marrowy parts of the fractured segments.

"Thus, almost instantly, without the tardy methods of nature, but by the artifice of Professor Davison, those with broken legs

DR. CHARLES DAVISON.

Who fastens broken bones together with pegs of bone.

who would have been laid up, as is now generally true, for two months or thereabout, were up and walking upon the broken leg in from three to four weeks.

"This discovery is a vast advance even upon sewing up the broken ends. In the latter step, which is also a progressive one over the old way, the bone is held nicely in place by the stitches, but there is no support for new bone to hasten the restoration to normal.

"In Dr. Davison's procedure, the basis is there in the form of a splint that can be used as food, soil, support, and first aid. Moreover, it becomes a part of and is fused with the new bone."

THE INNOCENCE OF "BAD" PLUMBING

WHAT we used to call "bad" plumbing is now, it appears, not nearly so bad as it used to be painted, being objectionable only so far as it fails to fulfil its primary office of removing waste in an inoffensive manner. The idea that it can cause disease by allowing noxious gas to escape into houses is now scouted by sanitarians. The public, however, while slow to learn, is also slow to forget. It took a long time for hygienists to saturate us with the fear of "sewer-gas," and it will apparently take a still longer time to dissipate that fear. *The Journal of the American Medical Association* (Chicago) laments that it is still enshrined in the laws of several States, and that the plumbers themselves appear to encourage it. We read:

"It is a little disconcerting to find that typhoid fever can still be complacently attributed to bad plumbing. When we read that 'insufficient laws regulating plumbing and sanitation in Virginia, Maryland, and the District of Columbia are largely responsible for the high typhoid rate and the prevalence of other diseases in the two States and the District,' and again that 'much of the fever and other forms of disease with which the health authorities are constantly wrestling is caused by noxious gases and vapors emanating from neglected or defective pipes in the homes of the people,' we are inclined to rub our eyes and ask ourselves if the education of the community is really proceeding at the pace we sometimes like to believe. The assertions quoted above, however, were reported as made at the Association of Plumbers, Gas-fitters and Steam-fitters which recently met in Richmond, Va., and not at a convention of health officers or physicians.

"It is hardly necessary to point out that typhoid fever—or any other fever—is not caused by bad smells, and that the small quantity of the gases of decomposition found in well-ventilated sewers has never been proved to exert any injurious effect whatever on health. . . . Disease germs are not found in sewer-air; indeed, it is difficult on physical grounds to see how they could get there. The 'noxious gases and vapors,' so dear to the plumber's imagination, are conspicuous by their absence in all

perfectly constructed sewer systems, as every visitor to the great sewers of Paris and other modern cities well knows. 'Defective plumbing' has about as much relation to public health as any other mechanical defect in house construction."

It is further charged by *The Journal* that city ordinances regarding plumbing are drawn with no uniformity in America, and that what is required in one city may be prohibited in another. High

SYRIAN CHARM AGAINST
THE EVIL EYE.

authorities, we are told, maintain that the system of modern house-plumbing which is made legally obligatory on house-builders in many places entails a large, needless, and altogether unjustifiable expense. This barrier of cost prevents progress toward better sanitation, we are told, and "is a harm, not a help, to public health." Therefore,

"If the plumbing interests really wish to aid the hygienic

welfare of the community, they can best do this, not by insisting on still more complicated devices and 'inspections,' but by simplifying and cheapening the cost of installing and maintaining the pipes and fixtures essential for carrying off the house wastes in a speedy and inoffensive manner. Finally, let us ask this question: To what extent do the plumbing ordinances in our American cities represent the prevailing opinion of public health experts and trained health officials, and to what extent do they represent the efforts of commercially interested individuals or organizations to entrench themselves behind the active if not always well-informed desire of the people to safeguard the public health?"

THE EVIL EYE

BELIEF IN THE "EVIL EYE" may cause actual physical illness, but this is due to the belief, not to the eye itself, so we are told by Dr. S. Seligmann, writing in *Kosmos* (Stuttgart, September 15). Such a belief is only the third and last stage of a malady named by the doctor "ophthalmophobia," or "fear of the eye." In the first stage, the victim merely feels worried when any one looks at him fixedly; in the second, this feeling induces him to shun the company of his fellow men; in the third, he becomes actually ill, and is then apt to attribute his illness to a physical influence exerted by the gaze of some particular person. Writes Dr. Seligmann:

"There is a common, but little noticed phenomenon which we shall call 'fear of the eye,' or ophthalmophobia. Its lowest stage is well known; it consists of the fact that many persons dislike exceedingly to be gazed at long and searchingly. . . . Timid persons are easily impressed by a 'high and mighty' look—and children especially are affected as well by reproachful and sad looks. Even an adult who is not particularly sensitive can not avoid a similar sensation. . . . He can not help thinking that the person gazing at him has seen something that is out of order; that either his hat is not on straight, or that a button is off, or that his boots are dirty.

"This first kind of ophthalmophobia is quite harmless and can at best be compared with the fear of blushing. Much more unpleasant for those concerned is the second grade. The person affected then strives to shelter himself from the gaze of strangers. Whenever he is in company or on the street and exposed to the gaze of the crowd, or even of a single person, he experiences a painful feeling of embarrassment and discomfort. He has cold hands and palpitation of the heart, the perspiration stands on his forehead, his limbs begin to tremble, his thoughts grow confused, and he becomes, as it were, powerless.

"There is one part of the body whose examination is especially painful to him—the face; and particularly the eye. Looks that are directed toward his eyes, and meet his own gaze, seem unbearable.

"The natural consequence of this unrest and fear is that the person who feels it takes care never to meet the look of another if he can help it. . . . This kind of ophthalmophobia can develop into illusion. One such patient saw always, even with closed lids, an eye in front of him, gazing at him sternly. . . . Sometimes this condition is aggravated by complication with other physical defects. . . .

"The third grade of ophthalmophobia appears when through

A NEAPOLITAN WITH THE EVIL EYE.
Whom glance, to a victim of "ophthalmophobia" carries menace and death.

fear of the eye real physical illness of any kind is brought on. . . . Here we have the belief in the power of the 'evil eye.'

"There is no doubt that through the fear of such an eye actual illnesses may be brought on—namely, any that may be due to suggestion. Only, those who believe in the evil eye make the error of ascribing these maladies not to the fear of it, but to the eye itself."

How, then, did the belief in the wizardry of the eye originally arise? It is closely connected, Dr. Seligmann thinks, with the idea, once universal, and still held by the ignorant, that sight is the result of radiation proceeding from the eye to the object

A TELEPHONE WITH A MEMORY

DEVICES for making a telephone "remember" what is said to it have been available for many years, but have never been commercially successful. The telescribe, an instrument of this type recently devised by Thomas A. Edison, is said to be both simple and practical. A little desk-instrument is used by means of which one of the parties to the telephone talk may record the conversation on a phonograph cylinder. According to a description of the use of the telescribe appearing in *The Iron Age* (New York), the receiver of the regular desk-telephone is first removed from the hook and placed in the socket of the telescribe. Then the user, we are told,

"Takes up a small receiver, which is part of the telescribe, and gives his call to the exchange, while starting and stopping the dictating machine by means of two small buttons on the telescribe in order to record the conversation between pauses or delays, thus avoiding any waste of running the wax cylinder meanwhile. Both sides of the telephone conversation are recorded, including all evidence of the central operator's voice in making connection. The telescribe, it is believed, will place the use of the telephone in a more serious light in business. After a conversation, the dictator will turn to his dictating machine and confirm his message in the usual manner covering the general understanding. . . . The wax records may, it is explained, be retained indefinitely for reference."

THE LIGHTNING-ROD DEFENDED

THE OLD-FASHIONED lightning-rod agent has been so thoroughly discredited that he has been well-nigh driven out of business—a good example of the way in which a flourishing industry may be wiped out by too little attention to square dealing. The theory on which the use of the rod is based is perfectly sound, and modern science has so amplified it and made it more precise that it is now possible to furnish protection to almost any building. But the rapacious agent of a score of years ago, with his worthless devices badly put up and with poor ground-connection, or none at all, succeeded at last in convincing most of us that the whole scheme of lightning-protection by rods was based on fraud. Some data collected recently by two Canadian professors show that this is by no means the case. Says a writer in *Engineering News* (New York, October 8) under the caption, "Ben Franklin Vindicated":

"The decline in popularity of lightning-rods, following the pernicious activity of rascally agents, left a stain on the scientific reputation of the great and wise Ben Franklin, who developed this protection against thunder-bolts. Scientists have stoutly defended the value of such equipment, if well put up, but, nevertheless, practical men, often speaking from bitter experience, have maintained continuously for generations that the rods have proved worse than useless.

"Two valiant defenders of the faith, Profs. J. B. Reynolds and W. H. Day, of the Ontario Agricultural College, not contented with the inconclusive deadlock of theory and claimed fact, set out to find the truth—in practicable demonstrable form. For ten years, first one and then the other industriously collected all possible information about buildings reported struck by lightning in Ontario. At the end of this time (1910), they had data on 599 buildings struck by lightning. Of this number struck, 317, or 53.6 per cent., were burned, but only eighteen of the buildings struck, or 3 per cent., had rods, and only three of these, or 16.6 per cent., of the protected buildings were burned. Having these interesting but incomplete figures, the investigators desired to know further the number and experience with unrodded buildings in the Province, so that they

THE TELEScribe "LISTENING-IN"

Thomas A. Edison in the act of telephoning and having the conversation recorded on a phonograph. He has placed the receiver of the desk-telephone in the socket of the telescribe so-called while he holds to his ear a receiver belonging to the telescribe.

seen, instead of being caused by light reflected from the object to the eye. The eye being regarded as "the window of the soul," malevolence, if it resides in the soul, naturally proceeds thence along the "rays of sight" and produces its effects in the objects or persons upon whom the evil glance is bent. Whoever believes this is, of course, frightened by a gaze that he considers to be evil, and the maladies due to suggestibility may follow. Fortunately they can be also cured by suggestion, hence the favorable results of "white magic" of all kinds, including especially amulets. These really do ward off the effects of the evil eye, since, as these effects are due to suggestion, anything that will cause a counteracting suggestion will prevent the injurious action. Those who do not believe in the evil eye, however, do not need the amulet, and hence its use has fallen off as mankind has advanced in the paths of civilization.

Translation made for THE LITERARY DIGEST.

might complete their case—reasoning that if rods neither prevented nor induced strokes the ratio of damaged to undamaged structures in the unprotected risks would be of the same order of magnitude as in the rodded.

"Great difficulty was found in securing the desired data. Eventually, however, the Provincial mutual insurance companies were interested in the studies, and reports covering about a fourth of the Province were secured after some delay. These showed that 21 per cent. of the insured farm buildings were rodded, and that of all those struck only 1½ per cent. were rodded. Out of 7,000 unprotected buildings, 37 were struck; out of 7,000 protected ones, only two were struck. Therefore, 35 were saved out of 37 expected to be struck, or a probable protection of 94.5 per cent., and that with uninspected rod-construction."

Professor Day visited Iowa and Michigan to inspect the insurance reports and methods of protection there. In Iowa, he found that the claims paid for lightning damage in eight years amounted to \$4,464 on rodded buildings and \$341,065 on unprotected ones. Apparently for each dollar paid on rodded risks \$76 was paid on unrodded. The rods were not inspected, and some of the losses probably were due to poor construction. Even so, the protection shown was 98.7 per cent. In Michigan, one mutual company insuring only rodded and inspected buildings, in four years paid \$32 claims on \$15,172,075 risk. Another mutual company taking both protected and ordinary risks paid \$32,269 in claims on a total of \$59,567,272 in the same period. The loss was practically all on unprotected buildings aggregating \$47,753,818 in value of risks. Comparing the two companies, for each \$1 damage on protected buildings there seemed to be paid \$1,168 on unprotected ones—an obvious protection of 99.9 per cent. All this and more is set forth at length in a recent bulletin of the Ontario Department of Agriculture. To quote again:

"Regarding the technique of the rod-construction so successfully employed in these States, it is of interest to know that,

A PLASTER MODEL OF THE WESTOVER TERRACE PROJECT.

where knowledge was available, there appeared to have been used more or less of an approach to a cage of conductors about the building. The rods were fastened both close to and away from buildings, but without insulators. Deeply buried ground-plates and rods were found, and where these groundings proved defective there invariably developed disaster.

"The worthlessness of the old lightning-rods, of course, was the fault of the loquacious fly-by-night agent who carelessly put up his cheap affairs, gathered his money, and disappeared."

CARVING A HILLSIDE INTO HOME SITES

WHAT is perhaps the most comprehensive service ever rendered by engineering to city-planning, at least for residential purposes, is the recent carving of a scenic residence district out of an inaccessible hillside in Portland, Oregon, by sluicing and terracing. As may be seen from the photograph of the plaster model, reproduced herewith, the hill has been carved by hydraulic methods into an irregular series of terraces connected by a serpentine boulevard that winds from

METHOD OF BUILDING WESTOVER TERRACES BY MEANS OF SHEER BOARDS AND SLUICING.

foot to summit. From this branch out lateral streets. Owing to the constant ascent to the summit and the doubling back and forth of the main boulevard, the difference in elevation between the lower and upper sides of the blocks is in some cases as high as ninety feet. This difference in elevation is taken up by the construction of terraces. Says R. M. Overstreet, of Portland, who writes of this achievement in *The Engineering Record* (New York):

"The work ranks as one of the largest pieces of hydraulic excavation in the country and has attracted attention of engineers from all localities. The estimated quantity in the original plan was 3,310,000 cubic yards, but changes made since that time have reduced the estimate of earthwork to 2,854,000. . . . The materials composing the hill are clay and gravel. . . . The gravel was overlaid with a top soil of from six to twenty feet of clay, but no gravel was encountered above an elevation of 456 feet above the river. Had the gravel and clay been intermixed, the carrying capacity of the water would have been greater, and the construction of the terrace fills would have been greatly simplified."

The water with which the "carving" was done was furnished by four big centrifugal pumps, drawing their supply from a lake at the foot of the hill. The method used in forming the terraces is that known as "sheer-board construction," and is thus described:

"The slopes are carried up by a series of small bulkheads or sheer-boards. . . . The first row of sheer-boards is placed at the line of intersection of the slope with the ground; the second, third, and subsequent rows of sheer-boards are placed as the embankment rises, each line being spaced according to the design slope. . . . After depositing its load the water is taken off the fill through spill-ways, which are located at convenient points. . . ."

"During June and July, 1911, a 5½ x 6-foot tunnel was driven through the hill on the west of the property to carry material out to the gulch for filling. . . . When running in the gravel material the flumes at the discharge end had to be extended every few days, as the gravel would pile up and not spread around, and it was necessary to level off the gravel fill with steam-shovel and cars. When running in clay the material would flow for 800 to 1,000 feet, making a fill as level as a table."

LETTERS - AND - ART

GERMAN REPORT ON ART DESTRUCTION

IN A CASUAL INSPECTION the damage done at Louvain by the invading Germans will seem much greater than the actuality, so the statement of the commission issued by the German Governor-General of Brussels assures the world. The duty of protecting Belgian art treasures was imposed upon this body of men, and their report traverses the ground passed

been saved. This is due mainly to the efforts of Lieutenant Thelemann, Councilor in the Railroad Ministry, who, together with a subaltern officer, a student of art history, saved the contents of St. Peter's Church, whose upper part was in flames.

"The wonderful paintings of Dierick Bouts, 'The Last Supper,' and the 'Martyrdom of St. Erasmus,' have not sustained the least injury. The buildings destroyed, from which shots fell,

were homes of well-to-do burghers, but without artistic value.

"In Liège we visited all the churches and art collections. The Church of St. Jacob, a magnificent late-Gothic edifice, with its handsomely painted, groined vaulting, and its gorgeous decoration recalling the Moresque style, has remained untouched, and it is especially gratifying to find that the stained-glass windows, among the finest in the world, have been preserved.

"The same is also the case with all the other churches—St. Paul's, St. Martin's, the Church of the Holy Cross, St. John's, St. Denis, and whatever there is of smaller churches and chapels. In St. Paul's a projectile damaged a window-casement very slightly, cutting also a hardly perceptible hole in a modern pane of glass; none of the incomparable Renaissance windows of the church

FRANK BRANGWYN'S WAR-POSTER.

In underground stations and on the London hoardings this poster appears alongside the call for recruits.

over by the conquering forces, and a careful estimation of the ensuing damage is attempted. Church after church in Louvain, the town hall, the library, and whatever noteworthy possessions the city has or had were examined, and, so says the report, "all lovers of art will rejoice to hear that, with the exception of the library, not only practically everything has been saved, but, barring the buildings themselves, everything is in faultless condition." In several papers this report may be read, and it continues in this vein:

"All these art treasures have been gathered into the town hall, and are under the strictest surveillance of the Commandant.

"As regards the buildings, the town hall is entirely untouched. The Church of St. Peter shows serious injuries of the roof and slight holes in the vaulted ceiling; St. Michael's Church, with its magnificent baroque façade; St. Jacob's Church, with its fine sacristy, and the well-known Chapel of St. Hubert, and the Church of St. Gertrude, with one of the most beautiful late-Gothic choir-stalls in Belgium, have not sustained the slightest damage. The façade of the beautiful library is seriously damaged, but can beyond doubt be restored.

"One-sixth of the city has been entirely destroyed. This comprises the whole of the railroad street, the buildings on the Place du Peuple, and the houses around the town hall and the Church of St. Peter. The last-named houses were purposely dynamited by our brave miners, hastily summoned by the Commandant, in order to prevent the town hall from catching fire.

I repeat that all art treasures and church possessions have

shows, as mentioned before, the slightest trace of destruction.

"The imposing treasury of St. Paul's, with its famous golden expiatory gift of Charles the Bold, donated after the destruction of Liège in 1468, and the important Gothic reliquary of St. Lambert rest untouched in their chest. All the museums of Liège, foremost among them the Musée d'Ansembourg, which we inspected under the leadership of its director, are in precisely the same condition as before the war. All necessary instructions, with a view to guarding against theft, have been given.

"On our way back we stopt, in spite of a heavy downpour, at Huy. There we were mainly interested in the Church of Notre Dame, with its beautiful Bethlehem portal in early Gothic style, and the handsome rose-window. The four reliquary chests formerly in the church treasury had been, according to the statements of the priests, sent to Antwerp."

A German article answering the world's protests against the destruction of art is called "We Barbarians and the Cathedral at Reims." Its author is Prof. Richard Hamann, of Marburg, and as a protest against the charge of Germany's insensibility to the charms of French art he tells in the *Frankfurter Zeitung* (translated by the *New York Evening Post*) of some of the German archeologists and art historians who are under its spell:

"A young scholar, Ernst Gall, already known as one of the best authorities on the subject, has found skilful expression for the rôle of Normandy as the progenitor of Gothic art. He is now either being trained for military service against France or is already in the field. Wilhelm Pinder, the editor of the 'Deutsche Dome und der deutsche Barock,' has shown in two

From "The Graphic," London.

THE STAGE STIRRING BRITISH WAR SENTIMENT.

An episode from "England Expects," by Seymour Hicks and Edward Knoblauch, now running in London.

authoritative treatises how much the rhythm of Norman art has influenced his style. He is now an officer in the field. The foremost student of French miniatures, Count Vitzthum, was on the point of writing a history of medieval plastic art, including that of France, when called to his colors. None of the many students who to-day busy themselves with the medieval art of Germany entered upon their work without first casting a glance at the monuments of France and exploring the land of Gothic art. This autumn there were to have appeared, as a basis for a new edition of the 'Denkmäler, deutscher Kunst,' 4,000 views of French monuments of the Middle Ages. One of the scholars who accomplished this labor, amid great difficulties and even dangers—owing to the hostility of chauvinistic natives—was Dr. Jantzen, privat-docent at Halle. He is now likewise in the field, and is perhaps trembling, not only for the statues of the great cathedrals, but for every stone of the village churches confided to his care, churches so important to us for the study of the beginnings of Gothic art, and which certainly are more exposed to destruction than the great cathedrals."

Other stories that perhaps call for further authentication also show the spell that French art casts upon the Fatherland. The *Matin* (Paris) printed the charge of the Baroness de Baye that her château was plundered by the Crown Prince Frederick Wilhelm of some of its choicest art treasures. These are described by an English acquaintance of the Baroness as "one of the most important collections of art in private hands in Europe." This writer, Mr. Boyd Dawkins, says in the *Manchester Guardian*:

"It would be incredible were it not backed by her name. Her story is this: The Crown Prince spent two days during the battle of the Marne in the Château de Baye, and under his orders the glass cases in the museum were broken open and a selection made of the most valuable works of art, ranging from coins, jewels, gold and silver plate, to tapestry, pictures, and furniture, and including gifts from the Czar and Czarina. These were packed up and carried off, with the exception of a few cases left behind in the hurry of the German retreat. He himself, before leaving, trampled on the pictures of the Czar and Czarina that were in the chapel. This act of low brigandage follows close on the outrage by German officers in the Brussels Museum. They took by force the keys of the cases out of the pocket of the director and stole old lace and other works of art exhibited to the public. The unfortunate victim was ultimately packed off to Antwerp, where he arrived safely, but without money, which had been taken *en route* by German soldiers."

"Neither of these outrages can be excused on the ground of their being acts of war. Both show, equally with Louvain and Reims, the depths to which German civilization has been degraded by the Hohenzollerns and the military caste. The Crown Prince has stained the honor of his house by acting like the lowest camp-follower 'out for booty,' and has identified himself with the wrongs inflicted by the Imperial troops elsewhere on non-combatants."

"When the inevitable reckoning comes it will be our duty to see that the Crown Prince and his officers be made to return their plunder, and that the whole damage be made good at the expense of the German Government."

THE FATE OF THE "FREE-LANCE"

SAD HAVOC has been played by the war with many of the writers whose speculations and pleadings have hitherto found a place in these columns. They must be regarded as among the luxuries of peace, for the stern necessities of war have driven them out of business. One hears it said by book-sellers as well as newspaper-vendors that nothing is read but war news. The man that dealt for us with the graces and candors of letters and art is called the "free-lance." This "interesting, unobtrusive figure," as *The New Statesman* (London) calls him, passed from view in Fleet Street "almost as soon as the Kaiser brandished his naked sword in the eyes of Europe." This same journal plays with this victim of the new circumstances in the terms of current warfare, calls him a "harmless Uhlan or Cossack, foraging far to help the well-organized forces of the newspaper office." His occupation "presupposes normal times, and even then he knows more than most men of the ups and downs of life." At such times his portrait may be limned in these words:

"The free-lance is an errant cavalry man (or woman) attached to the great army corps of the Press, the pen his weapon, fancy or hard-won fact, a sense of order, and some knowledge of newspapers his complete equipment. Sometimes he is no more than a clever searcher after the unfamiliar or unexpected, his object, in general terms, the discovery of the fashion in which the other half lives. More often he thrives by his hobby. A fine taste in literature, a trained and delicate ear, a quick eye for harmonies in color and line, will make him a critic of books, music, art. He will stand between the masterpiece and the philistine and will promote the beginnings of appreciation. A ready response to the wonders of mechanism, coupled with some technical knowledge, will enable him to write about motor-cars and aeroplanes, teaching the young ideas to scorch or fly. In friendly competition with all who seek to supply an open market he can only hold his own by dint of hard work and punctual service, but the true journalistic instinct, coupled with expert knowledge, makes him valuable to a world at peace, while for the saving of his soul he labors in spare hours at the making of books that are still-born or die in early days. He takes his life seriously."

"Few outside the ranks know how many and varied are the sources through which a living is earned. It may depend in large part upon the contribution of paragraphs to the provincial press through the office of the London editor; it may rely upon the hunt for a good news story or upon working up the historical and biographical incidents that will help to heighten the interest of the event of the hour."

This writer speaks of Fleet Street, London, the haunt of all pen-workers for the periodical press of England, but every great capital has its Fleet Street, and the same fate has likely overtaken (in our land alone, possibly, in less degree) the writers known as "free-lances." Britain has only been foremost in celebrating them as having joined the new army of unemployed. "Fleet Street has disbanded its regiment of free-lances," says *The New*.

Statesman; "they are thrown aside as soldiers 'broke in the wars.'" We read:

"Several of the literary papers, so long their happy hunting-ground, are in difficulties; the weeklies and dailies have cut down their pages to balance their reduced advertising revenue, and all the space that is not required to satisfy the modest needs of advertisers is given to the war correspondent and to the strengthening of the great ideal of carrying on as usual. People do not wish to read about literature or art or music; if they do, they must curb their desire. There are no general topics for discussion; war holds the field; the military and naval correspondents write daily, for even if they have nothing to say, the public desires that they should say it. Magazines are using up old stock: reviews, always in a state of congestion, are less able than ever to consider suggestions. If the artist and the musician go hungry, what must they expect who write about art and music? If hunting, shooting, and football are partially in abeyance, who can spare a thought for the men who earned a living by commenting upon pastime? The editor is sorry; the board of management may recognize that certain obscure and unknown men no longer claim small checks; but, as the free-lance himself would be quick to admit, his trouble touches none save himself and a stray dependent or two.

"The long hand of philanthropic endeavor has been stretched in his direction; the sometime proprietor of a famous group of newspapers, a suffrage association, and perhaps one other body are minded to help. It is extremely likely that he will decline gracefully. He does not wear his heart upon his sleeve, and he has long known that his hold upon decent living was very slight. He made his choice and will abide by it. There are avenues leading to irregular employment; these he will explore. There are odd jobs for the illiterate; these he will perform. He may savor, not for the first time, the limited hospitality of Rowton House; he will sell to the bookseller who has so often taken his 'review copies' some of the more treasured volumes; he will suffer in body and spirit and sell the story of his sufferings for a guinea, if he can find a purchaser; and he will preserve his anonymity as aforetime. It is said that one great publishing house is buying freely still, tho at starvation rates. There will be a few for whom the pressure of circumstances is too heavy; they will sink and their places will know them no more; but the best class of free-lance, the man or woman with education and grit, will merely be badly 'stung,' as they say across the Atlantic, and will be found in the old place when the doors are flung open again and there is need of his work. Had the thunderbolt of war fallen from a stormy sky the free-lance might have been prepared; as it is, he will explain that in the last weeks of July he was at work and in the first week of August he was adrift. He gives no notice and receives none; it is his place to supply a want, and when that want passes he goes with it. Unfortunately, thrift is among the virtues he has overlooked—the circumstances of the journalistic life do not favor it; he is ever looking forward to the good time that is coming, or, intent upon the pursuit of life for life's sake, has regarded the saving of a part of scanty earnings as an uncalled-for sacrifice. There is a chance, too, that he may have a wife and a child or two, and in that case he will have found no means to save—the struggling professional man must needs buy his domestic joys in the highest market."

If the free-lance in England be a bachelor he might enlist perhaps, but few save the youngest are fit to do so, and most of these, we are told, have gone to serve in some capacity:

"Men of sedentary life can not turn in the neighborhood of middle age to serve their country in the field unless they started the season of manhood with training and have kept in touch with it since then. The crisis finds the free-lance little able to help others or to help himself. One asset alone remains to him, his self-respect, and he will struggle to keep this from the all-powerful grasp of the philanthropist. He wants work. Many stories could be told of the few weeks that have passed since war broke out, but a sense of proportion forbids. When thousands are suffering or about to suffer, no section of the public would care to advance any special claim for sympathy.

"Perhaps he will suffer more than most of the dispossessed because of his imagination—a valuable asset when work is plentiful, a cruel handicap in bad times. All the buffets of Fleet Street have not availed to destroy a certain sensitiveness, and it is not well for a man to realize that nobody, in a little world which he has striven conscientiously and to the best of a fair society, will wonder at his passing or trouble for his loss."

"ATROCITIES" OF THE NON-COMBATANT

THE BELGIAN ANCESTRY of Beethoven saves his music for Paris for the coming concert-season, we are told, tho nothing that is undisputably German can retain its foothold or gain a new admission. Beethoven will figure at the head of concerts of Belgian music. London, with inclinations in the same direction, is debating the question with itself of carrying its anti-Germanism into the arts. Even neutral Italy has foresworn "Parsifal." Mr. Max Reinhardt wondered what was to be the verdict of Germany on Shakespeare, of whose plays he has made a notable series of productions. The *London Times*, quoting German sources, gives this reply of Maximilian Harden:

"If only all stage questions were as simple as this! Of course, Shakespeare must be played now and in the future. We can in no way dissolve the ties which bind us to one of the chief ancestors of our German culture."

Professor Harnack, director of the Royal Library, is quoted as saying that Shakespeare belongs to the world and must be played, and, adds Max Liebermann:

"We must play him as the representative of the old England which would be ashamed of the pharisaical conduct of the present England, and in order to show that we have too much discrimination to mix chauvinism with such questions of culture."

German women are, however, emancipating themselves from the slavery of Paris fashions. A Berlin newspaper, unnamed, is quoted by *The North German Gazette*, to this effect:

"The present moment seems good for delivering Germany from the tutelage of those nations which dictate the fashions. But what shall the German style be? Hitherto only esthetes have had their say. But in future clothes must correspond to the highest hygienic costumes, but if this attempt to set the fashion has hitherto been unsuccessful, and the movement has been confined to a few school-teachers in small places, a deeper reason must be sought. Can the shape of the figure have something to do with it? On a well-built woman the reform clothing looks quite nice, but on short and thick women awful. If a successful hygienic-German style is to be created, it must follow modern experimental methods. At first, however, a number of persons experienced in the hygiene of clothing must meet together with clever male and female dressmakers, authorities in textiles, and artists, to lay down the essential requirements and to make experiments. But, whatever the result, it must be susceptible to variations, otherwise the new German style will be still-born."

The Berlin correspondent of *The Christian World* (London) tells of excited attempts to "purify the language" engaged in by nearly all classes of the people:

"Let us, they say, expunge the word 'gentleman' from the language, because it is English. And forthwith a hundred German philologists are at work seeking for an equivalent, and writing to the papers about their particular discoveries. Why should not Germans invent their own sports? Cricket, football, horse-racing, tennis, golf are the pastimes of the treacherous and perfidious Britons. Why can not Germans, it is asked, by the exercise of a little patient ingenuity, invent other games quite as good, and without the ineffable disgrace attached to them that they are British?"

"Perhaps the height of patriotism run mad is reached by the movement for the invention of a German dress for the future. German men are to be freed from the thralldom of London, German women from the thralldom of Paris. The words 'fashion' and 'mode' are to be cut out of the language, and substitutes are to be found. We have scores of philosophic articles about the new dress and the ideals it is to embody, but nothing very tangible, nothing that is not obscure. We are only told that this dress is to be hygienic and German. Most of us have a dim impression of German hygienic clothing, and I am afraid none of us can regard it as artistic; but that is not our affair, unless their clothes are to form part of that 'Kultur' which they are attempting to impose on the rest of the world. I suggest that the professors, whose occupation in war-time is partly gone,

might be employed to work out this idea of a hygienic and national German dress. Their efforts might lend a little gaiety to an otherwise somber world."

EUROPE REPUDIATED BY ASIA

JAPAN, through the eyes of one of her best-known poets, looks askance upon the warring West and feels that the door should be closed against her. To the Oriental, says Mr. Yone Noguchi, the European War "means the saddest downfall of the so-called Western civilization; our belief that it was builded on a higher and sounder footing than ours was at once knocked down and killed; we are sorry that we somehow overestimated its happy possibility, and were deceived and cheated by its superficial glory." In these words of depression Mr. Noguchi, who is the professor of English literature in the Keio University, Tokyo, writes to *The Nation* (New York). He has a considerable acquaintance with Western life, having lived both in the United States and England. He gives expression to the East's strong repudiation of an ideal after what seems to them a betrayal:

"We now see that it was merely a mirage or optical illusion of a thing which, in its truest sense, never existed; or, if it ever existed, it was simply a changed form or crafty masquerading of an avaricious instinct of primitive barbarism. The Western people, with all sorts of colleges and institutions in their most advanced order, are, after all, like their naked friends in far-away Asia or Africa, as it proves now, only a hungry piece of flesh, who, to use a Japanese saying, has just three more hairs than a monkey; certainly we inhuman beings (who says human beings?) were made, not by the sure intentions, but by the caprice of God. How can you believe, when you see them throwing a cannon-ball, trampling on the killed people, that they are the human beings who could love trees and birds, and say, as Browning once said:

God's in His Heaven--
All's right with the world?

"During the last forty long years, the Western poets, preachers, and philosophers have been singing and writing on the general peace and brotherhood, and every church striking its holy bell on every Sunday and Christmas Eve, whose heavenly music was, to use Robert Bridges's graceful lines,

Angels' song comforting as the comfort of Christ
When he spake tenderly to his sorrowful flock.

And what is the result of their forty years' toil? We see only the rivers colored by blood, and a huge mountain made in a single night with human corpses. Where's the peace and brotherhood dreamed by their innocent minds? Who can deny when I say that the Western people, when they are so strong and savage, are the sure believers in Machiavellism? When they preached peace, it was only at the time when they could not practise that barbarous policy; those forty years of peace were only a sort of truce. It was never a peace for peace's

sake, but the time of preparation or suspension of hostilities in the interim from one war to another.

"We Japanese fought two wars in the last twenty years in the East; and we were given the unwelcome name of warlike nation, and often placed, as a result, in many international difficulties. We have been looked upon as a dangerous element, particularly by the Americans, who sent us peace envoys on several occasions; it was their stupidity not to think that their own West, as I said before, with all sorts of advanced colleges and institutions, was still more dangerous than the East where Confucius's analects are not a dead language. Confucius's teaching is that we should recompense injury with justice, kindness with kindness; and his doctrine is, the book says, to be true to the principles of our nature and the benevolent exercise of them to others. Even when we, as a people or nation, could

not strictly observe his teaching, we believe that we never acted aggressively. It was the German Emperor who drew a picture calling us Yellow Peril, when we won a fight from China; if we had been a yellow peril, as he said, it meant only against the white race of the West. But what that German Emperor is doing now is, certainly, a mighty peril against all the humanities of the whole world. We have a proverb saying that what the superior person loves would be loved more by the inferior people; what result will come from the example shown by the so-called most advanced first-class nation or nations of the West? What would happen if many second-rate or third-rate countries in Asia or anywhere else might imitate the Western example? The present downfall of the Western civilization means more than you and I suppose. It is not too much to say that the present European War is the beginning of the dark age of the whole world. We Orientals will insist in future not to believe whatever high philosophy on love or peace or humanity the Western scholars and theologians might write. We Japanese are glad at least to have a country in a far-away East, not in the West. I have been losing for some long while my own respect toward the West and her own civilization."

Mr. Noguchi has but lately

been in London writing letters to the English papers giving his impressions after a number of years' absence. Now he says:

"My recent Western journey, which was concluded only a few weeks ago, confirmed me that the so-called dynamic European civilization was all against the Asiatic belief, that is to say, Confucius's teaching that we 'should have no foregone conclusion, no arbitrary predeterminations, no obstinacy, and no egoism.' Confucius says: 'He who aims to be a man of complete virtue, in his food does not seek to gratify his appetite, nor in his dwelling-place does he seek the appliances of ease; he is earnest in what he is doing, and careful in his speech; he frequents the company of men of principle that he may be rectified.' When I knew that the Western civilization was more or less founded on individualism and often egoism and self-satisfaction, I thought that the social community of the West was less harmonious and loving; and when one does not respect the others, there will be only one thing to come, that is fight, in action or silence. I have seen enough proof that the Western life was not a kind to lead one to soul's content and peacefulness, but always to disturbance and pain. Having much dissatisfaction with the Western life, I returned to a country whose immediate, most important determination should be a refusal to the Western invasion."

SAVING THE PRIDE OF ANTWERP

Rubens's "Descent from the Cross," the great altarpiece in the Antwerp Cathedral, removed from fears for its safety

RELIGION-AND-SOCIAL-SERVICE

THE ENGLISH THEOLOGIANS' REPLY

THE "RETORT COURTEOUS" is what the English churchmen maintain they offer to the German theologians' defense of their nation's warfare. At the same time they express themselves as filled with "amazement that those who occupy the positions held by the signatories of this appeal should commit themselves to a statement of the political causes of the war which departs so strangely from what seems to us to be the plain facts of this grave hour in European history."

Copyrighted, 1914, by "Puck Publishing Co." by permission.

A WAYSIDE SHRINE.

—Crawford in Puck.

They complain, moreover, that the "most salient of the facts out of which the war has arisen" has received no mention at all. The appeal of the German clergy was treated in our issue of October 10, and the reply by the British now naturally follows. The signatories to this document declare that it has been no light thing for them to give assent to the action of the Government of their country in this matter. But the facts in the case as they know them give them no other choice. Upon these facts they rest their assured conviction that "for men who desire to maintain the paramount obligation of fidelity to plighted word, and the duty of defending weaker nations against violence and wrong, no possible course was open" but that which England took. The document then rehearses the main facts of the diplomatic negotiations already well known, and the treaty agreements by which the neutrality of Belgium was supposed to be guaranteed, and adds these final conclusions:

"The facts thus recited are, in our belief, incontestable. We

can only suppose, incredible as it seems, that those honorable and gifted men who signed the German Appeal were unaware of the obligations by which we were bound, and also of the story of the negotiations. A violation of such promises on our part would have been an act of basest perfidy.

"When we turn to the generalities which the document contains about German thought and polity and plans, we seek in vain for any reference to the teaching of such writers as Treitschke and Bernhardt.

"Does it mean that those who have signed the German Appeal regard those leaders and teachers as negligible, or that their own opposition to what those widely read books contain is so well known as to need no assertion? We can not tell. But the facts of the hour, as set forth in the summary which we have given above, correspond so clearly with what is inculcated and driven home in those writings that we at least find it impossible to separate the one from the other.

"Again, we can not pass in silence the statement of the manifesto that 'unnamable horrors have been committed against Germans living peaceably abroad.' We do not know to what the signatories refer in this general statement; but we may be permitted to speak of what is within our personal knowledge. Peaceful and well-disposed Germans in this country are being treated with all possible consideration and kindness, and the Home Secretary has taken them under his own protection.

"God knows what it means to us to be separated for a time by this great war from many with whom it has been our privilege—with whom we hope it will be our privilege again—to work for the setting forward of the Christian message among men. We unite whole-heartedly with our German brethren in deploring the disastrous consequences of the war, and in particular its effect in diverting the energies and resources of the Christian nations from the great constructive tasks to which they were providentially called on behalf of the peoples of Asia and Africa.

"But there must be no mistake about our own position. Eagerly desirous of peace, foremost to the best of our power in furthering it, keen especially to promote the close fellowship of Germany and England, we have nevertheless been driven to declare that, dear to us as peace is, the principles of truth and honor are yet more dear.

"To have acted otherwise than we have acted would mean deliberate unfaithfulness to an engagement by which we had solemnly bound ourselves, and a refusal of our responsibilities and duties in regard to the maintenance of the public law of Europe. We have taken our stand for international good faith, for the safeguarding of smaller nationalities, and for the upholding of the essential conditions of brotherhood among the nations of the world."

This document, besides bearing the signatures of the Archbishops of Canterbury, York, and Armagh, contains the names of many bishops, deans, and prominent clergymen of the Established and non-conformist churches. *The Church Times* (London) is "not sure that all the respondents were well advised in answering." It inclines to think that "silence would have been more dignified even than the most dignified speech." For this reason:

"Evangelic Christianity, as recently developed in Germany, is so peculiar a thing that it might be allowed to stand apart with its peculiar judgments. We yield to none in respect for the learned candor of Harnack, or for the profundity of Rudolf Eucken; we acknowledge the services they have rendered to Christian thought and Christian science, but we have some difficulty in recognizing either of them as definitely Christian at all, and to call their teaching evangelic—except in the legal sense which the word bears in the Kingdom of Prussia—is to play with words. Their appeal might have been allowed to pass as sharing the eccentricity of their doctrine. . . .

"To pretend that a Power which sent out ultimatum after ultimatum with such remarkable promptitude as was exhibited on this occasion at Berlin was laboring all the time for peace is to make a mock of human intelligence. In a sense there can

be no doubt that the German Government desired peace. No man wishes to get his own way with difficulty if he can get it with ease. The German Government wanted to have its own way; if without war, so much the better. *'Recte, si possis; si non, quocunque modo.'* We fear that the German professors were laboring under a characteristic delusion; it seemed to them gratuitous wickedness in any fashion to prevent the German Government from having its own way. Not otherwise can we account for their interpretation of facts that must have been known to them, in spite of the arrest of the usual supplies of information."

The English document, according to *The Guardian* (London), "will help to make clear the responsibility of Germany for one of the most wapton and unprovoked wars in all history." Going on:

"The cynical audacity of men who, in the name of the Almighty, can seek to justify as a stern necessity this deliberate and calculated outrage on humanity in face of the abundance of their own national literature in which war is glorified, either for its own sake or for the sake of the huge plunder in the shape of trade and power to be gained by it, provides indeed an instructive study in the possibilities of human self-deception. But altho we may readily deceive ourselves, especially when we have something to gain, we do not so readily hoodwink the mind and the consciences of other people. In this issue Germany stands at the bar of the public opinion of the world, and from the first hour of the war its verdict and the verdict of history have been in no doubt. It is a war of aggression, pure and simple, a war of pride and cupidity, a war of brutal indifference to the rights of small nationalities. In refusing to allow those rights to be violated, in preventing the triumph of designs long meditated and prepared for with the nicest attention to detail, the Allies are vindicating the demands of public law and the collective conscience."

All religious journals quote Mr. Asquith in saying that "the one thing worse than taking part in this war would have been to shirk it."

THE "WHITE CROSS"

THE MEN who bear the wounds have at least their compensations in the added glory; but the non-combatant sufferers—the old, the women and children, homeless, unfed, and unclothed—what tags of glory can they wear? We see a new cross mentioned for humanity to bear in

FEEDING HUNGRY BELGIANS.

All classes in the vallant little nation are leveled to necessities like this.

their name, and the reports of the progress of the Committee of Mercy's "White Cross" movement for their relief shows a wide-spreading interest. Governor Glynn's New York committee will be a strong one. Word comes from cities like Montgomery, Ala., and Atlanta, Ga., where committees are completed. The Vice-President has set his seal of approval to the movement in a letter to Mr. Norman Hapgood, chairman of the New York committee, reading thus:

"There are thousands of us to whom the Golden Rule has become a mere lip-service. Your movement will enable us to vitalize it. If we really believe in democracy and in the vital truths of Christianity, now is the hour not to dispense charity, but to do justice to our unfortunate brothers and sisters regardless of tongue and creed.

"The Red Cross deserves support and should not be hampered in its efforts to look after the wounded.

"The Christmas-ship movement should spread a ray of sunshine on Christmas day over the children of storm-tossed Europe, and your committee should have the high honor and privilege of disclosing that the true greatness of America consists in its service to mankind."

Senator Hoke Smith, of Georgia, is quoted by the *New York Sun* as saying: "I am in fullest sympathy with the splendid movement organized by the Committee of Mercy. The condition of the women and children of desolate Belgium would touch the heart of a man of stone."

The British Government has voted a monthly allowance of \$750,000 for Belgian relief, to be applied by a committee headed by Ambassador Page. To the same purpose the American Red Cross has given \$50,000.

THEY WHO REMAIN TO MOURN.

Peasant women of Austria, after searching the lists of the dead.

WAR'S DERANGEMENT OF RELIGIOUS WORK

ORGANIZED religious work everywhere suffers by the war, so the Philadelphia *North American's* regular writer on religious topics points out. "The caution and readjustment compelled by the war are causing a limitation of all gifts on the part of church members, which all philanthropies and religious institutions are even thus early beginning to feel." The marked effect upon foreign-mission work already has been dwelt upon in these columns. But the same interference with the course of international activity and the same need for retrenchment affect, we are reminded, all bodies which depend upon public gifts for their normal income. Take a typical incident cited in *The North American*:

"One of the Baptist boards had planned to send a woman worker to the Pacific Coast for a special form of service. When the war broke out she was notified by telegraph to remain in the Middle West, simply in order to save so small an amount as one worker's traveling expenses."

Nowadays, continues this writer, "there are many international religious organizations, and these are peculiarly sensitive to such disturbed conditions as the present." For example:

"The Young Men's Christian Association at Geneva has three secretaries, and at the outbreak of the war one of these was called to the Swiss colors, one to the German, and one to the French, with the result that the association was left without workers. Dr. John R. Mott has abandoned his proposed world-tour. Everybody knows that the church peace congress was broken up as soon as it convened."

"Sunday-school workers have been preparing for a world's convention in Tokyo next year, but now the leaders look grave. The Christian Endeavor Society was to have held a world's convention in Australia, but that had already been postponed, because of the prevalence of an epidemic."

"Not only have present troubles lessened gifts, but they will divert the general stream of unpledged benevolence. Relief work, that will be made necessary in behalf of all nations, will have first claim upon the sympathies of the public. Americans are foremost in responding to international appeals, and the one popular cause in the whole field of philanthropy for a long time to come will be the relief of war-sufferers."

"There will be a sifting out of many frailer organizations and a careful examining of the relative claims of the causes which demand public support. All of this may mean more than any man can yet tell."

One great international body, the Salvation Army, is facing the most severe crisis of its existence, according to officers quoted in the *New York Times*. More than 10,000 members of the organization are said to be actually fighting in the ranks. In all the fighting countries, except England, its actual existence as a working factor is said to have ceased. In this country,

"The work planned by the Army to meet some of the tremendous problems that it is asked to solve must in large part now be abandoned. This will have serious effect on our work in Chicago, Pittsburg, and many other cities."

"The Salvation Army in America is without reserve funds, and its gifts from the well-to-do have always been small in number and amount. Churches give little. So hardly more than a hand-to-mouth existence has been possible for some weeks. Most of the money of the Army is earned in industrial plants, but these have been well-nigh put out of business. Some collections are received at street-meetings, but these have much fallen off."

In particular, the annual Christmas charities in the large cities will suffer, for, as *The Times* notes, "most of the larger donations and gifts of money to the Army here now are for the sufferers in the war-zone, and are being sent abroad for distribution through such parts of the organization as remain intact in the warring countries."

THE WAR'S LESSON TO FRANCE

RELIGION as an integral factor of the life of France must resume its place, believes a writer in the Paris clerical organ, *La Croix*, and he rakes those who wonder stupidly at the horrors of war in this enlightened century for not perceiving as the cause the loss of the religious ideal amid all vaunted scientific and intellectual progress. He shows scant mercy to the Prussians, whose genealogy he traces back to an evil admixture of races; but at the same time he bids his compatriots look into their own conscience and confess their errors. The whole war situation affords the writer opportunity for a severe arraignment of so-called progress. In his view the world has undergone a regression, rather than achieved an advance, and this because of the ascendancy of materialism. People who have idolized Progress, he remarks, are astounded at the state of things in Europe. Speaking of France, in particular, he notes ironically the former diminished credit of the War Department because war was considered "impossible." In the name of Progress, he says, "benignity and the gentle hand" was decreed, when "all of a sudden a war of savages breaks out." He calls to mind the Napoleonic wars, the Seven Years' War, the Hundred Years' War, and discovers by comparison between them and the present conflict all the difference that exists between a war among Christians, or civilized people, or a war among barbarians or assassins. From former wars, the writer maintains, humanity, courtesy, even good form, were not lacking. Men fought bitterly, he admits, but not against women, the wounded, or against the clergy. Except for a certain siege of Saragossa, we are told, not since the days of Attila, does the history of France show us a single feature of war so horrible as those which the newspapers recount every day.

How far backward have we fallen, the writer exclaims, tho as a Frenchman he is bound to declare that "the savagery" is all on one side. His picture of the Prussians takes high rank in the literature of invective. He even denies them a place in the Indo-European group of peoples, "whose noble qualities have been displayed variously by the Greeks, the Latins, the Gauls, the Germans, and the Russians." They rather descend from "certain nameless prehistoric tribes," whose "savagery more than once astounded the Germans and the Slavs." By successful wars they saddled themselves on Germany, which, we are assured, is "dishonored" by such association. Much more of the same tenor could be quoted, but is perhaps unnecessary. At length he turns to the case of his own land:

"Are we sure that we, on our side, are as polished, as good, as moderate, as refined as were our fathers? Has not materialism conquered whole regions of our soul? After all, what is civilization? Is it not, in the first place, morality? And is not morality exclusively religion?"

"Henceforward let us hear no more of Progress! Everywhere, in varying degrees, the spirit of sacrifice, of equilibrium, of clear-sightedness, has suffered enormous losses. Our public manners in France have nothing enviable about them, and Prussia, in showing us her brutal visage, is a messenger from God. 'See whither ye are tending,' the Lord seems to be saying to us, 'unless ye mend your ways.'"

"All of us, many as we are, have erred in politics, in morals, in religion. We have all suffered a regression. We have all deserved to be punished. And if any one, readers, utters again to you that phrase of fathomless stupidity, 'to think that in the twentieth century such things can be,' answer thus: 'It's just because we are in the twentieth century that we see such things in the twentieth century, that is to say, at an epoch in which chemistry, mechanics, and comparative philology have achieved immense advances, but in which the religious ideal almost perished, and with the religious ideal all that endows man with his high place upon the earth, and distinguishes him from the brute beast.'"

"The simple peasant of the thirteenth century had a soul beside which ours pales. Let us try to regain it."—*Translation made for THE LITERARY DIGEST.*

CURRENT POETRY

A YEAR ago, Mr. Alfred Noyes opened for us the door of that glorious old tavern, "The Mermaid," and showed us Raleigh, Ben Jonson, Shakespeare, and the other immortal guests. He has opened the door again, opened it only a crevice this time, to let us see and hear the blind old fiddler who (he makes us believe) taught Shakespeare the snatches of balladry that decorate his plays. We take the poem from *Blackwood's Magazine*.

BLIND MOONE OF LONDON

BY ALFRED NOYES

("Dispersed through Shakespeare's plays are innumerable little fragments of ballads, the entire copies of which could not be recovered. Many of these are of the most beautiful and pathetic simplicity.")

Blind Moone of London
He fiddled up and down,
Thrice for an angel,
And twice for a crown.
He fiddled at "The Green Man,"
He fiddled at "The Rose";
And where they have buried him
Not a soul knows.

All his tunes are dead and gone, dead as yesterday.
And his lanthorn flits no more
Round the Devil Tavern door,
Waiting till the gallants come, singing from the play;
Waiting in the wet and cold!
All his Whitsun tales are told.
He is dead and gone, sirs, very far away.

He would not give a silver groat
For good or evil weather.
He carried in his white cap
A long red feather.
He wore a long coat
Of the Reading-tawny kind,
And darned white hose
With a blue patch behind.

So—one night—he shuffled past, in his buckled shoon.
We shall never see his face,
Twisted to that queer grimace,
Waiting in the wind and rain, till we called his tune;
Very whimsical and white,
Waiting on a blue Twelfth Night!
He is grown too proud at last—old blind Moone.

Yet, when May was at the door,
And Moone was wont to sing,
Many a maid and bachelor
Whirled into the ring;
Standing on a tilted wain
He played so sweet and loud,
The Mayor forgot his golden chain
And jigged it with the crowd.

Old blind Moone his fiddle scattered flowers along
the street;
Into the dust of Brookfield Fair
Carried a shining primrose air,
Crooning like a poor mad maid, O, very low and sweet,
Drew us close, and held us bound,
Then—to the tune of "Pedlar's Pound,"
Caught us up, and whirled us round, a thousand frolic feet.

Master Shakespeare was his host,
The tribe of Benjamin
Used to call him Merlin's Ghost
At the Mermaid Inn,
He was only a crowder,
Fiddling at the door.
Death has made him prouder,
We shall not see him more.

Only—if you listen, please—through the master's themes,
You shall hear a wizard strain,
Blind and bright as wind and rain
Shaken out of willow-trees and shot with elfin gleams.

Campbell's Tomato Soup—

Who can resist its wholesome temptation?

No one who has ever tried it.

The practical housewife—who at first doubts if any soup can be quite so good as that which is made in her own kitchen; the dainty young home-maker—who wants to provide the

most attractive table; the clever and critical hostess—who will

have only the best, and that which is absolutely correct.

The skeptic, the epicure, the hearty, the delicate

—guided by the pleasing experience of

others—They all come to it.

And it satisfies every one

They
all
come
to it!

Foster
Plug
prevents
slipping.

Makes
'em
wear
longer.

That Foster Friction Plug stands between millions of people and dangerous, slippery sidewalks.

Do you have weak arches? Then you need the Foster Orthopedic Heel which gives that extra support where needed. Especially valuable to policemen, motor-men, conductors, floor walkers and all who are on their feet a great deal. 75c attached of your dealer—or sent postpaid upon receipt of 50c. and outline of your heel.

It prevents thousands of accidents. It makes Cat's Paw Rubber Heels wear longer than ordinary kinds.

But there are additional reasons why you should have all your shoes—old and new—equipped with Cat's Paw Heels.

Extra quality rubber, giving greater resiliency and longer wear.

No holes to track in mud or dirt.

Cost no more than ordinary kinds.

Black or Tan, 50c attached.

Foster Rubber Co., 105 Federal St., Boston, Mass.

Originators and patentees of the Foster Friction Plug which prevents slipping.

Rémoih Gems

Look and wear like diamonds. Brilliancy guaranteed forever. Stand fire, acid and fire like diamonds. Have no paste, foil or backing. Set only in 14 karat solid gold mountings. About 1-30th the price of diamonds. A marvelous synthetic gem—will cut glass. Guaranteed not an imitation, and to contain no glass. Sent C.O.D. subject to examination. Write today for our 4 color catalog. Delate, it's free. Remoh Jewelry Co. 624 Washington Ave. St. Louis

REID'S GENUINE RAZORBACK Smithfield Va. Hams

COOKED & SHIPPED ANYWHERE
No other ham approaches in delicacy a genuine Smithfield Razorback as my "Old Virginia cook" prepares them. They are 33c the pound—plus 75c the ham for cooking—except to 10 lbs. If shipped uncooked if desired. Further information on request.

SECTIONAL BOOKCASES

are made for little libraries that are bound to grow. You will find them adapted to the books you have and are getting this season, and you will be just as delighted with their usefulness, fitness, beauty, good quality and economy when you have hundreds of books in your own collection.

You can start with one section and add as needed. We have agencies everywhere. Gunn quality is guaranteed. Our prices are lower than others.

Write for Souvenir bookmark and absence of disfiguring iron bands, and the handsome Sanitary, Mission, Colonial, and Standard designs.
The Gunn Furniture Co., Dept. B-19, Grand Rapids, Mich.

How should I your true love know?
Scrape and snatches—even so!
That is old blind Moone again, fiddling in your dreams.

Once, when Will had called for sack
And bidden him up and play.
Old blind Moone he turned his back.
(Growled, and walked away:
Sailed into a thunder-cloud,
Snapt his fiddle-string.
And hobbled from "The Mermaid"
Sulky as a king

Only from the darkness now, steals the strain we knew:
No one even knows his grave!
Only here and there a stave.
Out of all his hedge-row flock, bedrips the may with dew.
And I know not what wild bird
Carried us his parting word:
"Master Shakspeare needn't take the crowder's fiddle, too."

Will has wealth and wealth to spare.
Give him back his own.
At his head a grass-green turf,
At his heels a stone.
See his little lanthorn-spark.
Hear his ghostly tune,
Glimmering past you, in the dark,
Old blind Moone!

All the little crazy brooks, where love and sorrow run
Crowned with sedge and singing wild,
Like a skylark—or a child!—
Old blind Moone he knew their springs, and played 'em every one:
Stood there, in the darkness, blind,
And sang them into Shakspeare's mind. . . .

Old blind Moone of London, O now his songs are done,
The light upon his lost white face, they say it was the sun!

The light upon his poor old face, they say it was the sun!

To *The Conning Tower*, Franklin P. Adams's famous column in the *New York Tribune*, Mr. Charles Hanson Towne contributes these sympathetic and strong lines. What may be called the democratic case against war has seldom been so forcefully presented.

THE LITTLE PEOPLE

BY CHARLES HANSON TOWNE

The little, simple people are they who shall go down,
Not Kings, and Kaisers, Emperors, and availing Czars;
The good, God-fearing people who never saw a crown—
'Tis they who know the power of guns, and feel the curse of Mars.

It is the little people who must suffer and weep.
They who do the wise things, the good things of the earth;
They who till the farmlands, they who softly reap
The grain and the harvest, and build fires on the hearth.

The good folk, the kind folk—'tis they who run toward Hell
When Kaiser and Emperor dare to urge them forth;
Forgotten are the homely ways when sounds the war god's bell—
From East and West they gather, from still vineyards of the North.

From orange-groves, and wheat-fields, barley-brake, and plain,
From business in the quiet towns, the saw-work of the world,
They rush at the mad call, and face the stinging rain
Of shot and shell and cannon—for the King's flag is unfurled!

The little, simple people now run a race with Death,
They who ran wise errands for the rulers of the
earth:
They give their all, who built the world, they give
their very breath,
And who shall blow to life again the fire upon
the hearth?

O unregardful Kings, and ye who hold high
destinies
Within your misnamed mighty hands, how dare
ye face your God
When ye have thrown your simple people, people
such as these,
The good folk, the little folk, face downward on
the sod?

For they are worth more than your crowns, more
than ye know:
They are the wise ones, and ye the foolish, . . .
Stay!
Keep them and protect them, before your light
burns low,
And the Lord God rebukes you on His awful
Judgment Day!

There is plenty of *vers-libre* nowadays,
but little blank verse. Therefore the fol-
lowing impressively picturesque poem is
all the more welcome. It has dignity and
beauty, and the description in the last five
lines is splendid. We take it from the
Toronto Globe.

THE HILLS OF ALLEN

BY THE REV. JAMES B. DOLLARD

["The wine-cup is circling in Almhuln's high
hall."—Thomas Moore.]

I said I will arise and wander forth
High Almhuln's Hill to see, of Lathster wide
The glory and the crown—for I had read
In many a wild and strange old bardic tale
How on that hill great Finn his palace built,
And all the heroes of his order famed
Had lived and feasted there—Odan the hard
And Caolte and Conawn and Goll the Red
And Diarmuid, Son of Doon, and Oscar brave—
And so I traveled far a lonely road
Till I saw a mountain rise in air
Through trailing Druid mists. I clambered up
Through reeds and withered grasses that sang out
A haunting chorus in the querulous wind.

A low, red sun hung sadly in the west,
And shadows filled the valleys when I paused
On Allen's summit. Lone and bare it was,
And only gorse and heather flowered there
Where flowered once proud Erin's chivalry!
No mound arose to mark the place where stood
The banquet-hall where once the foaming mead
Went round, and wondrous tales of war and chase
Were chanted by the Bards to silver harp,
While Finn presided, giving gracious praise,
And Odan sat and mused of Tir-na-n-og
(A fairy-land that he once visited),
And Oscar dreamed of hunting the wild boar,
And Goll of bloody fields whereon he strode,
Breaking the ridge of battle!

Down below,
And all about, stretched out an endless plain
Of brown morass studded with silver pools,
With here and there a patch of vivid green,
All waste it was and empty—sad as death—
No human habitation showed in sight,
And ever and anon a curlew's cry,
The voice of desolation, pierced the air,
Reechoing in my soul!

Ah, nevermore
Those ancient scenes that languish after them
Shall hear the heroes' laughter, or the sound
Of the Dord Plan (the hunting-horn of Finn)
Or see again the beauty and the grace
Of Diarmuid and of Oscar! Long I stood
On Allen desolate, till darkness fell
And in the moaning winds I seemed to hear
The baying of Finn's hounds, Skolawn and Bran,
And swift Lomair; and mighty shapes thronged
round
Spear-armed for the chase! Then rose the moon,
Large, broad, and round, like Finn's emblazoned
shield,
Wheeling its mournful course across the sky,
And through the mists an hundred little lakes
Flamed up like crucibles of molten gold!

Elgin Wonder Tales

Lost in struggle with prisoners. Recovered after strenuous night.

The Elgin Watch long ago established a
wonderful record for endurance and world-wide use.
A remarkable instance comes from Alberta, Canada:

"My father gave me my Elgin Watch in London, when I emigrated to Canada. I carried it for two years of heavy farm work. I joined the Royal Northwest Mounted Police, at Regina, and during my three years in that force my watch got some very rough handling."

"On one occasion another constable and myself had arrested some drunken Indians and had trouble getting them into a four-horse wagon to take them to the lockup. Arriving there, I found my watch missing. Next morning I looked into the wagon and found my Elgin lying on the bottom, still going, but the glass was broken and the stem ring was bent. The watch must have fallen out when I was subduing our prisoners, about 24 miles down the rough trail. The watch had ridden in the bottom of the wagon all that distance and was still keeping perfect time."

"Later, I went to Australia, where I again broke the crystal when I was struck by a belt coming off an engine wheel. I used the watch then about seven months without a crystal, being too far in the bush to get one."

MOTOR - TRUCKS

TRUCKS IN THE WAR—THE SUBSIDY SYSTEM

IT is believed by John R. Eustis, who writes in *The Review of Reviews*, that by the end of August a quarter of a million motor-vehicles of all kinds were already in service in the European War. Every Government involved put into use not only those which they already owned, but those

not service in the war, but rather in transporting food, ammunition, and equipment. The speed with which armies have been able to advance in the present war is believed to be almost double the best that Napoleon, with all his efficient organization, could bring about in his wars of one hundred and more years ago. Motor-vehicles, however, are not now used for the first

time in war. The Bulgarians employed them in their advance on Constantinople, and England used them in her war with the Boers of South Africa. Italy, in her recent war with Turkey, used about 200 light trucks. Greece, in the war which she and Serbia carried on against Bulgaria after the first Balkan war, used about one hundred. Other interesting points in Mr. Eustis's article are the following:

MOTOR WORKSHOP USED BY THE FRENCH ARMY IN MAKING REPAIRS TO AEROPLANES

in private hands, which were promptly commandeered. England's share at that time is put at 50,000. Germany probably had more, and so had France. Immediate use was made of motor-vehicles by the German Army in making its way across Belgium, and thence almost to the gates of Paris. Thousands of picked soldiers are believed to have thus ridden into Belgium and Luxemburg immediately after war was declared. Besides using motor-vehicles for transportation purposes, the Germans made extensive use of trucks as mounts for rapid-fire guns, ranging from those of the Maxim type to light field-guns having a range almost equal to that of ordinary field-artillery. It is conjectured that the forced retirement of the Allied Army from the Belgium frontier was materially promoted by the German use of guns on trucks. At the first attack on Liège many German troops rode in automobiles, with which they made charges that have been likened to Balaklava, except that cars took the place of horses. Motor-cars were also used by German scouts. In the French Army the motor-vehicle has almost entirely superseded the horse except for cavalry mounts, and, to a limited extent, for artillery traction.

It is not in these matters, however, that motor-vehicles have performed their great-

est service in the war, but rather in transporting food, ammunition, and equipment. The speed with which armies have been able to advance in the present war is believed to be almost double the best that Napoleon, with all his efficient organization, could bring about in his wars of one hundred and more years ago. Motor-vehicles, however, are not now used for the first time in war. The Bulgarians employed them in their advance on Constantinople, and England used them in her war with the Boers of South Africa. Italy, in her recent war with Turkey, used about 200 light trucks. Greece, in the war which she and Serbia carried on against Bulgaria after the first Balkan war, used about one hundred. Other interesting points in Mr. Eustis's article are the following:

MOTOR WORKSHOP USED BY THE FRENCH ARMY IN THE FIELD

years. In the case of many of the special types, of which only limited numbers would be needed, government ownership was feasible, and such vehicles were therefore acquired immediately.

"To provide the large fleets of pleasure cars and motor-trucks necessary, two plans were adopted. For owners of private cars a motor militia was arranged, while for the

motor-trucks a subsidy plan was adopted. Under this plan the Governments approved of certain models of different manufacturers, and buyers of these models were granted a yearly bonus, extending over a period of from three to five years. In return the owners of the subsidized trucks agreed to turn them over to the Government on demand, and to keep them at all times in good condition. Under the latter provision the trucks are subject to inspection by army officers at regular intervals.

"While the subsidy systems for motor-trucks are much the same in the different European countries, they differ widely in the size and kind of vehicles the use of which they are intended to encourage. These varying preferences are governed by the nature of the country and the roads over which they are most likely to be used in case of war, and by the plan of army organization and utilization of the different nations. The English subsidy is applicable only to motor-trucks of one and a half and three tons load capacity, and capable of a maximum speed of sixteen miles an hour. The subsidies are \$528 and \$576, respectively, and are paid in three yearly instalments. England is the only nation to require a strict adherence to a standard form of design and construction. France subsidizes motor-trucks and tractors, with and without trailers, which have a load capacity of two or more tons and a speed in excess of nine miles an hour. The subsidy for a three-ton truck is \$1,440, paid in four years.

"The German Government favors motor-trucks, and its subsidy is applicable only to motor-trucks and tractors designed to haul trailers. Load capacities of four tons on trucks and tractors and two tons on trailers are required, and a speed of ten miles an hour. The subsidy is \$2,160, paid in five yearly instalments. The Austrian requirements are similar except that only three tons are necessary on trucks and tractors, and the subsidy is \$1,728. On account of the mountainous nature of its frontiers, Austria also requires more powerful motors. Neither Russia nor Italy has subsidy systems, but each has acquired by purchase a number of motor-trucks, the former having many of American manufacture. Both countries favor trucks of about one and a half and three tons load capacity. To date, the United States Army has adopted but one type, of one and a half tons load capacity. Complete specifications have been prepared, which call for a vehicle driven and steered through all four road wheels—a design similar to most of the European tractors. Only one of the 360 American motor-vehicle manufacturers is engaged in building trucks to these specifications.

"The purpose of the subsidy plan encouraged the use of motor-trucks in large numbers for ordinary commercial transport, and made certain that these trucks would be adapted for military purposes and would be kept in good condition. Some difficulties have been met in having the subsidy plan widely accepted by manufacturers and owners. The principal one is that trucks adapted for military service are not adapted to the average commercial requirements. France and Germany, the first to arrange for subsidy systems, adopted the motor-truck for military purposes somewhat in advance of their general use for business in their respective countries, and were therefore able to control this situation fairly well.

"England, on account of the late adoption of a subsidy system, has not been so successful in having military designs substituted for those developed by years of commercial usage. This was in some measure a handicap. To offset this disadvantage, there were in England at the outbreak of hostilities more motor-vehicles

GREAT BEAR SPRING WATER
 50c the case of six glass stoppered bottles

of all types than in all the other belligerent nations combined, the total being about 250,000. France had approximately 90,000, Germany 70,000, Austria 25,000, and Russia 10,000. (It may be an interesting comparison, by the way, in this connection, to note that there are considerably over one million motor-vehicles now in use in the United States.)"

Other facts connected with this subject have been brought out by a writer in the *New York Commercial*. Most notable of all the changes effected by the motor-vehicle are those that pertain to transportation. For the first time in the history of warfare, the army mule and the draft-horse seem now to have been almost completely eliminated. One truck when used as a tractor propelling a train of supplies is able to supplant twenty or even thirty mules and can move at from ten to eighteen miles an hour. This writer presents interesting points:

"The large part which the automobile has had in the battles of France, and particularly in the marvelous speed in which the Germans pounded their way through Belgium and almost to the gates of Paris, has been almost lost sight of. Possibly this is because those new engines of war, the aeroplane and the Zeppelin, have been more spectacular. It is true, however, that the automobile has had a very important part in the matter of transportation.

"The mule teams and the horse teams of the old baggage-train made from three to five miles an hour. The auto-truck, with a speed ranging from twelve to eighteen miles an hour, accounts largely for the tremendous amount of ground covered by the German Army in its charge upon the fortifications of Paris, and also will account in part for the fact that the German Army was so successful in withdrawing intact from the Marne to the Aisne.

"The part which the automobile has taken in the war has not appeared in the press because of the strict censorship and the more spectacular movements of the troops. It appears, however, that the motorizing of the military machinery of the great Powers has been a development of years and has been considered in a large degree just as important as the development of the great guns and the equipment of the various other branches of the service. It has been considered in this regard that the cost of maintaining in idleness the thousands of horses and mules for military service in densely populated countries is economically prohibitive. Both Germany and France have the finest permanent roads in Europe, and the conditions for the practical utilization of motor-trucks are more favorable than in any other country in the world. Of course the first reason for motorizing has been the greater mobility of the machine and its ability to transport rapidly many and heavy loads."

MOTOR-TRUCKS SOLD ABROAD

The war in Europe had scarcely more than begun when orders for motor-trucks reached this country. Russia alone ordered in August 180 trucks. Since then much larger orders have come. It was known early in October that five American manufacturers had been awarded for European armies contracts numbering 1,840 trucks which are believed to be intended for the French Army, but a positive statement on this point was withheld. Following are other facts connected with these orders printed in *The Horseless Age*:

"The placing of these orders is the result of several weeks of inspection and tests at the plant of the Bethlehem Steel Co.,

Our 1915 Truck Tire

For fifteen years The Goodyear Tire & Rubber Company has been developing Truck Tires. For the last eight years this work has been principally on heavy service tires.

In this time, the men in our Experimental Department have solved a legion of tire problems. The work they are constantly doing to perfect Goodyear Tires costs us \$100,000 a year.

This Goodyear Experimental Department has built 29 different types of Truck Tires. In the evolution of one type—the 1915 Goodyear S. V. Truck Tire—74 separate tire structures were built. Each was watched and tested for utmost efficiency. In the last year and a half 2,100 test tires have been placed in actual use, under every working condition.

The result is the 1915 Goodyear S. V. Truck Tire. This 1915 tire marks today's finality in truck tire service, durability, simplicity, economy. It is the sum of all that has been done in the attainment of truck tire perfection.

GOOD YEAR
AKRON, OHIO
S. V. Truck Tires

Some New Features

The Goodyear S. V. is a metal base tire of the pressed-on type. Wonderfully simple. No tire is applied more quickly, easily or securely. It cannot be applied wrong. There are no rights and lefts.

It is lighter than others—due to a total absence of cumbersome metal wedges, flanges, bolts and bands used to keep other tires in place.

It has a flat tread—which means better load-distribution, better traction and a uniform wearing quality.

The metal base is a corrugated channel, to which is vulcanized a layer of hard rubber. Then comes the tread rubber. By a Goodyear process, the metal, the hard rubber and the soft rubber tread are all welded together into one inseparable unit.

Less Cost Per Tire-Mile

Ask us to show you how big concerns in every field are lowering tire-mile costs by using 1915 Goodyear S. V. Truck Tires. Learn also how these tires save equipment—the load—the driver's time—how they keep the truck in commission.

Before buying tires remember what Goodyear has done to insure the service and economy you seek. Goodyear S. V. Truck Tires eliminate guess-work and experimentation.

Get Goodyear experience when you buy Truck Tires.

THOMAS B. MORTON COMPANY, Incorporated,
Starks Building, Louisville, Ky.

at which were represented all of the prominent motor-truck manufacturers of the country. These tests were made before a French army officer, Lieutenant Lunet, and several expert automobile men, and after several meetings in New York the contracts were signed on October 8.

"All of the automobiles are what is known as artillery wagons, canvas covered, with large, long bodies. They are capable of carrying from two to three tons in field service. They are all intended for the use of the army. The automobile men declare that their end of the contract is completed when the vehicles are delivered to the purchaser in New York, and that any shipment abroad will be done entirely by the latter. The trucks are to be mounted with camp or artillery bodies, according to the United States Army Regulations. In addition to the contracts for the trucks, large orders were placed for tires and extra parts which will be rushed through the same as the vehicles.

"The opportunity of securing this remarkably large order did not arise without the American manufacturers being prepared, for with the commencement of the European hostilities, motor-vehicle makers in this country recognized the possibilities offered them by the wholesale destruction of vehicles impressed in the war's activities and have been assembling reserve supplies since the breaking out of hostilities. The result was that when the deal was consummated, most of these manufacturers were in a position to make prompt deliveries."

Where Safety Lay.—Even the war has its bright side. Two negro porters were discussing it as they waited for a train to pull into the station.

"Man," said the first, "dem Germany submarines is sho'ly gwine to sink de British Navy. Yas, sir-ee, dey's sho'ly gwine to 'splode dem naval boats dat's waitin' out yonda."

"Sho!" said porter No. 2. "An' what's gwine ter happen den?"

"Why, dem Germany submarines'll come right on 'cross de ocean an' 'splode de rest oh de naval boats oh de world. Dat's what'll happen den. Sambo!"

"Well, looky heah, Gawge. Ain't yo' an' me better deela' ouselves a couple o' noot—nootal—nootalities?"

"Man," said Gawge, "yo' all kin be a nootality if yo' wants to. Ah'm a German!"—*New York Evening Sun.*

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even tho they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. THE LITERARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

vital of all subjects

Expectant Motherhood

A new book by J. W.
Ballantyne, M.D., Phy-
sician to the Royal
Maternity Hospital,
Edinburgh

This important new book explains the hygienic rules which the parents, and especially the mother, must obey if their child is to come into the world well and strong. Dr. Ballantyne, as physician to the Royal Maternity Hospital, Edinburgh, is able to write on this subject with authority. He not only tells the expectant mother what she ought to do and ought not to do, but, with singular clearness and charm, explains the physiological reasons for the directions he gives. In this respect the book is unique.

PERSONAL GLIMPSES

A SUBMARINE VICTORY, ABOVE
AND BELOW

TWO accounts of the sinking of the *Hogue*, *Cressy*, and *Aboukir*, by the German submarine U-9, appear almost simultaneously in American papers. One is taken from the *Manchester Guardian* and tells the story of one of the officers of the *Hogue* who had the good luck to be rescued after his vessel sank; the other, given by the *New York World*, under the copyright of the Press Publishing Company, is told by Captain-Lieutenant Otto Weddigen, the man who loosed the torpedoes upon the trio of British cruisers. The two accounts serve to give a singularly complete picture of this encounter, showing the destruction and helpless confusion above water, and, below, the calmness of the little death-dealing machine, triumphantly victorious against its huge foes. The English officer was aroused from a sound sleep by the unusual performances of his vessel, just in time to see the last of the *Aboukir*. As he tells the story:

I was awakened about 6.15 by the increase of our speed, and, thinking it was nothing more than just a slight spurt to take up our day patrol position, I lay quiet. However, about ten minutes later I felt the engines going full speed astern, so, guessing at once that something out of the ordinary was happening, I sat up, and, opening my scuttle, looked out. Conceive the jump I gave when I saw the *Aboukir*, about half a mile away, heeling over to port so that the starboard copper plates were plainly visible glistening red in the sun. I could also see considerable commotion on board her, and one of her starboard sea boats was lowered half-way, but seemed to have stuck there.

While I watched she seemed to heel over still more, so I leapt from my bunk, and, running into the next cabin, I found — jumping out of his bunk, and together we ran up on to the quarter-deck. From there we could see that in the short time we had taken getting up on deck she turned over much more, and was down by the head, and while we watched we could see the sun shining on pink, naked men walking down her sides inch by inch as she heeled over, some standing, others sitting down and sliding into the water, which was soon dotted with heads. All this time we were hard at it lowering boats.

Both the sea-boats had gone, manned by nucleus crews and Lieutenant —'s voice could be heard as he directed the hands working the main derrick, which was hoisting up the launch—a boat capable of holding two or three hundred men. Other men under the direction of another lieutenant were busily throwing overboard every bit of wood that they could find for the swimming men to clutch—an act which materially aided in our escape afterward. I then ran along to the sick-bay and ordered the stewards to get hot blankets and coffee ready, and went below to get into some clothes.

I had only been in my cabin about a minute when there was a terrific crash, and the ship lifted up, quivering all over.

LUXEBERRY WHITE ENAMEL

Whitest White · Stays White

In any room throughout the house the effect of white enamel is one of rich and permanent beauty. Luxeberry White Enamel is checkless, fadeless and whitest white.

Because of its hard, tough surface it is easy to keep clean. Finger marks and spots simply melt away beneath the dampened cleaning cloth.

And for floors use Liquid Granite—the waterproof varnish kiddies can't mar with little heels that pound the floor in play. The weight of heavy moving furniture won't crack it, nor scrubbing with hot water turn it white.

Liquid Granite is a high quality Varnish through and through. Like other celebrated Berry Brothers' finishes its worth and quality are the results of over 50 years' experience in the making of famous varnishes.

You can bring this experience to bear in the finishing of your new home or the refinishing of your worn dining room floor. The advice of our experts is yours for the asking, no matter how great or small your problem may be.

See our nearest dealer or write our factory direct as you prefer.

BACK TO NATURE

By NEWTON NEWARK

No funnier bit of typical American humor has ever been written than this convincing tale of two amateur sportsmen who go "back to nature" on a hunting and fishing trip. It is a rare bit of refreshing and humorous humor enlivened by illustrations made by Newark himself, in a style of drawing that is as original and entertaining as his literary method.

Thomas W. Lawson says it is: "Bully-shaking, lung-tearing, side-splitting. . . I hystericked, rolled over the library rug, and in my awful gleeful convulsions nearly rolled into the open grate."

"I think your book splendid. . . You have a spontaneous style that is admirable," says Walt Mason.

**DANIEL GREEN FELT
SHOE COMPANY**

75 Lincoln Street, Boston, Mass.

A second or two later another and duller crash, and a great cloud of smoke, followed by a torrent of water, came pouring in through my open scuttle. The noise for a second or two was deafening; everything seemed to be breaking, and somewhere or other I could hear dishes and glass being crashed to pieces on the deck, and, in addition, all the lights in the ship went out. I ran out of my cabin and along to the first ladder, the aft deck being in darkness and full of smoke; conceive my dismay when I found that it had fallen down.

Another ladder, farther on, offered escape, however. On the deck was worse confusion than before, and soon there was nothing left to do but make one's escape in the shortest possible order. He tells of his experiences in the water while awaiting rescue, and of the end of the *Cressy*:

The first piece I clung to had sharp edges which hurt, so I left that and swam to a table floating near. Then another man came up and climbed on to my table, so I left it to him and struck out for a large spar which I caught sight of some little distance off. This afforded a very comfortable hold, and I lay over it, kicking gently with my legs to keep them warm, and I looked about me. Both the *Aboukir* and the *Hague* had gone, and the *Cressy* was in front of me, about a quarter of a mile away. Then she began to fire her guns, and, hearing the shells going over my head, I looked behind, and there, about 300 yards off, I saw the periscope of a submarine.

For some time the firing continued, several of the shells bursting most unpleasantly near, and then the men on the *Cressy* started cheering, and I heard after that they were unanimously of the opinion—true or not, I don't know—that they had sunk one of the submarines. However, the firing continued for some time, till there was a sudden explosion, and a great column of smoke, black as ink, flew up as high as the *Cressy's* funnels, while she heeled over about ten degrees. Nothing much further seemed to happen, however, and, looking about me, I caught sight of—hanging on to a large fender of twigs, which kept revolving and ducking him under, so, calling to him, I started to push my spar toward him till I got near enough, and then, giving it a vigorous shove, pushed it alongside him and swam after it.

The two of us clung to that for some time, till the sound of an explosion made us look round to see the spray and smoke disappearing, and as we watched another torpedo struck, and the *Cressy* heeled right over and almost entirely disappeared in a very short space of time, the last few feet of "island," however, taking a very long time to go. Soon after this I realized the wonderful fact that as the *Hague* sank she must have righted herself, for the picket boat and steam pinnacle had in some miraculous way floated clear quite undamaged, the half full of water, and were now about one hundred yards from us. Turning the spar so that it lay pointing toward the boats, and slipping the fingers of my left hand into a notch that seemed made for the purpose, I turned on my side and started to tow the spar toward the boats.

These were soon reached, and we found that some four or five people had already boarded them. With their help we

EVERY-DAY JAPAN

By ARTHUR LLOYD, M.A.

With an Introduction by Count Tadasi Hayashi, late Japanese Minister for Foreign Affairs.

This is not a tourist's notebook. It is the product of 25 years' residence and work in the country, and every chapter is written from first hand knowledge and personal observation.

William Elliot Griffis, whose works on Japan are standard, writes the publishers: "This book on Japan has all the qualities that will keep it before the public for a generation to come. There is no other book on Japan quite like it. I shall commend it alike to my audiences and to librarians, a great many of whom I meet in the course of the year."

Illustrated with 5 colored plates and 96 half-tones. Large octavo. Cloth, \$1.50 net; by mail, \$2.00.

Funk & Wagnalls Co., 354-60 Fourth Ave., N. Y.

scrambled on board, having been in the water about an hour and a quarter. After this there is not much to tell. The *Flora* hove in sight when we had been in the boat about an hour, followed by the *Titan*, and in an hour more we naked, shivering mortals were all taken off to the former.

Meanwhile, part of the time beneath the waves, and partly skimming just under the surface, with only his small periscope visible, Lieutenant Weddigen was speeding back to Wilhelmshaven, to be greeted as a hero and to receive, with his crew, the personal recognition of the Kaiser. In his account of the discovery of the three cruisers, he is unable to give details as to locality, distance, or direction, but the story of his attack he gives in full detail:

It was ten minutes after six on the morning of last Tuesday when I caught sight of one of the big cruisers of the enemy.

I was then eighteen sea-miles north-westerly of the Hook of Holland. I had then traveled considerably more than 200 miles from my base. My boat was one of an old type, but she had been built on honor and she was behaving beautifully. I had been going ahead partly submerged, with about five feet of my periscope showing. Almost immediately I caught sight of the first cruiser and two others. I submerged completely and laid my course so as to bring up the center of the trio, which held a sort of triangular formation. I could see their gray-black sides riding high over the water.

When I first sighted them they were near enough for torpedo work, but I wanted to make my aim sure, so I went down and in on them. I had taken the position of the three ships before submerging and I succeeded in getting another flash through my periscope before I began action. I soon reached what I regarded as a good shooting-point.

[The officer is not permitted to give this distance, but it is understood to have been considerably less than a mile, altho the German torpedoes have an effective range of four miles.]

Then I loosed one of my torpedoes at the middle ship. I was then about twelve feet under water and got the shot off in good shape, my men handling the boat as if she had been a skiff. I climbed to the surface to get a sight through my tube of the effect, and discovered that the shot had gone straight and true, striking the ship, which I later learned was the *Aboukir*, under one of her magazines, which, in exploding, helped the torpedo's work of destruction.

There was a fountain of water, a burst of smoke, a flash of fire, and part of the cruiser rose in the air. Then I heard a roar and felt reverberations sent through the water by the detonation. She had been broken apart and sank in a few minutes. The *Aboukir* had been stricken in a vital spot and by an unseen force that made the blow all the greater.

Her crew were brave, and even with death staring them in the face kept to their posts, ready to handle their useless guns, for I submerged at once. But I had stayed on top long enough to see the other cruisers, which I learned were the *Cressy* and the *Hogue*, turn and steam full speed to their dying sister, whose plight they could not understand, unless it had been due to an accident.

Like Covering Your Walls With Velvet!

The same soft, deep tones of velvet, with velvet richness and body. It covers your walls with a *velvet textured coat* whose freshness can be renewed by *washing*. Nothing more truly artistic, nor a more harmonious background for pictures, ornaments and drapery; no medium so effective for the expression of good taste.

O'BRIEN'S Liquid Velvet

What Is Liquid Velvet?

A new, oil-base, *washable wall finish*, the only one of its kind. Not a paint; nothing like calcimine. LIQUID VELVET is unique, alone in the field.

A sponge and a pail of water will keep it fresh and clean indefinitely. Think of the economy this affords, the decorating bills it saves, the exquisite cleanliness it allows.

LIQUID VELVET can be *applied over old wall paper if desired*.

Pettijohn's
Rolled Wheat With the Bran

Diet Lists

Do you know why Pettijohn's appears on nearly every diet list?

It is because this soft-wheat dainty appeals to fickle appetites.

And because of the bran.

This needed roughage is usually omitted even from "whole wheat" foods. And that omission brings need for drugs and salts.

Find out how delightful these flakes are. And how they better the days when you eat them.

If your grocer hasn't Pettijohn's, send us his name and 15 cents in stamps. We will send one package by parcel post, and try to arrange for your future supplies. Address: The Quaker Oats Company, Chicago.

But soon the other two English cruisers learned what had brought about the destruction so suddenly.

As I reached my torpedo depth I sent a second charge at the nearest of the oncoming vessels, which was the *Hogue*. The English were playing my game, for I had scarcely to move out of my position, which was a great aid, since it helped to keep me from detection.

As has been shown by the English officer's account, those on the British ships were unconscious presumably up to this point of the presence of the submarine. It speaks well for Lieutenant Weddigen's marksmanship that, when the British sensed the cause of the explosion, they believed themselves surrounded by a fleet of the undersea boats. On his little craft, says the Lieutenant, all was in true German Navy form, and every man acted with the precision of a machine. When all was ready he loosed his second torpedo:

The attack on the *Hogue* went true. But this time I did not have the advantageous aid of having the torpedo detonate under the magazine, so for twenty minutes the *Hogue* lay wounded and helpless on the surface before she heaved, half turned over, and sank.

By this time the third cruiser knew, of course, that the enemy was upon her, and she sought as best she could to defend herself. She loosed her torpedo defense-batteries on boats, starboard and port, and stood her ground as if more anxious to help the many sailors who were in the water than to save herself. In common with the method of defending herself against a submarine attack, she steamed in a zig-zag course, and this made it necessary for me to hold my torpedoes until I could lay a true course for them, which also made it necessary for me to get nearer to the *Cressy*. I had come to the surface for a view and saw how wildly the fire was being sent from the ship. Small wonder that was, when they did not know where to shoot, altho one shot went unpleasantly near us.

When I got within suitable range I sent away my third attack. This time I sent a second torpedo after the first to make the strike doubly certain. My crew were aiming like sharpshooters and both torpedoes went to their bull's-eye. My luck was with me again, for the enemy was made useless and at once began sinking by her head. Then she careened far over, but all the while her men stayed at the guns, looking for their invisible foe. They were brave and true to their country's sea traditions. Then she eventually suffered a boiler-explosion and completely turned turtle. With her keel uppermost she floated until the air got out from under her and then she sank with a loud sound, as if from a creature in pain.

The whole affair had taken less than one hour from the time of shooting off the first torpedo until the *Cressy* went to the bottom. Not one of the three had been able to use any of their big guns. I knew the wireless of the three cruisers had been calling for aid. I was still quite able to defend myself, but I knew that news of the disaster would call many English submarines and torpedo-boat destroyers, so, having done my appointed work, I set my course for home.

"If damaged from any cause, a new one FREE."

SPICE OF LIFE

Their Maid.—WOMAN—"I would like to see some maids' aprons."

CHILD—"Oh, mother! is father to wear hose when he dries the dishes?"—*Judge*.

Clinched.—HE—"In what month were you born?"

SHE—"Oh, you needn't be afraid. The diamond is appropriate."—*Boston Transcript*.

Why They Cheered.—"Who are those people who are cheering?" asked the recruit as the soldiers marched to the train.

"Those," replied the veteran, "are the people who are not going."—*Puck*.

Usefulness Ended.—WIFE—"Oh, George, do order a rat-trap to be sent home to-day."

GEORGE—"But you bought one last week."

WIFE—"Yes, dear, but there's a rat in that."—*Sacred Heart Review*.

A Familiar Term.—THE GROOM—"Well, Bill, you won't see the gov'nor's horse any more; they've taken him for the army."

THE GARDENER—"Oh, I suppose now he's going to be what the Frenchies call a 'horse de combat.'"—*London Opinion*.

Taken Literally.—PRECISE BOARDING-MISTRESS—"Mr. Blunt, shall I tender you some more of the chicken?"

MR. BLUNT—"No, thank you! But, if you can tender this piece you have already served me, I shall be greatly obliged to you."—*Christian Register*.

Hardly Possible.—Riding in an omnibus up Regent Street last evening, I heard an old lady annoying the other passengers by her remarks. The conductor remonstrated with her, saying, "Ma'am, remember you are in a public vehicle, and behave as such."—*C. G., in the London Spectator*.

Experts Only.—MARIE—"At the place where I was spending my vacation this summer, a fresh young farmer tried to kiss me. He told me he'd never kissed a girl in his life."

ETHEL—"What did you say to him?"

MARIE—"I told him that I was no agricultural experiment station."—*Boston Transcript*.

His Politeness Explained.—"It was mighty nice of you to give up your seat to that stout old lady, Mr. Blinks. It is pleasant to see that there are still some polite men left in the world."

"Sorry, Mrs. Jabbers, but it wasn't politeness at all. The man who sat next to me was quarrelsome because he said I crowded him too much, and all I did was to use that stout old lady as a sort of retort courteous."—*Judge*.

Righteous Wrath.—"I won't pay one cent for my advertising this week," declared the store-keeper angrily to the editor of the country paper. "You told me you'd put the notice of my shoe-polish in with the reading-matter."

"And didn't I do it?" inquired the editor.

"No, sir!" roared the advertiser. "No, sir, you did not! You put in the column with a mess of poetry, that's where you put it!"—*Ladies' Home Journal*.

SEARS, ROEBUCK & COMPANY, CHICAGO

Sears, Roebuck & Co., the greatest of all mail order houses, were among the early adopters of the Automatic-Phone for Inter-Communication. They bought their first

Automatic-300 phones—August 7, 1905. Today they have 501 instruments and an AUTOMATIC switchboard that takes the place of twenty operators—at a saving of about \$12,000 a year.

These Automatic-Phones handle upwards of 20,000 calls per day at an average saving in time, to the person telephoning, of 18 seconds on every call—100 hours a day. At 30 cents an hour (a low figure) this means a saving of \$9,000 a year. Sears, Roebuck & Co. do not regard this saving as theoretical. They say: "We have found the cost of operation nominal and the service very satisfactory, in fact we consider the system superior to any other on the market."

(Signed) J. ROSENFELD, President.

Eighty Percent of Your Telephone Calls Are Inter-Communicating

—or should be, for this is the ratio in most big, progressive businesses. This 80% is handled by the Automatic-Phone,

quicker, better, and with no expense for operators' salaries, and with no rentals for instruments which should be

restricted to inter-calls. The net, clear saving pays the total cost of the Automatic System in one to three years.

Secrecy—Reliability—24-Hour Service—these are some of the other advantages which the Automatic affords—some of the reasons why Standard Oil of Ohio, Selway Process Company, National Tube Company, Illinois Central R. R., and scores of other businesses, great and small, are using the Automatic-Phone. Mail the coupon for free booklet giving all the facts.

Booklet Free—Mail Coupon Now

Our booklet, "At Your Finger's End," tells why the Automatic-Phone has been chosen and how it is used. A copy will be sent you free upon request. Request your copy NOW. Clip the coupon and mail it to us at once.

Along The Beautiful Adriatic Just Before the War Began

ONE of the most refreshing volumes written in years—a live, snappy, rollicking tale of experiences aboard and ashore in the most delightful piece of Southern Europe—along the Adriatic.

Its pages breathe the very spirit of everything that goes to make Dalmatia delightful. Story, anecdote, ancient legendary, beautiful cities, old churches, countless architectural and other ancient treasures, etc., etc., criss-cross through its pages in entertaining variety.

You'll Never Forget It Once You Read It

DELIGHTFUL DALMATIA

By ALICE LEE MOQUE

The book is timely for its descriptions of places already in the wake of war; among these is Cattaro the recently bombarded fortification on the Adriatic. Unusually attractive is the great scenic and historic interest attaching to Pola, Sebenico, Gravosa, Spalato, Ragusa, etc.

Cloth bound, 362 pages. Profusely illustrated in color and half-tone. \$2.00 net; by mail, \$2.16.

Funk & Wagnalls Company - 354-380 Fourth Ave., New York

INVESTMENTS - AND - FINANCE

OUR DEBTS ABROAD

WITH a better prospect ahead of us for taking care of our debts in Europe—that is, our open-account debts, as distinguished from permanent European investments in our securities—financial writers see a lifting of what has perhaps been the most ominous cloud in the sky. Much discussion was under way in the third week of October of plans to settle these open-account with short-term notes, or sales of cotton to England, and there seemed to exist a fair prospect that something might be accomplished. Meanwhile, it began to look as if a considerable part of these debts would be taken care of through a rising tide in the volume of our exports. An increase in these exports that became notable in October led a writer in the *New York Sun* to remark that the war-cloud might not only prove to have a silver lining, but "a golden one." The latest developments had been quite contrary to the predictions which pessimists were making a few weeks earlier. "All talk of stagnation in our export trade has ceased," said this writer, who declared further that "millions of gold" were being transferred from Europe to New York, in order to pay for the huge purchases that England, France, Germany, and Russia were making here. He said further in detail:

"After all, the war-cloud may prove to have a silver lining, or rather a golden one. The latest developments in the business and financial situation are far different from what the pessimists were predicting only a week or two ago. All talk of stagnation in our export trade has ceased, and alarm over the settlement of our debts to Europe is disappearing as millions of credits are transferred to New York to pay for the huge purchases that England, France, Germany, and Russia are making or planning to make here.

"The new buying movement affects a great variety of interests. Except cotton, which so far remains in a class by itself, all forms of rural industry are benefited. September's shipments of wheat, flour, corn, and kindred products were two and a half times as great as in 1913. From day to day the demand for export grain is a feature on the New York Produce Exchange. Meat products of all sorts are in huge demand. Foreign officers are buying many thousands of horses.

"But the market for manufactured wares appears to be no less. There are very large orders being placed for all sorts of material of war, a term which includes such diverse articles as barbed wire and automobiles. In addition clothing and underclothing for the troops in the field and for civilians at the rear are eagerly sought. The shrinkage in home manufactures compels the belligerent peoples to come here for their supplies. Just now the call is extensive for footwear and underwear of plain, durable quality, 60 per cent. wool. It is said that existing stocks in this country could be sold out completely if the holders did not refuse to risk a scarcity in the domestic trade.

"A banker estimates that the country's exports will be doubled in the current year, reaching a total of \$5,000,000,000. The figure may be considerably too hopeful, but the fact which it represents is becoming too plain to question, namely, an enormous and profitable increase in the immediate future in foreign trade. What is more, it is to all intents and purposes cash business through the transfer of foreign

credits, and practically every dollar not only tends to diminish unemployment and enhance gains here, but simultaneously helps to reduce the incubus of transatlantic liabilities.

"Naturally this boom in export trade is only temporary. Little or none of it means permanent expansion for American industries. The war once over, the European countries will go back to producing for themselves and one another. American trade will return to normal conditions. In this there will be no injury to us. The country will be neither better nor worse off than in the first half, say, of this year."

In the matter of prosperity at home, much encouragement has been derived from a statement made in the third week of October by Charles S. Hamlin, governor of the new Federal Reserve Board:

"Our present difficulties do not appear to arise from scarcity of actual money. Much more can be issued. Aldrich-Vreeland notes available amount to over \$1,200,000,000, while there has been shipped to banks only a little over \$340,000,000. In the South there is available \$169,000,000, there has been shipped between \$50,000,000 and \$60,000,000. The real difficulty would seem one of credit. Mutual trust and confidence have been disturbed. As to certain great crops, demand has temporarily greatly decreased, and value has left its moorings—cost of production. Ordinarily, such a condition would quickly adjust itself. We should see to it that remedies proposed are not worse than the disease itself. The Treasury is in sound financial condition. It possesses ample gold and ample power to increase it."

Commenting on this statement a writer in *The Financial World* remarked that credit is not available in full measure just now because of doubts in bankers' minds as to the markets which the borrowing man will have for his wares. On these wares he seeks advances sufficient to carry his business on until his customers pay him for what he sells them. That conditions are changing for the better is obvious to this writer, who says:

"But the encouraging feature of the situation is that, while the banker and the business man were utterly at sea for at least a month or six weeks after the war started and conditions seemed hopeless, at present there is a manifest disposition on the part of both banker and business man to discount the future and go ahead. This attitude represents a distinct advance and means a speedy reestablishment of full and mutually expressed confidence. Credit then will follow automatically."

STATE OF THE BUILDING-TRADE

An investigation has been made by *Bradstreet's* of building-operations in 149 American cities during the first nine months of the present year. The result shows "a marked shrinkage" in the value of building-construction planned or completed, but only a small decrease in the number of enterprises. In value, the decline is \$58,000,000, or 8.3 per cent.; in the number of structures planned, it was 1,568 in a total of 211,983, or seven-tenths of one per cent. In these declines, the only important ones occurred in the Middle States. In New England and the South they were "trifling." In newer sections of the West

there was an actual gain." Following are a table and comments given by *Bradstreet's* on this subject:

(Three figures omitted from values.)

	No. of Cities	No. Permits 1914	1913	Value, 1914	Value, 1913
New England.....	24	14,194	14,319	\$52,885	\$57,611
Middle.....	33	48,173	50,288	226,135	245,874
Western.....	34	59,913	59,799	185,080	185,823
Northwestern.....	14	16,591	15,874	52,036	44,626
Southern.....	28	30,589	30,797	51,486	58,560
Far Western.....	16	42,521	42,474	68,546	101,305
Total U. S.....	149	211,083	213,551	\$636,181	\$694,099
N. Y. City.....		12,621	12,805	113,560	119,053

"It is worth noting that New York City (four boroughs reporting) does not exhibit a decrease in permits, but actually contributes a gain, while the decrease in values is only 4.6 per cent. This showing is, however, made possible by increased activity—in other words, in small construction—in the outlying boroughs of Brooklyn and Queens, while Manhattan and the Bronx show decreases. In fact, the decrease in value of new construction in old New York (Manhattan) is \$13,729,000, or 25 per cent., while the decrease in all New York is only 4.6 per cent.

"Chicago shows a decrease of 7.9 per cent., Philadelphia of 7.1 per cent., Boston of 4 per cent., San Francisco of 32 per cent., and Los Angeles of 41 per cent. The list of cities showing gains is a long one, including Cleveland with 17 per cent., Baltimore 45 per cent., Detroit 5 per cent., Pittsburgh 18 per cent., Minneapolis 34 per cent., St. Paul 70 per cent., and Seattle 32 per cent. gain.

WAR-LOANS IN TEN WEEKS

In *The Wall Street Journal* were recently printed statistics showing what amounts the countries at war in Europe had issued in war-loans in the first ten weeks of operations. The total was \$1,696,250,000, of which Germany had put out the greater part, \$1,115,250,000, while the Allies had put out \$560,000,000. Interesting items in this article were the following:

"This compares with previous loans by these countries, since the beginning of the Balkan War, just two years ago, on October 8, of \$830,000,000. Altho those earlier loans were not exclusively for military purposes, they were largely so, and were patently made in intuitive preparation for just such a conflict as has now arisen. Germany and Austria made \$480,000,000 of them, France, Serbia, and Belgium, \$341,000,000, the Belgian Premier announcing in the Senate at Brussels, late in 1913, that the Government intended to make a loan for military purposes, because of the fear that in the event of war Belgium would again become the battle-field of Europe.

"The full list of loans that can be directly traced to the war is as follows:

German war-loan, 5%, at 97½.....	\$780,250,000
German treasury bills, about 5% basis.....	335,000,000
Russian treasury bonds.....	150,000,000
British treasury bills, about 3½% basis.....	300,000,000
Belgium (from British and French Governments).....	100,000,000
French treasury bills, 5% basis, in London.....	10,000,000
Danish domestic loan.....	15,000,000
Switzerland, about 5¼% basis.....	6,000,000

Total.....\$1,696,250,000

"France has probably raised money on its new treasury bills at home, in addition to the \$10,000,000 secured in London. A large amount is ultimately to be sold, but no report of those already taken locally has been made. England has now made four offerings of £15,000,000 six months' treasury bills, each issue being heavily oversubscribed. For the last offering tenders amounted to over £30,000,000.

"If Paul Leroy-Beaulieu's estimate, that between \$7,000,000,000 and \$8,000,000,000 of loans will have to be made on account of the war, is accepted as a basis, then the financing of the war, as far as public loans go, has only been about one-fifth provided for."

Acid Tests of Safety for Real Estate Bonds

The best real estate bonds are investments of the most gilt-edged safety, bought freely by banks, trustees, insurance companies, estates and others requiring securities of the most assured soundness.

It is now time to re-define the standards of safety in this class of bonds. Our experience of 32 years as specialists in this class of securities without the loss of a dollar of principal or interest to any of our clients should give some weight to our definition. This definition may be summed up in the following simple "acid tests" which any investor may apply:

Mortgage—Are the bonds a direct first mortgage on the property securing them?

Margin of Safety—Is it ample to protect the bondholders?

Serial Maturities—Do the bonds mature in serial installments so that the margin of safety is constantly increasing?

Earnings—Is the property improved and producing net earnings of at least twice the interest charge?

Real Estate Conditions—Is the property located in a city where real estate values are solid, stable and constantly advancing, and not dependent on booms of speculation?

Sponsorship—Are the bonds offered by a responsible investment banking House, not connected in any way with the ownership or management of the property?

We wish to point out that the first mortgage 6% serial bonds we sell, in denominations of \$100, \$500 and \$1000, meet these and all other requirements of safety.

Recollections of Sixty Years

By the Right Honorable Sir Charles Tupper, Bart., G.C.M.G., C.B.

To attain the age of 92, and to have devoted over sixty years to public affairs, is unquestionably a record achievement for a statesman, and Sir Charles Tupper, the "Grand Old Man" of Canada, is easily the doyen of the world's politicians of today.

He inaugurated the policy which led to the foundation of the Canadian Pacific Railway, he presided over the first transatlantic steamer service to Canadian ports and, indeed, he had a great share in building up Canada's prosperity.

In a career that extended from a modest practice in Nova Scotia to the High Commission at London, Sir Charles Tupper was for nearly fifty years in contact with many of the men who have made the history of the past fifty years, and his "Recollections" give interesting glimpses behind the scenes of international politics.

A great big Octavo book, over two inches thick, profusely illustrated with portraits, etc. A BIG book for BIG men, showing between the lines the policies which have resulted in Canada's phenomenal rise.

CURRENT EVENTS

EUROPEAN WAR

IN THE WEST

October 16.—The Allies report a substantial gain, driving the Germans northeast gradually, and recapturing Arras.

October 19.—General Joffre reports splendid work on the part of the Belgians in forcing their way northward from Ypres to Dixmude. Southward, in the advance on Lille, much house-to-house fighting is reported. A severe renewal of fighting is reported about Arras and Roye. It is said that English war-tips are preventing the Germans occupying the coast near Ostend.

October 20.—The Germans assume the offensive between Ypres and Arras, but without material effect.

The Belgians are signally successful in withstanding German attacks along the Yser River.

The centers of the most desperate fighting are along the east and west line between Nieuport, on the Belgian coast, and Dixmude; on the line Arras-Albert-Roye; in the vicinity of St. Mihiel and on the Meuse south of Verdun.

The young Prince of Hesse, nephew of the Kaiser, is reported killed in a small town in northern France.

October 21.—General Joffre reports that the German line is being driven in, from Nieuport on the coast to La Bassée, across the border of France. It is said that the German line has been broken up into a zigzag formation extending from Nieuport, northeast to Bruges, south to Roulers, southeast to Courtrai, and southwest to Roubaix and Orchies, in France.

IN THE EAST

October 15.—Petrograd reports that the German force in the vicinity of Warsaw has been cut in two and driven back on the line of Lodz, Piotrkow, and Kielce, after a two-days' battle, in which 10,000 prisoners and many guns are said to have been captured.

October 21.—Petrograd claims that the German-Austrian Army in northern Poland has been decisively repulsed, and Vienna admits difficulties. Warsaw is now reported safe, and the invaders are driven forty miles southwest, beyond Skierniewicz, an important railroad center. In Galicia, about Przemyśl, the Teutons appear to be holding firm, save for the defeat of one battalion at Stryi, 60 miles southeast of Przemyśl.

GENERAL

October 16.—The British cruiser *Hawke* is sunk in the North Sea by a German submarine, with a loss of 387 seamen.

October 17.—Peking reports a heavy engagement at Kiaochow, with the Japanese forces compelled to retreat to Syfang, in the direction of Tseng Yang.

The Japanese cruiser *Takachiho* is sunk by the small German torpedo-boat S-90 in Kiaochow Bay.

It is officially reported that the English cruiser *Undaunted* sinks four German torpedo-boat destroyers off the coast of Holland.

October 19.—It is reported that the Servian-Montenegrin Army has completely surrounded Serajevo.

A train of 150 car-loads of war material on its way from Germany to Turkey is seized by the Roumanian Government.

October 21.—The British Admiralty receives a report from Colombo, Ceylon,

that the German cruiser *Emden* has captured one British steamship and sunk four others and a dredger, about 150 miles southwest of Cochin, British India.

GENERAL FOREIGN

October 15.—The official statement of a German commission of inquiry reports that, with the exception of the library, every art treasure in Louvain is safe, and nearly all the buildings are unscathed.

October 16.—The Marquis di San Giuliano, the Italian Foreign Minister, dies in Rome.

October 19.—Agents of General Villa post orders declaring that secret-service men or others who attempt to watch the General's maneuvers will, when caught, be shot without trial, without regard to nationality.

Mgr. Robert Hugh Benson, son of the late Archbishop of Canterbury, priest in the Catholic archdiocese of Westminster, lecturer and novelist, dies in Salford, England, in his forty-third year.

October 20.—Ambassador Gerard arranges for the release and repatriation of all Englishmen over 55 now held prisoners in Germany.

From Havre, Minister of Justice de Wiart, former member of the Belgian Commission to the United States, writes a message of appreciation to the American people, thanking them for their sympathy with Belgium's sufferings.

October 21.—The Standard Oil Company received word from the captain

JUST FIFTEEN MINUTES AT BEDTIME

IN only those few minutes a day it is possible for you to get the knowledge of literature, the broad culture, that every University strives to give.

This is no idle promise. Dr. Chas. W. Eliot, from his sixty years of reading, study, and teaching—forty years of it as President of one of the world's greatest universities—has put aside those few great Poems, Dramas, Biographies, Histories, Works of Travel, Science, Philosophy, and Religion that

best picture the progress of the human race from the earliest times down to the present day. "I believe that the faithful and considerate reading of these books will give any man the essentials of a liberal education, even if he can devote to them but fifteen minutes a day."—Eliot.

What books? The answer is contained in the free booklet mentioned below; it is the most valuable booklet ever written for the man who wants advice on what or how to read. It contains the story of

WASHINGTON

October 15.—Republican Representative Gardner, in a House speech, calls the United States helpless to protect itself and blames the Carnegie peace crusade.

The Federal Reserve Board approve the cotton-pool scheme proposed by the bankers of North and South, but find direction of such an enterprise by the Board to be illegal.

The House repeals the bill docking its members for absence during the past term.

October 17.—The War Tax Bill passes the Senate by a vote of 32 to 24.

October 21.—The Bill for the issue of \$250,000,000 emergency currency to be used in aiding the cotton situation is rejected in the House.

GENERAL

October 15.—A slide in the Panama Canal fills up the bed of the Culebra Cut to a height of 24 feet.

October 17.—W. C. Robinson, of Grinnell, Iowa, breaks the American aviation record by flying, in a monoplane of his own construction, a distance of 400 miles in 4 hours and 44 minutes.

Seven people are reported wounded in Naco, Arizona, as a result of the fighting in Naco, Sonora, across the Mexican border.

October 18.—Horatio W. Parker, a Yale Professor of Music, receives a prize of \$10,000 given by the Los Angeles Music Teachers' Association for the best American opera. The libretto is by Brian Hooker, who wrote that of the opera "Mona," for which Professor Parker received a like prize.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"W. B. E." Alneworth, Neb.—"Is the definition of *lie* commonly recorded by the dictionaries correct? They emphasize the fact that 'intent to deceive,' conscious and purposive deception, regardless of motive, constitute a *lie*. Does such a definition give the exact truth of the matter? In life, certain situations arise where there is no alternative but to tell and act a deliberate untruth with the purpose to deceive, to hide the truth completely, and to convey an utter untruth, if necessary to the hiding. This is done from a high sense of duty, as by physicians, for instance, where if the truth were told it would accomplish nothing but harm, not only to the individuals interested, but to society at large. It seems to me that the definition of *lie* better fits the word *untruth*, and that one should characterize a *lie* as told deliberately, not only with intent to deceive, but inspired by malice and cowardice."

According to Matthias Pridoux, the essence of a *lie* is "the intention to deceive," and this seems to be the generally accepted meaning of the word, which may be further characterized, perhaps, as a criminal falsehood. The *lie* described by "W. B. E." is *sui generis*, and consists of a statement of the untruth of which one is conscious, but which is rendered venial by, or may be considered commendable through, its motive. Such a falsehood is usually characterized as a *white lie*. Unfortunately, however, *lies* of this color invariably introduce others of a very different hue. "To *lie* like a gentleman" is a euphemism of the law courts with which Captain Marryat disagreed when he wrote, in "Peter Simple" (ch. 34): "All *lies* disgrace a gentleman, white or black." There is on record in *The Gentleman's Magazine*

for 1741, Vol. XI, p. 647, a passage that throws light on a part of "W. B. E.'s" inquiry. It runs: "A certain Lady of the highest Quality makes a judicious Distinction between a *white Lie* and a *black Lie*. A *white Lie* is that which is not intended to injure any Body in his Fortune, Interest, or Reputation, but only to gratify a garrulous Disposition and the Itch of amusing People by telling Them wonderful Stories." Her description of a *black lie* is too long for reproduction here. As an expert, this "Lady of Quality" was followed by Amella Ople, who asked and answered the following: "What constitutes lying? I answer, the intention to deceive. If this be a correct definition, there must be passive as well as active lying. . . . Lies are many and various in their nature and in their tendency, and may be arranged under their different names, thus: Lies of vanity, of flattery, of convenience, of interest, of fear, of first-rate malignity, of second-rate malignity, and lies falsely called lies of benevolence, and lies of real benevolence, and lies of mere wantonness proceeding from a depraved love of lying or contempt of truth." Judging from the foregoing, it would seem that Dean Swift was not far wrong when he said, "Altho the devil be the father of lies, he seems, like other great inventors, to have lost much of his reputation by the continual improvements that have been made upon him."

Like our correspondent, Lord Chesterfield felt that lying was "the production of either malice, cowardice, or vanity." By cultured people the words "falsehood" and "untruth" are used to-day as euphemistic substitutes for the word *lie*, which last is retained as an angry expression of moral censure or reproof. Usage guides the lexicographer, and as "the intention to deceive" is the foundation of lying, it does not seem that modern definitions need correction. As to the situations to which "W. B. E." refers, one may perhaps be permitted to suggest that the statements made under the circumstances would better be characterized as *dissimulation* rather than deliberate lying.

"H. M. R." New York City.—"Which of the following expressions is correct? 'Sustains energy in exhausting,' or 'for exhausting office work'?"

Both are correct, in means "under conditions of" exhausting office work; for means "to enable one to perform" exhausting office work.

"B. M. B." Grove, Okla.—"(1) Is Will Carleton still alive? (2) Is Ada Carleton, the poet, related to him in any way?"

(1) Will Carleton, the American poet, died December 13, 1912, at his home in Brooklyn, New York. (2) We do not know.

"E. R. D." Bluford, Ill.—"Please explain the correct use of the following: 'Few days time.' Should you use the possessive sign with the word days? 'Any sized bale' or 'Any size bale'? 'We await to hear from you.' Is this correct?"

The common practice is to omit the apostrophe. "Any sized bale" is preferable, but both are correct. "We await to hear from you" is incorrect as "await" is a transitive verb and, therefore, needs an object; thus, "We await your reply" would be a better form.

"A. C." New York, N. Y.—"Is it correct to say, 'On the last days of April, July, October, and January'? The question in my mind is day or days as used here, when the last day of each of these months is being referred to."

Use the singular day, for if you use the plural your sentence would be ambiguous.

"P. K." Claypool, Ind.—"In the following sentence, is the use of *surrounded* and *environment* correct? 'Had he been surrounded by different environment, his present life might be better.'"

The sentence you submit is tautological, say "Had his early environment been different, he might now lead a better life."

"C. R." New York City.—"Please inform me whether the following phrases are correct: 'Branches and agencies in the most principal cities in Europe'; 'Object of the present is to acquaint you that we are,' etc."

Principal is a word that is seldom or never used with a superlative as it denotes "chief" in itself. Say, "Branches and agencies in the principal cities in Europe." Acquaint in the sense used may be correct, but it is not common usage, and inform is a better word. Say "Object of the present is to inform you that we are," etc.

GERMAN RESPECT FOR THE MONROE DOCTRINE

AS NO OFFICIAL ANSWER has as yet been made by our Government to the recent diplomatic assurance of Germany's intention to respect the Monroe Doctrine, we can judge of its effect upon American sentiment only by the response of the American press. This response, as far as we have yet been able to judge, is rather lacking in enthusiasm. The New Orleans *Times-Picayune*, it is true, characterizes the German assurances as "gratifying and important," and the New York *Evening Post* remarks that it is "wise of the Germans to make it clear that they have no thought of seeking South-American territory in the event of their conquering the Allies," since "there is a great deal of loose talk going the rounds to the effect that we shall 'have Germany on our necks if she wins.'" The same paper adds: "Every assurance which she can give that this will not be her policy, if it is based on something more definite than 'a scrap of paper,' will be to her advantage." This qualifying afterthought recurs in many editorial columns. Thus the Brooklyn *Eagle*, after reminding us that "this country has never received from any foreign Government an explicit recognition of the Monroe Doctrine," goes on to say that "diplomatic pledges, in view of recent events, are not so reassuring as might be expected." And the Albany *Knickerbocker Press* thinks that "the Kaiser's disregard of treaties has caused all the nations of the world to be 'from Missouri,' so far as promises from the Kaiser's Government are concerned." The New York *Journal of Commerce*, while remarking that "any official German utterance which implies recognition of the Monroe Doctrine must be regarded as having an important bearing on the relations between the two countries," also reminds us that "the unofficial voice of Germany, particularly that of its professors, has been steadfastly hostile to the Doctrine." The neutrality of Belgium, says the New York *World*, was "a European Monroe Doctrine upheld by the chief Powers, including Germany." But to *The*

World and other papers that cite Belgium's unhappy experience as illustrating the value of German promises, *The Times-Picayune* replies:

"It is only fair to recall that Germany has sought to justify the violation of Belgian neutrality upon grounds that could scarcely be pleaded to defend the breach of a promise to respect the Monroe Doctrine. It is not easy, at this time, to conceive how aggressive projects threatening the integrity and independence of American States could be supported as 'measures of absolute necessity.' The sincerity of Germany's official assurances respecting the Monroe Doctrine may be accepted, we think, as freely as like assurances from any other Power under like circumstances. There is no reason to suspect that the Kaiser presently harbors sinister designs against the peace or independence of American States. His attention and that of his counselors is wholly occupied by other and more pressing issues. Nor does there appear cause for fear that his triumph over the Allies would be swiftly followed by aggressions against the Americas. Even if she conquers, Germany will have had her fill of war for the time. A season of rest and recuperation would have to precede any fresh struggle against a powerful and unwearied opponent."

The immediate cause of this discussion is found in recent statements by Dr. Bernhard Dernburg, formerly German Secretary for the Colonies, and Count von Bernstorff, German Ambassador at Washington. In the course of a speech in Newark, and in a subsequent interview, Dr. Dernburg said that, no matter what was the outcome of the present European struggle, Germany would respect the Monroe Doctrine, and that assurances to this effect had been com-

municated to Secretary Bryan by the German Ambassador. Inquiry at the State Department resulted in the information that, on September 3, Count von Bernstorff, in a note to the Department, "stated that he was instructed by his Government to deny most emphatically the rumors to the effect that Germany intends, in case she comes out victorious in the present war, to seek expansion in South America."

Published weekly by Funk & Wagnalls Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

The Monroe Doctrine, it will be recalled, served notice on the Powers of Europe that "we should consider any attempt to extend their system to any portion of this hemisphere as dangerous to our peace and safety," and that we should consider "any attempt to oppress Governments on this side of the water whose independence we had acknowledged as a manifestation of an unfriendly disposition to the United States." After an interview with Ambassador von Bernstorff a Washington correspondent quotes him as confirming Dr. Dernburg's interpretation of his note, and as saying further that "a German invasion of Canada for a temporary foothold on the American continent would not be a violation of the Monroe Doctrine." When interviewed later in New York by a representative of the *New York World*, he said:

"If the Government of the United States wants assurances from Germany that in the event of victory she will not seek expansion or colonization in North America, including Canada, and also South America, Germany will give the assurances at once. Germany has not the slightest intention of violating any part or section of the Monroe Doctrine. Please make this as emphatic as you can and state that I tried to make it emphatic as earnestly and sincerely as I could."

"We have already laid before the Government of the United States an official note stating that Germany would not seek expansion in South America. North America was not included because it never entered our minds that any one could conceive that we had such intentions. But now that the question has come to the fore we shall gladly give the assurance in any form desired."

"Let me tell you, too, how this question came up. I did not invite it. It was the result of the publication of an interview in Washington with me of things I did not say. Erroneous inferences were drawn for which I am not responsible."

"Referring to our declaration about South America, a correspondent put this question to me, 'How about Canada?'"

"To that I merely replied that Canada itself had violated the Monroe Doctrine by making war on Germany, and had thus placed herself beyond the protective influence of that doctrine."

"I did not say and I had no thought of conveying the inference that Germany might seek to take advantage of this violation ultimately to possess herself of the Dominion in the event of victory coming to her arms. I make this statement at this time in order that the American people may thoroughly understand the attitude of the German Government."

Germany's attitude was further explained to a representative of the *New York Sun* by Dr. Dernburg, who is recognized as Germany's chief spokesman in America. He said:

DR. BERNHARD DERNBURG.

Germany's leading spokesman in this country, formerly Colonial Secretary. He makes the important point that Count von Bernstorff's statement recognizes the Monroe Doctrine "in so far as the doctrine can be recognized."

"According to my understanding of the situation, Germany will not only avoid taking, or attempting to take, any territory in South America in violation of the Monroe Doctrine, but will extend its principles to all of Canada, in spite of the fact that Canada has placed herself beyond the pale of American protection by sending troops to aid England against Germany."

"In other words, Germany seeks no territorial expansion whatever in either North or South America."

Asked whether the von Bernstorff note constitutes a formal recognition of the Monroe Doctrine, Dr. Dernburg replied:

"Altho the statement made by Count von Bernstorff does not recognize in so many words the Monroe Doctrine, my interpretation of the matter is that it does recognize the doctrine in so far as the doctrine can be recognized. I mean that the doctrine is not written in such a way that it is possible to recognize it formally, and it has not been the custom of foreign Governments so to recognize it. But the spirit of the Count's statement implies a recognition of the doctrine."

Some of the most piquant comment on these statements centers around the German renunciation of Canada. The majority of our papers appear to agree with the *Brooklyn Eagle* that "the right of Germany to attack Canada is as undebatable as the right of Canada to attack Germany by adding her military resources to those of Great Britain." The *New York World* remarks tersely that "should German troops ever invade Canada, the application of the Monroe Doctrine to the specific case will be defined in Washington, not in Berlin." "There is nothing in the Monroe Doctrine which covers such an emergency as the invasion of Canada," admits the *Albany Knickerbocker Press*, but it goes on to say, "for the benefit of Dr. Dernburg and Count von Bernstorff," that "in case of an invasion of Canada by Germany, were such a thing probable, the American people would begin discussing something more serious than the Monroe Doctrine."

The Monroe Doctrine was never meant to apply to Canada, thinks the *Philadelphia Press*, in which we read:

"The maintenance of the Monroe Doctrine, to which this country stands pledged is a pretty heavy contract, but we have hitherto interpreted it in respect to the weaker countries to the south of us. That it involved us in any obligation to throw a defensive shield over Canada and incidentally over the whole British Empire for the interests of its part-belligerents can not be separated—is an extension of the Monroe Doctrine that this country will hardly feel ready to accept. . . ."

"That European Powers shall not inter-

Copyrighted by Underwood & Underwood, New York

GUNNERS OF THE EMDEN

The swift and daring German cruiser that has done about \$4,000,000 of damage to British shipping in Far Eastern waters since the beginning of the war. One of her latest exploits is the sinking of a Russian cruiser and a French destroyer in the harbor of Penang, which she entered disguised and flying a Japanese flag.

ere with the political affairs of the American continent is the gist of the Monroe Doctrine. When a portion of this continent does interfere as a belligerent in the affairs of Europe it is manifest that the Monroe Doctrine can be applied to her case with difficulty by a nation desirous of keeping the peace."

Until Great Britain's Navy is completely swept from the sea, remarks the *Boston Transcript*, discussion of the invasion of Canada by the Germans is "decidedly academic." But

"It is only fair to say, however, that in the event of Germany being able to undertake to bring the Dominion within the range of its armies and fleet, there is nothing in international law or military propriety to prevent it from doing so.

"Count Bernstorff only stated a military truism when he asserted that Canada is open to German attack. He need not make its contribution of troops to the British Army a condition precedent to its exposure to hostilities. Nor is it plain why he felt called upon to give any warning to the Canadians or any intimation to the United States that the issue of 'Monroeism' could be raised by any development of the European War. It would have been more tactful for him to allow events to speak for themselves in their own time. He may be sure, that should a German army invade Canada for any wider purpose than mere 'military occupation,' 'Monroeism' in its most militant aspect would immediately raise its head in this country. If we are to have new colonial neighbors we reserve our right and will insist on our right to choose them for ourselves."

"Canada is not skulking in the shadows of the Monroe Doctrine," declares the *Brooklyn Eagle*, and the *Springfield Republican* agrees that "the Monroe Doctrine has no more to do with the case than the binomial theorem." But the *Springfield* paper goes on to say:

"Speaking more broadly out of a much greater knowledge of North America than of Europe, it might be helpful to point out that no European Power could ever invade Canada without causing a tremendous commotion and arousing the keenest apprehension in the United States; and that, too, is said without the slightest reference to the Monroe Doctrine. Canadians and Americans have been living in North America together for some three hundred years, and they will be living here side by side for at least three hundred years to come. No European Power should ever attempt to conquer Canada without carefully weighing the probabilities of having the United States to conquer at the same time; and this is offered as a purely academic contribution to a subject as remote in its character as one pleases.

"Yet what far-reaching effects may not be imagined as coming possibly from Canada's participation in the wars of the

MORE BOER REVOLT

NO SOONER is the rebellion of Colonel Maritz in northwest Cape Colony crushed and his little army of one thousand men driven across the border into German southwest Africa than another and apparently more serious revolt against British rule breaks out in the Orange River Colony

Copyrighted by Underwood & Underwood, New York.

BOER LEADERS ESTRANGED BY WAR.

On the reader's left is General Christian De Wet, who in the latest Boer rebellion leads the rebel commandoes in the north of the Orange Free State. On the right is General Louis Botha, Premier of the South-African Union and commander of the loyal forces. Standing between them is General De La Ray.

FIELD OF BOER UNREST IN AFRICA.

The anti-British revolt of Colonel Maritz was crushed at Kakamas, the Colonel being wounded and his men driven north into German southwest Africa. The first hostile act of the more serious uprising under Generals Beyers and De Wet was the rebel seizure of Heilbron, in the Orange Free State. Later, General Beyers was put to flight at Rustenburg in the Transvaal.

British Empire. The first step was taken in the Boer War, when the Dominion sent a contingent to the battle-fields of South Africa. Now Canadians, by throwing their military weight into the wars of continental Europe, are laying the foundation of issues which may be dismissed as remote, yet which in time, perhaps, will leave their marks upon history."

and western Transvaal, under the leadership of General de Wet and General Beyers. This outcropping of rebellion in three separate parts of the Union of South Africa, remarks the *Newark News*, should give Premier Botha "ample opportunity to test the loyalty of his people" and the validity of his assurances that disaffection among the Boers of the Union is confined to a small minority. Recalling that General Beyers resigned in September as Commandant-General of the Citizen Forces because he regarded his command as a purely defensive organization, and therefore disapproved of the action of the Government in ordering it to invade German southwest Africa, *The News* remarks:

"There is nothing in the dispatches to indicate that Beyers and De Wet are parties to any such German conspiracy as was alleged in the case of Colonel Maritz. If the new revolt means merely a refusal to support an aggressive campaign against the German territories in Africa, it loses a good deal of its significance. The fact that Premier Botha has tried to check the rebelliousness of Beyers and De Wet without bloodshed hints at the possibility that this is the real purpose of the revolt."

"There is no reason to believe that the new revolt will very seriously embarrass the British Government," thinks the *Wash-*

ington *Evening Star*, which sees in the quick collapse of the Maritz rebellion evidence that the majority of the Boers are loyal. The *New York World* is also inclined to minimize the seriousness of the situation for Great Britain. Other papers, however, think that the prestige of General De Wet's leadership is likely to make the new revolt a matter of grave concern to the British authorities. Thus we read in the *Philadelphia Press*:

"No more formidable Boer strategist and commander than De Wet could be picked to lead a revolt in South Africa. His masterly tactics during the later phases of the Boer War in 1900 and 1901, when he had the greater part of the seasoned British South-African Field Force on his heels directed by none other than Lord Kitchener himself, are already history. They chased him over most of South Africa for months and never did catch him. He knows the vast veldt stretching from the Orange River and the Basutoland border up beyond Pretoria as he knows the palm of his hand, and he is a past master in the art of organizing as well as in the tactics of guerrilla warfare."

It would be idle to question the influence of the two rebel Boer leaders, remarks the *New York Sun*, which goes on to say:

"Memories of De Wet's exploits at Sanna's Post and Reddersburg and of the capture of a British camp by Beyers at Nooitgedacht will shake confidence in the ability of the Government of the Union to put down the rebellion quickly. Lord Buxton's assurance that 'the very great majority of the citizens of every province of the Union are thoroughly loyal' would be more convincing if he did not nervously promise immunity to those who have been guilty of 'disobedience under the Defense Act.' What impends in South Africa is a civil war among the Boers and British population, with the Government fearful that the defection of De Wet and Beyers will draw large numbers of Boer veterans into the field in repudiation of a peace that was forced upon them at Vereeniging. Reconstruction is in danger. England must place implicit confidence in the loyalty and leadership of Premier Louis Botha, who has assumed command of the Citizen Forces, and Gen. Jan Smuts, the Minister of Defense."

Twelve years ago General De Wet made peace with the British Government, taking part in the peace negotiations in London in 1902, and writing a book on the Boer War which closed with these words:

"Loyalty pays best in the end, and loyalty alone is worthy of a nation which has shed its blood for freedom."

TAXING US FOR EUROPE'S WAR

THE EUROPEAN WAR has brought many evils in its train, but none of them, as a Brooklyn daily observes, "strikes the American people in the pocket—as does the war-tax." And we are beginning to pay it. Some of the taxes went into effect on October 23, the day after President signed the War Revenue Bill, others on November 1, and the rest follow on December 1. Among the last group are stamp-taxes, which will affect the average "man on the street." The bill is expected to raise \$90,000,000, and is strictly a temporary measure, as all the taxes will expire on December 31, 1915. In the Congressional debates, as the *Salt Lake Tribune* (Rep.) recalls, the necessity for raising this money was disputed by Republicans claiming that there was no excuse for it, "or, if the money is really needed, that it is because the Tariff Law caused the deficit. Consequently they voted against it to a man." The Democrats, however, "charge present conditions in the country's finances up to the war in Europe and let it go at that." Now that the law is actually on the statute-book, Democratic opinion may be represented by the *Louisville Times*, which says:

"The bill, on the whole, will be accepted as the best yet devised under the circumstances. It is not going to increase the cost of anything that the average man can't do without. Nobody wanted it, but nobody will have to contribute materially to the revenues it is expected to raise unless he so desires."

"The country is prepared to accept it philosophically as a war-tax, which, quite conceivably, might have been made more burdensome. It may further be predicted that the majority of the voters will agree with Mr. Wilson that it would have been worse had we been operating under a Republican instead of a Democratic tariff, since there is no getting away from the common-sense reasoning of his statement to Mr. Underwood that 'the import duties collected under the old tariff constituted a much larger proportion of the whole revenue of the Government than do the duties under the new.' A larger proportion of the revenue would have been cut off by the war had the old taxes stood, and a larger war tax would have been necessary as a consequence. No miscalculation, no lack

HIT BY NINE BULLETS.

if foresight, has created the necessity for the taxes, but only a great catastrophe, world-wide in its operation and effects."

Opposition papers either admit that the Administration can not be held accountable for the need at this time to raise emergency revenue by special taxation, or repeat the assertion of the tariff's large responsibility for the deficit. The schedules as finally adopted of course receive their share of criticism. According to the *New York Press* (Prog.) the Democrats "tried their best to bungle the emergency revenue measure into all sorts of absurd and preposterous shapes, but somehow did not succeed, as usual, in going the limit." The tax on bankers displeases the *Brooklyn Times* (Rep.), because it "is a tax on thrift." The chief fault the *New York Journal of Commerce* can find with the law "is its multifarious and complex character." "It might have been made much simpler and briefer, providing for the needed revenue at much less cost for mere collection."

This war-tax is divided into four schedules: an excise-tax on liquors, a tax on tobacco, flat taxes on certain special businesses, and a stamp-tax. The tax on beer and other malt liquors, which the *New York Sun* considers the principal feature of the law, levies \$1.50 instead of the \$1 previously imposed by law. Still wines and champagnes are taxed. The tobacco-taxes which took effect November 1 tax all dealers doing a business of over 50,000 pounds. There is also a graduated tax on tobacco-, cigar-, and cigaret-factories running up to \$2,496 a year for concerns turning out over 20,000,000 pounds of tobacco, 40,000,000 cigars, or 100,000,000 cigarets.

Certain special businesses are taxed as follows: Bankers must pay \$1 on each \$1,000 of capital surplus and undivided profits employed in business. Security brokers pay \$30; pawnbrokers, \$50; commercial brokers, \$20; custom-house brokers, \$10; commission merchants, \$20; proprietors of theaters, museums, and concert-halls pay a tax varying with the seating capacity; circus proprietors pay a flat tax of \$100; other public exhibitions or shows for profit pay \$10; Chautauquas, agricul-

tural or industrial fairs and exhibitions under religious or charitable associations are exempt; bowling-alleys and billiard-rooms are taxed.

The list of articles which must be stamped is very long. All bonds, agreements of sale, promissory notes, real-estate deeds, entries of goods at custom-houses, insurance policies, voting power or proxies, and various certificates required by law are taxed. Every telegraph or telephone message costing over 15 cents costs the company and the sender 1 cent; freight and express packages must carry a 1-cent stamp; sleeping-cars and parlor-cars are taxed 1 cent; passenger tickets by sea to foreign ports are taxed.

Perfumery, cosmetics, and similar articles, among which the new law mentions "any essence, extract, toilet-water, cosmetic, vaseline, petrolatum, hair-oil, pomade, hair-dressing, hair-restorative, hair-dye, tooth-wash, dentifrice, tooth-paste, aromatic cachous," are all taxed at a rate varying with the value of the package. Chewing-gum and substitutes for chewing-gum are likewise taxed, and certain wines not otherwise taxed by this law must pay a stamp-tax.

This "war-tax" law was the last important piece of legislation enacted at the long and busy second session of the sixty-third Congress which was in session for 326 days, breaking the previous record by twenty-five days. Some of its other important acts are thus noted by the friendly *New York World* (Dem.):

"The second session passed the Federal Reserve Act, revising the Banking and Currency laws.

"Repealed the exemption clause of the Panama Canal Act, thereby imposing tolls upon American coastwise ships.

"Passed the Clayton Antitrust Act, supplementing the Sherman Antitrust Law, making guilt personal.

"Passed the bill creating the Federal Trade Commission.

"Provided \$35,000,000 for a Government railroad in Alaska.

"Provided for the American registry of foreign-built ships.

"Ratified twenty-six arbitration treaties."

THE "MADE IN THE U. S. A." CAMPAIGN

THE HOME as well as the foreign market is kept in mind by our Government, our bankers, our manufacturers, and our merchants who are planning to sell goods "Made in America" in all the territory temporarily forsaken by Germany and the other belligerents. If some of our editors have their way, the word "imported" will lose its charm for American shoppers, and only goods "Made in the U. S. A." will be featured in shop-window and advertising column. True it is, as one points out, that this home market is for the moment better protected against foreign competition by war than by any tariff. Many things, of course, we must now make here, or go without. But we are urged to extend our efforts and plans beyond the present emergency, and manufacturer, merchant, and consumer are told to unite to create a permanently broader home market for American-made goods. So we see the arrangements in New York and Chicago for great "Made in U. S. A." exhibitions. The Rotary Clubs have adopted "Made in America" as their slogan; "the sooner we all get on this footing of domestic trading the better it will be for general prosperity," says one prominent member quoted in the *Philadelphia Public Ledger*. Members of the Housewives' League are stamping "American Goods for American Women" on their correspondence. The "Buy-a-bale of Cotton" idea has been extended to almost every species of goods produced here.

A Louisiana company is preparing to revive two industries at once by selling Louisiana sugar packed in cotton bags direct to the consumer. Individual traders and trade centers are showing much activity. Paterson, N. J., for instance, gave an exhibition recently, calling attention to the fact that it is the world's greatest silk-manufacturing city. The *New York Commercial* takes this act as a text for an eloquent plea for the use of American-made

products, which is typical of the argument made by the "Made in the U. S. A." campaigners. To quote:

"Imported goods are scarce and dear, and the patriotic movement to increase the consumption of cotton goods in this country should lead the people to appreciate the high quality and good value of practically everything that is made in the United States.

"Paterson has put the silk industry under the spot-light of publicity this week and deserves all the credit and help that the press can give it. American mills make and have for years made the best weaving-silks in the world. The industry has been so developed that our silk-mills compete in foreign markets in some lines of manufacture. If the public will demand and pay for better dress silks than have ever before been woven, they will be forthcoming. Fancy prices are paid for imported silks that our mills can duplicate and surpass at less cost if women will get over the 'imported' craze. The finest silk hosiery sold in the best shops in Paris and London is made in America. The only satisfactory silk linings for men's overcoats and clothes are made in America.

"Men may not be more patriotic than women, but they are less prejudiced. Men buy domestic products because they are better and cheaper. Mechanics prefer American-made tools, because they are better made, better balanced, and handier than those of England and Germany. Men buy American shoes because they possess style and quality not equaled abroad. Woolen and worsted goods for men's wear have been perfected in durability, finish, and fast coloring to a point at which they surpass imported lines, and tailors and clothing-merchants have practically ceased talking about imported fabrics, most of which were made in this country anyway.

"If women could be made to realize that the country which has produced the best yachts, the best machines, the best agricultural implements, the best pianos, and the best vehicles in existence, can show equal superiority in making almost everything else, they would be as proud of home products as are the patriotic women of France. An American woman would not put a pair of foreign-made rubbers on her feet. She has learned that American rubbers are incomparably superior to all others in style and quality. The same is true of many other things,

ONE WAY OF STIRRING UP INTEREST IN SOUTH-AMERICAN TRADE. Twelve large manufacturing concerns on this railroad's lines have been thus led to make a start in pushing their goods in South America.

but she shuts her eyes to the fact. . . . All that our manufacturers ask is an equal chance. If our women gave it, our domestic trade would be still more flourishing. . . . Any woman would see the point if foreign cook-stoves, bath-tubs, house-furnishing goods, and builders' hardware were placed side by side with American products. Why not dress-goods and other things as well?"

"Why not?" rejoin some of those to whom such pleas are addressed. "Simply because we can get better value for our money by purchasing foreign-made goods." And the thoughts in the minds of these possibly mistaken people are reflected in a few editorial paragraphs in the *New York Telegraph*, which has collected some instances of the sort. Such utterances are at least useful in showing our manufacturers that it is high time for them to remove any doubts in the minds of the consuming public about the reliability of their wares, and the present campaign will undoubtedly do much in this direction. The *Telegraph* writer avers that the very existence of the "Made in the U. S. A." movement "is a damaging criticism of American-made goods." For,

"If this country's manufactured products compared equally, or even favorably, with those of Europe, there would be no need to coax her citizens to buy them. . . .

"Take silk hose, for instance. Those made in America are worn most generally, because of the prohibitive price of the superior hose manufactured in Europe. At the slightest provocation the American stocking will drop a stitch. This loose stitch will run, collecting others in its flight,

And, like the baseless fabric of a vision, . . .
Leave not a rack behind.

"The European stocking is an economy because of its durability.

"Then there is the American glove, which invariably splits at the thumb or middle finger when drawn on in any but the most painstaking manner. It costs two and three times as much as the European glove, which Americans are always making a point of buying in large quantities when they are traveling abroad.

"French and Swiss underwear is not only beautifully embroidered, but well cut. American lingerie of the same price

NOTHING IN IT.

—Harding in the *Brooklyn Eagle*.

is machine-made, poorly fashioned, and often possesses many unfinished details.

"These examples of inferiority are taken from the ordinary necessities of existence to show that, in producing the articles which have the largest markets, the American manufacturer has proved himself unworthy of the high protection so long afforded him by the tariff on imports. His shortcomings are even more flagrant in goods requiring greater skill and artistry."

LAYING SNARES FOR FOREIGN DOLLARS

WHILE IT IS TRUE that war's demands have stimulated a large export business, yet we are warned by acknowledged authorities on trade matters that the European struggle "has not brought us a lottery prize," but has imposed upon our business men "a hard job," in which "it is

THE FANTOM SHIP.

—Bradley in the *Chicago News*.

up to us to make good." South America, for instance, deprived of intercourse with Germany, looks to us, and lucrative opportunities are reported for American exporters in China, Japan, and India. But we are not ready, it seems, to step right in and sell these people everything they want and all we have to sell. It is a banking and transportation problem as well as a manufacturer's opportunity. We must provide credits, rearrange the exchange system, and furnish ships. At least such is the deliberate opinion of men who have devoted their lives to the development of great businesses and who can speak of financial and commercial problems with the authority of expert knowledge. Our Government and our great banks are sending out trade missionaries throughout that part of the world which remains at peace, as the editor of the *Portland Oregonian* notes. Business men have been meeting in conventions and at dinners in New York, Chicago, and other cities and giving serious consideration to speakers who tell them how to extend trade abroad, bring large profits to themselves, and make their country the leader in the world's commerce. While nobody suggests a complete Germanization of our trade methods, the zeal, the industry, the scientific study of markets and salesmanship, and the insistence on quality of output that characterized the German commercial crusade, are repeatedly and earnestly advocated. At a New York Merchants' Association dinner, Mr. Charles M. Pepper, a former trade adviser of the State Department, offered this condensed counsel:

"To reach the foreign consumer, it is necessary to know commercial geography—the commercial geography of the Orient, of South America, and of the Russian Empire. It is desirable to digest and apply the valuable information always to be obtained through the many sources which the Government possesses. It is also desirable to approximate credits. It is imperative to study the foreign consumer in his own environment and to sell him what he wants. In order to sell him what he wants, it is essential to show him the goods. To show him the goods, it is important to provide selling organizations, to put the handling of American goods in the hands of Americans, and, above all, to establish permanent exhibits in the leading commercial centers. All this requires cooperation, and cooperation of American manufacturers and exporters among themselves is the surest way to reach the consumers in the foreign fields."

On a similar occasion in New York, Mr. Alba B. Johnson, President of the Baldwin Locomotive Company, told an audience of large exporters that "Americans do not like to invest money abroad," but that "they must do it if they want to get

foreign trade." In a Chicago speech, widely and favorably noticed in the press, Mr. Willard D. Straight, of J. P. Morgan & Co., one of the foremost foreign-trade experts in this country, laid much stress on this point. We are the only nation whose finances are not affected by the war, he reminds us, and after it is over we may become a creditor instead of a debtor nation. At all events, says Mr. Straight, Russia, Chile, Brazil, and the Argentine "will need money for their development, and should offer attractive fields for American investment, and promise large returns for American industry if loans are granted on condition that the proceeds be expended in the purchase of American goods." Then there is our lack of a merchant marine, which, in the present emergency, "would have done so much to maintain uninterrupted shipping facilities with Europe and have enabled us to carry on our trade with neutral countries." In this connection it may be cheering to find Government reports disclosing, according to the *New York Evening Sun*, that owing to the transfer of foreign-built ships to American registry, our merchant marine is the greater by seventy-four vessels, representing 266,373 gross tons, acquired in the last twelve weeks.

Russia and the Scandinavian countries are reported to be calling for our manufactured goods. The great demand for cotton in Japan, England, Germany, and Austria may save the South, since Britain promises to let cotton cargoes go through to her enemies. Representatives of India and Japan call attention to trade opportunities for American manufacturers in those countries. The head of one of our great New York export houses declares that our best opportunities are now in Australia, New Zealand, and South Africa, and, after them, the Far East, the Philippines, and the Dutch East Indies. South America, however, is the chief market discussed by our writers and speakers on foreign-trade opportunities. "South America

as Our War Prize" was rather fully discussed in one of our recent issues. There was noted in that issue the appointment by Secretary Redfield of a Latin-American Trade Committee. This committee of leading business men and financiers headed by President James A. Farrell, of the United States Steel Corporation, has recently reported. It sums up Latin-American trade needs as follows:

"First—The establishment of a dollar exchange, through the ultimate creation of a discount market, and pending the establishment of a discount market by the extension of adequate accommodation by banking institutions, and the establishment of reciprocal balances in the United States and in Latin America for financing Latin-American trade.

"Secondly—Perfection of our selling machinery by furnishing additional support to commission houses familiar with Latin-American business, by forming associations of merchants and manufacturers to be jointly represented in Latin America and by obtaining information as to the possibilities of developing retail stores in large Latin-American cities."

These conclusions are very generally approved by authorities like John Barrett, and by important newspapers like the *Atlanta Journal*, *Washington Post*, *Philadelphia Record*, and *New York Sun*, *Times*, and *Journal of Commerce*. The National City Bank of New York is the first bank to take advantage of the provision in the Federal Reserve Act, making it possible for national banks having over a million dollars capital to establish foreign branches. The operation of the branches being planned for Buenos Aires and Rio de Janeiro will, believes Mr. W. S. Kies, manager of the National City Bank's foreign-trade department, "in time make New York the money market for South America, at least to the extent that American bills shall be paid in dollars on New York and not in pounds sterling drawn on London."

American Sympathy in the War.—We have obtained from hundreds of leading editors throughout the United States expressions of our attitude toward the nations at war in Europe, and, at the same time, their reports of the sympathy of their communities. These will be summarized in an article in our next issue, presented without prejudice for the information of our readers.

FOREIGN - COMMENT

GERMAN VIEW OF AMERICAN SYMPATHY

THE DISAPPOINTMENT felt in Germany over reports from America telling of sympathy here for the Allies has been briefly told in cable dispatches. Now we have the German papers containing the letters from correspondents here breaking the news to the people of the Fatherland. The most forceful of these, perhaps, appear in the semiofficial *Kölnische Zeitung*, and are written by a correspondent in Washington, evidently a keen diplomat or skilled journalist, whose style is strikingly dramatic, almost un-German in its brief sentences, falling with the emphasis of the hammerlike strokes of a Dumas or a Jules Verne. Yet so at home in the language is the author that, with no ostentation, he ventures constructions that no one not a German would dare. His first letter deals with events leading up to the war. Then comes the actual clash of arms, and "the storm breaks in the forest of newspapers." He goes on:

"These were glorious days! . . . A holy wrath breaks over us, the *furor teutonicus*. All Germany flames up like a powder-mine. . . . Who is not for us is against us. And they were all, all against us, America the most furious. Search history as you will, you will not find a page that records the like of what appears in these days in the American press. They write with Indian arrowheads and for ink use viper's venom. Has ever one member of the family of nations ventured to employ against another such a mode of speech, especially when that other was locked in a most sanguinary strife?"

"And America is a neutral State! They won't understand Austria, they misapprehend Germany. The *New York Times* will never once learn the purport of the treaty between Germany and Austria in order the better to seize an occasion for hypocritical reproach. The double murder, the high treason, the dismemberment of an Empire—these were whisked away with a gesture as pure invention. The demands of Austria were not meant to be met, since no nation with a spark of self-respect can meet them. The participation of Austrian officials in a Serbian inquisition is a thing unheard of."

But in a like case at home, the Benton case in Mexico, says the writer, the Americans, "the lone watchers over pure morality," had permitted something very little different. He then proceeds to report our press comment in terms that may be summarized thus:

"And Germany? Germany alone could have preserved peace if she would. But she would not, for during forty years she had armed for this day. In fact, she had created the occasion; the Vienna ultimatum was Berlin's handiwork!"

"And Russia? Why did she back Serbia? Why did she not give Serbia good advice? Why! of course she must stand behind her brother Slavs! Only Germany might not come to the help of

a related people—American morality could not brook that. And then Americans, with left-handed meaning, speak of the Kaiser as 'the War Lord.' And for the honest Yankee there is no more ghastly title than this. For it sounds better to play the peace waltz! On all the editorial organs they play now only one melody: Germany is the world's champion peace-buster (*Allerweltschönfried*), and when peace is broken the freedom of the people is beaten into fragments."

An editorial in the *New York World* beginning "Germany runs amuck" is quoted entire. And this comment is added:

"In the cables—those that are really cabled as well as those that are written in New York; in the contributions from the estimable people—in these especially; in the so-called cartoons and the so-called caricatures; in the make-up of the reports—everywhere, appear hate and fury in so unrestrained, so wholly exceptional a guise that in presence of the fact one stands astounded. He can't grasp or apprehend it."

"There are wounds more painful than those made by an enemy's bullet; they are the wounds of the soul which wickedness inflicts." So nobly spoke President Wilson over the bodies brought from Vera Cruz to New York. We have recalled with a lively—too lively—memory, these days, this sentence. And we had but one wish—rather an honorable wound from a soldier's bullet than to suffer longer this soul-martyrdom inflicted

by devilish wickedness. A land, a people, a nation, is the prey of the American vultures of the press. For these conveyers of culture there is no such thing as honor of country, people, or nation. Whatever is German is deranged and damned. In their eyes it is a shame to be a German. We sought to explain, to tell the story, why all happened as it did and as it must. To no purpose! The brand of Cain was on our brow, and it was almost dangerous to life to let oneself be seen with it. It was a burden to be a German.

"Yet not! It was not a burden. For the English blows were struck at a fourth of the whole American population—the German-Americans. And the Giant awoke! His indignation blazed out mightily, and he raised his voice in booming outcry. From the Statue of Liberty to the Golden Gate, from Lakes to Gulf, the people rose. And well that they did, for had it not been for the German-Americans, the hate in America of things German must in the end have brought a declaration of war on the Fatherland."

The latest communication from this source to the *Kölnische Zeitung* was written on the day after President Wilson warned Americans to observe the neutrality which he had publicly announced as the Government's policy in the present state of affairs. This declaration is quoted at considerable length, with those parts italicized which refer to the manner in which citizens are urged to observe the spirit as well as the letter of neutrality.

GERMAN TROPHIES IN PARIS.

Six German standards, taken during August, after being sent to President Poincaré at Bordeaux, were brought to Paris on the occasion of the President's visit to the Army and carried in triumph to the Invalides, where they were added to those already captured.

AN EXCELLENT PEOPLE.

—Ull (Berlin).

"ON TO LONDON!"

Or, the Ruin of the German Empire.

—London Opinion

A DIFFERENCE OF PERSPECTIVE.

and which speak of partizanship as the most subtle, yet the most essential, branch of it. The letter then proceeds:

"Altho the President named no names, it was clear enough to any unprejudiced eye to whom this warning was address. The mad hate of Germans manifest in the greatest American newspapers, the remarks of distinguished people and of the 'man in the street,' speeches in the Senate, communications from the public in the daily press—all these expressions of the public understanding appeared clearly to point out whom the President had in mind when he issued this most unusual signal of danger. And what interpretation did the 'neutral' press give? All were of one opinion—the President's very timely warning was directed to—the Germans in America!"

Then an editorial from the *New York Times* is quoted, in which is emphasized by italics a sentence to the effect that "it is the German-American press and German-Americans" who are warned.

An article in the *Hamburger Nachrichten*, written from New York, is quite different in tone from the foregoing, has none of its bitterness and irony, and speaks in the heartiest terms both of the President's exhortation and of the punctilious care in political circles to observe neutrality. It notes that part of the press is unfriendly, and names *The Sun*. On the other hand it speaks of the tendency elsewhere to judge favorably the German cause, singling out *The Army and Navy Journal*, referring to an article which emphasized the Kaiser's peaceful proclivities. And it calls attention particularly to the painful impression made upon public opinion by the participation of Japan in the war, and to Secretary Bryan's expression of satisfaction with Japan's promise to maintain the integrity of China. Still another issue of this same paper quotes an editorial in *The World* to which the caption "A Friendly Suggestion" was prefixed, which warned the British Government that its treatment of contraband might cause unfriendly feelings in the United States. And a cable to *The Times* is also cited which suggests to England that it would be wise to alter its practice of halting and searching ships within the three-mile zone to capture prospective German soldiers.—*Translations made for THE LITERARY DIGEST.*

GERMAN SPIES IN ENGLAND

THE BRITISH DEFENSE against German attempts to perfect an information system in England is revealed in a press statement from the British Home Office. We learn of a crusade against the "German Secret Service" that has been constant for six years past and reached a climax with the outbreak of the war. Naturally the British press rejoice and are relieved. Some editorial observers even indulge in a certain humorous enjoyment of the situation, as, for instance, the *Manchester Guardian*, which remarks that "if it be not unseemly for a nation to chuckle during one of the greatest crises of its life, a vast chuckle will certainly go up from the British nation to-day when it reads the Press Bureau's report on the Government's way of dealing with German spies in England." At the same time, it must not be overlooked that the Home Office informs the public of its activity in this matter in order, as we read in the report, to allay "anxiety naturally felt by the public" and because secrecy can no longer be maintained "owing to the evidence which it is necessary to produce in cases against spies that are now pending." Five or six years ago, we are told, it was ascertained that the Germans were making great efforts to establish a system of espionage in England. As a counterstroke the Admiralty and War Office organized the Special Intelligence Department which acts "in the closest cooperation with the Home Office and Metropolitan Police and the principal provincial police forces." Furthermore, the report states that by the passing of the Official Secrets Act in 1911 the law on espionage was "put on a clear basis and extended so as to embrace every possible mode of obtaining and conveying to the enemy information which might be useful in war." As the result of the Department's industry, the report claims that—

"In spite of enormous efforts and lavish expenditure of money by the enemy, little valuable information passed into their hands. The agents, of whose identity knowledge was obtained by the Special Intelligence Department, were watched and shadowed without in general taking any hostile action or allowing them to know that their movements were watched. . . . Accord-

ingly, on August 4, before the declaration of war, instructions were given by the Home Secretary for the arrest of twenty known spies, and all were arrested. This figure does not cover a large number (upward of two hundred) who were noted as under suspicion or to be kept under special observation. The great majority of these were interned at or soon after the declaration of war."

How completely the spy system had been suppressed in the early days of the war, the report also tells us, is shown by "the fact disclosed in a German army order—that on the 21st of August the German military commanders were still ignorant of the dispatch and movements of the British Expeditionary Force, altho these had been known for many days to a large number of people in this country." But, the report urges in caution, despite the success the Special Intelligence Department has had, "it is still necessary to take the most rigorous measures to prevent the establishment of any fresh organization." The report speaks of effectiveness of the cable censorship and the postal censorship; and then mentions the blunter weapons against espionage forged in the Aliens Restriction Act and the Defense of the Realm Act. These statutes were enacted on August 5 and 8, respectively. The Aliens Restriction Act gives the police "stringent powers to deal with aliens, and especially enemy aliens, who under this Act can be stoppt from entering or leaving the United Kingdom, and are prohibited while residing in this country from having in their possession any wireless or signaling apparatus of any kind, or any carrier- or homing-pigeons." Of the Defense of the Realm Act the report says that "espionage has been made by statute a military offense triable by court martial. If tried under the Defense of the Realm Act the maximum punishment is penal servitude for life, but if dealt with outside that act as a war crime the punishment of death can be inflicted." Finally, merely as a precaution against "conspiracies to commit outrage," we read that "about 9,000 Germans and Austrians of military age have been arrested and

WHY GERMANY EXPECTS VICTORY

BETWEEN THE LINES of the German and Austrian press one can see an expectation of victory not based on the operations in France or Poland. Insurrections of peoples held in subjection by Britain, Russia, and France, the hostility of neutral nations angered by British interference with commerce, and dissensions among the Allies themselves are

FOR TREASON.

The degradation of Private Gruault. His description of the Eiffel Tower military wireless station, made for the Germans, fell into French hands while on its way through the mails.

THE LIGHTS O' LONDON.

are held as prisoners of war in detention camps, and among them are included those who are regarded by the police as likely in any possible event to take part in any outbreak of disorder or incendiarianism." For a native opinion of the report we recur to the above-quoted *Manchester Guardian*, which says—

"There is, naturally, a touch of glee about the official report of this triumph of good gamekeeping. To have succeeded in keeping the poachers out at night for three years, letting them beg nothing, and then clapping them under lock and key, is enough to justify a certain measure of honest professional pride."

expected to appear soon and aid the Austro-German cause. No subject, except the progress of affairs on the fighting lines, is more frequently discussed than this, or with greater unison of expression, either in the news columns, the editorial pages, or even in the literary or magazine supplements of the German-Austrian press. History is searched and probabilities worked out, showing how dangerous is the situation for all of the Powers in the *Entente*, while the other combatants on that side, Serbia and Japan, are not without their own distractions. The expectation of Germany and Austria seems to be either that forces now in the European field will have to be withdrawn to protect and hold colonial possessions, or that these possessions will at least cease perforce to furnish troops for the contest in Europe. India, Egypt, South Africa, Persia, and Morocco are expected to burst into a flame of revolt that may decide the war. Then we are assured that nearer home England is raising up trouble for herself. Her complaints against Scandinavian countries are angering them, as are her attacks upon their commerce with Germany, as an abiding breach of neutrality. Her irritation about the pro-German attitude of the Scandinavian press is similarly leading to feeling that may bring untoward results. Holland also, and Italy (to the latter the *Kölnische Zeitung* devotes much space), are becoming still more aroused by the arrest of their shipping, the search processes initiated, and the removal of German and Austrian passengers. The *Hamburger Nachrichten*, *Pester-Lloyd*, *Frankfurter Zeitung*, *Berliner Tageblatt*, and the *Preussische Zeitung* allot much space to this phase of England's international relations. When to all these external troubles and to her full occupation at the seat of war there are added a

home the difficulties of providing a sufficient food supply, the embarrassment of unemployment, and the dangers and loss to her commerce by the German cruisers now loose, the case of England appears to the German press to be quite desperate and liable to cause her withdrawal from the contest before many more days elapse.

So far as France is concerned, her external difficulties are less only as her colonial dominion is smaller and less diversified; and at home, we are told, such embarrassments exist as a dangerous royalist agitation, which has even got into the Army; the exceedingly great need caused by unemployment and a straitening of resources, which so affects the population at large that many are actually starving. The situation is so bad that, according to the *Berliner Tageblatt*, a great deal of looting of their own wounded and dead is done by the French themselves on the battle-fields.

On the Russian boundaries all is not harmony. If Mohammedans are arousing themselves against England and France, their objective includes also Russia. She holds sway over twenty millions who profess this faith, so that Persia and Afghanistan are no less resolved to enter the lists against her than against the other two Powers. The *Frankfurter Zeitung* recalls in this connection the fanaticism and oppression of Russian orthodoxy. The net result is, so reports the Constantinople correspondents of the *Pester-Lloyd* and the *Berliner Tageblatt*, an outbreak of hostilities on the Russian-Persian boundary. Nearer home Finns and Polish revolutionaries are pictured as giving trouble, the former being engaged in actively opposing conscription.

On the other side of the field of conflict Serbia is finding her path anything but smooth, since New Serbia (the provinces gained by her in the Balkan conflict) is already in insurrection. And in the extreme East, according to the *Frankfurter Zeitung's* "unofficial" advices, the Japanese Government has to contend with a serious popular movement against participation in the war. House-to-house search has brought to light posters setting forth that Japan were better employed in concern with Manchuria and Mongolia than in pulling Great Britain's chestnuts out of the fire.

The *Kölnische Zeitung* and the *Pester-Lloyd* discern also the seeds of dispute among the Allies. Neither trusts the other—else why the agreement about making peace jointly? Pin-pricks contribute little to cordiality and good feeling. Such a one is the reported bad treatment of English journalists, whom the French staff kept jaunting from post to post ineffectively. And how little England trusts Japan is shown by her taking part in the Kioochow offensive. "Surely a whole nation like Japan ought to be enough to take care of a little place like that and a few Germans."

The *Vorwärts* quotes the Paris correspondent of the *Manchester Guardian* to the effect that France cannot sustain a war of two or three years' duration. The *Götenburger Handelsmann* predicts complete victory over France in two months, says the *Pester-Lloyd*. "As soon as Verdun is taken, the development of events will be rapid." "The spirit of the German Army is totally unaltered, while the French wait only the opportunity to submit." Thus conditions throughout the world are declared to point infallibly to German and Austrian success.—*Translations made for THE LITERARY DIGEST.*

A ROD IN PICKLE FOR TURKEY

TURKEY'S ABRUPT ENTRY into the war may precipitate that punishment foreseen by a writer in the *Paris Figaro* as a result of her recent abrogation of treaty rights with regard to her foreign residents. The treaties with the Powers, by which foreigners were not liable to occupation taxes and by which offenses of aliens lay outside Turkish jurisdiction, are abrogated, foreign post-offices are suppressed, and the customs duties increased. When the announcement of this intention was made some of our American journals noted it with repressed irritation, as has been shown in these pages. But there is no such modified feeling in the tone of French comment, which may be said not unfairly to represent the point of view of the Allies. In the absence of an Oriental statement of the case we are confined to opinion on one side. Turkey hurls defiance at all Europe, says the *Figaro* writer, and he calls attention to the fact that even the Germans, the "patrons" of Emir Pasha and his clique, have sent a protest to the Porte "for form's sake." Europe has other cases just now, he adds, which prevent her from taking up Turkey's gauntlet. One thing is certain, however, which is that "the Young Turks will lose nothing of what is coming to them because they have had to wait for it." The writer rates this party lower than Abdul Hamid, whom they overthrew by their revolution, because Abdul was at least frank in his hatred of Christians. Disguised with a thin veneer of civilization, he adds, the Young Turks fooled all Europe for a time. But some people soon awoke to the fact that in acquiring a seeming polish from Europeans they were only adding "one more lie to their original vices." In abrogating the capitulations, the writer declares, Turkey, as a European Power, has signed her

THE NEW DEATH.

—*Amsterdamer.*

death-warrant. The warrant will be executed, we are told, while as an Asiatic Power the Arabians will see to her fate. That Turkey has mistaken the "patience" of the Triple Entente for "impotence" is the observation of the *Paris Journal des Débats*, which says that because of the war the Turkish Government has been permitted to commit various offenses without protest. But this failure to protest, we are reminded, is only provisional, and we read:

"Turkey has piled up provocations without having had to repent thus far. German generals have taken entire charge of the Ottoman Army, organized the mobilization, and reconstructed and armed the forts of the Dardanelles. Officers, engineers, laborers, and soldiers have come into Constantinople by the train-load. The *Goeben* and the *Breslau* took refuge in the Sea of Marmora, put up for repairs, and are now cruising in the Black Sea. . . . But that is not all. Impunity makes for courage. Since September 27 the Dardanelles have been closed to commercial navigation. All foreign ships that happen to be in the Black Sea or on the lower Danube have been blockaded. This occurs just at the busiest season for international navigation in these waters. The complete closure of the Dardanelles is a direct provocation to Russia and to England, while at the same time it is a menace to Roumania."

While the Bordeaux edition of this journal holds that, if Roumania does not want to become "the victim of a ruinous blockade," she should hasten the end of the war by attacking Austria-Hungary, the Paris edition believes that the neutrals in Roumania will draw support from the patient policy of the Triple Entente.—*Translations made for THE LITERARY DIGEST.*

SCIENCE - AND - INVENTION

WASTING A HUNDRED VALUABLE BY-PRODUCTS IN SMOKE.

OUR CHIMNEYS "BELCH GREAT VATS OF GORGEOUS COLORS INTO THE AIR," WHILE WE BUY DYES AND OTHER COAL BY-PRODUCTS FROM ABROAD.

OUR COMMERCIAL DECLARATION OF INDEPENDENCE

THE EUROPEAN WAR is to make our country rich and prosperous beyond belief—but not entirely, or even chiefly, by throwing into our hands the trade of South America or of any foreign land. It is from our own people that the riches are to flow. Nor is this at all like the economic condition of the island whose inhabitants made their living "by taking in each other's washing." The mechanism is explained to us by George H. Cushing, who writes on "Prosperity for America" in *The Technical World Magazine* (Chicago, November). What is to happen, according to Mr. Cushing, is that we shall henceforth produce for ourselves many things which we now buy from Europe. It is our own trade that we are to capture from England and Germany. Commercial America, says Mr. Cushing, was given its biggest shock in fifty years when it suddenly realized, as a result of this war, how completely it has been dependent upon other countries for many of its necessities. It had supposed that the shoe was on the other foot. Surprise became chagrin when we learned that we might have been producing those things ourselves, if we had only thought of it. He goes on:

"Wounded in its pride, this country has at last awakened to its opportunity. The story of this awakening one day will make one of the biggest chapters in America's industry. I can now tell only of the birth of a few ideas. I can not clothe them in the detail of machinery and organization which must come soon.

"It is to go far too minutely into the chemistry of steel-making to tell why this is so, but it is true that when the war began, the steel business of the United States came very near to stopping. One of the elements in Bessemer steel is ferro-manganese. We had obtained this mainly from Europe—or Germany, to be exact. With fresh supplies shut off and with small stocks on hand, we were in a bad way. Then we got one cargo and arranged for others from South America. This eased the steel mind and established closer relations with our neighbor to the south, but it did not salve the wound to the national pride. In fact, we were stung to the quick when we learned from the Department of the Interior that these elements are available in quantity in this country and have been all along.

"Our steel-makers give the assurance that, before the war is over, they will have developed the deposits which yield those

elements. This will make for the real independence—and hence the greater riches—of this country. This is the beginning of our home program.

"Another shock to commercial and self-contained America came when it discovered that while the tin can is the emblem of cheapness, and while tin is the foundation of some of our richest industries, we mine no tin. All of it that we have and use comes from 'the other side.' The supply was interrupted for a time and we were in a panic. I know of one man who went away on a vacation and returned to find himself richer by twenty-five thousand dollars because he had a stock of tin-plate on which the price had risen. It was with a sensation akin to pain that we learned that we have tin here and should have been working in it years ago. To wipe out this national disgrace—this in a commercial sense—I am told that enterprising citizens of Cincinnati have said they intend to produce our tin. That will add to our riches. Surely, it will help to complete our home-trade program.

"These things hurt, but 'the most unkindest cut of all' came in connection with the thing which, with us, is almost as common as dirt. The United States produces about 40 per cent. of the total coal output of the world. This giant coal pile is a mine of riches. Last spring, I made a partial enumeration of the commercial products which are made from a lump of coal. When I was interrupted—after two weeks of constant work—I had counted 117 separate articles. All of these things we have burned—or thrown through the chimney in smoke—to get the three elementary things—light, heat, and power.

"For example, all of the anilin dyes are by-products of coal. Chicago, Pittsburg, Cincinnati, and Cleveland belch great vats of gorgeous colors into the air daily and then send all the way to Germany to buy a supply.

"I found also that creosote oil is a by-product of coal. This is used to preserve wood and adds from 200 to 500 per cent. to its life. We buy between fifty million and sixty million gallons of it each year from Germany. This element in the coal we either burn to make heat or spill it into the air as smoke. One railroad manager told me recently that it will be necessary to carbonize 3,500,000 tons of coal to get enough creosote oil to preserve the railroad-ties used by his lines, which make up one of the big Western railroad systems."

So soon as these and dozens of similar facts became known, Mr. Cushing tells us, he began to get all sorts of suggestions of coal by-products that are going to be produced in the United States. One engineer in Chicago, who has invented a coke-oven, will reclaim creosote oil from coal. Another engineer in

Milwaukee has worked for years to persuade gas companies to put in apparatus that will make dyes. He now expects his plan to succeed. A group of farmers will build a series of coke-ovens in eastern Indiana and will—in addition to coke and gas—produce the fertilizer which is so readily reclaimed from coal.

SHOOTING GUNITE INTO PLACE.

Showing why concrete deposited in this manner is called "gunite."

Also, a big chemical house in New York has made even more sweeping statements as to what it intends to do. The writer goes on:

"Meanwhile, there is moving to completion, under the impulse of present necessity, some great programs. These have been taking form for years. . . . Around the water-power plants of the Blue Ridge Mountains a great cotton-spinning industry was prophesied. It was intimated that this movement never could realize its possibilities until a big selling organization—one that had as much scope as its English competitors—was formed to distribute the product of these mills. When that came, it would be possible to keep the raw cotton at home and to ship the manufactured product to all the world. Because we lacked such effective selling for all mills, England was making more profit than we were off our raw cotton. England was, in fact, buying our raw cotton and was selling to us the finished cotton goods.

"England, to-day, is fighting quite as hard to keep its hold on the cotton market as it is to end militarism in Europe. It wants to avoid giving the United States any necessity to convert its raw cotton into the finished product to satisfy the world's need. But England is being drawn more and more into the vortex in Europe. Its manufacturing business is languishing for lack of the workers who are turning soldiers. The United States, to satisfy a world need of cotton goods and to find a market for its raw cotton, is being forced to build more cotton-mills. Those mills, because their local selling organizations can not cope with the situation, are distributing their product through the big New York and Boston selling agencies. In this way, we are solidifying our cotton business and are giving to it the one thing that is needed. Incidentally, we are making a home-trade program at the same time.

"This thing is bigger than it seems to be when first studied. We respond to what appears to be a simple necessity. That seems to end the incident. But it doesn't. We are becoming a world commercial power without an effort. Cotton goods go everywhere. Selling organizations which specialize in cotton goods must keep in touch with the cotton market everywhere. They trade in China and Japan as well as in New York, Chicago, and San Francisco. They do a business in South America as well as in Canada. Such expansions of the commerce of a people in any line must widen the whole trade field of that nation. We are rapidly acquiring an international trade in one line,

others must follow. Such things can do nothing but speed the ultimate tremendous prosperity and riches of this country.

"We are, right now and in the simple things which made up the every-day life of the individual, building big and strong a national trade structure that must prevail and grow steadily for generations to come. We are building a new foreign-trade program. We are filling out our old home-trade program.

"We are making a feverish dash to master South America's markets, and we thus are moving to consolidate the western hemisphere into a complete commercial unit. That is a tremendous thing even to think about. At the same time, we are being forced to reach out across the Atlantic and the Pacific to supply growing and imperative needs in both directions. That is opening friendly markets to us against the time when we will need them as an outlet for the products of this hemisphere. We are playing the game big by doing only the simple thing which comes immediately to hand.

"After seeing these things, I have come to this conclusion of the whole matter. From 1897 to 1907, we expanded internally as no nation on earth had ever done. From 1914 to 1924, we shall grow both at home and abroad so tremendously that the world will forget the glory of other periods while marveling at what will have been done in those ten years."

CONCRETE TO BALK MISSISSIPPI FLOODS

AS THE RESULT of recent experimentation by Government engineers in charge of flood-protection work on the Mississippi, it is possible that the dikes built to keep out flood-water from bottom lands along the river may hereafter be paved with an impervious layer of concrete along their riverward slopes. It is believed that with such protection smaller levees may suffice to do the work, and hence that the cost of protection may not be greatly increased. Dikes made of earth saturated with water have no great protective value, and the expectation is that the concrete covering will keep the earth of the levee dry as well as preventing damage by the friction of the flood-water and in other ways. Major C. O. Sherrill, of the

HOW THE GUNITE CONCRETE IS APPLIED.

The worker in the previous picture is seen in the background.

United States Engineer Corps, describes his experiments thus in *Engineering News* (New York, October 8):

"The years 1912 and 1913 were characterized by the greatest floods ever known on the Mississippi River, and efforts of the United States Government and the local authorities to hold these floods between the levees are well known to all. These efforts, in effect, were directed against 2,200,000 cubic feet per

Illustration by courtesy of "The Engineering News," New York

A "FLOOD-PROOF" LEVEE. PAVED WITH CONCRETE ON ITS RIVERWARD SLOPES.

Here a slope of one foot in three is protected by four inches of monolithic concrete on an 8-foot crown.

second of water flowing down the river between levees constructed to grade for 1,750,000 cubic feet per second. As a result, all the levees were strained to the utmost and every known variety of defect developed and had to be combated.

"It was found that in certain classes of soil excessive seepage and sand boils occurred, even in the then standard levees. To determine the effectiveness of various forms of protection, the Fourth District, Mississippi River Commission, undertook certain experimental work, described below, with a view to determining whether a smaller section levee protected with gunite (concrete deposited by the cement gun) over its face and with interlocking sheet piling extending 8 to 10 feet deep at the foot of the levee would not decrease the percolation of water through the levee so as to keep it dry for the average period of highest flood—namely, thirty to forty days.

"The writer undertook these experiments with the idea that the protection of levees in this way would add largely to the friction of the water flowing through the levee, due to the necessity of its passing over the longer path around the bottom of the sheet piling and upward toward the surface against gravity and frictional resistance of the soil; and that for the period during which levees are subjected to the pressure of flood-water this increased resistance to percolation would probably delay the rise of the seepage planes sufficiently to allow the levee to remain dry until the danger was passed. It has been thoroughly demonstrated, moreover, that a dry levee of any size practicable to build is a safe levee, and that any thoroughly saturated levee, no matter how large its section, is useless as a means of protection. . . .

"Upon the surface of the protected portions of the levee was placed either ordinary concrete 4 inches thick, or gunite 2 inches thick. The gunite was placed on a levee of small sections, namely, 5-foot crown, with slopes 1 and 2, to give it as severe a test as possible in comparison with the ordinary concrete. The 4-inch monolithic concrete was placed on a levee having 8-foot crown and slopes 1 on 3. The largest section levee, which is the standard Mississippi River Commission type, was left unprotected in order to have a direct comparison between this levee's efficiency and that of the smaller protected sections.

"Gunite was placed on the levee in several different ways: (a) Directly on the levee itself; (b) on the levee with light reinforcement; (c) on gravel spread on the levee with reinforcement on the top; (d) on gravel with no reinforcement. In each case, the top of the sheet piling was increased for one foot down with gunite reinforced by light wire mesh. The last method named, that is, gravel with no reinforcement, having proved most satisfactory, it was adopted for the bulk of the work. The gravel was spread 2 inches thick on the levee and was then treated with gunite to concrete it in place. This was found to give a dense concrete practically impervious to water, as was shown by a basin constructed by this office."

THE SPREE DISEASE

WHEN an otherwise sober and reputable citizen goes off at intervals on prolonged sprees or debauches, during which he remains continually intoxicated and seems to have lost his moral bearings, some persons believe that he is innately depraved and that his vicious nature occasionally asserts itself to such a degree that he is unable to control it. Medical men, on the other hand, have long recognized that such persons are suffering from a very dangerous form of mental disease, that they are irresponsible during their lapses from normal conduct, and that they need medical treatment and not moral maxims. In a paper on "Periodicity of the Drink Neuroses," contributed to *The Medical Record* (New York, October 10), Dr. T. D. Crothers, of Hartford, Conn., groups some of the interesting facts that bear on this mysterious form of periodic brain malady. He says:

"The drink neurotic who abstains for distinct periods and then suddenly breaks out with insane cravings for spirits, which after a time die away, only to be followed by another outbreak of a similar character, is an example of these unknown cyclic degenerations.

"At one time it is a delirium, intense, overpowering, and irresistible, and then a period of quiet rest, sanity, and complete control comes on. At one time it is the rigid moralist, strict abstainer, and sound, strong man. At another it is the excessive drinker, immoral, dishonest, without character, and reckless of his acts and conduct.

"To the unreasoning public and the foolish theorist this is simply vice—an outbreak of the animal instincts and the beast part of the man. The most delusive and stupid theories have become a great literature in explanations of these two widely differing conditions. The statement that it is simply a gathering and breaking of morbid energies and activities of the brain and nervous functions, governed by distinct physical laws, is not recognized to any great extent.

"Some facts common to these conditions will show how thoroughly they are physical and subject to laws which are to be studied. In all probability fully 60 per cent. of all inebriates and alcoholics display this periodicity of symptoms.

"In the distinct periodical drinker the free intervals are very often definite as to time, varying from one week to several years, and in many cases breaking out at intervals that are as fixt and unvarying as the movement of the stars. In others this interval of freedom from the drink craze is variable, and in some cases depends on certain conditions which may be often forecast, controlled, and prevented. In others the conditions are

unknown, and the laws that govern their culmination and explosion have not been studied. There is a small class of persons in whom the drink impulse appears as mysteriously as the flash of lightning in a cloudless sky, with no premonition or hint of the coming attack. Often it disappears in the same mysterious way.

"An attempt at classification indicates several groups which seem to have fairly constant symptoms. Thus in many cases they may be called the insane impulsive periodic inebriates. The free interval is an unknown condition, and the return of the drink craze is abrupt and unexpected. The man will drink and become crazed at the most inopportune time, on the eve of marriage or some great social, political, or literary triumph, or some business success, or on a public occasion, or at a funeral, where his condition is most disastrous for his future.

"A very poor young man with a large family, who had been sober for some weeks, was informed that his uncle had left him an immense sum of money, contingent on his remaining sober for one year. Immediately on hearing the news he drank to great excess for weeks.

"The reaction when this obsession disappears and the sudden realization of the losses may precipitate suicide. The remorse is so intense that death is preferred. Others, when the drink craze passes off, show the most intense anxiety to explain and minimize the losses which they have suffered from, and also make earnest efforts to convince their friends that this will never occur again.

"The memory is usually vague, and events of the past are uncertain and cloudy. In others the memory is clear and intact. The reason and judgment seem to have been suddenly arrested, and on recovery display unusual activity to promote total abstinence in the subject and his friends. The extreme delirious excitement to help others and to show the dangers from alcohol, and promote the cause of total abstinence, so prominent in revival meetings, is not infrequently the after-effect of previous alcoholic excesses. Sometimes this is manifested in egotism and childish appeals to credulity, away beyond the bounds of rational judgment and sense.

"Another class of these periodics exhibit distinct premonitory symptoms of the drink craze. Curiously enough, they are unconscious of these premonitions. The more common of these symptoms are degrees of unusual excitement or depression, great business energy or unusual apathy, perhaps exaltation of the emotions or depressive states, with fears of poverty and sudden death. There is a great variety of these symptoms which take on almost every form of abnormality, all leading up to the toxic use of spirits, usually to stupor, and this period is marked by amnesia and delusions that are peculiar to the person."

These periodicities seldom appear, Dr. Crothers tells us, until after twenty years of age, and often subside or merge into some serious degeneration before fifty. At first the paroxysm is confined to a few hours. Later it may extend over two or three weeks, then finally becoming shorter and less intense. He goes on:

"The periodic drinking, based on a neurotic heredity, frequently merges into epilepsy, paresis, and forms of insanity, marked by exaltation and depression. The drink craze not infrequently dies away, but obsessions remain, sometimes concentrating on widely differing objects. Thus a periodic drinker developed a craze for building houses, which extended over many years, each year building a new house for himself, with different designs and rooms.

"Another man developed a craze for travel. Every few months he would stop business and go away, pursuing an aimless journey. Another man has a craze for dressing, another one goes into politics, another becomes a reformer, and so on through an almost infinite list of activity. . . .

"The periodic return of the drink paroxysm should be treated successfully, and can be broken up by a great variety of methods and means. The fact that one at intervals is possessed with the desire for drink is a very serious one, and should not be treated lightly. The fact that one is able to stop after the period is over is no evidence of strength, but is decidedly suspicious of a very grave spasmodic disease that will terminate fatally.

"Such persons should be taught the gravity of their condition and encouraged to seek help from the physician on the first approach of the paroxysm, and in this way break up its return, then become built up and restored so as to overcome the next onset.

"Here is a field for practical physicians of the utmost importance, with possibilities of restoration beyond any present conception."

FALLACIES OF THE WAR

THE VERACIOUS CORRESPONDENT, saved by a merciful fate from exposing himself at the front in the present war, and not even allowed to interview the commanding generals at their respective headquarters, solaces himself, while eating his heart out beyond hearing of the big guns, by devising tales of their bigness and of their fatal effects, which will hardly hold water—at least, so we are assured in a leading editorial by *The Scientific American* (New York, October 17). This paper, noting the complaints of the daily press regarding the severe censorship exercised over news from the seat of war, expresses the opinion that it would be better, in some respects, for the public if the censor's blue pencil were used even more freely than it is. The writer goes on:

"We refer to the sensational and misleading technical absurdities which from time to time are passed by the censor and permitted to go broadcast over the world for the confusion and bewilderment of the public, which is weary of rumors and asks only for the facts. . . .

"The military censor knows perfectly well that all the statements which have been going the round of the press regarding mobile 16-inch guns used by the Germans, shrapnel which can annihilate a whole regiment with a single burst of one shell, high-explosive shells whose death-dealing gases kill a company of infantrymen without leaving a mark upon their bodies; he knows full well, we say, that most, if not all, of this talk is the veriest kind of rubbish.

"That these absurdities are too often received at their face value is proved by the number of inquiries which come to this office, asking for further details respecting these appalling weapons of modern warfare.

"In the first place, then, let it be understood that the 16-inch German mobile siege-gun does not exist and probably never will exist. It is possible that some siege-guns of this caliber have been built for fixed fortifications, but certainly never as mobile siege-guns to be carried with an army in the field. The largest field siege-gun is the huge 11-inch howitzer or mortar. . . . It was a great feat on the part of the Krupp firm to produce a gun of this size, weight, and power that could be transported with an army over the highways of a hostile country, and go into action on its own mount, without preliminary foundation work, for the reduction of fortifications from five to seven miles distant. Broadly speaking, the weights both of a gun and its ammunition increase as the cube of the caliber. This means that a mobile 16-inch siege-gun complete would weigh something over 100 tons, and its shell would be approximately one ton in weight. The finest macadam, brick, or concrete roadway would be crushed down under such a load, even supposing that traction-engines of sufficient power and number could be linked up to transport it. It may have been done; but we doubt it.

"Another fallacy is that of the wholesale annihilation of troops caused by bursting shrapnel. More than once we have been asked to explain what kind of a shell it is which, in bursting, discharges a shower of bullets which will kill every man within a rectangle seventy yards square. The answer is that no such shell has been invented, and never will be. . . . The shrapnel shell contains 262 balls which, when the shell bursts in the proper position above the enemy's troops, will cover an area of ground elliptical in form. The area is, roughly, about 45,000 square feet. Now any one can calculate for himself that, if the dispersion is fairly even, there will be an average of one ball to each 120 square feet of space covered, or say, one ball to each square measuring about eleven feet on a side. If the troops under fire are in a trench, with only head and shoulders exposed, and with, say, three feet interval between the men, it will be seen that the chances of a bullet finding its man are one in one hundred for each bursting shell.

"Even more ridiculous are the stories about the killing of groups of men by the shock and the poisonous gases of exploding shells. More than once, in describing the trenches or city streets after a battle, or houses that had been under shell-fire, correspondents have spoken of the dead being found without a single scratch upon their bodies and preserving exactly the attitude in which they stood or sat, when this mysterious engine of destruction smote them. The shock of exploding steel may produce deafness and temporary unconsciousness; but if the explosions take place near enough to produce death, the men affected will be hurled by the blast in every direction.

"Then there is the subject of bomb-dropping from aeroplanes.

and dirigibles, regarding whose military value as a means of reducing fortifications or even of destroying cities there is in the public mind a greatly exaggerated estimate.

"We do not hesitate to say that one of the German 11-inch siege-guns, aided by range-finders and observers at the end of a measured base-line, would place more shells within a fort in a single hour than the whole fleet of German dirigibles could do in an all-day attack."

Despite this exposition of the subject, the daily press of October 20 contains the statement that the Krupps are so pleased with the effect produced by their 16-inch guns that they are now preparing to turn out 22-inch and even 23-inch ones. Is *The Scientific American* wrong, or has the enforced idleness of the war correspondent stimulated his imagination to still greater activity?

GAS-POISONING. A COLD-WEATHER PERIL

THE FATAL EFFECTS of carbon monoxid, which rapidly causes death when breathed even in minute quantities, have long been known, but it is now being found out that besides such cases of acute poisoning this gas is capable of producing very serious and baffling cases of chronic poisoning when air only slightly tainted with it is breathed for periods of weeks or months. This knowledge is of the gravest importance to the general public, since this gas is found in illuminating-gas and heating-gas, especially when these are partly composed of water-gas. Thus a very tiny leak in a gas-pipe might suffice to liberate enough carbon monoxid in the course of months to affect disastrously the health of every member of a family. The gas is formed also in stoves and furnaces when slow burning takes place. Moreover, it is said to be capable of passing through the pores of red-hot iron. Hence it might readily pass into the atmosphere of stove-heated schoolrooms in sufficient quantity to cause lassitude and headache, or even more serious affections, among the pupils. A case was recently reported also, of fatal poisoning of two men in Bridgeport, Conn., by carbon monoxid coming from the exhaust-pipe of a gasoline-engine operating in a pit.

In a late number of *L'Annuaire Mensuelle* (Paris), Dr. Henri Bouquet treats the subject at length, and his warnings should be widely disseminated. We read:

"Carbon monoxid is the more dangerous since it can not be detected by taste or odor. It is dangerous even when the atmosphere contains an extremely small proportion of it, but in order to be fatal to men, dogs, or cats, it must be present in a minimum quantity of $\frac{1}{2}$ to 1 per cent. It acts, at least in acute intoxications, by asphyxiation. It fixes upon the hemoglobin of the blood and forms with it a stable combination, thus causing the hemoglobin to become incapable of carrying the oxygen needed. It is not probable, however, that the red corpuscle is destroyed. . . . The nerve-centers react against this intoxication by lowering the temperature and diminishing the oxidations. But this reaction becomes insufficient if the cause of the poisoning is too prolonged or too violent."

A curious feature of this form of poisoning is that its victims stand a better chance of recovery if they remain extended and motionless than if they are made to walk and move about. While acute poisoning generally occurs in confined places, it sometimes occurs in the open air, when the proportion of the gas inhaled is very large, as in the neighborhood of furnaces, lime-kilns, gas-works, etc. It is said to be due, however, in the great majority of cases, to defects in heating apparatus, especially those where the burning is slow. It may also be produced at a distance by defects in pipes carrying off smoke and gases of combustion. The first symptoms are violent headaches, vertigo, constriction of the temples, ringing of the ears, hallucinations, shivering, and an irresistible desire to sleep. Even when the victims of acute cases recover it is said that they suffer for many weeks from physical and intellectual torpor, and at times also from mental troubles, paralysis, trembling, and pains in the

head. Different people differ greatly in the power of resistance to this poison, so that a number of persons exposed at the same time may vary greatly in the length of survival or possibility of restoration.

"The treatment consists in the use of oxygen as abundantly as possible. It should be used in inhalations and also in subcutaneous injections, which are both more efficacious and easier to administer. The transfusion of blood is a logical procedure in such cases, and use should be made likewise of the ordinary manipulations in cases of asphyxiation."

As a means of detection when the presence of this gas is feared it is recommended to keep a bird, or some other small animal, in a cage, since these are peculiarly susceptible to this poison, and soon revive. Certain chemical methods of detection are also used, the most practical being the reduction of ammoniacal silver nitrate, which turns brown under the influence of this gas.

Chronic cases of this poison are doubtless far more common than has hitherto been suspected, since the effects are slow and subtle, and the symptoms are such as may be present in various diseases. It is not improbable, indeed, that many cases of illness really due to this have been wrongly diagnosed, and consequently ineffectually treated.

"The most frequent cause of chronic cases is the use of defective heating apparatus which allow small quantities of the gas to escape during long periods. Badly managed hot-air furnaces and fissures in the pipes of chimneys may come in this category as well as slow combustion apparatus which remain the most dangerous of all. But this intoxication also often has a professional origin, and is met with among cooks, chauffeurs, and engine-drivers, miners, laundresses, employees of gas-works, and laborers who commonly breathe air vitiated by the leaking or the intensive employment of illuminating-gas.

"The symptoms of such chronic oxycarbonism are manifested after a variable length of time, which may be quite extended and may be appreciably mitigated when the subject escapes the action of the toxic gas for a sufficient period. Here one must accuse not only the combination of the carbon monoxid with the hemoglobin of the blood, but also its toxic action on the tissues with which it is brought in contact by the blood-corpuscles."

The symptoms in chronic cases include asthenic muscular weakness, vertigo similar to that caused by alcoholic poisoning, paralysis (often attacking the muscles of the eye), difficulty of coordination, and convulsive movements. Other nervous troubles are pains in the head, especially in the frontal region, neuralgias (sciatic), local anesthetics, vasomotor disorder, arterial spasms, in the first rank of which may be placed "ophthalmic migraine," swellings, and tropic troubles. Likewise mental activity, memory, and sleep are seriously disturbed, and there may be torpor, loss of will-power, and even characteristic psychoses. Other troubles are listed by the author of the article as follows:

"As concerns the circulative system we note palpitations, syncope, toxic angina pectoris (false angina pectoris), and a very characteristic anemia (which often attacks cooks in this form). The digestive apparatus does not escape; dyspepsia is present. . . . Some authors have admitted that chronic oxycarbonism may be the origin of pulmonary tuberculosis. (Bestier.)"

"The danger of such cases of poisoning is doubled by the fact that they are often misdiagnosed, the symptoms being infinitely variable and diverse, and the attention being rarely enough attracted to a source of peril which acts in most cases only with extreme slowness. The treatment should be symptomatic above all, and its most important feature consists in removing the subject from the action of the poison."

It may be remarked that the "coal-gas" which often escapes from furnaces, etc., when the combustion is imperfect is practically the same as illuminating-gas, but may contain an even higher percentage of the deadly carbon monoxid. Charcoal burners also give off considerable quantities of this gas.

Translation made for THE LITERARY DIGEST.

SAFEGUARDING OUR PUBLIC ART

PUBLIC ART is growing at such a rate among us that some wise measures, of public protection seem advisable.

Indeed, so rapidly are the memorials of public personages multiplying that "friends of the candidates for metallic immortality find difficulty in snatching suitable sites from the traffic that congests the streets of the fast-growing cities." Realizing this, Mr. Charles Moore presents to the American Federation of Arts some suggestions respecting the choice of men to execute these projected ornaments of the public highway. He finds of prime necessity the aid of competent professional advice both at the outset and also during the execution of the work, and, in the case of competitions, "a thoroughly prepared program, and a competent, unbiased professional jury, whose award shall prevail without question." When the task of supplying works of public art is entrusted to a commission of laymen, as is usually the case, Mr. Moore sees an amusing transformation often occurring, and in *Art and Progress* (November) views it from an experience of twenty-five years as a layman, called upon to assist in the selection of men to execute works of a public and semipublic character:

"By some miracle of transubstantiation the men selected suddenly become judges of art and artists. Two out of the three commissioners will peruse with zeal the laudatory biographies sent them by zealous artists seeking the job; and they gaze with profound knowledge at the submitted photographs of the executed work of these self-advertising artists. The third commissioner, a busy business man, comes late to the meetings, and, on being appealed to, selects from the pictures the most romantic presentation of a subject, and with an air of finality declares, 'I don't profess to know much about art, but this one fills my eye!' His fellow commissioners bow to the superior wisdom of the successful man, and selection of the artist is made accordingly. Thereupon the members of the commission become the active partizans of the man of their choice; and the more obscure he is, the greater credit they take to themselves for having discovered genius.

"There is, however, a better side to the matter. There are commissions made up of modest laymen who earnestly desire to have the work entrusted to them executed by competent artists, whether architects, sculptors, or painters. These commissioners

often go wrong because they do not know the method of procedure calculated to obtain good results."

Mr. Moore goes on to point out that the first duty of an art commission composed of laymen is to obtain a competent professional adviser.

"In every city there is usually to be found one or more architects of ability, taste, and public spirit. The architectural profession is calculated to bring the practitioner in touch with artists in the kindred professions of sculpture, painting, and landscape architecture. Moreover, the architect deals with builders and contractors, who have their place in the execution of the work. He knows all the tricks of the trades, whether artistic or mechanical. He may have his favorites among artists, but usually he can be relied on to recommend the best men. Of course it is assumed that the adviser himself is not to be considered in the selection. If the competition is one involving architecture, it may be best to seek an adviser from out of town. The qualifications of the adviser should be generally recognized ability, a sense of public service demands, and, above all, the possession of artistic standards.

"The next thing to be decided is as to whether the artist is to be obtained by direct selection or by means of a competition. For many and valid reasons direct selection is preferable. Artists of established reputation usually have as much work offered to them as they can do. Therefore they rarely enter open competitions; and in some professions they never do. Moreover, competitions, even under the best auspices, are uncertain in their results and are expensive to the participants, so that artists avoid them whenever they can do so.

"In cases where direct selection is to be made, the professional adviser, after full consultation as to the project to be executed, suggests a number of artists, any one of whom should be able to design and to

carry out the work in hand. And here it may be remarked that the ability to make an attractive sketch and the ability successfully to carry that sketch into execution are two separate things, and that, of the two, the ability to execute is by far the more important. Too much emphasis can not be laid on this consideration, and yet it is the point most often overlooked by the layman."

Competitions seem still to be a necessary evil, says Mr. Moore, because of a mistaken idea prevalent among the people that competitions lead to the discovery of new artists.

EDWIN BOOTH AS HAMLET.

By Edmond T. Quinn.

The statue, selected from eight competitive models by a committee composed of Players assisted by three sculptors, to be erected by the Players Club in Gramercy Park, New York.

"Competitions may be mitigated by limiting the number of artists invited to compete, and then paying each artist an amount sufficient to cover the necessary expense of making the preliminary sketches. A competition involves a program and a jury. The program is prepared by the professional adviser; its provisions are governed by the rules for competitions adopted by the American Institute of Architects, or whatever national society represents the particular profession. These rules embody the experience of that profession in dealing with the difficulties and perplexities involved in competitions, and they aim to protect both the artist and the patron. The program also states the local conditions surrounding the problem. The more exact and carefully prepared the program, the less difficulty the jury finds in arriving at a decision. Conversely, the looser the program, the more room for differences of opinion on the part of the jurors.

"The jury should be selected by the commission from a list prepared by the professional adviser. No layman should act as a juror. An artist, no less than a person under indictment, is entitled to a jury of his peers. Even the artist as a juror may be biased by facile rendering and clever sketches, and not every artist has correct standards of judgment, but the chances are that by professional ability and experience the artist is qualified to pass judgment, whereas the layman is hopelessly incompetent to compare, to analyze, and to reach a decision on a problem out of his line of thought.

"It should be understood that competitions are only for the selection of the artist; that every work of art is a growth and is developed in the making, and is subject to restudy, and to professional consultation and criticism during its execution. Given all these conditions at their best, the result is on the lap of the gods."

NOT UP ON NIETZSCHE

SOMETHING of a subsidiary war is just now raging among the ranks of the Allied sympathizers over the responsibilities of Nietzsche in the present imbroglio. What seems to develop is a sorry deficiency in the "culture" of these combatants, and the worst offender from the point of view of the Nietzschean ranks is Mr. Thomas Hardy, who wrote to the newspapers that if it should turn out that the destruction wrought at Reims was predetermined, "it will strongly suggest that a disastrous blight upon the glory and nobility of that great nation has been wrought by the writings of Nietzsche, with his followers, Treitschke, Bernhardt, etc." Following this, Mr. C. M. S. McLellan, the author of "The Belle of New York" and "Oh, Oh, Delphine," writes to the *London Chronicle* saying that it's high time "some one of real authority in the world of letters took this matter up seriously," for he overhears "the present generation of Berlin professors laughing at us," and thinks "something ought to be done to prevent our literary men persisting in their unwarranted repetition of a senseless libel." The librettist goes on:

"Bernhardt never quotes from or mentions the name of Nietzsche throughout his notorious book, and as for Treitschke, how could he ever follow a writer who repeatedly express the utmost contempt for him and his theories? And then, you know, Mr. Hardy simply puts himself out of court as a critic with any claim to delicate observation when he says: 'Nietzsche and his school seem to have eclipsed in Germany the close-reasoned philosophies of such men as Kant and Schopenhauer.' The bracketing of Kant with Schopenhauer is one of the quaintest literary curiosities I have ever encountered. Kant may be a close reasoner; indeed, I fancy his reasoning is so close as to be impenetrable to all but expert mathematicians, astronomers, and deep-sea divers. But Schopenhauer! A dear, delightful weaver of airy trifles, whose essay on Woman, one of the finest pieces of humor ever perpetrated, is the only thing that keeps his memory green even among people who finally read everybody."

Another man who is terribly upset by Mr. Hardy's reference to the mad German philosopher is Mr. Thomas Beecham, purveyor of pills, grand opera, and Russian ballet to the British public. "Anything that emanates from Mr. Hardy," he observes, "is carefully read and welcomed with complete faith by a large number of seriously minded people who accept more

or less unconditionally the assertions of celebrated men, especially those of literary reputation." All the more, he thinks, is Mr. Hardy to be "blamed for his light-minded and ill-considered attack on a writer with whose works he is obviously very slightly acquainted." Going on:

"To me, an old student of Nietzsche, it is only too evident that Mr. Hardy's criticisms of this remarkable man are founded on the most superficial basis of knowledge, and provide a deplorable example of that ignorance which has prevailed for over a generation in this country of matters concerning real German life and thought.

"As one of the few who have never disguised their views on this subject, and who have often brought themselves into collision with those others in this country who have thought it a part of their duty to support the claims and pretensions of

GERMAN VIEW OF ART AS DEFENSE.

You shoot behind me—you lie behind me.
But you are assaulting the apex of civilization.

—Kreuka in *Ull* (Berlin)©.

modern German culture, I have resolutely attacked, publicly and privately, in season and out of season, the mental and moral decadence of Germany, its utter bankruptcy on the higher planes of art and philosophy. For during an entire generation Germany, which formerly occupied a fairly exalted place on the arctic heights of spiritual life, has taken a headlong flight down-hill into the valley of the grossest materialism, and through the length and breadth of that country which was once described by Lord Lytton as 'a nation of dreamers and poets,' and which during the nineteenth century has contributed so gloriously to literature, music, and philosophy, there has been found only one man to raise his voice against this terrible national tendency, to devote his whole career to arresting the final vulgarization of all German thought, who shattered his life-forces on the unbreakable rock of German philistinism, and whose marvelously subtle brain and superrefined organism at last gave way under the strain of the splendid but hopeless task he had taken upon himself. It is Friedrich Nietzsche. And how this gladiator of real culture, the 'good European' and keen hater of all nationalistic 'termini' and Jingoism, must now be turning in his grave at being daily placed in the same category with men like Treitschke and Bernhardt (the former being a particular object of his detestation) and regarded as the spiritual father of modern Germany."

But that the identification of the Nietzschean doctrines with the present temper of the German people has some grounds belief is pointed out by Mr. Paul Elmer Moore in the *New*

Nation. "The so-called spirit of militarism has not been confined to a clique of Prussian officers," he observes, "but has sunk deep into the hearts of the German people." The unanimity of the German press, the documents sent to this country by the most eminent scholars, "the readiness of the leading poets and moralists of the land to condone the worst vandalism of the Army," show that something is at work "different from the patriotism that is solidifying other countries." He goes on:

"All this we of America, who are so far from the contest as to stand as it were in the position of judging posterity, are beginning to perceive and to wonder at; and with the perception our condemnation of German policy grows wider than a mere democratic antagonism to the phantom of arbitrary power, and deeper than abhorrence of the ruthlessness of the Kaiser's troops under the plea of efficiency. This change, if I am right in suspecting its existence, is coming about from late acquaintance, mostly, of course, at second hand, with certain authors who, with almost incredible frankness, give voice to the inner creed of the nation. Above all, the name of Nietzsche is beginning, by the aid of the daily press, to take on a sinister meaning for the man in the street. Now, the gospel of that fanatic is nothing new. It has a respectable following in Russia and France, and through the efforts of a little body of propagandists in London and this country his works have been translated into English and expounded among us with great fervor and some cunning. But we of the English tongue are pragmatists by blood, endowed by nature with a plentiful scorn of philosophical speculation, and only the hammer of events could drive into us a suspicion that a metaphysical theory of life might have a serious influence on a national policy, and, as at once cause and effect, enter into the molding of a people's character. And doubtless Nietzscheism itself would not have got such a hold in Germany had not a part of the doctrine been haunting the popular ear ever since Luther pronounced war to be 'a business, divine in itself, and as needful and necessary to the world as eating or drinking, or any other work.'

"Nietzscheism is, indeed, more than a glorification of war. It is in one sense almost anything you choose to make it, for its author was a master of the various epigram, with little care for verbal consistency, so that from his works the devil or the angels may quote texts with equal conviction, as they are said to quote from better books. But out of his broken discourses, taken as a whole, there does stream a pretty definite tendency of thought and feeling, and this is what has acted dynamically on so many practical minds of his Fatherland. Briefly, the force of Nietzscheism may be summed up thus: A violent repudiation of any faith or tradition which recognizes a power of right and justice lying beyond our impulsive nature and pronouncing a veto on the wilful expansion of that nature; an identification of self-restraint with degeneracy and of self-assertion with health, resulting in a deadening of the response to the value of harmony and proportion and voluntary moderation; a search for happiness in the conquest of others rather than in self-conquest, and a hatred of all sympathy for the weak which would involve even a partial surrender of the privilege of strength; a sharp distinction between the superior individual and the servile horde; a substitution of the will to power for the Darwinian will to live, with the consequent intensification of the unconscious and instinctive struggle for existence into a battle for conscious mastery; a sharpening of the competition of life, with its self-observed rules of fair-play or its traditionally imposed limitations, into a glorification of war as the supreme test of strength, obtaining its justification in success.

"Such, then, is the essence of the philosophy distilled by a master mind out of the pragmatism of Luther (whom he praised for his 'depth and courage,' but denounced for his religiosity), and Frederick the Great (whom he regarded, only less than Napoleon, as the 'genius for war and conquest'), and out of the romantic deification of emotional expansion (himself a product of Rousseauism, tho writhing in his fetters).

"One thing has tended to obscure the influence of Nietzsche. He was no patriot; he even condemned modern nationalism as a *nerve nationale*, and, for very personal reasons, was most vitriolic against the particular Teutonic brand of chauvinism. . . . Now, there is something that sounds illogical in glorifying war and cosmopolitanism in the same breath, and certainly there is something not nice for German ears in Nietzsche's vituperative epithets; another mind was needed to make his philosophy thoroughly digestible for the home stomach, and Herr von Treitschke was the man to add the necessary ingredient 'chauvinism.'

SINGING "TIPPERARY"

THERE is a curious difference between the British soldier and his Continental associates, both friend and foe, as he goes to war. They sing the sublime songs of their Fatherland and he whistles or trolls a music-hall ditty. "Many otherwise amiable folk think it a little degrading that our soldiers should prefer to set their fighting to what are contemptuously called 'music-hall songs' rather than to more imposing song-structures such as the 'Marseillaise' and the 'Wacht am Rhein,'" says the editor of *T. P.'s Weekly* (London). Everybody knows that when the British soldier sings of "Tipperary" the last thing he thinks of is some place so named in Ireland. He is thinking of "home." Yet it has all the requisites of an immortal war-song, says a writer in the *New York Evening Sun*—"a free and swinging lift, a touch of humor, of sentiment, and a dash of rough-and-ready patriotism."

Mr. Holbrook Jackson, of *T. P.'s Weekly*, points out "the curious mental kink" in all "criticisms of the tastes of the common people" which "reveals the almost impassable gulf between the cultured few and the uncultured many."

"Culture seems to kill psychological insight. It helps us to understand ideas and to work out problems with logical exactitude, but it always neglects the final human equation which, in the long run, is the only thing that matters. Modern Germany is an example of what mere culture-worship can do for a nation. There you see life worked out with the exactitude of a problem in mathematics. . . .

"Germans believed (and still believe) that they will be victorious in arms because they have the biggest effective army, the biggest siege-guns, the most efficient military organization, and the most complete and perfectly calculated plan of action. They are proud of all these things; they worship them. And this much may be said for worshiper and worshiped: both are irresistibly logical. But no margin is left for the play of that little rift in the lute of all logic—chance. 'Chance in the last resort is God,' says Anatole France. That may or may not be. I will not argue the point. None the less, all sorts of incalculable things have frustrated the perfect working of German machine-culture. Not least the curious fact of our own men singing 'Tipperary' in the trenches.

"For that reason one should suspect any inclination to deplore the music-hall tendencies of Mr. Atkins. We must be sure that our objections are not based on what may be called a German misunderstanding of life. You can do almost anything to a man without destroying his essential splendor—you can beat him and bully him, starve him and cheat him, laugh at him, and even kill him, and yet he remains sublime and, on the whole, indifferent to fate. But once you insist upon him acting logically you destroy him utterly. So it is that you will find men kindling trivial and sometimes ridiculous words at the fire of emotion and setting up a blaze which shows them the way to victory and honor. It is quite a chance that our soldiers sing 'Tipperary'; two years ago they would have sung with equal gusto, 'We All Go the Same Way Home.' The thing to remember is that it is not always the musician or the poet who makes songs. Songs are made also by the circumstances under which they are sung. Some songs, the oldest and the best, have neither author nor composers; they seem to have grown out of the national life and to have gone on living because the national life has lived. Thus 'Tipperary' has been reborn. In the ordinary course of things 'Tipperary' would have passed into the limbo of forgotten popular airs, but Mr. Thomas Atkins has done for it what its author could never have done; he has given it immortality."

The same theme is dwelt upon by the *London Spectator* in answer to the feeling of some that "the soldier abroad should think as he marches of the purpose with which his country has gone to war, and that because he thinks about that purpose he should sing about it if he sings at all."

"Other armies, we know, have sung of their purpose; 'John Brown's Body' is a hymn rather than a song, and 'Marching Through Georgia' tells its own story. The 'Marseillaise' is the singing of the soul of a nation, and that is why there can never be an English translation of it:

Allez, enfants de la patrie,
Le jour de gloire est arrivé.

We can not put that into English words. We have not suffered as France has suffered, and we can not sing her songs as she sings them. We who are at war to-day can not feel all that the French soldier feels; if we had known what France has known, we too might have evolved music and words which would mean and tell what we felt. But if we look more closely at 'John Brown's Body' and 'Marching Through Georgia,' do we not find in them something which is less concerned with the operations of a particular campaign than with the unaltering outlook upon life of the singer? Both are songs of freedom; they were sung by men who thought about being free, and knew what it was to be free. And if we come to the songs which our own soldiers sing, shall we find any other underlying reason for their singing than this, that they sing about what interests them? They have fine words and fine tunes in any number to choose from. There is the 'March of the Men of Harlech'; there is 'Scots Wha Hae'; there is 'The Minstrel Boy'; there might be any number of English 'words' for the 'Marseillaise' if the men really wished to sing it. The 'Marseillaise,' as it was heard the other day at the departure from Waterloo Station of the Scots and Grenadier Guards, was the most superb thing to hear: the music rose from the hands on the platform and rolled under the great glass roof like a voice. But the men do not sing the 'Marseillaise.' They sing songs from the music-halls:

It's a long way to Tipperary,
It's a long way to go.
It's a long way to Tipperary,
To the sweetest girl I know.
Good-by, Piccadilly!
Farewell, Leicester Square!
It's a long, long way to Tipperary,
But my heart's right there!

That is the song which has carried our Army from Aldershot to Southampton and from Paris to the Aisne; it is the song which one of the sailors from the torpedoed *Cressy* started singing in the water. 'It certainly is if you have to swim there,' so went the comment, already historic. . . .

"Now what is there in 'Tipperary,' which makes the appeal, which gets the song sung, when other apparently much better words are not even looked at? . . . Is it rubbish? Is it not the reflection of national character? Is it not just the gaiety which takes the fighting as the day's work, and which looks beyond the day's work to the reward? That is the gaiety and courage of outlook which writes nonsense-songs for recruits to march to; and which is written in the records and the roll-calls of Mons, of the Marne, and of the heights above Soissons."

The biography of "Tipperary" and also of some other war-songs is given by the *Evening Sun* writer, who maintains that the now dominant song of the soldier was "made in America":

"'It's a Long, Long Way to Tipperary' the marching song of the British Army, was written right here in New York. It was composed three years ago, but it needed a great war to bring it into popularity.

"It was originally intended for a little vaudeville skit. The composer of it, Harry Williams, is also the composer of that treasured local lyric, 'I'm Afraid to Go Home in the Dark.'

"There's an odd history to all these songs that sweep into favor with the roll of a drum. Rouget de l'Isle wrote his famous battle-hymn to greet the passing army of the Marseillaise on its way through Strasburg. He was a lieutenant there and—so one of the stories goes—he was tipsy when he wrote it. His reward was to be the last bottle of wine in the cellar of his inn. He finished it hastily, drowsily, to meet the coming of the 'black-browed mass' of revolutionists at dawn. When the last

note of it was down on paper his head toppled into his hands and he fell asleep. 'The greatest war-song ever promulgated,' is what Carlyle calls it, 'and whole armies and assemblages will sing it, with eyes weeping and burning, with hearts defiant of death, despot, and devil.'

"Max Schneckenburger's poem, 'Die Wacht am Rhein,' was first published in a provincial newspaper. Within two weeks it had appeared in almost every publication in Germany and had been set four times to music.

"Julia Ward Howe has left a subjective bit of reminiscence to tell how she wrote the 'Battle Hymn of the Republic.' It was after a visit to the ragged Union camp that her heart gave

THE WOUNDS OF NOTRE DAME, PARIS.

Broken pinnacles tell the story of one of Germany's air-ship raids over the city of Paris. One bomb struck the venerable cathedral.

way to its glorious inspiration. But more popular and useful was the original version of that song, the unsmooth 'John Brown's Body,' and that other rollicking jargon of stirring nonsense, 'As We Go Marching Through Georgia.' And when the Spanish-American War took our soldiers into the Cuban plantations, they had one great, rough tune to cheer them; its name was 'There'll Be a Hot Time in the Old Town To-night.'

"As for Mr. Harry Williams, who wrote 'Tipperary,' it has been impossible to determine whether or not he is an Englishman by birth. At any rate, he has been spending six months out of every year in London or thereabouts, doing odd jobs in vaudeville. The other half of the year he has been living here.

"But it has been established definitely that 'Tipperary' was written at a house in Douglas Manor, L. I., to be exact. It was finished early in 1912. It was submitted to publishers on this side of the water and accepted by an English firm. But it was not published in America at that time. And, in fact, when it was brought out in London, a little later, it failed to arouse much enthusiasm. It was only after the war began and the weary marches were forced that some one in the ranks started this little ballad of the music-hall and found in it all the requisites of an immortal war-song. . . .

"There is something peculiarly appropriate about the tune. The French have had it translated and are singing it as they go into battle. Scotch Highlanders, who probably never heard of Ireland's Tipperary, are playing it on their bagpipes. Canadian reservists, lonesome for the Western forests, are humming it. And native Bengalese are crooning the little song through their very white teeth as they shiver through the chilly nights and wipe their bayonets dry.

"But for all that it was 'Made in the U. S. A.'"

RELIGION-AND-SOCIAL-SERVICE

GERMANY'S ETHICS DEFENDED

FAIRNESS is asked by a German-American theologian in the discussion of Germany's ethics in the European struggle. And while he asks the critics of the Fatherland to concede something, he meets them half way by concessions of his own, and does not make the sweeping claims that have characterized some of the acrid utterances on both sides. In deciding the merits of the case for the contending parties in Europe it is "impossible to be fair unless one makes a determined effort to be fair and to give extra-candid attention to everything

decalog tumbles after it. I suppose there has never been a war in which women have not been outraged and innocent people killed out of hand. In this chaos of human relations we ought to respect every bit of self-restraint and virtue that is left. What is true or false in the charges in detail I despair of determining.

"But there is one fundamental fact to be remembered—and I have not seen the point made anywhere, simple as it is—that the Germans are in the enemy's country and the Allies are not. German soldiers are in direct contact with the homes, the women, and the industries of the Belgians and the French. The Allies have not burned German towns nor harmed German women because they have not set foot on German soil except briefly in the Alsace. If they march on Berlin, we shall see what we shall see. This simple difference seems to me to demand a stay in judgment from every fair-minded man."

On the subject of Germany's hostility to England, he recalls that "no doubt the feeling against England has been tense for years, and the conviction prevailed that some time the matter would have to be fought out." He proceeds:

"Now, our relations to England for many years have been so close and friendly, we feel such deep admiration for her power, her literature, her historic liberties, that instinctively we feel that the attitude of Germany is unreasonable, dangerous, vicious, and provocative of war. We have forgotten how John's face looks when he is crowded. We knew when he stooped American ships to press the sailors before 1812, and when he tried to turn our Capital into a cow pasture.

"No one sees the present war fairly who does not apply the doctrine of economic determinism to the alignment of the Powers. Up to 1870 Germany was a disorganized crowd of small States; it had no fleet, no common diplomatic or commercial policy. At that time England was kind and contemptuous. When Germany was united through the war with France, it slowly learned team work. It applied more scientific intelligence and trained ability to its work than any nation on the earth. While we have been plundering our soil and while great parts of England have drifted

out of cultivation, Germany has cultivated even her moorlands and planted her hills with paying forests. She maintains 67,000,000 people on an area smaller than Texas, and much of it poor land.

"When England became a modern industrial nation, great parts of her working class were pauperized in the process. Germany passed through the same transition, but lifted her working class with her. She has put a firm hand on her millionaires and a protecting arm about her working class, so that very few of them now care to emigrate to our country. Her great cities are so clean, beautiful, and safe that English cities—and even Paris—look slatternly beside them. They have cut out graft, they tax land-values, and practise public ownership. The *per capita* debt of France is fifteen times as great as that of Germany. Nor has this development been only material. In almost every element of the higher life Germany leads the world. In creative science and philosophy every scholar knows that this is true. In music Paderewski says she stands in a class by herself. In intellectual spirituality the Germans compare with the English and Americans as the Greeks compared with the Romans.

"Now imagine this highly efficient team work invading the outside world. German exports grew. German business and technical skill captured contracts. Young German business men pushed young Englishmen out of their office-chairs, even in England, because they knew more and worked harder. Germany has only two good ports to connect her with the Atlantic Ocean, but on that slender base she built up a carrying-trade

PRAYING FOR SUCCESS TO RUSSIA'S ARMS.

Public supplications in Petrograd before the battle of Augustovo. Besides bearing the Czar's portrait the banners are inscribed with "Victory for Russia and the Slavs" and "God Save the Czar."

that reaches us on behalf of Austria and Germany." This statement is preliminary to a plea for open-mindedness made by Dr. Walter Rauschenbusch, of the Rochester Theological Seminary, in *The Congregationalist* (Boston). He confesses to German descent, and says he has "relatives and dear friends fighting on both sides." But he feels the case of Germany, as this country treats it, is like "a trial in which one side has the floor in the court-room, while the other side is out on the street and can shout its statements only when the insiders are willing to open a window." He exhibits his neutrality by asserting that "there is not a nation at war which has not some justification and some spiritual values at stake, and I think I could make out a fairly strong case for any one of them." But he feels that "the case for Austria and Germany is understated and obscured at present," and he proceeds to "state a few really fundamental points of view which help to explain their position." First as to atrocities:

"We have probably all begun to realize that we must make large deductions for wilful lying, and still more for the inevitable exaggeration in times of excitement, bitterness, and fear. But for my part, I find nothing incredible in the worst charges—such destruction by Germans, assassination by Belgians, mutilation by Russians and French Turks. When we reverse the law of morality and make it a duty to kill, the rest of the

that covered the oceans with a network of lines. She built a navy to protect them, and built ships more cheaply and swiftly than the English could.

"Remember that this German commercial invasion found England in possession of the markets and all the choice colonial possessions. Consequently every forward move of Germany jarred and angered English interests. That was only human. England is the greatest imperialistic Power in the world, and its possessions were acquired in all sorts of ways, but always with a strong right arm. This was 'England's historic mission.' But when Germany began to pick up remnants of the earth that England had not considered worth while, it was aggression."

"Nations rarely fight for moral issues alone," observes Dr. Rauschenbusch; "always for material interests complicated with moral questions," and "for such causes as this nations have always sooner or later fought"—

"England is right in condemning the violation of Belgian neutrality; but I do not believe she would have gone to war if France had violated Swiss neutrality. The possible occupation of the Belgian ports by her worst rival was another matter. She feels now that she must protect the small States; yet she crushed the Boer republics with such brutal aggression that great numbers of the best Englishmen protested. Her ally, Russia, is the great devourer of peaceful China. Her other ally, Japan, is now using Chinese territory for war purposes against the protest of China. Does England get excited about that?"

"In many conversations with leading men in Germany I found that they were bitter against England because they foresaw that England would let her French allies take the real sufferings of war, while she took its possible gain. Poor France is being devastated; all her available men are fighting. England is safe; she has less than two hundred thousand men on the field; before her own resources are fairly tapped, she is importing colonial troops, Russians, and Asiatics to help her. Her great fleet has not taken a single risk against the German ports. The long Baltic coast-line of Germany has been untroubled; the Baltic has been left as a German lake. I believe the Germans are fighting France without anger this time; only with pity, as a matter of necessity. Against the English they feel differently."

AFTER THE WAR THE CATHEDRAL OF HEIMS WILL BE REBUILT IN A STYLE MORE IN HARMONY WITH OUR PRESENT-DAY CULTURE THAN THE MIDDLE-AGE GOTHIC.

—Dr. Nolentreeker (Amsterdam).

WHY THE ENGLISH CHURCH GOES FORTH TO WAR

IN CONTRAST with much that has been written of the failure of Christianity in Europe, with assertions that the Prince of Peace no longer dwells in the hearts of his nominal followers, comes the clarion call of *The Canadian Churchman* (Toronto) to all Anglicans as Christians to go forth to war with

DEPARTURE OF CANADIAN FORCES.

One-half of these are said to be adherents of the Anglican faith. "The traditions of the Church of England," says *The Canadian Churchman*, "are in complete sympathy with service in defense of the country."

bayonet and machine gun against the Kaiser. There comes a time in the affairs of men, we are told, "when sin and self have intruded with the appeal to force that the only answer that can be made is in the same language of force. Anything else would be craven and recumbent." So, instead of the command to turn our cheek when smitten by our enemy, this Canadian editor is mindful rather of the Psalmist's song of such a time, "Blessed be the Lord, my strength, which teacheth my hands to war and my fingers to fight." Well may the Christians of the British Empire, we read further,

"give thanks to God for the men of our nation, strong, alert, and devoted. We are not a nation of puny weaklings, starved by the crabbed hand of an ill Providence, but a race of stalwarts nurtured on the rich harvests of a virgin soil. 'Live at peace with all men as much as in you lieth.' But the only way to see eye to eye with some men is along a gun-barrel."

"Sons of freedom every one are we. Can we refuse our aid when freedom itself calls us? Through the long process of centuries the leaven of the New Testament truths of individual worth and liberty has been working, and now we stand a nation wherein each man's rights are the concern of the State itself."

"A tyrant has arisen in the earth, a man of violence, who seeks to crush all power against his own and to rob the weaker nations of their rights. By long concealment of his grudge and by the deception of a promised peace, he has trained a nation to be soldiers. He hurls against a world astonished by his duplicity the men he has fed on dreams of empire to be won by force of arms."

"Emergency is the only word which covers the situation his unrighteous dealings have created. Emergency is the only word which conveys the strength of the armies he commands. That emergency is not one for Belgium, or France, or Great Britain alone, but it is for the whole British Empire. There is not the shadow of a doubt as to his desires. His resentment against England for her righteous championing of the cause of Belgium he makes no attempt to conceal. The check to his arms he lays ultimately at the door of the British. Her fleet has swept the seas and destroyed his commerce. The inviolate isle seems to mock him and stands as witness of the virility of democracy, with which he has no truce. His course has been stayed by sacrifice

Two months ago he would have made Belgium and France the hinterlands of Germany but for the men who laid down their lives for the freedom of their country.

"Great Britain has given men and means to drive back the common peril. All through the country was posted:

"YOUR KING AND COUNTRY NEED YOU."

From Canada, we are reminded, twenty-two thousand men went forth in answer to this call. But the war will be long; more men must go from Canada, and this editor is quite certain as to the duty of his readers:

"The man who is free to go has to give his answer as to why he should not go. He has to give that answer to his country and, on the peril of his manhood, to himself.

"Preparation is the duty of every man, whether he can go now or must wait until the danger becomes more acute or nearer home (which God forbid). He should know sufficient squad drill to enable him to become one of a body which can be moved rapidly and compactly. He should be able to give a good account of himself with a rifle. Accuracy of shooting is an important factor, as accounts from the field tell us. For efficient service training is required."

No swaggering and boasting! "He is a poor fool who boasts when warm, red, human blood alone can make good his boast." The *Churchman's* editorial concludes with a word on the part being taken and to be taken by the Church in this struggle:

"Anglicans have taken their full part in the Empire's struggle up to the present. No figures have been given out regarding the Canadian contingent which has landed at Plymouth, but it is safe to say one-half of the men are Anglicans. The traditions of the Church of England are in complete sympathy with service in defense of the country. The Church should be the whole state at prayer, and Anglican tradition has always held for the interpenetration of every department of life with the ideals of religion. The list of the sons of the Church of England who have served their country in military service is a long and honorable one. The Anglicans in Canada will keep true to the traditions of their Church and country."

Popes gave absolution to Crusaders who died fighting the heathen foe. And so a poetic tribute to "The Rank and File" which follows the *Churchman* editorial concludes with these words of promise for the hereafter:

"Tho' all your lives belie you, rude hand and ruder lips,
At last ye shine transfigured in death's apocalyptic.
When by our deed that washes each soul as white as snow
From merely man grown Godlike to God at last you go."

ENGLISH VIEW OF GERMAN MORALS

THE ETHICAL POSITION of Germany in the present war, treated with so much conciliation by Dr. Rauschenbusch in another article, is viewed from quite a different angle in the *London Times*. This writer takes the case of Professor Eucken as a representative one of the present temper of German ethical reasoning under the spell of war's necessities. The point of departure is a recent book by Dr. Eucken on "The Spirit of the Times" in which he shows himself not "pleased with the state of affairs in Germany." "He writes definitely to bid Germany collect its mind, bethink itself of the true sources of national greatness, cease to be dazzled by the immense material achievements of the past generation, and to realize that with all this advance in the material sphere and the worship of the *Kraftideal*, there has been a spiritual and ethical retrogression of a very serious kind." Professor Eucken, we are reminded, "may be regarded as the most authoritative ethical teacher of the class to which he belongs in contemporary Germany," yet the position he takes, so this writer thinks, is not unlike that of the German Reichstag after the Zabern incident which the Munich paper *Simplicissimus* satirized so bitingly:

"There were two companion pictures, one of which represented a crowd of excited females battering at a closed door. Underneath this was the legend: 'There will be no women in the next Reichstag.' The other drawing represented a crowd

of bowed and sheeplike figures, seen from behind, apparently doing reverence to some symbol of authority, with the words below: 'Nor men in the German.' Irresistibly this deadly thrust of the satirical dog in *Simplicissimus* recurs to the mind in reading Professor Eucken's latest word of counsel and warning to his countrymen. . . .

"The war has forced upon him a definite and concrete issue which he could not possibly evade. The issue is contained in the question, What about Belgium? We know how he has answered it. 'The advance through Belgium' was, it seems, 'necessary,' and with that 'necessary' all that is called for is said. But Germany was not in a position in which anything that could be rationally called a necessity had yet arisen. If that was necessary, any baseness, any treachery, might equally be called necessary if it were supposed to yield a military advantage. Eucken might here have said the word which would perhaps have won him obloquy in the present, but which his countrymen would in later and better days have recognized as the truest wisdom, the most faithful and patriotic counsel. He did not utter it. Deliberately he faced the issue; he came down on the Governmental side, he abased himself before the very *Kraftideal* which he had denounced with innocuous eloquence so long as he could keep it at a safe distance in the realm of philosophic abstractions; and in so doing he abased—for his position enabled him to do so—the whole of German ethical culture in the eyes of the civilized world.

"This and other more drastic revelations as to the worth of that culture have led in England to some curious and interesting speculations. It has been suggested from several quarters that the bad faith and the shocking cruelty and destructiveness with which Germany is waging war can be accounted for by that sapping of the historic data of orthodox Christianity which has been carried on so largely by German professorial criticism. One correspondent in *The Times* has recently quoted a beautiful and plausible passage of romantic nonsense from Heinrich Heine about the shattering of the Gothic cathedrals by the hammer of a rearsen Thor—the symbol which for the German is to displace the Cross. A moment's consideration, coupled with an elementary knowledge of history, ought to be enough to dispel this fancy. Never were wars waged with more ferocity and bad faith than in the days when those cathedrals were being built, nor were the cathedrals themselves always spared. In the present day France has broken more completely than Germany with the creed which ought to have averted the agony of Belgium and safeguarded the towers of Reims. The Kaiser is an orthodox believer of the Lutheran brand. M. Anatole France, on the other hand, might not unjustly be described as unbelief incarnate. Let us note, then, his words on the destruction of Reims:

"Soldiers of the right, we shall remain worthy of our cause. We will show ourselves until the end formidable and magnanimous. . . . We will exact pitiless vengeance on these criminals. We will not soil our victory by any crime, and on their soil, when we have conquered their last army and reduced their last fortress, we will proclaim that the French people admit to their friendship the conquered enemy."

"It is not from this side that we hear the demand which might have been expected for a barbarous retaliation in kind."

The bombardment of Reims and the excuses alleged for it, the writer concludes, are most instructively typical of the errors into which a system-ridden people may fall when they come to deal with what Bismarck called the imponderabilia—human forces that do not admit of being systematized:

"A building which is used for military purposes may be attacked—that is the theory. The cathedral is a building, and the French, so it is alleged, had an observation-post on its towers. And so, without warning or remonstrance, down comes a rain of shells as if the 'building' in this case were a villa or a barn instead of being one of the wonders and treasures of the world. The French lost their observation-post—if they had one; Germany lost something in the eyes of the civilized world which generations of peace will not restore to her. Nietzsche, in a famous passage in the 'Genealogy of Morals,' notes the aversion, the fear, the 'icy mistrust' with which the European peoples have regarded the rise of Germany to power, and ascribes this feeling to the haunting memory of the devastating ferocity with which the Goths and Vandals long ago overran the civilizations of the south. Apparently there is no one in Germany with perception enough to see the unwisdom, the imprudence from the lowest material point of view, of making that memory start out again, vivid and vengeful, and backed by far other powers than those which Rome in her decadence could command."

REVIEWS - OF - NEW - BOOKS

MRS. PARNELL'S BOOK ABOUT PARNELL

Parnell, Mrs. (Katherine O'Shea). *Charles Stewart Parnell: His Love-Story and Political Life.* Two volumes. Illustrated. 8vo, pp. xvii-258-272. New York: George H. Doran Company. \$5 net.

This book, announced as a "startlingly frank revelation of the famous love-affair of the 'uncrowned king of Ireland,'" belongs to a class of writings that might be called the forbidden fruit of literature. Critics of weight allude to it as one of the most remarkable books of these times and state that it has already created a great sensation. Those who hold the memory of Parnell dear and persist in regarding his lapse from morality, however serious in itself, as an episode in a career of unrivaled distinction, are certain to resent the publication of the book, and especially its being timed to coincide with the successful accomplishment of Home Rule. Literary productions of this class are undoubtedly interesting, but are usually reserved for publication until after the death of the author. Such, indeed, was the original intention in the case of this volume, but the arguments against posthumous publication were probably too strong to be withstood.

The tragic dénouement of Parnell's brilliant and dramatic career is still fresh in the public memory. Few men in political life have attained to that supreme power, so personal in its nature, which he wielded over his countrymen, and used solely for the benefit of the national cause. With the exception of O'Connell, no man in the long and discouraging record of Ireland's struggle for freedom so incarnated the spirit of a whole people in its aspirations for self-government. By a paradox not isolated in Irish history, he was, as regards personal characteristics, more an Englishman than a Celt. He was probably devoid of a single Irish trait and had the accent of a cockney. Yet this cold, impassionate aristocrat, lacking as an orator and in personal magnetism, gained such an ascendancy over the people of Ireland as had not been known since the days of the Liberator. The story of his virtually autocratic power in Ireland, of his creation of the Nationalist party, and of the long and memorable battle in Parliament for Home Rule, his unrivaled strategy whereby he secured the balance of power which enabled him to overthrow either of the great parties as it suited his purpose, his long parliamentary duel with Gladstone, whom he finally won over to the cause—all these events are given from an intimate and personal point of view by one who was a participant in the drama.

All the world has heard of Parnell's ill-fated infatuation for Katherine O'Shea, the wife of Captain O'Shea, his intimate friend and political protégé. The illicit relation was kept secret for ten years, and was finally revealed to the world in the proceedings of a divorce court. Even the dauntless mettle of a Parnell could not withstand the storm that broke over his head when his secret was divulged. The Catholic clergy, hitherto his powerful ally, condemned him without mercy. Gladstone disowned him. He defied his enemies, and, organizing a separate party with the remnant of his followers, appealed to the

peasantry of Ireland, for whom he had sacrificed everything, including his patrimonial estates. The dramatic character of the immense gatherings that assembled to hear his speeches addrest to the "men of the hillsides" is still remembered. The strain proved too much for his ever-frail health. Never was ruin more inevitable. The man who had recognized no criterion but success saw his life-work end in dismal failure. He died broken-hearted, still battling for the now vanished dream of Home Rule.

All this and much more of a secret nature are told in a narrative not lacking in glowing phrase and vivid descriptive touches by the woman who became the Irish leader's Egeria and political intermediary, and, later on, his wife. Whether or not she has earned the execration which the Irish people have visited upon her, and which she returns in kind in her amazing book, must be left to the reader's judgment. She has torn aside the veil which most women insist on interposing between the public gaze and their private lives, and has exposed to vulgar curiosity the whole of the private correspondence which Parnell addrest to her with its burden of unhallowed love, its secret avowals, its yearning tenderness, and, above all, its revelation of an utterly new, unsuspected, and intensely human personality which lay concealed under an exterior of ice and iron. Of the personality of Parnell, the author gives an interesting sketch:

"When I first met Mr. Parnell, in 1880, he was unusually tall and very thin. His features were delicate with that pallid pearly tint of skin that was always peculiarly his. The shadows under his deep somber eyes made them appear larger than they were, and the eyes themselves were the most striking feature of his cold, handsome face. They were a deep brown, with no apparent unusualness about them except an odd compulsion and insistence in their direct gaze that, while giving the impression that he was looking through and beyond them, bent men unconsciously to his will. But when moved by strong feeling a thousand little fires seemed to burn and flicker in the somber depths, and his cold, inscrutable expression gave way to a storm of feeling that held one spellbound by its utter unexpectedness.

"His hair was very dark brown, with a bronze glint on it in sunlight, and grew very thickly on the back of the shapely head, thinning about the high forehead. His beard, mustache, and eyebrows were a lighter brown. His features were very delicate, especially about the fine-cut nostrils; and the upper lip short, tho the mouth was not particularly well shaped. His was a very handsome, aristocratic face, very cold, proud, and reserved; almost all the photographs of him render the face too heavy and thicken the features.

"He had an old-world courtliness of manner when speaking to women, a very quiet, very grave charm of consideration that appealed to them at once in its silent tribute to the delicacy of womanhood. I always thought his manner to women, whether equals or dependents, was perfect. In general society he was gracious without being familiar, courteous but reserved, interested yet aloof, and of such an unconscious dignity that no one, man or woman, ever took a liberty with him.

"In the society of men his characteristic reserve and 'aloofness' were much more

strongly marked, and even in the true friendship he had with at least two men he could more easily have died than have lifted the veil of reserve that hid his inmost feeling. I do not now allude to his feeling for myself, but to any strong motive of his heart—his love for Ireland and of her peasantry, his admiration that was almost worship of the great forces of nature—the seas and the winds, the wonders of the planet worlds, and the marvels of science.

"Yet I have known him expand and be thoroughly happy, and even boyish, in the society of men he trusted. Immensely, even arrogantly, proud, he was still keenly sensitive and shy, and he was never gratuitously offensive to any one. In debate his thrusts were ever within the irony permitted to gentlemen at war, even if beyond that which could be congenial to the Speaker of the House or to a chairman of committee.

"Parnell went into nothing half-heartedly, and was never content till he had grasped every detail of his subject. For this reason he gave up the study of astronomy, which had become of engrossing interest to him, for he said that astronomy is so enormous a subject that it would have demanded his whole time and energy to satisfy him. He was constitutionally lazy, and absolutely loathed beginning anything, his delicate health having, no doubt, much to do with this inertia, of which he was very well aware. He always made me promise to 'worry' him into making a start on any important political work, meeting, or appointment, when the proper time came.

"In character Parnell was curiously complex. Just, tender, and considerate, he was nevertheless incapable of forgiving an injury, and most certainly he never forgot one. His code of honor forbade him to bring up a wrong of private life against a public man, and he had a subtle love of truth that dares to use it as the shield of expediency.

"Physically Parnell was so much afraid of pain and ill-health that he suffered in every little indisposition and hurt far more than others of less highly strung and sensitive temperament. He had such a horror of death that it was only by the exercise of the greatest self-control that he could endure the knowledge or sight of it; but his self-control was so perfect that never by word or deed did he betray the intense effort and real loathing he suffered when obliged to attend a funeral, or to be in any way brought into contact with death or the thought thereof. Whenever we passed, in our drive, a churchyard or cemetery he would turn his head away, or even ask me to take another road. The only exception to this very real horror of his was the little grave of our baby girl at Chislehurst, which he loved; but then he always said, 'She did not die, she only went to sleep.'"

OTHER WORKS OF HISTORY AND BIOGRAPHY

Agassiz, G. E. *Letters and Recollections of Alexander Agassiz.* With a Sketch of His Life and Work. With portraits and other illustrations. Pp. 644. Boston and New York: Houghton Mifflin Company. \$3.50 net.

The task to which the son of Alexander Agassiz has here set himself has been performed *con amore*. The pictures which he offers are etched with sympathy and their lines are strong and sure. The contrast in temperament and in conviction between the gifted scientist and his distinguished father, Louis Agassiz,

A naval officer I know canceled a lot of engagements last week in order to devote the time to his dentist.

"I am going on a long cruise," he said, "and I know the value of good teeth. Good teeth mean good health. Afloat or ashore a man can't do his work *well* unless he has good teeth."

In the army and the navy, and in all great industrial spheres, the value of good teeth is being recognized. Statistics prove that sound, clean teeth preserve health and promote business efficiency.

The twice-a-year visit to the dentist and the twice-a-day use of Colgate's Ribbon Dental Cream (the efficient, deliciously flavored dentifrice) insure sound, clean teeth, better health and better looks.

**You too
should use
COLGATE'S
RIBBON DENTAL CREAM**

sharply drawn. A passionate love of natural science seems to have been almost their only common trait. The elder Agassiz, robust, buoyant, reverent, conservative, was ever a great teacher, kindling the enthusiasm of thousands for science-study. His son, retiring, cautious, intolerant, yet swiftly progressive, and surrendered to research, is justly named as a great investigator. How far the natural reserve of Alexander Agassiz was deepened by the sorrow with which the early death of his wife shadowed his life we may not determine.

To the scientist, the interest of the biography lies in the results of Agassiz's voyages in nearly every sea upon the globe, in which he gathered facts and specimens of first importance for the up-building of the great Agassiz Museum at Harvard University, and of the sciences to which the Museum is devoted.

Yet, curiously enough, the most romantic part of his career is his rescue of the Calumet and Hecla mines from imminent wreck, to become the source of great fortunes to investors and of prosperity and happiness to thousands of workingmen. Only rare executive ability and mighty patience, combined with scientific knowledge, could have wrought that slowly coming miracle. "Since Hecla paid its first dividend in 1869, the company had paid to its stockholders, up to December 31, 1909, the huge sum of \$110,550,000." That mine is "a monument such as few men can show as a result of a life's work; when we consider that it was the by-product of the brain of a man whose life's interest was abstract science, the monument becomes unique." By the wealth which came to him personally from this valiant adventure he was "enabled to lead a series of scientific expeditions to the ends of the earth, any one of which would have more than fulfilled the fondest dreams of many a poor naturalist patiently bending over his microscope."

Higginson, Mary Thacher. Thomas Wentworth Higginson. Story of His Life. 8vo, pp. 435. Boston and New York: Houghton Mifflin Company. \$3.00.

A typical American of the best type, Thomas Wentworth Higginson had a remarkably many-sided nature and a genius which adapted him for a life of varied activity and accomplishment. He came of the highest class of New Englanders. Generations of his ancestors had served God and fought for their country and their rights as he was destined to do. In early life his religious piety led him to be a preacher, after serving some time as a tutor at Harvard. In 1850 he left his congregation at Newburyport, because as an abolitionist he could not work harmoniously with it. The honesty of his convictions is shown in the way in which he took command of a regiment of emancipated slaves in the Civil War, and was wounded and invalided in 1863, from which period he actively applied himself to literature, as well as to the study and promulgation of advanced educational news.

The present volume, the work of his wife, reveals the personality of a clever and conscientious man who could fight equally well with the weapons of peace and the weapons of war. He was the last survivor of that brilliant group which comprised Longfellow, Holmes, Motley, and Lowell, and his essays and sketches are

AWK! This Should Never Happen to You

A tooth brush bristle in the throat is unpleasant to say the least.

More—it is dangerous! Liable to cause severe choking or coughing fits which might result seriously.

RUBBERSET Safety Tooth Brushes

Loose tooth brush bristles can be avoided easily. When you buy a tooth brush, insist on the RUBBERSET, the *Safety* tooth brush.

A RUBBERSET tooth brush cannot shed a single bristle. The bristles are held in hard vulcanized rubber — you cannot force them loose.

These brushes come in all shapes to suit all requirements. The price is 25c for 8-row style, and 35c for 4-row style.

It costs no more to be on the safe side. Use a RUBBERSET Safety Tooth Brush.

**RUBBERSET COMPANY, Newark, N. J.
R. & C. H. T. CO., Props.**

The arrow points to one of the many individual brush sections, showing how each bristle is gripped in hard vulcanized rubber and cannot come out.

United Profit Sharing Coupons packed with every RUBBERSET BRUSH. Good for valuable premiums.

measured on many library shelves. His last work was a life of Longfellow, published in 1902.

Mrs. Higginson's pleasing memoir is full of bright sketches of character and anecdotes of characteristic point. She writes with a sweet and unaffected grace that the friends and admirers of Mr. Higginson will acknowledge with gratitude.

J. G. Frazer, D.C.L., LL.D., Litt.D. *Adonis, Attila, Osiris.* Studies in the History of Oriental Religion. 3d ed., 2 vols., 8vo, pp. xvii-317, 321. London and New York: Macmillan, 20s. net.

The separate issue of Part IV. of "The Golden Bow" took place in 1906 in a single volume. The present edition is expanded into two full volumes by the addition of several chapters. The new matter comes from several sources—especially Bandissin's work on Adonis, Budge's noteworthy volumes on Osiris and the Egyptian Resurrection, and Garstang's on the Hittites. Besides these, a number of other recent works adducing ethnological and other material have been laid under tribute, so that most of the available data are brought up to date. There appears to have been, however, one omission of a pertinent and notable source—William Hayes Ward's original work on the seal cylinders of western Asia. Some items concerning which Dr. Frazer's information is either uncertain or erroneous might have been definitely or correctly put had his authority been employed. Still, a mass of facts has been brought together which—when sifted, verified, and disentangled from occasional doubtful exegesis—is of permanent value.

The Empress Frederick. A Memoir. Pp. 371. New York: Dodd, Mead & Co., 1914. \$2.50.

Strangely enough, little is known, and almost nothing has been written, about the mother of Germany's Emperor, William II. While the present author prefers to remain anonymous, we are assured that he is thoroughly conversant with her life, and has written a "biography, intimate, discreet, authentic, and interesting." Unlike most royal persons, the eldest daughter of Queen Victoria and Prince Albert lived a very normal life, free from unnecessary excursions of royal etiquette. Her father instructed her in all healthy, out-of-door sports, and educated her along lines which included an understanding of statesmanship and political conditions. Her marriage with Prince Frederick William of Prussia was a love-match. There was never a cloud on their married life, except such as were caused by death and natural sorrow. Their esteem was mutual and their home life happy. The Princess Royal was full of personal enthusiasm, sympathetic toward suffering, active in philanthropic movements, and yet in her fifty years of Berlin activity she was often misunderstood and misjudged. Bismarck worked against her, and yet frankly admired her intellect and ability. The author gives a very fair account of her mistakes, apparent and real, and pays a high tribute to her personality. "All through her life," we are told, "one of the Princess's mental peculiarities was that of thinking it impossible that any reasoning human being could object to anything that was obviously in itself a good and wise measure."

Bryce, James. (1) *The Ancient Roman Empire and the British Empire in India.* (2) *The Diffusion of Roman and English Law Throughout the World.* Two Historical Studies. 8vo, pp. 133. New York: Oxford University Press. \$1.90.

Manning-Bowman Electric Dining Table Set

Those who are acquainted with the quality, efficiency and beauty of Manning-Bowman Percolators, Chafing Dishes, Tea Ball Tea Pots, etc., would expect something unusual in our Electrica.

We offer it here. An electric stove that can be used with any utensil. You can readily see the saving effected by buying the set in preference to utensils with the heater attached. The articles may be purchased as a set or separately.

Manning-Bowman Percolators have for years established a standard of quality for the percolation principle of coffee-making—a principle that guarantees a better, more healthful and more delicious cup of coffee in less time and at less cost than can be obtained by any other process.

This standard of quality is manifested throughout the entire line of Manning-Bowman Ware, which includes any cooking or heating device for use with electricity, alcohol or on ordinary coal or gas range.

Special Booklet describing any article sent on request.

**Packer's
Tar Soap**

(Pure as the Pines)

Lord Bryce does much in these two essays to place the Government of India in its true historical perspective with regard to the Roman conquest of the various nations and the establishment of a Roman empire in civilized countries. In fact, we may say that the Romans were superior to the British in one respect. The fields they traversed, the cities they captured, the temples they seized upon were turned into something Roman. A Goth in the time of the Christian emperors became the head of the Roman army in Constantinople, a Spanish soldier was made Emperor of Rome, and the Roman language became an instrument with which a Spanish poet expressed himself in meters which Rome had borrowed from Athens and Alexandria. This is not the way in which we must describe the relations of England with India. India is ruled under the British raj by downward pressure. India has not become Anglicized. As Bryce remarks:

"The English have impressed the imagination of the people by their almost uniform success. . . . That over 300,000,000 of men should be ruled by a few pale-faced strangers seems too wonderful to be anything but the doing of some unseen and irresistible divinity. I heard at Lahore an anecdote, which, slight as it is, illustrates the way in which the native thinks of these things. A tiger had escaped from the Zoological Gardens, and its keeper, hoping to allure it back, followed it. When all other inducements had failed, he lifted up his voice and solemnly adjured it in the name of the British Government, to which it belonged, to come back to its cage. The tiger obeyed."

"In the high-class grades of the civil administration there are only about 1,200 persons; and these 1,200 control 315,000,000, doing it with so little friction that they have ceased to be surprised at this extraordinary fact."

Mr. Bryce does not fail to point out the astounding character of this plain fact. He writes, of course, with the same copious and natural flow of learning, the same candor, the same clear and felicitous phraseology as are characteristics of all his essays. These essays, separated as they have been from his "Studies in History and Jurisdiction," gain special significance from their very isolation in one volume.

Traubel, Horace. With Walt Whitman in Camden. 3d vol., 8vo, pp. viii-590. With portraits, facsimile letters, and index of names. New York: Mitchell Kennerly. \$3.00 net.

The third volume of Horace Traubel's Boswellian biography of Walt Whitman contains 583 pages of closely packed matter and continues this extraordinary record of the now world-famous "Good Gray Poet." It is a formidable literary production, quite in keeping with the unconventional character of the subject, who was in all things unlike other men—a literary anarchist ignoring all models and precedents in life and art and an original in all things. Whitman's rise and formal installation in the ranks of fame are one of the paradoxes of contemporary literature. At first scoffed at as a crank and mountebank of letters, he came gradually to be looked upon as a thinker and writer of original power.

The naked truth is what Mr. Traubel has aimed at regarding his idol. To attain this he has, in the plan of his work, cast aside art, order, style, grammar, chapter-division, all hitherto regarded as the essentials of a book, and has assembled in a heterogeneous mass all that has any bearing on Walt Whitman's long life and varied ac-

tivities—his favorite authors, his views on philosophy, art, politics, religion, his literary heroes, among whom are mentioned Carlyle, Tolstoy, Victor Hugo, and Eugene Sue. In photographic accuracy and minuteness of detail this amazing production outranks Boswell himself, the author's model. The effect on the reader is as tho the contents of an omnipresent phonograph had been disgorged in print. Whatever may be thought of Mr. Traubel's book as literature, it is a veritable mine of material for future biographers. Through all the dross runs a vein of rich virgin ore.

Out of the chaos of Mr. Traubel's pages emerges a portrait of Whitman. Stript of his vesture of hero-worship, he confronts us as he is in reality—a prototype of the new recruits to the world of learning provided by the intellectual middle classes made possible in an age of print. He is, as it were, the glorified *roturier* of literature, the ideal of the proletarian *élite* whom the public libraries have endowed, as they imagine, with the learning of all the ages. Above all, he is the representative of those who have partaken of the forbidden fruit of learning, and whose religious faith and normal traditions, undermined by the writings of Darwin, Huxley, Haeckel, and especially Ingersoll, for whom the Camden philosopher professes deep admiration, have been replaced by the religion of progress and the modern cult of democracy. The recent claims of his admirers that he was a man of deep learning are absurd. His writings and conversations indicate that he had skimmed over the works of great authors, but his culture was nondescript, and he gives the impression of one who had been at a great feast of learning and brought home the scraps.

Bradford, Gamaliel. Confederate Portraits. 8vo, pp. 281. Boston and New York: Houghton Mifflin Company, \$2.50.

In this book, eight of the leaders of the Confederate forces during the War of Secession are portrayed in a vigorous and sometimes severely candid way by the clever author of "Lee, the American." There are lifelike touches in the intimate description he gives us of Judah P. Benjamin, for instance, or Raphael Semmes, that "elderly, respectable, professional man," "no pirate," the commanding privateer, Robert Toombs, with his impressive physique, a born fighter as well as fiery orator, and something like a savior to Georgia, has never been so picturesquely described both in his excellencies and defects. In the political world, where he figured most, Stephens seems to have been pitifully ineffectual. As in the case of Benjamin, "lack of deep and heartfelt convictions, a shallow opportunism, prevented the man from making any distinguished mark on the history of time." With Stephens the same result "followed from an exactly opposite cause, and the excess of conviction most nobly nullified a prominent and notable career." The author feels sure that posterity "will adjust the difference and that Stephens will grow more and more in our history as a figure of commanding purity, sincerity, distinction, and patriotism."

Mann, Horace K. Nicholas Breakspoor (Hadrian IV.). Twenty illustrations and map. 8vo, pp. 134. St. Louis, Mo.: B. Hender. \$1.

This admirable biography, which on its earlier appearance formed a chapter in Mr. Mann's larger work on the popes, will be particularly interesting to English and American readers, for Hadrian IV. was baptized Nicholas Breakspoor, and was born

You Cannot Afford To Be Without This Hot Water Bottle

The Cello Metal Hot Water Bottle is just as vital a necessity as your fire, life, or accident insurance policy—because prompt use of the Cello will insure you against the many emergencies incident to the cold days of Fall and Winter now before us.

One reason why the Cello can be thus depended upon for un-failing reliability, is because it is made of finest nickel-plated brass—which we have found to be the only material that will positively withstand the severe test to which a hot water bottle is subjected. No rubber to dry up, crack, burst, or leak.

CELLO METAL HOT WATER BOTTLE

Sold to you with a guarantee, instead of a caution against boiling water.

Reliable, dependable, practically indestructible—that's the Cello. And it's wonderfully comfortable too. No awkward angles, the Cello is curved to fit the body. With the Cello comes a bag of blue flannel which makes it soft as a little pillow—stays hot all night. Long handle converts the Cello into an ideal method of massage.

Note this extra long handle stopper—one of the many convenient features of the Cello—which makes it ideal for massage purposes.

The regular stopper has a special grip so as to be easy to tighten or loosen. Handy loop for attaching with cord. Well cut screw thread.

Notice the patent neck, with air chamber, shown also in sectional view. Always sufficiently cool to handle with comfort.

Then again, inside the Cello is that patented contraction spring (see sectional view) which keeps the Cello always in shape—just as necessary as the stopper for keeping the water from running out.

With each Cello comes this neat blue flannel bag with handy draw-strings.

Can be filled from any faucet or kettle without slightest danger of scalding or burning the hands.

Air chamber around neck makes it comfortable to handle. Patent spring (inside) accommodates all expansion, contraction and vacuum, keeping the Cello always in shape—a feature no other bottle possesses. The Cello is perfectly sanitary—self-sterilizing every time you fill it.

Ask Your Dealer To Show You The Cello

and you will readily see why it should be your choice, why 90% of the metal hot water bottles bought are Cellos, and why all the valuable patents, the features that make a bottle dependable and durable, are owned exclusively and found only in the Cello.

Once you use the Cello, you will never be satisfied with any other hot water bottle, because it never disappoints you.

So get the Cello today at your drug or department store, in 1, 3 and 5 pint sizes, prices \$1.75, \$2.00 and \$3.00 respectively. 35c extra for 1 pint massage handle; 50c extra for 3 and 5 pint sizes.

Should you fail to find the Cello, order direct from us, mentioning size wanted and your dealer's name, and we will deliver by parcel post prepaid. Your money back if you are not more than satisfied.

A. S. CAMPBELL CO., 285 Commercial St., Boston, Mass.

Does your
face feel
like a board?

That drawn, wooden feeling is due to an excess of caustic in your shaving soap. So is the biting and smarting. "Rubbing in" the lather with your fingers works this irritant into your pores and makes matters worse.

Mennen's Shaving Cream requires no "rubbing in" and contains no free caustic.

A few strokes of the brush works up a rich, creamy lather which softens the toughest beard.

No re-stropping; no re-lathering; no after-lotions; no time wasted; no sore, burning skin.

Read this strong commendation from a man whose shaving troubles are over: "I am a mechanic and my beard is usually full of dirt and grit, which, before using your cream, required from ten to fifteen minutes' application of

lathering. I used your cream as per directions on same, and procured a clean, close, velvet shave in less than five minutes. It does not irritate the skin and is pleasant to use."

Mennen's Shaving Cream is put up in sanitary air-tight tubes with handy hexagon screw tops.

At all dealers—25c. Send 10c for a demonstrator tube containing enough for 50 shaves. Gerhard Mennen Co., Newark, N. J. Makers of the celebrated Mennen's Borated and Violet Talcum Toilet Powders and Mennen's Cream Dentifrice.

Trade Mark

Mennen's Shaving Cream

in England early in the twelfth century. As he has a warlike name, so he was of a warlike or pugnacious nature.

Like Wolsey in England he fought for the Church, and his first antagonist was the redoubtable Arnold of Brescia, who wished to restore what it was left for Garibaldi to restore in a more enlightened age—the royal supremacy in Rome. He crushed Arnold, who was eventually banished. The main conflict of his life, however, was with the Roman people, who refused to accept Frederick of Barbarossa, whom Hadrian had crowned as king on condition that he enforced the people's submission to the papal see. These incidents and the many other stormy passages in the life of the only English pope are well and perspicuously treated by this author, and we hope that those who read this volume will look upon it as an introduction to the learned work of which it forms one instalment. Nineteen plates and a map enhance the value of the book.

Frank, Tenney, Professor of Latin, Bryn Mawr College. *Roman Imperialism*. 8vo, pp. xi+363. New York: The Macmillan Company. \$2.50.

This author has produced in clear and vigorous English a serious philosophical study of Roman territorial expansion, a subject of pertinent interest as applied to present-day world polity and of especial significance with regard to international affairs in our own country. The author's classical attainments have been of signal advantage, giving access to original sources of information and enabling the author to supplement the value of historical matter by excerpts from the literary productions of the period. The author has also made good use of knowledge gained from the works of distinguished modern historians, who are mentioned in a note of acknowledgment: Mommsen, Meyer, Abbott, Beloch, Botsford, Cardinali, Chabot, and Colin.

The central idea of Roman foreign policy was, in the author's view, a prudent liberality toward the conquered state, designed to heal the bitterness of conflict and bind the subject power to the conqueror by mutual interests and the granting of full citizenship. It was the exact opposite of the Greek idea, which treated a conquered people as virtual slaves. What aroused the ambition of the republic and started it upon the path of imperial progress was the war with Hannibal, which, tho at the beginning a series of disasters, had as its final result the definitive dominance of Rome as a world-power. It was the hard-won victory over Carthage which gave Rome her primacy among the nations and imbued her with the conviction of her invincibility.

The first great empire-builder who appears in Roman history is Pompey. In the wide range of human affairs there is perhaps no more amazing spectacle of mediocrity arriving at the pinnacle of success. Absolutely ignorant of the art of politics, he calmly appropriated the opinions of others and by means of his military prestige carried their ideas into effect. By degrees he came to regard himself as a great statesman and his self-rating was actually approved by the popular estimate. In a republic he wielded the shadowy power of an emperor, was feared like Sulla, and had statues erected in his honor. According to Froude, he was so handsome that "the women used to bite him." No more picturesque or puzzling example of greatness combined with fatuity has appeared

Each Year There Are
Over Three Million New Users of
Krementz Collar and
Cuff Buttons

One-piece construction and the heavy shell of hammered gold protects every exposed part from wear and tear.

Krementz Unbreakable Collar Buttons are made in 21 shapes. 14 Kt. Rolled Gold, 25c. each; 10 Kt. and 14 Kt. Solid Gold, \$1.00 and \$1.50.

Krementz one-piece-bean-and-post Cuff Buttons are built by exactly the same wear-proofing process as Krementz Collar Buttons.

A wide variety of exclusive patterns, with the newest flat or curved fronts; plain, engine-turned or engraved. \$2.00 a pair.

The purchaser is fully protected by this rock-ribbed Krementz guarantee: "If damaged from ANY cause, a new button FREE." Jewelry stores and haberdasheries and select drug stores sell Krementz Guaranteed Collar and Cuff Buttons. Look for the name on each button.

KREMENTZ & COMPANY
54 Chestnut Street,
Newark, N. J.

upon the stage of history. He is the exact antithesis of Rome's greatest figure, Cæsar, who next appears upon the scene, the embodiment and type of Roman imperialism.

OTHER BOOKS WORTH WHILE

Wilcox, Ella Wheeler. *The Art of Being Alive.* Pp. 200. New York and London: Harper & Brothers. \$1 net.

This is a helpful little handbook, in which each of the thirty-seven chapters is complete. The author shows, both in poetry and prose, the tonic effect of right thinking and how each of us may achieve contentment, strength, and ability by the use of our mental forces. It has the elements of theosophy, some of the rules of mental science, and a great deal of what used to be called "common sense." The author applies the principles of thought to every condition of daily life, to every class of people, and gives for every one helpful counsel and good suggestions.

Shackleton, Robert and Elizabeth. *The Charm of the Antique.* Pp. 300. New York: Hearst's International Library Company. \$2.50.

It would be hard to estimate the value of such a book to an enthusiastic antique collector, since even to the layman it has fascination. The illustrations and the character of the book itself have a compelling charm and the subject-matter is entertaining. The author gives a sort of bird's-eye view of the whole realm of collecting, tells the ways and means of acquiring things worth while, and the necessity for knowledge of actual worth and values; and recites some entertaining experiences in searches for Chippendale, Sheraton, and Heppelwhite furniture. The book is full of good and helpful advice. It cautions against overenthusiasm and counsels moderation. The reader will long for some of the chairs, high-boys, sideboards, and porcelain that used to be so common in "grandfather's house," but the path of the collector is full of pitfalls; let him go carefully.

Grayson, David. *The Friendly Road.* Illustrated by Fogarty. Pp. 342. New York: Doubleday, Page & Company. \$1.35 net.

Those familiar with David Grayson's former books will not have to be told that this is a continuous chronicle of Optimism. Such a spontaneous outpouring of a contented soul is restful and a delight to the reader. Tired of the monotony of his daily existence, and beginning to fear that the farm owns him instead of his owning the farm, the author set out with pack across his shoulder, and wandered into the country, carrying food for only a short time, no money and no definite plan, nothing but a penny whistle such as he played when a boy. Experiences—yes, even adventures—come thick and fast, and each makes a chapter of romantic narrative, permeated by the atmosphere of beautiful country life, cheery philosophy, and real inspiration. Mr. Grayson's method is delicious. He either whistles himself into the hearts of those he meets, or gains their confidence by joining them in their task of the moment. Each story is complete and satisfactory. In fact, the whole book is charming, sweet, and inspiring, full of "the very joy of living."

Most Misled.—"So you don't like living in the country? What do you miss most since moving out of town?"

"Trains."—*Philadelphia Ledger.*

If the Grocer Sold It This Way

Suppose your grocer sold Puffed Grains in bowls—as they come to your table, floating in milk. Or with cream and sugar. Or mixed with fruit.

And suppose children did the buying.

Don't you know that a child—whatever you sent for—would bring home this Puffed Wheat or Rice?

None Can Resist It

You read here—in cold print—of these Puffed Grain fascinations. And we can't describe them—can't make them seem good enough.

Or you see the package at your grocery store, and it looks like other wrappings. So some of you don't get Puffed Grains, and your folks miss their delights.

But when one sees these grain bubbles—eight times normal size—she can't resist these airy, flaky morsels.

When one tastes them—thin, crisp, porous—they reveal an enticing flavor, like toasted nuts.

And when they come to one's table—in cream or milk—one wonders and regrets that the table ever lacked them.

Puffed Wheat, 10c
Puffed Rice, 15c

The answer to your questions

WE have been asked such questions as: "Is Welch's Grape Juice pure?" "Is it part water?" "Is any preservative used?" "Do you add any sugar?" "Is it really unfermented?"

Perhaps similar questions have occurred to you.

Welch's is absolutely pure. It is just the unfermented juice of carefully selected, fresh Concord grapes. Nothing is added; no water or sugar or coloring matter or chemicals.

As soon as the skin of the grape is broken the juice is sterilized and sealed in glass. Welch's as it comes from the bottle to your home is as pure as when sealed by Nature in the cluster. All questions are answered when the bottle bears the guarantee of the Welch label.

CURRENT POETRY

BY writing "Wine of Wizardry" and "The Black Vulture," George Sterling earned the gratitude of all lovers of poetry. And unlike most poets who suddenly become famous, he has steadily gained power. His new book, "Beyond the Breakers, and Other Poems" (A. M. Robertson), is better than any of the three distinguished volumes that preceded it.

Here, for example, is a poem in "the grand manner," sweeping, sonorous, splendid. Swinburne, in the vigor of his youth, wrote like this.

"TIDAL, KING OF NATIONS"

(Genesis xiv. 1-17)

BY GEORGE STERLING

Tidal, king of nations, is it night and silence for thee—

For all who smote by the slime-pits and were slain in the valley of kings?

Come there dreams to the bed of stone which none attaineth to see—

Mirth of thy captains, moan of thy slaves or shadow of voiceless things?

Amraphel and Arloch and Kiam's over-lord,

Hold they still the part they held by the salt-sea's bitter breath?

Speak they yet of the battle's range when the nine kings drew the sword?

Beck they now for a phantom wine in the sunken courts of Death?

Tidal, king of nations, the desert is seal of thy tomb;

He who breaketh that ashen seal may sell thy bones for a price.

Thy scepter rotteth unheld and thy chariot in the gloom,

And the ghosts of thy gods come not to the evening sacrifice.

There, tho the twilight deepen, no harps are sad for thy sake;

Thou with care for thy wraths alone hast seen how the captains fall.

Time for thy doves hath given dust, for thy melon-vine the snake.

The bittern's cry for thy viol's voice, and the bat for thy nightingale.

Tidal, king of nations, and traitor to each for pride,

Thou wert no wall to thy people, nor guard in a narrow place;

Thy will it was on Admah and the hearths of Zoar to rife,

Slaying beyond thy borders, till the arrow sang at thy face.

Treasure and flocks and women, and all things fair in thy sight,

They for thine eyes were herded—and what do thine eyes discern?

For man and friend are broken, and none remaineth to fight;

They that supped with War hath War now eaten in turn.

Tidal, king of nations, could life be given again,

For what thy sword uplifted in the battle that kings must use?

Would thy heart give thought to the secret of man's unsearchable pain,

Keeping thy trust with the orphan, and the widow's empty cruse?

The waterways are broken that led to the corn and grape;

Thy steel was to other torrents, thy steeds to another goal.

Alas for our faithless hands that mar whatever they shape—

For the dusts made equal now in the palm of the groping mole!

Tidal, king of nations, the world is weary of strife;

We stand aghast by our engines, that wait for the trumpet's call.

Must man be brute forever and Hate be hurt over life?

Nay! tho the midnight question, the morning answereth all!

Still wait the fields for the sower, tho the lords of 't be not;

The heavenly roads be open to the horses of the sun;

And still the mighty Hands, unchangeable, unbegot,

Test as of old the nations, till the many realms are one.

And here is an exquisitely made sonnet. "With sandals beaten from the crowns of kings" is unforgettable.

THE COMING SINGER

BY GEORGE STERLING

The Veil before the mystery of things

Shall stir for him with iris and with light;

'Chaos shall have no terror in his sight

Nor earth a bond to chafe his urgent wings;

With sandals beaten from the crowns of kings

Shall be tread down the altars of their night,

And stand with Silence on her breathless height

To hear what song the star of morning sings.

With perished beauty in his hands as clay,

Shall he restore futurity its dream.

Behold his feet shall take a heavenly way

Of choric silver and of chanting fire,

Till in his hands unshapen planets gleam,

'Mid murmurs from the Lion and the Lyre.

One of Mr. Sterling's characteristics is his almost uncanny knack of using exactly the right words about beasts. No poet but he could make such a phrase as "the palm of the groping mole," in "Tidal, King of Nations." And no one but he could write so vivid, so sympathetically humorous a poem about a coyote as this.

FATHER COYOTE

BY GEORGE STERLING

At twilight time, when the lamps are lit,

Father coyote comes to sit

At the chapparal's edge, on the mountain side—

Comes to listen and to decide

The rancher's hound and the rancher's son,

The passer-by and every one.

And we pause at milking-time to hear

His reckless carolling, shrill and clear—

His terse and swift and valorous troll,

Ribald, rollicking, scornful, droll,

As one might sing in coyotedom:

"Yo ho ho and a bottle of rum!"

Yet well I wot there is little ease

Where the turkeys roost in the almond-trees.

But mute forebodings, canny and grim,

As they shift and shiver along the limb

And the dog flings back an answer brief

(Curse o' the honest man on the thief),

And the cat, till now intent to rove,

Stalks to her lair by the kitchen stove;

Not that she fears the rogue on the hill;

But no mice remain, and—the night is chill,

And now, like a watchman of the skies,

Whose glance to a thousand valleys flies,

The moon glares over the granite ledge—

Pared a slice on its upper edge.

And father coyote waits no more,

Knowing that down on the valley floor,

In a sandy nook, all cool and white,

The rabbits play and the rabbits fight,

Flopping, nimble, skurrying,

Careless now with the surge of spring . . .

Furry lover, slack! alas!

Slidest your fate o'er the moonlit gram!

Probably the war must be blamed for Alfred Noyes's attempt to make "pierce" rime with "universe." But in spite of this blemish, "The Search-lights" is a strong poem, altho it is not so forceful as an earlier and similar poem by Mr. Noyes which had as its refrain "Before the world, was God." This poem is based on the common

You have eaten Florida oranges that didn't have any

flavor. The pulp was dry and stringy and the juice—well, there wasn't much of it but what there was you found to be flat and sour. Not much pleasure in eating oranges like that! The fruit was insipid and tasteless because it wasn't allowed to ripen on the trees.

Again you have eaten the

other kind of Florida oranges

—thin-skinned fruit filled with sweet delightful juice. These oranges tasted so good um! How you smacked your lips at their delightful flavor! They were so fine simply because the growers had left them on the trees until fully ripe.

To advance their own interests by protecting those of the consumers of the fruit, progressive orange and grapefruit growers of Florida some years ago formed a co-operative organization. The members are pledged to ship only tree ripened fruit, that has been handled with extreme care from tree to railroad. None but white-gloved workers prepare this fruit for market—it never is touched by human hands before shipment. In the packing houses of the Florida Citrus Exchange no child labor is employed.

This mark is red on boxes and wrappers

FLORIDA CITRUS EXCHANGE

Means fully ripe, juicy, sweet fruit

Not many Florida oranges are ripe before winter. One of the few varieties which ripen in the fall is the Parson Brown—named after a good old preacher who had a fine orange grove. The Parson Brown oranges mature in October and November, and often will be sweet and juicy inside before they have become altogether yellow outside. This is true of no other Florida oranges—all other varieties show when they are ripe by their rich yellow color.

Only a limited number of Parson Brown oranges are grown in Florida. The greater part of the crop is produced by members of the Florida Citrus Exchange. When you buy Parson Brown oranges in boxes that carry the Exchange trade mark you may be sure that they are true to name and will be found ripe and sweet. Ask your dealer for Florida Citrus Exchange Parson Brown oranges and you will be sure to get what you want. This is Florida's early orange.

Florida grapefruit is of surpassing quality. This year's crop is the finest ever produced. The Florida Citrus Exchange will begin to ship grapefruit as soon as it is ripe. Buy in boxes or wrappers containing its red mark and be assured of the best in quality and ripeness.

Booklet of citrus fruit recipes, telling how to use and how to serve, mailed for four cents in stamps by Florida Citrus Exchange, 627 Citizens Bank Building, Tampa, Florida.

Danger and expense lurk in every weak ceiling

You could perhaps save a little by using "something else" in place of Herringbone, but the expense and danger of falling plaster or stucco would make that saving a future debt.

For your inside walls decide, now, that you will use

Herringbone

Rigid Metal Lath

grips and holds — prevents falling stucco and plaster

Use Herringbone for outside walls, too, if you want a stucco house—a permanent, fire-resisting, cheap-to-keep-up home. Remember, Herringbone holds plaster and stucco, prevents discolored, cracked and falling walls or ceilings.

Herringbone is either galvanized or painted at the factory and the paint baked on. It goes into walls untarnished and can not discolor plaster or stucco.

For unusually damp climates we recommend the use of Herringbone Armco Iron Lath—Armco is the rust-resisting iron.

Write for Book on Building Helps

Your home can resist fire, decay and time, and yet cost little if any more than an all-wood house. Let us help you as we have helped thousands of others. Send for "The Question of Building Material." It is full of illustrations of beautiful Herringbone homes. It contains facts that every home builder should know. Mention your architect's or builder's name and we will gladly co-operate with him in planning a house that will stand.

assumption, denied in Germany itself, that General von Bernhardi is the official spokesman of his nation.

THE SEARCH-LIGHTS

BY ALFRED NOYES

[*"Political morality differs from individual morality, because there is no power above the State."*
—General von Bernhardi.]

Shadow by shadow, stript for fight,
The lead black cruisers search the sea,
Night long their level shafts of light
Revolve and find no enemy.
Only they know each leaping wave
May hide the lightning and their grave:

And, in the land they guard so well,
Is there no silent watch to keep?
An age is dying; and the bell
Rings midnight on a vaster deep;
But over all its waves once more
The search-lights move from shore to shore:

And captains that we thought were dead,
And dreamers that we thought were dumb,
And voices that we thought were fled
Arise and call us, and we come:
And "Search in thine own soul," they cry,
"For there, too, lurks thine enemy."

Search for the foe in thine own soul,
The sloth, the intellectual pride,
The trivial jest that veils the goal
For which our fathers lived and died:
The lawless dreams, the cynic art,
That rend thy nobler self apart.

Not far, not far into the night
Their level swords of light can pierce:
Yet for her faith does England fight,
Her faith in this our universe,
Believing Truth and Justice draw
From founts of everlasting law.

Therefore a Power above the State,
The unconquerable Power, returns,
The fire, the fire that made her great,
Once more upon her altar burns.
Once more, redeemed and healed and whole,
She moves to the Eternal Goal.

Here is a pro-German poem written in English. We take it from the *Missouri Staats-Zeitung*. The last stanza contains a thought well worth emphasizing, but after the intensity of the preceding lines it seems an anticlimax.

AT BAY

BY ARTHUR NELSON OWEN

"Nun, Gott mit mir!" cries mighty Thor,
Great Wodan's son and god of war,
And hurls him in the whirling hell
And fights it long and fights it well.
So doth the lone and mighty Thor,
The dauntless old gray god of war.

Now round him roars the awful tide
Of battling beasts from far and wide;
For out the west as black as night
The grizzled Osa tears his right
And seeks to slay the mighty Thor,
The dauntless, old gray god of war.

In front old Taura grimly roars
As with his horned brow he gores
And flares his eyes and smokes his breath
With rage to bury Thor in death—
With rage to slay the mighty Thor,
The dauntless, old gray god of war.

'Upon the left the fiery Gaul
Is wild to see the hero fall,
While Taura bellows 'cross the main
And calls his beasts from mount and plain
And sets the mighty mob on Thor,
The dauntless old gray god of war.

But yesterday he taught them all,
A wealth of music in his hall,
From Bach, from Beethoven, Mozart,
And science, medicine, and art
He taught them too, did wondrous Thor,
The god of peace as well as war.

Lutton's Miniature Glass Gardens

ordered today will reach you in time to prepare a garden that will supply your table with delicious vegetables and beautiful flowers throughout the long winter months. Frames shipped complete, ready to put together. Quickly assembled, easily ventilated. Built of the same materials as the large ranges of glass which we erect in all parts of the country. Make winter gardening a continual source of pleasure and profit. We manufacture 2, 3, and 4 sash frames, single and double glazed. Besides the specials listed below. Complete planting instructions with each frame. Prompt shipment and satisfaction guaranteed. Send your order today. Portable Greenhouses—complete for \$185.00 and up.

Special No. 3 Diminutive Greenhouse

Covers 40 sq. ft. of garden space. Probably high enough to receive some of your tallest pet plants. Six large lights of extra heavy glass to each sash. Hinged at top. Easily ventilated, strongly made. Nicely finished. Quickly put together. Portable. Carefully packed. Price complete, freight prepaid anywhere in U. S. For double glazing \$2.50 extra. **\$20.00**

Our free catalog sent immediately for the asking. Write for it today

WILLIAM H. LUTTON CO.
721-3 Kearney Ave. Jersey City, N. J.

Special No. 2 Beginner's Garden

To meet a popular demand, we manufacture this special No. 2 sash and frame. It's 8 ft. 6 in. long and just wide enough to put in a 3 ft. space. Sash has six large lights of extra heavy glass so that plants receive the maximum of life giving sunlight. Carefully packed, easily set up. Price complete, freight paid anywhere in U. S. For double glazing \$1.00 extra. **\$10.50**

Hello Boys!
make lots of Toys

What shall we build first?

THE TOY WITH
GIRDERS LIKE STRUCTURAL STEEL.

**BIG PRIZES
FOR NEW
MODELS**

The Mysto ERECTOR

**ELECTRIC
MOTOR**
WITHOUT EXTRA CHARGE
(IN ALL SETS OVER \$3)

I KNOW what boys like. That's why I made the girders of the Mysto Erector with turned-over, close-lapping edges so that your boy could build big, strong, life-like models.

Not only can he build big, strong models, but he can build them easily and quickly, and they will be exactly like real steel construction.

With all sets over \$3 I give, without extra charge, an electric motor that runs many of the models—such as elevators, traveling cranes, derricks, drawbridges and machine shops.

The Mysto Erector is by far the most interesting and instructive gift you could find anywhere. It is so fascinating that the entire family will enjoy watching and helping the boy to construct the 300-and-more models.

Boys—just see how many things you can build! Think of the fun building battleships, torpedo boats, Brooklyn Bridges with third rail cars run by a real motor—skyscrapers with running elevators—electric-run sand shovels that dig just like the Panama Canal dredges—workshops with cute little band saws, power presses, lathes, buffing wheels, etc., that really go.

And think of all you'll find out about engineering and electricity!

You can build so many models with Erector that if you worked every minute from Christmas till next summer, without

stopping, you probably wouldn't get them all finished. This is because you get so much building material for your money with the Erector—more than with any other similar toy.

HURRY!

**SEND NOW
FOR THIS
FREE BOOK**

USE
COUPON 

And the models are made just like real structural steel. You can build quicker—the girders will never buckle up when you are putting them together. Only half as many bolts are needed, and the models are stiff and won't wobble.

Be sure to ask for the Mysto Erector, so you get the extra and better pieces and the motor. No other construction set gives a motor without extra cost.

The Erector is sold by toy, department and hardware stores and by many drug stores. Eight sizes, ranging from \$1.00 to \$25.00.

Send me your dealer's name and I will mail you my brightly colored Book, containing photos and descriptions of Erector models. I'll also send you a free copy of my magazine, *Erector Tips*, which publishes pictures of boys who build prize-winning Erector models; tells how you can win a prize; shows how to do magic tricks, etc. Every boy, every parent, should write for the free Book and magazine at once.

Dioxogen Remains the Same in Purity Dioxogen Remains the Same in Price

Dioxogen, the pure peroxide of hydrogen, is distinguished from all others by its strength, purity, uniformity and freedom from acetanilid.

ANALYSIS—	Absolute H_2O_2	3.750%
	H_2O	96.211
		<hr/> 99.961%
	Acidity expressed in terms of HCl .	0.011
	Residue	0.028
		<hr/> 100.000%

Extraordinary care is used in the manufacture of Dioxogen to insure its purity — not just for the sake of purity but because purity insures its efficiency in time of need.

Dioxogen

A germicide and antiseptic is used for mighty serious work. A pin prick may lead to blood poison, the scratch of a rusty nail may bring into your system the germs of deadly lock-jaw. You don't want to run risks when you have such emergencies to meet. You can always depend absolutely on Dioxogen strength, purity and uniformity.

Always ask for Dioxogen by name. If you are a user of peroxide, try Dioxogen next time. It will cost more than you paid for ordinary peroxide before the war, but for the extra pennies you may buy priceless protection for an emergency when even dollars do not count.

*Dioxogen is sold in sealed containers
by druggists at 25c, 50c, 75c*

THE OAKLAND CHEMICAL COMPANY, 10 Astor Place, New York

PERSONAL GLIMPSES

WHAT FATE FOR BELGIUM'S KING?

WHAT part will Albert of Belgium play in the affairs of Europe a year or two years from now? At present he is, in bitter truth, a "man without a country." Yet many people have pointed to him as the most significant figure in the New Europe that is to be brought forth through the world's present travail. As already mentioned in these columns, King Albert is strikingly like to the hero of H. G. Wells's "World Set Free"—the chief agent in establishing the world peace there set forth; and it may be safely inferred that that author had King Albert in mind. Again, an American editor not long ago, with some ingeniousness, suggested that Albert of Belgium may well prove to be the Napoleon of the present war whose coming Tolstoy predicted. Tolstoy's prophecy, printed in the Letters and Art Department of THE LITERARY DIGEST for August 22, mentions a leader "of little militaristic training, a writer or journalist," who would be the star ascendent in the final conflict. This description, the editor made plain, fits the young King passing well. He was not a direct heir to the throne, did not, in his earlier years, expect to reign; he was for some time a journalist in the full sense of the word, and his present position, hopeless as it may seem, is not without promise of great things to come, if he survive. Another straw, showing the direction of the wind of Fortune, is to be found in Gelett Burgess's description of Paris in war-time, in *Collier's* for October 17. He speaks of the popularity of the Belgians in the French capital, and adds: "On the terraces of cafés along the Grand Boulevards the old aristocrats are already talking of a new king of France. Who is the new pretender? Don't laugh. It's Albert I., King of Belgium!"

In this magazine for August 29, a short account was given of the young King's career and personality. Now, when nine-tenths of his country lies in the possession of the Germans and he himself is practically a fugitive, it is especially interesting to read another account of his life, written from a somewhat different viewpoint. Such a story appears in the *New York Evening Post*, in part as follows:

Albert, the king without a kingdom, is thirty-nine years old. When he ascended the throne, on December 23, 1909, in succession to his uncle, the late King Leopold II., of unsavory memory, there were no breakers ahead, and he looked forward to prosperous and peaceful days for his people.

"We must," he told them, "continue our unshakable attachment to constitutional liberty and the love of independence,

and thus hold sacred our patrimony while advancing toward the peaceful conquests in the fields of labor and science."

This expression was characteristic of the young King. He had no military aims to achieve; he believed his country to be securely maintained by the Treaty of London. Moreover, his individual tastes ran in the direction of peaceful pursuits; his chief desire was to help the Belgians, an industrious people, to achieve greater prosperity. He had already trained himself in the knowledge of statecraft, and by doing so had won the confidence of the nation.

The story of Albert's efforts to fit himself for his duties indicates in a measure the moral and intellectual status of the man. Not until the death of his elder brother, Prince Baodoin, in 1891, did Albert realize that he might some day be called upon to rule Belgium. He was then sixteen years old, and had studied little. He decided at once to remedy his deficiencies. Passing through the Belgian Military School, he received a commission in the Grenadier Regiment and was promoted rapidly from sublieutenant to colonel. His military duties, necessary as they were, did not interfere with more serious studies. For years he surrounded himself with professors and books. He went daily to the Foreign Office to learn diplomacy, and from diplomacy he turned to sociology.

We are told that his principal interest was ever the welfare of the Belgian people, and that he did not scruple to take the most direct available road to that end. It was not his place to interfere in matters of State, nor, at that time, to push himself to the fore. Instead, he made it his business to learn about his people intimately, from themselves. He went about among them, simply and without the slightest ostentation. They welcomed his democracy, lauded his methods, and told him all that he wished to know. In the same spirit, he determined to travel, that he might know something as intimately of other peoples. Thus it was that he came to this country in 1898. A description of the youthful Crown Prince of sixteen years ago is given by a Harvard graduate, who met him during his visit to Cambridge. Says the Harvard man:

"I saw a tall, pale-faced, angular, and rather awkward youth—he was only about twenty-three then. An army officer in uniform and a court physician trailed along behind. The Prince held his silk hat stiffly in hand and stepped forward. His hand-shake was hearty and vigorous. 'I am glad to meet you,' he said. 'It is a pleasure to see your quarters, and it is very good of you to admit us.' He spoke perfect English, with scarcely a trace of an accent. Then the Prince spied a group picture of some college girls, and examined it carefully. 'You have some very beautiful women in America,' he said, with a smile. 'I have often heard them praised, and now I am learning that it is all justified.'"

Awkward, unassuming, unsophisticated as he appeared, he viewed us shrewdly. When Albert left this country, we are

Examine A FREE Sample of the Fabric and You Will Realize the Superiority of **Duofold** Underwear

THE practical, common-sense construction of the Duofold fabric appeals to every intelligent person desiring the most comfortable, most hygienic undergarments.

Duofold is a *double* garment. Although made of two distinct fabrics it weighs much less than ordinary underwear. The outer fabric is warm, light-weight wool. The inner lining is soft, thin cotton. *No wool touches the skin.*

The cotton lining absorbs the moisture of the body and protects the flesh from the irritating wool. The woollen outer fabric repels the Winter's cold and retains the natural heat of the body.

The two fabrics are joined by wide stitching through which the air circulates and keeps the garment fresh and dry. Could anything be more practical? Physicians wear and endorse Duofold as the ideal underwear.

Combines All the Protection of Wool and All the Comfort of Cotton

Made in union and two-piece suits, in several weights and all sizes for men, women and children.

Sample of Duofold Fabric
and booklet on request.

In Peace and in War

—in Sickness and in Health
—in Good Times and Bad Times—in all climes and in all seasons—for children and grown-ups—the food that builds strong and sturdy bodies, fit for the day's work or the day's play, is

Shredded Wheat

the one staple, universal breakfast cereal that sells at the same price throughout the civilized world. War always furnishes an excuse for increasing the cost of living, but no dealer can raise the price of Shredded Wheat. It is always the same in price and quality—contains more real nutriment, pound for pound, than meat or eggs and costs much less—is ready-cooked and ready-to-serve.

Two Shredded Wheat Biscuits with milk or cream supply all the nutriment needed for a half day's work or play. Delicious for any meal in combination with sliced pineapples, sliced bananas, canned peaches, pears or any fruit.

"It's All in the Shreds"

Made only by

The Shredded Wheat Company
Niagara Falls, N. Y.

told, he was familiar with it as are few Americans. He knew its commercial and economic resources. Nay, more—

He knew about the experiments in trade schools which several States had begun, and he took with him a vast amount of other useful information which he was to use later for the benefit of the Belgian people. When he became king, he was the first and only European monarch who had been in personal contact with the industrial life of America.

One of the problems that King Albert had to tackle was the Kongo, the rich and extensive African colony which Leopold controlled and exploited personally as a business venture. The Kongo atrocities had long been a blot on the white man's civilization, and the whole world demanded better treatment for the negroes in Belgium's possessions. King Albert promised reforms in his first speech from the throne.

"In the Kongo," he said, "the nation wishes a policy of humanity and progress enforced. The mission of colonization can not be other than a mission of high civilization. Belgium has always kept her promises, and when she engages to apply in the Kongo a policy worthy of her, none has a right to doubt her word."

King Albert, we are told, was well equipped to formulate a humane policy, for, some years before, and contrary to the wishes of King Leopold, he had visited the Kongo country and observed the condition of the natives. The first-hand knowledge there gained he applied in working out reforms, and tho all the abuses may not yet be remedied, a more intelligent and humane policy has been enforced under his guidance. But the young King and old Leopold had little in common, at the most. As we are told:

In contrast to the wild life of his predecessor, Albert has maintained a reputation for clean living. He kept himself apart from Leopold and the unhappy affairs of his daughters. His married life has been a happy one, and his consort, Queen Elizabeth, daughter of Duke Charles Theodore of Bavaria, a famous scientist and eye specialist, is devoted to her adopted land.

Queen Elizabeth is an accomplished woman. She is a registered physician, a graduate of Leipzig, and has a sound knowledge of art, literature, and music. The King admits that she taught him to appreciate art and literature, two things that were banished from the Belgian court during the reign of Leopold. In reviving an interest in them, Queen Elizabeth has encouraged Belgian authors and artists to new flights.

After the marriage of Albert and the Princess Elizabeth in Munich, on October 2, 1900, they made a tour of Europe and the Far East, traveling only with a maid and courier. Three children have been born to them—Philip, the Crown Prince; Prince Charles, and Princess Marie. Both the King, whose mother was a Hohenzollern, and the Queen have severed many blood ties in defying the German Kaiser. Their devotion to Belgium has cost them a kingdom, perhaps for all time, if Germany dictates the terms of peace.

SPY-HUNTING IN ENGLAND

DETACHED the England is from the actual scenes of warfare and reasonably safe from any attack save from the air, and in spite of the fact that, in London and out, the country has remained quiet and apparently undisturbed through the stirring times of the last two months, there is yet evidence enough that she is in a state of war. Colonial troops are reported to be stationed everywhere, the censorship is strict, economy is being more and more rigidly practised, and patriotism is being daily fanned into a flame more fierce and inextinguishable. In addition, reports are coming to us of a spirit pervading the whole nation, of unity and a shoulder-to-shoulder sympathy, that is bringing all classes of the people closer together than they have stood for many a year past. One example of this is given by Henry Reuter Dahl, in his account in *Collier's Weekly* of the system of surveillance, partly official, partly unofficial, that goes on day after day and night after night, in the effort to rid England of the plague of espionage with which it is said to be infested. His personal observations of the working out of this system were conducted at some considerable risk to himself, as he says:

My first Sunday I spent with a pal of mine near a naval port, but before I could come he had to ask the authorities for permission to have me and to explain my identity. My name did not sound healthy. I had a glimpse of the war from the inside, not the far-flung battle-line across Channel—khaki-clad men charging under bursting shrapnel—but of the dogged, silent determination of those left behind to guard home ground, searching in the dark for hidden enemies like a pack of terriers—women, children, rich men, poor men. Their nights are spent not in bed, but patrolling the lanes and the thickets, the culverts, or the railroads, challenging every passer-by, searching every face. And this I call practical patriotism and splendid—not like Fourth of July speeches in the United States or the weak-kneedness shown by those of our peoples who dug out of New England and buried their silverware during the Spanish War because of Cervera's phantom fleets. Right here is something for us to learn and store away, should the flash ever strike us.

Over the forts the arcs of the searchlights cut the heavens searching for the gray Zeppelins of the Germans, and against the greenish glare are the outlines of the guns. Through my glasses I could see the men operating the lights.

On the road to the city, with the dockyard beyond, the scout-master divided his section of boy scouts and sang out the orders for the night. In silence the boys went to their stations. The orders were to halt everything. And no motor nor carriage nor any pedestrians could pass unless hailed. The hail is "good night," and unless answered at once and in the King's clearest English, the boy scout blows his whistle and the signal is taken up by the others down the road until it reaches the sentry, who shoots first and asks questions

Olive Oil—Nature's Food and Medicine Combined

Its contribution to healthful living—where the choicest Olive Oil is obtained—Olive Oil Grapes, a new form which makes it pleasant and easy for all to take Olive Oil

Centuries ago the Greeks and Romans recognized the high value of olive oil for food and cookery, for the maintenance of health, and as an adjunct to the toilet. By the Ancients it was deemed indispensable. Subsequently, as the world's population increased and spread out, the use of olive oil became less general. Except in the native land of the olive, its use became as a lost art. Modern civilization has awakened to the benefit bestowed on mankind by olive oil. Thanks to a broader knowledge of dietary science, its use is increasing in extraordinary volume.

Where the Best Olives Grow Whence Comes the Choicest Oil

Many brands and grades of olive oil are on the market. The cheaper ones contain almost invariably cottonseed and other adulterants. The richest olive oil produced is pressed from the fruit grown in southern Italy. The finest of all these oils is "Cream Lucca," produced by one Italian firm for more than a century, ideally pure and pressed under sanitary conditions. This oil has long been ranked by epicures as the standard by which all others are compared.

What "Virgin Olive Oil" Means and How It Is Obtained

To users of olive oil the term "Virgin Oil" is important to understand. When the olives are picked they are reduced to pulp and then subjected to several pressings. The oil obtained from the first pressing is the choicest produced. It is called "virgin oil." That which is obtained from subsequent pressings is invariably inferior.

The Food Value of Olive Oil As Acclaimed by Authorities

Food scientists estimate the nutritive value of pure virgin oil as almost 100%, while that of eggs is but 12%. Dr. Harvey W. Wiley in his book, "Foods and Their Adulteration," says: "Edible vegetable oils * * * afford to a greater degree than any other kind of food product the elements necessary to the production of heat and energy. * * * By far the most important of these oils is the olive oil." A laboratory analysis shows that olive oil contains 264 carbohydrates per ounce, largely excelling all other articles in a table enumerating thirty-eight different foods. Its nutritive value is so high that in cases of low nutrition it is often used externally. J. Mitchell Bruce in his "Materia Medica and Therapeutics" states that "olive oil rubbed

into the skin is absorbed by the lymphatics and has a distinctively nutritive value."

Therapeutic Value of Olive Oil Restores and Preserves Health

Internally olive oil has important therapeutic properties. Authorities assert that it possesses prophylactic qualities in connection with the stomach and intestines. It is a mild and natural laxative. Many physicians believe it prevents the formation of gallstones. In appendicitis it is often used with beneficial results. In colic its soothing qualities are pronounced. "Olive Oil," says Sir Thomas Barlow, the noted physician to King George, "prevents waste of tissues." The same authority, speaking of its effect upon the complexion, says: "The warm, rich complexion of the Italian and Sicilian women is due to the free use of olive oil as much as to the air and climate of their country." J. Mitchell Bruce, writing of olive oil, states that "It constitutes a food, increasing the amount of fat in the tissues, furnishing force, and thus saving the waste of nitrogenous tissue and the necessity of consuming quantities of nitrogenous food. When cod liver oil is rejected, olive oil may be assimilated."

Olive Oil Grapes—What They Are, What They Accomplish

Olive Oil Grapes are soft, elastic, pure gelatine capsules, containing virgin Cream Lucca Oil and *nothing else*. These capsules are prepared under scrupulously sanitary conditions. In these Olive Oil Grapes you secure the following advantages:

- 1st—The oil is preserved without deterioration.
- 2nd—The Grapes are airtight and dustproof.
- 3rd—The oil is not tasted, so everyone can take it.
- 4th—Each capsule contains an exact quantity.

Importance of the Olive Oil Habit for Young or Old

In this way all can take and benefit from this natural food and medicine combined. Every family should keep a supply of Olive Oil Grapes on hand. There should be a box handy in the pantry, in the medicine cabinet, and in the pigeon hole of the business man's desk. Form the olive oil habit and you will notice a permanent benefit to your health. Take one or more Grapes with each meal and preserve the dietary balance. The Grapes are equally beneficial to young or old. Every grape taken is a contribution to your health insurance fund.

At all leading druggists, packed in boxes of 24 Grapes, 25 cents per box. Packed in boxes of 100 Grapes, \$1.00 per box.

McKESSON & ROBBINS
NEW YORK

afterward. A detachment of scouts are searching the railroad-track, the main line to London. As the train thunders by the boys hug the ground; with their staffs they examine each culvert, penetrate each shadow, and crawl underneath the bridges.

From early in the evening to dawn the silent, serious lads are on duty; cheerily they trot about, some of them barely eleven, and when exhausted they tuck in in the scout-master's motor. Here are the sons of cooks, butchers, naval officers; and the scout-master himself a figure of international prominence in the naval world. No effort is too big, no night too long, for it takes many hands to watch the roads, the approaches to the power-house and the water-reservoirs of the largest naval base in the Kingdom. Soldiers are wanted elsewhere, so others must help to see that no stick of dynamite cuts the water supply. And when the men are worn out from their nights' vigils in addition to their own daily duties, the women turn to and do their trick in the watch, as allies to the territorials guarding the main points; the babies are left with the nurses.

Hysteria, nerves, you say? No—spies! Many of them have been caught red-handed and dispatched to the Great Beyond without either obituary or corner's inquest, and all within the district of this base. Not a line appears in the papers; no one knows or speaks.

ROMANTIC DAYS IN WAR-REPORTING

"**F**AR off, as a child might sigh for the moon, this work had been the dream of my life, ever since I had come to realize I could write matter that men would print and that other men would read." So Archibald Forbes feels and writes of his profession as war correspondent, to which he has devoted ten years of his life. The story of his career in the field, where year after year he gave the best in mind and sinew to the securing of news, the best news, the quickest, and the most authentic, is told by F. Lauriston Bullard in his new book, "Famous War Correspondents" (Boston: Little, Brown and Company). To read of these heroes of an epoch past and gone and glimpse a few of the situations they experienced, the narrow margins by which they escaped death, and the extreme hardships they endured, is to peruse a succession of tales far more gripping in interest than the cleverest work of fiction. Sir William Howard Russell, MacGahan, Villiers, O'Donovan, Steevens, Creelman, Forbes, and many other "gentlemen adventurers" of the press, they are worthy of honor for what they did, and deserving of remembrance as the great ones of a now vanished race. Kipling calls Forbes "the Nilghai, the chiefest, as he was the hugest, of the war correspondents," and says of him: "Saving only his ally, Kenen, the Great War Eagle, there was no man mightier in the craft than he, and he always opened the conversation with the news that there would be trouble in the Balkans in the spring." And yet, with all this, the present writer tells us how, at the end of

the summer of 1870, Forbes stood in Fleet Street, in London, spinning his few remaining copper coins on the sidewalk, to decide whether he should continue as a war correspondent or go back to compiling marriages and "obits" on the London Scotsman. His first work had been with *The Morning Advertiser*, when he followed the German forces in the Franco-Prussian War, until, after Sedan, when the Germans prepared their advance upon Paris, *The Advertiser* recalled him, proposing, forthwith, that its Paris correspondent could report the siege and fall of Paris sufficiently well!

Forbes was compelled to return, without any further prospect than that of being able to sell to some London daily the information about the disposal of the German troops, which he alone in England knew. Twice skeptical editors refused him; at last Sir John Robinson, of *The Daily News*, who had noted some of his earlier writing, and kept in mind his name, accepted his services at twenty pounds a week. Of this opportunity Forbes wrote later:

"It is possible that had I declined I might have been a happier man to-day. I might have been a halier man than I am at forty-five, my nerve gone and my physical energy but a memory. Yet the recompense! To have lived ten lives in as many short years; to have held once and again in the hollow of my hand the exclusive power to thrill the nations; to have looked into the very heart of the turning-points of nations and of dynasties! What joy equal to the thrilling sense of personal force, as obstacle after obstacle fell behind one conquered, as one galloped from the battle-field with tidings which people awaited hungrily or tremblingly."

There was a vast difference between his first commission and this second one. Here he was free of the limitations placed upon him by *The Advertiser*, and might not only gather news where he would, but might set to work his fertile mind upon the schemes for news-gathering that were soon to make him renowned above his rivals. Mr. Bullard says of his work at this point:

He proceeded to be enterprising; he did new things constantly. For weeks he lived on foreposts within easy range of the French cannon at Metz. He was "at home" with a regiment of Prussian infantry, sleeping on straw in a corner of a chateau drawing-room. Like the war-horse, he sniffed battles from afar. He was the only spectator of the fight of Mézières-les-Metz, but still he could send only a half-column over the wire to London. He got a flesh-wound in the leg and suffered from fever. Entering Metz even before the capitulation, he joined in an informal fashion the sanitary volunteers. Gangrene attacked his leg and had to be burned out with acids, but he carried a vinegar sponge in his mouth and managed to keep going. Finally he had to go to England lest amputation become necessary.

Now he let slip a great opportunity. He saw the surrender of Metz and watched Bazaine drive away from the railway station. All night he wrote in his room

In one case Rice's brought 50% more daylight

It was in the plant of the Kellogg Toasted Corn Flake Co. (See what they say below). Over 3,000 firms have had similar experiences—concerns like the Ford Motor Car Co., General Electric Co., etc.

More daylight means more dividends. Employees work better when they can see better. In one big mill, the cost of production was 20% lower during daylight hours, than when artificial light had to be used.

RICE'S GLOSS MILL-WHITE

increases daylight 19% to 36%. It saves money, by **making repainting less frequent**. Another economy: it can be applied over cold-water paint. And it will not flake or scale.

Rice's is the original "mill-white." All others are imitations. It is the **only** gloss paint which contains no varnish. For that reason, we **guarantee** that if Rice's does not remain white longer than any other gloss paint—applied at the same time and under the same conditions—we will give, free, enough Rice's to repaint the job with one coat. We also guarantee that, properly applied, Rice's will not flake or scale. You cannot lose, under this guarantee.

Sold direct from factory

Rice's Mill-White is sold direct from the factory in barrels containing sufficient paint to cover 20,000 square feet—one coat.

Send for sample board,
and booklet "More Light"

U.S. GUTTA PERCHA PAINT CO.
29 DUDLEY ST., PROVIDENCE, R. I.

What a Few Users Say

Sanitary conditions in our plant have improved wonderfully. We should judge we are getting 50% more light than before.—Kellogg Toasted Corn Flake Co., Battle Creek, Mich.

We are indeed astonished to note the vast amount of daylight created by this paint—especially where we were formerly forced to use electric lights all day.—Knotsley Hoistery Co., Philadelphia, Pa.

The most practical interior finish we have ever used on walls and ceilings. We imagine will show an increase of between 20 and 25% in light.—R. J. Reynolds Tobacco Co. (Makers of Prince Albert).

Find it very satisfactory, indeed.—Gillette Safety Razor Co.

Out of six comparative tests, Rice's Mill-White leads.—Killingly Mfg. Co., Killingly, Conn.

We gave your paint a severe test in connection with several brands and your paint stood the test the best, and gave complete satisfaction.—The American Pin Co., Waterbury, Conn.

The closed car, so necessary to a successful social season, was never more superb in character and appointments than for the approaching winter. Body types in variety and a wide range of color schemes and finishing fabrics, now ready for Winton Six buyers, assure exclusive beauty for your personal car, and lend a new charm to winter engagements. It is not too late to place your order now. The Winton Motor Car Co., 77 Berea Road, Cleveland, Ohio. Branch Houses in Principal Cities.

but he did not hurry over the forty-five miles to Saarbrück. It was then that the German-American, Muller, carried to London the dispatch, long ascribed to Forbes, which indicated to Forbes and the others what they might have been doing all the time; and from then on the pace and the competition quickened.

During his brief stay in London, his chief, Robinson, said to Forbes: "As a fellow man I say you ought to lie up for six months; as a newspaper manager I wish you would start for the siege of Paris to-night." He started and his leg got well. Adventures in great variety befell him during the months of the siege. He began to display his remarkable ability as an organizer. The Germans were bewildered by the unaccountable speed with which his letters appeared in London.

What Archibald Forbes would have accomplished, faced by the censorship of to-day and the rigid limitations imposed upon the actions of war correspondents in the present war can not be known, but one who reads of his feats in those earlier times can not help believing that he would now find some way to break through the lines and were once more one of the phenomenal hits for which he was noted. Forbes's methods were not as subtle as his rivals imagined, but they were tremendously effective and for a long time absolutely mystifying. We read on:

So short was the interval between the time of events described and the time of the *Daily News* reports that one rival, concluding Forbes had telegraphic facilities denied to the others, made formal complaint. The Chief of Staff of the Crown Prince of Saxony informed Forbes of his rival's dissatisfaction, and under promise of secrecy Forbes disclosed his method to the staff officer. Soon after at a dinner an officer accused the correspondent of postdating his letters and thus faking their freshness. Forbes made his usual laughing reply that he carried his own private wire about with him, and placed a bet then and there that if a piece of information was communicated to him it would appear in *The Daily News* the second morning after. The officer told him of a movement of the troops and at once left the room. When Forbes visited the military telegraphic headquarters he found his guess of the errand of the officer verified; the operator grinned and said, "No; I am ordered to take no message from you." Nevertheless, after a few days Forbes handed the officer a copy of his paper of the date stipulated in the bet and containing the item upon which the bet was based, whereupon the officer stared and paid over the stake.

The mystery was explained by Forbes himself in these terms:

"My secret was so simple that I am ashamed to explain it, yet with one exception I had it to myself for months. When before Metz I had done my telegraphing from Saarbrück, depositing a sum in the hands of the telegraph-master and forwarding messages to him from the front against the deposit. Before leaving the frontier region I learned that a train started in the small hours of the morning from the rear of the German cordon on the

east side of Paris and reached Saarbrück in about fifteen hours. The telegraph-master would receive a letter by this train soon enough to wire its contents to England in time for publication in the London paper of the morning following. I put a considerable sum into his hands to meet the charge of messages reaching him, and arranged with a local banker to keep my credit balance with the telegraph-master always up to a certain figure. Every evening a field-post wagon started from the Crown Prince of Saxony's headquarters on the north side of Paris, picked up mails at the military post-offices along its route, and reached the railroad terminus at Lagny in time to connect with the early morning post-train for the frontier. At whatever point of my section of the environment of Paris I might find myself, a military post-office served by this post-wagon was within reasonable distance, and my letter, address to the Saarbrück telegraph-master, went jogging toward the frontier once every twenty-four hours, with a fair certainty of its contents being in England within twenty-four hours or thereabouts of the time of its being posted."

Another of his stratagems at the time of the St. Denis bombardment was to have all the particulars written in advance, and, indeed, already in type, locked up securely in the *Daily News* office. With the first gun that was fired, the Crown Prince gave to Forbes a signal of permission, Forbes shouted to his operator "Go ahead!" and these two words, wired to London, brought the full details of the attack upon the streets of London in the noon edition of *The Daily News*. One of the most thrilling tales of Forbes's work tells of his entrance into Paris during the siege. Taking advantage of a short lull in the fighting, he proceeded to achieve the impossible, as the story relates:

Forbes rode about the lines of investment and saw the depopulation of the environs of the city. During the great sortie he watched with alert eyes. He saw the thirty civilians who had come to offer King Wilhelm the German crown. Christmas passed, the bombardment piled the walls of St. Denis in ruins, and at last, on the evening of January 28, while the headquarters staff were assembled in the drawing-room of the château of the Crown Prince, an orderly brought in a telegram from the Emperor. It announced that two hours before Count Bismarck and M. Jules Favre had set their hands to a convention in terms of which an armistice to last twenty-one hours had already come into effect.

The correspondents nerved themselves to a desperate venture. The capitulation was imminent. The reporters watched each other suspiciously. How to get into Paris; how to be the very first to enter the city; how to get out of the city with the news, and how to get the news to their papers—these were their problems. The world was on tiptoe for tidings from the inside of the plight of Paris. The balloon post and the carrier-pigeons had come far short of telling the world the details of the awful experiences of the besieged city.

His German friends shook their heads and took pathetic leave of him when he announced his intention to try for Paris.

BUY DIAMONDS DIRECT

FROM JASON WEILER & SON,

Boston, Mass., one of America's leading diamond importers, and save 25 to 40 per cent on retail jeweler's prices

For over 38 years the house of Jason Weiler & Son of Boston has been one of the leading diamond importing concerns in America selling to jewelers. However, a large business is done direct by mail with customers at importing prices! Here are three diamond offers—direct to you by mail—which clearly demonstrate our position to name prices on diamonds that should surely interest any present or prospective diamond purchaser—

Ladies' or Men's Style Mountings as desired.

1 1/2 carat \$235.

This 1 1/2 carat genuine diamond is of great brilliancy and perfectly cut. Mounted in men's or ladies' style 14 k. solid gold setting. Our price direct to you \$235.

If you can duplicate this ring for less than \$200.00, send it back and money will be refunded.

1/2 carat \$19.

This 1/2 carat genuine diamond is of great brilliancy and perfectly cut. Mounted in ladies' style 14 k. solid gold setting. Our price direct to you by mail \$19.

1/2 carat \$65.

This 1/2 carat genuine diamond is of great brilliancy and perfectly cut. Mounted in men's or ladies' style 14 k. solid gold setting. Our price direct to you by mail \$65.

If you can duplicate this ring for less than \$50.00, send it back and money will be refunded.

Money refunded if not entirely satisfied

We refer you as to our reliability to any bank or newspaper in Boston.

If desired, rings will be sent C. O. D. with privilege of examination. Our diamond guarantee for 5 years' full value goes with every purchase.

WRITE TODAY FOR THIS BEAUTIFUL BOOK ON HOW TO BUY DIAMONDS

This booklet is beautifully illustrated. Tells how to judge, select and buy diamonds. Tells how they mine, cut and market diamonds. This book, showing weights, sizes and prices (\$10.00 to \$100.00), is considered an authority. A copy will be mailed to you FREE on receipt of your name and address.

A Genuine Comfort House Slipper

The very thing for a gift—unique and practical. Slippers made of soft suede back, heavy wool linings and other for trimmings. Toe is artistically decorated with colored beads. Colors, rich brown and grey. Misses' and ladies' sizes, \$2.50; men's, \$3.75, postpaid.

Be sure to mention size and color desired. Write for our booklet of Adirondack Christmas novelties.

E. L. GRAY & CO., Berkeley Square, Saranac Lake, N. Y.

Enjoy Better, Quicker Shaving

A cluster of rubber fingers, vulcanized in the center of the brush, thoroughly rub in the lather as it is applied, saving time and giving a beautiful massage.

AUTOMASSAGE SHAVING BRUSH

Costs no more than the old style brush. Sterilized and sealed in a sanitary box. At your dealer's 50c or sent prepaid \$1.

"Satisfaction or money back."

Leopold Ascher Co., 117 Chambers St., N. Y. Mfrs. of Century Brushes for 25 years.

The Ansco *Speedex*, as the name implies, is intended for extra high-speed work, and is therefore equipped with a fine Ansco Anastigmat lens, working at F 6.3, and with a high-grade accurate Ilex shutter, the maximum speed of which is 1/3000th second. The covering is genuine Persian morocco, with rich black leather bellows. No. 1A, 2½ x 4½ inches, \$45; No. 3, 3½ x 4½ inches, \$47.50; No. 3A, 3½ x 5½ inches, \$65.

ANSCO *Speedex*

THIS is unquestionably the *camera de luxe*. As a Christmas gift, it is a tribute to intelligent selection and knowledge of camera values.

Every Ansco model, from the lightning-like *Speedex* to the wonderful little folding *Vest-Pocket*, is an amateur camera of professional quality. Pictures taken by an Ansco loaded with Ansco film, developed with Ansco chemicals and printed on prize-winning *Cyko* paper are sure to be successful.

There are many Ansco models on display now at the Ansco Dealer's in your town, priced from \$2.00 up. See them. Write to us for Holiday booklet.

ANSCO COMPANY. Binghamton, N. Y.

The Extra Guarantee

**"Team Work"
for Twelve Years**

Organization wins every time, in war, sport, business. The Continental Motor is today America's Standard because, for twelve years, with every ounce of energy and with undivided enthusiasm, a group of men have played the game fair and square and hard. They are the Directors of the Continental Motor Manufacturing Co.

Continental Motors

The influence of this great Continental organization permeates the whole motor car industry.

It safeguards production for over a hundred manufacturers of trucks and pleasure vehicles by assuring a steady schedule of motors even in the hurly-burly and mad rush of the heavy buying season.

It holds the market stable by furnishing an unvarying measure of value.

It steadies the trend of design, for it is a clearing house wherein the ideas of world famous engineers (not only the Continental corps but all its allied firms) are exchanged and checked up.

It establishes sales of cars and trucks on the right basis—quality. And thereby builds up a permanent business for the dealer on the one enduring foundation of success—the satisfied owner.

Back your next car with this Continental organization.

He found the roads in bad order, long neglected as they had been, and much scored by the trenches of both armies. One shoe after another was torn from the hoofs of the laboring animal. He was dead beat when Forbes galloped to the station barely in time to consign him to the care of a German cavalryman and swing aboard the train. He was trusting no post service for his coup.

The following morning about two he was across France and in Karlsruhe, where he knew there was an all-night telegraph-office. For eight hours he remained there, supervising the work of the girls who had the night shift. The instant the message was gone he went aboard the train again, and forty hours after he had left Paris he was back in the city.

A CZARINA OF THE SWITCHBOARD

THO the device for privacy in telephoning described in *THE LITERARY DIGEST* for October 17 may be a boon to the majority of telephone-users, there is at least one place in this country where its inauguration would be viewed with dismay. That place is "Homeburg," now well known to readers, if not to geographers, through the writings of George Fitch. Mr. Fitch has put Homeburg on the literary map, and, more than that, has peopled it with a delightful collection of town-folk. His characters and his anecdotes about them may not be true, but they are essentially truthful. One of the most winning of these is *Carrie*, of whom he tells in the October *American Magazine*. She is the one and only Central of the local telephone exchange. Her power is absolute in Homeburg and unquestioned, but it is never abused. No "musical indicator" is needed by the subscribers. Indeed, one making *Carrie's* acquaintance is rather grateful for the tardiness of Mr. Howard's invention. In part, George Fitch's description of Homeburg's Central is as follows:

When my wife wants to know if hats are being worn at an afternoon reception she calls up Carrie. Ten to one Carrie has caught a scrap of conversation over the line and knows. But if she doesn't she will call up and find out. When a doctor leaves his office to make a call he calls up Carrie, and she faithfully pursues him through town and country all day, if necessary. When we are preparing for a journey we do not go down to the depot until we have called up Carrie and have found out if the train is on time. And when our babies wander away we no longer run frantically up and down the street hunting for them. We ask Carrie to advertise for a lost child, seven hands high, and wearing a four-hour-old face wash; and within five minutes she has called up fifteen persons in various parts of the town and has discovered that said child is playing Indian in some back yard a few blocks away.

Carrie is also our confidante. I hate to think of the number of things Carrie knows. Prowling into our lines while we are talking, as she does, in search of connections to take down, she overhears

UNQUESTIONED!

Alike in beauty and simplicity of operation, Ohio Electric supremacy is apparent

The beautiful body-design of the Ohio has long made it the car of comparison on every fashionable boulevard.

In this season's models crown fenders, beaten by hand from one piece of aluminum, lend even greater grace to the lines.

And the exclusive Ohio operating combination—magnetic control, magnetic brake and double drive—stands unchallenged as the simplest, safest, most efficient operating mechanism known.

Worm or Helical-gear drive optional. Literature on request.

enough gossip to turn Homeburg into a hotbed of anarchy if she were to let it loose.

But she doesn't. Carrie keeps all the secrets that a thousand other women can't. She knows what Mrs. Wimble Horn said to Mrs. Ackley over the line which made Mrs. Ackley so mad that the two haven't spoken for three years. She knows just who of our citizens telephone to Paynesville when Homeburg goes dry, and order books, shoes, eggs, and hard-boiled shirts from the saloons up there to be sent by express in a plain package. She knows who calls up Lutie Briggs every night or two from Paynesville, and young Alexander Bane would give worlds for the information, reserving only enough for a musket or some other dueling weapon.

There's very little that Carrie doesn't know. I shudder to think what would happen if Carrie should get miffed and begin to divulge. Once we had a telephone girl who did this. She was a pert young thing who had come to town with her family a short time before. It was a mistake to hire her—telephone girls should be watched and tested for discretion from babyhood up—but our directors did it, and because she showed a passion for literature and gum and very little work they fired her in three months. She left with reluctance, but she talked with enthusiasm; and Homeburg was an armed camp for a long time.

A BATTLE IN THE AIR

FOR many days Paris has dreaded an organized attack from the sky. Day after day, so the dispatches tell, has the German *Taube*, the Kaiser's war-pigeon, soared and dipt over the French capital, to the wrath and consternation of the populace below. No one can blame the Parisians for the excitement they manifest, but it is safe to say that any demonstration they have yet made would be of slight account beside the stir that would result did they realize the attitude of mind of the aviators above them. In the New York *Evening Post's* translation from the *Berliner Tageblatt*, a German aviator tells what his feelings were when he and his superior officer first sailed over Paris. His state of mind is easily understandable, but would not be appreciated by a harassed Parisian. He says:

Paris! The major pointed below with his finger, then turned slowly to me, raised himself from his seat, and—yodeled at the top of his voice! I saw it, altho the motor, which sang its song incessantly, overwhelmed the sound. And I? I went absolutely out of my little head with joy, and cut the maddest capers and caracoles in the air with my trusty biplane. There lay the white church of the Sacré Cœur, there the Gare du Nord, from which the French thought to leave for across the Rhine; there Notre Dame, there the old "Boul. Mich.," the Boulevard St. Michel in the Latin Quarter, where I bohemianized so long as an art student, and over which I now flew as a conqueror.

Unprotected beneath me lay the heart of the enemy, the proud glittering Babel of the Seine. The thought of everything hateful, always attached to the great city,

was swallowed up; an emotion of possession, of power, alone remained. And doubly joyful we felt ourselves. Double conquerors! In a great circle I swept over the sea of houses. From the street arose a murmuring of the people, whom the bold "German bird" astonished, who can not understand how the Germans are turning the French discovery to their own service more cleverly and advantageously than the French themselves.

As the French aeroplanes are usually all called away for scout duty on the firing-line, often the *Taube* goes unmolested, save for the harmless fire from below. But on this occasion the Germans were not so fortunate, and the result was a battle in the air with all the thrill that the most competent fiction-writer could inspire. As the airman tells it:

For nearly an hour we had been flying in swoops and had been shot at vainly from here and there below us, when they approached in extremely rapid flight from the direction of Juvisy a French monoplane. Since it was much faster than my biplane, I must turn and seek to escape, while the major made ready my rifle and reached for his revolver. The monoplane came steadily closer and closer; I sought to attain an altitude of 2,000 meters in order to reach the protecting clouds, but my pursuer, on whom we constantly kept an eye, climbed more rapidly than we, and came always closer and closer. And suddenly I saw at a distance of only about 500 meters still a second biplane, attempting to block my way.

Now it was time to act. In an instant my companion had grasped the situation. I darted at the flier before us; then a turn the major raised the rifle to his cheek. Once, twice, thrice, he fired. Then the hostile machine, now beside us, and hardly a hundred meters away, quivered and then fell like a stone. Our other pursuer had in the meantime reached a position almost over us, and was shooting at us with revolvers. One bullet struck in the body close beside the fuel controller. Then, however, impenetrable mist enfolded us protectingly, and the clouds separated us from the enemy, the sound of whose motor grew ever more distant.

When we came out again from the sea of clouds it was toward seven o'clock. In order to get our position, we descended, but suddenly there burst forth before us and behind us and beside us roaring shrapnel shells. I saw that I would have to fly a considerable distance over hostile positions and exposed to French artillery. "The devil to pay" again. Ever madder grew the fire. I noticed that the machine received blow after blow, but held cold-bloodedly to my course; at the time it did not come into my mind at all that these little pointed pieces of steel meant death and destruction. Something in mankind remains untouched by knowledge and logic.

There—suddenly before me, a yellow-white burst of flame! The machine bounds upward; at the same time the major shrinks together, blood runs from his shoulder; the wiring of one of the wings is shattered. To be sure, the motor still booms and thunders as before, but the propeller fails. An exploding grenade has knocked it to pieces, torn one of the wings to shreds, and smashed the major's

POMPEIAN OLIVE OIL

A clock of Proud Lineage

The Continental pattern of Seth Thomas Clocks was originated nearly a century ago. Today, more than ever, it is favored as a household clock.

This quaint and venerable recorder weaves the threads of time with traditional Seth Thomas exactness. The movement is an eight-day. Hours and half-hours are struck by a Cathedral bell. The case is mahogany with scroll top and base—below the dial is an artistic tablet.

Truly, the Continental is a clock of caste and worthy of a place in your home. It and other Seth Thomas Clocks of equal beauty and accuracy can be seen at most jewelers'.

shoulder. Steeplly my machine sinks to the ground. By calling up all my power, I succeed in getting the machine into a gliding flight, and I throw the biplane down into the tops of the forest trees, crashing through the branches and tree-crowns. I strike heavily, and know no more what goes on around me.

When I wake again from my unconsciousness, I find Major G. lying beside me on the ground, both of us in the midst of a group of the German Landwehr.

A REPAIR-SHOP FOR WARPED MINDS

WE know something of the work that is being done for children of sub-normal intelligence, the painstaking and patient work that brings light into the twilight mentality of those little ones suffering from "arrested mental development." But the Department of Efficiency and Economy of New York has lately unearthed a school that goes even further than this. It is a school that, in the words of the Department's official investigator, Miss Elizabeth Eadie Kerrigan, "gives kindergarten lessons to old men; that teaches painting to an ex-prize-fighter; that has for its pupils men of good education and illiterate immigrants from the heart of Russia." More than that, these pupils, so varied in age, character, and social status, are from the ranks of those who are regarded by most of us as the irreclaimable waste of humanity. The school is located in the Manhattan State Hospital for the Insane, on Ward's Island, New York, and the pupils are all inmates of the institution. In the New York Evening Post Miss Kerrigan tells how the school was started, by one man who has given his life to the work, in gratitude for the restoration of his own sanity:

A little over a year ago a man of the highest education and attainments, with degrees from European universities and with a record as a tutor in one of the royal families, as an instructor in the gymnasium, as a professor in various American universities, went voluntarily to Ward's Island for treatment. Domestic, financial, and other troubles were undermining the powers of his unusual mind, and he submitted himself to expert care to see if he could be restored to a normal state. In a few months he recovered his grip upon himself and began to study the patients around him.

It was soon evident that the man himself had entirely recovered his powers. Instead, however, of fleeing from the place at the first opportunity of release, he was stirred by gratitude for the help that had been granted to him and by humane interest in the suffering around him. He elected to remain upon Ward's Island and formally open a school for the reeducation of those whose minds had failed.

This man who is sacrificing himself for the good of other men is Prof. Karl R. Moench, Ph.D.

The stories that Professor Moench can tell of his experiences and the vagaries of

Bedtime and Comfys

AN irresistible combination for a tired man! The thick cushion soles of COMFY felt slippers give you a foretaste of how good bed will feel. A Big Man's Game —for Boys

Boys take to the American Model Builder like ducks take to water. It's a big man's game—natural for them—supplies a distinct want in their nature. For every boy is fundamentally a builder, an inventor, and

THE AMERICAN MODEL BUILDER

gives him just the opportunity he craves—to think, to invent, to create, to construct, to build—to "use his head." The American Model Builder contains all main mechanical parts used in modern engineering—spring tempered, nickel-plated steel girders, gears, pinions, pulleys, beams, bolts, nuts, etc., with which boys can build bridges, derricks, etc., Fathers, and Boys, too.

Write for illustrated free book

"The Story of Steel," which shows dozens of new models and tells all about the American Model Builder.

Eight sizes, 50c up, at Sporting Goods, Toy and Department stores everywhere.

The American Mechanical Toy Co.
342 East First St., Dayton, Ohio

his pupils range from the sublime to the delightfully ridiculous, and from stories of unremitting, patient, unrewarded effort to anecdotes of sudden surprises and even great personal danger. Once it was necessary to leap between two scholars who were flying at each other's throats with murderous intent; once an apparently hopeless case of wilful unresponsiveness was cured in an instant by the chapel organ, whose compelling tones awoke the obstinate one to loud and irrepressible song. Often the wonders worked by this one man, with his indefatigable patience and his sure faith in the spark of intelligence that must lurk somewhere behind the dulled eyes and dogged scowl of his pupils, seem almost unbelievable. Miss Kerrigan mentions a few of these:

"See that man with his back to us?" the Professor whispers, careful not to let the discussion of his case reach the ears of the subject. "He was the 'Terror' of the whole island a few months ago. The attendants could do nothing with him. He was so violent he could not be managed by anybody. He was always disturbing the rest, and likely to break out any minute."

Then, raising his voice, but still speaking gently: "Come, John. Come and show our friend how you can read."

The youth, heavy-bodied, sullen of face, but tractable, comes forward and stands in front of a big chart such as is used in elementary schools, and as the Professor's pointer moves from word to word, the patient carefully reads the large print aloud: "My cat is in the tree. Puss likes the birds. My dog likes to swim. Watch is the name of my dog."

It seems a travesty on all schooling, but Professor and pupil are in deadly earnest.

"And I have not had an outbreak from him in four weeks," the Professor says, with natural pride, as he pats the "Terror" on the back and sends him to his seat as a "good boy."

Not always is it so easy to get responses from the pupils. There is George over in a corner, for instance—a good-natured, mustached fellow, who smiles and nods in answer to questions, but never will open his mouth.

"I thought that he had lost the power of speech," confides the Professor. "Never did he say one word. But one day when I had won his confidence, I thought I would try a little experiment on him. I had my arm about his shoulder, and when he was least expecting anything of the kind, I just lightly pricked him with a needle."

"Ouch! That hurts!" he exclaimed, just as clearly as you or I. In the four weeks that I have had him in my class I have got him to speak just five words. George, aren't you going to speak to me some day?"

And George hobs his head in assent.

Professor Moench's method may be briefly described as a sounding of the chords of human interest. To one of these chords the subject will respond, if there be the slightest hope for his reclamation. Sometimes, as in the case above mentioned, it may be music that will stir him; but it

Beautify and protect your woodwork with this rich, smooth, extremely white and long-lasting enamel.

Until Sherwin-Williams Old Dutch Enamel came on the market it was always believed that no genuine white enamel could be made except from imported "long" oils.

But—

Instead of importing oil from Europe in the customary way, we only imported Holland's expert enamel maker.

Then we set about developing our own process of treating our linseed oil. The perfection of this process has been responsible, in a large measure, for the success of Old Dutch Enamel.

Use an enamel that is not dependent on Europe in these troubled times—use an enamel that is not affected in *quality, quantity* or *price*—use Sherwin-Williams Old Dutch Enamel—to be had from the Sherwin-Williams dealer in your town.

Buy A Lippard-Stewart Fleet

HALE BROS.—SAN FRANCISCO

Not one of this fleet of Lippard-Stewarts has ever been laid up. The oldest car has run almost 25,000 miles. The average trip of each car is 46 miles daily. Gasoline record, 9 $\frac{3}{4}$ miles per gallon; oil, 240 miles per gallon. Tires average 4,500 miles per case, ranging from 3,000 to 10,000 miles. From 100 to 200 packages are delivered daily, or an average of about 150 packages per car. Hale Brothers have given ample evidence of their satisfaction by sending three repeat orders, bringing their present total equipment to nine.

THE above are 1500 pound delivery cars. Lippard-Stewarts are built in capacities that meet the great majority of requirements. Make up a fleet of Lippard-Stewarts, $\frac{1}{2}$ ton, $\frac{3}{4}$ ton, 1 ton, 1 $\frac{1}{2}$ ton, 2 ton trucks, simplify garage and repair business, economize on maintenance cost, save all the waste and bother of having several different kinds of trucks to take care of. There is as much waste in operating overcapacity as there is in overloading. A Lippard-Stewart fleet prevents this waste.

In Government Mail Service
General Specifications:

Continental Motor with Automatic Speed Governor; Eisemann Magneto; Brown Lipe Transmission; Timken Axles and Bearings; David Brown Worm Drive (extra above level drive on $\frac{1}{2}$ ton and $\frac{3}{4}$ ton size); Big Size Tire Equipment.

This standard of excellence is carried through the entire construction.

Business Men, Write Us About Your Delivery Problems

Let us tell you about the Lippard-Stewart trucks, the high business standing of our dealers and the efficiency of our co-operation with owners.

Attention given to particular body requirements.

Operating in over 70 Lines of Business,

Lippard-Stewart delivery cars and trucks are recognized in every city for their attractive appearance, noiselessness, flexibility and ever-ready service. You see fleets of them at work in large cities, operating in rural delivery work. They are used by the U. S. Parcel Post, by the U. S. Army. They are popular for Omnibus, Patrol, Ambulance and Funeral Work.

Over 40 concerns use two or more Lippard-Stewarts, having purchased one or more extra after the first car had proven its merit.

The CORONA

Typewriter is as personal as the fountain pen.

THE travelling man has long felt its need—for he has letters to write while on the road—reports to make out and various other matters that should be typewritten. Likewise is the Corona a boon to Authors, Actors, Druggists, Doctors and every Home.

What makes the Corona so personal is that besides being a typewriter with all the latest improvements, such as back spacer, two color ribbon, stenciling device and visible writing—it has in addition a carriage that folds over the keyboard and an aluminum frame that is much lighter and stronger than iron.

The Corona in its carrying case occupies only about the same amount of space as a large camera and weighs but 22 lbs.

It will be to your interest if you let us send you full details of this personal typewriter. Simply ask for Catalog No. 14.

The Corona Typewriter Co., Inc.,

Green, N. Y.

may be arithmetic, or water-colors, or the learning of the alphabet, or the making and molding of some bit of ornament or design—whatever it be, Professor Morton believes implicitly that it can be found. Naturally, his classes are not run by schedule, and the work done is accomplished in the most haphazard way, as we are shown:

In some respects the "side-lines" of the School for Reeducation are even more illuminating than the reading and writing and picture-puzzle solving that go on in the little schoolroom. In a room adjoining this there is a group of men—a few weeks ago, perhaps, inert and unresponsive or violent and dangerous—patiently working out in clay the models set before them in magazine pages, or figures evolved in their own disordered brains. Quietly, absorbedly, they prick holes through pictures to transfer the outlines to soft clay, and then mold the flat surface into relief; and the difference between the shapeless daubs of clay that are the results of their first efforts and the surprisingly well-executed forms that they turn out at the end of a month or so are a living record of the evolution of their minds, halted in their downward course and made to concentrate, to imitate, and finally to originate.

In still another room—entirely without guard and out of sight when the Professor is busied with his other classes—the artists sit quietly at work. Strange, indeed, are some of the pictures turned out by them—crude copies of the "comics" from the Sunday newspapers; scrawling sketches of persons and objects and even visualizations of the "influences" that work upon their minds. Side by side with these are excellent little drawings and a few paintings of a high degree of merit—the work of true artists whose minds are temporarily or permanently clouded.

Nor is the whole order of the day unrelieved by occasional bright spots of humor. In witness of this is related the examination of one pupil whose mind was not so clouded as he would have it appear:

"William, stand up."

A hulking figure, with a foolish smile, slouches upward—if such an expression may be used—and crams both fists down into his pockets.

"Fold your arms, William. You must keep your hands out of your pockets."

Grudgingly the arms are raised and folded.

"What did you write to-day on your slate?"

Very slowly and painfully the great figure enunciates the words of its lesson.

"A thief is a miserable man."

"And what are you, William?"

The foolish smile broadens.

"I am a miserable man."

"William, where were you before you came here?"

"In jail." Very cheerfully.

"What jail?"

"The Tombs."

"Did it do you any good?"

"Nope!" More cheerfully.

"Do you know where a thief goes when he dies, William?"

"To jail!"

"Oh, no; he doesn't. You know perfectly well where he goes."

The foolish smile has reached its climax, and there is actually a twinkle of mischief in the once dull eyes as William makes his final answer as to the ultimate destination of a thief:

"To heaven!"

Turning again to the serious side of this strange school, Miss Kerrigan sums up the work of the Professor as follows:

Six months the little school has been running, and in that time two "pupils" have so improved that from seemingly hopeless lunatics they have become well-behaved citizens, and have been discharged from the hospital; several others have been sufficiently controlled to be allowed to go home on parole. A youth from the Bronx is now awaiting the capture of a "job" before his release. Men from the most "disturbed" wards, low in mentality, unkempt in appearance, violent in manner, have begun to show signs of intelligence, have cleaned their clothes and gone back to white collars, have become obedient, and have won places in the quiet wards, away from the distressing sights and sounds of those not fortunate enough to have come under the influence of the good Doctor.

If such results can be obtained by a lone and saddened man working against great odds, in a wretched little "schoolhouse" that used to be a morgue, with almost no equipment and with the expenditure of no money except the few pennies that can be squeezed from an infinitesimal salary—lower than the wage of an untutored attendant—what results might be attained through the establishment of a well-equipped school and the expenditure even of a moderate amount of money?

A MONSTER BIRTHDAY PARTY

OUT in Kansas there is a *Pied Piper* who pipes so merrily that whole townships of children come trooping out to him once every year. It is his way of celebrating his birthday, and he tries to make that one day the biggest, most glorious day in the year for the largest number of children that can possibly be enticed and persuaded to help him celebrate it. Doubtless if he could think of any better way of commemorating the number of years young that he has grown than this of making thousands of children happy for a day, he would try it; but so far both he and the children have been completely satisfied. This year was an off year, but even so he did the best he could. The *Springfield Republican* says of him:

B. P. Waggoner, of Atchison, Kan., whose birthday picnics for the children of his city and county and neighboring counties have achieved national fame, is in poor health, and so this year all he was permitted to do was to hire all the picture-shows in town, to which children under 16 years of age were admitted free. There is ardent hope among the youth of his part of the State that Mr. Waggoner may get back his health and live forever. It was 15 years ago that he invited the children of his neighborhood to help observe his birthday. The next year the picnic was much larger; the third year the children of the entire city were entertained; the fourth year the children of the

Look Into Your Car Through These Books

A telescope gives you a clearer view of a subject. That's what happens when you get your motor car into the focus of these books.

The day of professed mechanical ignorance is passed—today motor car knowledge is a source of pride. Actual sales records for the past year show that car buyers are of the "Missouri type" more than ever as regards construction. They want facts—not mere assertions of superiority.

The motor-wise car owner knows the importance of axles and bearings—how they mean strength, safety, and economy of power if they are good—how much trouble they can create if they're not.

You can put yourself into the progressive class by reading the Timken Primers and learning more about the vitals of your car. These interesting books describe the manufacture of Timken Axles and Bearings, from their design until they are engineered into different makes of cars.

They describe the foundation upon which Timken satisfaction has been built—what has made Timken the choice of motor car engineers who value strength of construction and of motor car buyers who demand long life and safety. There's proof of this in the long list of "Timken equipped" cars which is a book by itself.

These three books, "On the Anatomy of Automobile Axles," "On the Care and Character of Bearings," and "The Companies Timken Keeps," sent free on post-card request to either Timken Company. There'll be no follow-up. No salesman will call. Write for them today.

county were invited and brought to Atchison in special trains. Then the annual affair was extended until the children of four counties were brought to Atchison, and not a child was ever injured during the passage on the free trains. Last year Mr. Waggoner entertained fully 20,000 children. There is lots of satisfaction in thus making one's birthday a matter of high moment to so many.

HERR WILHELM HOHENZOLLERN

WE are told by Miss Anna Topham that the favorite poem of the Kaiser is Rudyard Kipling's "If," and that over his writing-table are placed the lines: "To fill the unforgiving minute with sixty seconds' worth of distance run." Miss Topham, who was at one time governess to the Kaiser's only daughter, now the Duchess of Brunswick, has lately written, in "Memories of the Kaiser's Court" (New York: Dodd, Mead & Co.), an engaging book of the intimate life of the German royal family. In it she reveals a side of the Kaiser that those who would judge him should in all fairness know. There follow brief extracts from the book, pen sketches of Wilhelm and those near to him, made by a quite dispassionate observer. Miss Topham describes her first impression of the head of the family:

His keen blue eyes look at me with that characteristically penetrating, alert, rather quizzical brightness. They seem almost too violent a contrast with the deep sunburn of his face. My hand is enveloped in a hearty, almost painful, handshake, and I am confronted with a few short, sharp questions.

She describes the woman who has since given her five sons to the cause of Germany:

The Empress is sitting on a sofa and receives me with a pleasant, gentle smile and a look which reveals at once that she herself is feeling slight embarrassment. Soon I find myself sitting in a chair talking easily and without restraint to a mother about her little daughter. It is all quite simple and straightforward. Her chief recreation, the one in which she most delights, is riding. Every day, if possible, she takes a brisk canter of an hour or two. Her reading consists largely of historical memoirs.

Of her young charge, then a tomboy not yet in her teens, she writes:

Suddenly above the bank appears the sleek golden head of a small girl of nine or so, dressed in a stiff, starched, plain white sailor-dress, with a blue collar and a straw sailor-hat. Her day begins with breakfast at 7.30, and her lessons start at eight o'clock. Her allowance for spending-money was \$1.20 a month until she reached the age of seventeen. . . .

His daughter, in a moment of relaxation, seeks to amuse herself by practicing the schoolboy trick—she is very schoolboyish—of making with her mouth and cheeks the "pop" of a champagne cork and the subsequent gurgle of the flowing wine. "Who taught you that unladylike accomplish-

Jack Wanted A Cosy Den

This long living room was big enough to make two rooms. Jill was willing—but oh, dear! that dreadful mass of a plaster job. Dust everywhere—gobs of plaster on the piano—white foot prints on rug! But

vent?" said I. "It was papa. He can do splendidly."

Papa, it appears, can do several things excellently well. His chief characteristic seems to be his abounding vitality. He is forever alert and strenuous, both mentally and physically, to a degree, at times, rather wearing on those about him. As we read:

The Kaiser's conversation at its best has a certain quality of intoxication—is provocative of thought and wit. Men often change, for the better or worse, when they retire from the public eye, but the Emperor is much the same everywhere. At home he inspires much the same charm as he does in public, and sometimes the same irritation. He is a man almost bound to get on the nerves of those who surround him. There is no more alert place in the world than the Kaiser's court.

He disapproves of people who want to settle down and be comfortable. He likes to keep things moving, has no desire for the humdrum, the usual, the everlasting sameness of things.

He believes he is very astute and can see further than most men. He tends to become just a bit blinded by his own brilliancy, by the versatility of his own powers. He has a marvelous memory for facts, but deduces hasty inferences. He does not give himself time and opportunity to think things out.

The Emperor William has a great horror of every possible kind of infection, especially the ordinary cold. I remember panic-stricken flights at an hour's notice from measles or chicken-pox. His Majesty no more objects to a frightfully overheated building than an American does.

"What's the matter with the chairs?" he says sharply. "Hard, are they?" he laughs, derisively. "I hope they are. Here we live hardily."

He likes to be identified with successful people of every class.

The Emperor possesses in an unusual degree what Kipling calls the "common touch." He knows how to talk to poor men, workmen, without any shadow of patronizing affability; an absolutely frank and unreserved interest in their affairs and an obvious desire really to know of the conditions of other people's lives. It is not perfunctory.

He Made a Hit.—A commercial traveler had been talking his hardest, his most eloquent, his most persuasive for nearly an hour to a shrewd old Yorkshire business man. The old fellow seemed convinced and pleased, and the traveler thought he had his fish landed. But the Yorkshire man said:

"There's ma lad, Jock. Ah'd laike him to hear what ye have to say. Will ye coom this afternoon and go over your talk again?"

"Certainly, sir, with pleasure," replied the traveler heartily, and at the hour appointed presented himself again for the interview with father and son. Again he went over the points of the article he had to sell—forcibly, eloquently, persuasively. Never had he acquitted himself of a finer "selling talk."

When he had finished the old Yorkshire man turned to his son and said enthusiastically: "Do you hear that, Jock? Well, now, that's the way I want ye to sell our goods on the road."—*Kansas City Star.*

KNOWN THE WORLD OVER

The "Bulldog"

HERE is how a good thing will force its way to the front. For a long time there was only one "Bulldog" Gillette Razor in existence. Then there were two, then seven, and now everybody wants one.

The first "Bulldog" was designed for the Chief of the Company to meet his desire for a *stocky bulldog handle*. He liked it at once. Said it shaved better—new grip and balance—gives more weight and swing to the stroke.

Other members of the organization adopted the "Bulldog": it was evident

that the extra weight and different balance are *fundamental*.

Then men everywhere were given a chance at the "Bulldog". They saw the point instantly. Result, the most widespread and immediate success of any new model ever put out by the Gillette Company.

It is making thousands of new friends for the Gillette and regular users are finding it well worth while to buy the new "Bulldog".

Contained in an oval case of Gray Antique Leather, with Blade Boxes to match, containing 12 double-edged Gillette Blades (24 shaving edges). With Triple Silver plated Razor, \$5.00; with Gold plated Razor, \$6.00. See the "Bulldog" at your Gillette dealer's anywhere.

SHE.—"No real gentleman forces a lady to make one."—*Baltimore American.*

Opportune.—THE OPTIMIST (who has just been struck by a passing motor-car)—
"Glory be! If this isn't a piece o' luck! Sure, 'tis the docter himself that's in ut."—*Punch.*

A Good Reason.—"How was it that you didn't name your baby Woodrow Wilson when you told me that was your intention?"
"We named it Mary Jane."—*Philadelphia Ledger.*

Not Recognized.—"What excuse did he give for shooting at you?"

"The flimsiest ever. Said he thought I was a deer, when everybody in this community knows I'm a bull moose."—*Louisville Courier-Journal.*

Tempus Fugit.—"Why, what in the world has become of your watch? The one you used to have had a handsome gold case."

"I know it did, but circumstances alter cases."—*Philadelphia Telegraph.*

Not Certain.—"What is this malady which has suddenly attacked the nations of Europe?"

"There is some doubt as to that. Some say it is the German rush, others that it is the Russian germ."—*Christian Register.*

Too Impatient.—SUITOR (waiting for the lady)—"Is your daughter coming out next winter?"

FATHER—"She'll come out when she's good and ready and if you git fresh I'll knock yer block off."—*Cornell Widow.*

He Wasn't Looking.—DÉBUTANTE—"He said he would go through a raging flood just to look into my eyes."

CHAPERON—"When, last night?"

DÉBUTANTE—"No; last night he phoned that it was raining too hard for him to call."—*Judge.*

Caught.—Senator Tillman was arguing the tariff with an opponent.

"You know I never boast," the opponent began.

"Never boast? Splendid!" said Senator Tillman, and he added quietly, "No wonder you brag about it."—*Washington Star.*

Couldn't Turn It.—"Brudder Perkins, o' been fightin', I heah," said the colored minister.

"Yaas, Ah wuz."

"Doan yo' membeh whut de good book 'bout turnin' de odder cheek?"

"Yaas, pahson, but he hit me on mah nose, an' I've only got one."—*Livingston Lance.*

Exciting Times.—"Well," mused six-year-old Harry, as he was being buttoned into a clean white suit, "this has been an exciting week, hasn't it, mother? Monday we went to the Zoo. Wednesday I lost a tooth. Thursday was Lily's birthday party. Friday I was sick, yesterday I had my hair cut, and now here I am rushing off to Sunday-school."—*Lippincott's.*

"It Reminds You"

THE HESS CALENDAR TICKLER

See how nearly self-running, how simple it is:

- | | |
|-------------------------------------|---------------------------------------|
| A. Current date | D. Cards for balance of year |
| B. Entire current month | E. Memo-pocket and blanks yet to come |
| C. Day of year and days yet to come | F. Yearly calendar |

Memos are filed before any desired date. The current day slip is discarded daily, so the memo must come up at proper time. Or it can be refilled without re-writing. With The Hess Calendar Tickler there is no drawer to open, no lid to lift. It is always in plain sight—prominent above desk papers, etc. Saves its cost a hundred times in time, trouble and preventing costly "slip-ups".

Moore's
the pen that makes
the ink behave

Tired of pens that let the ink do as it likes? Moore's for you, then!

For Moore's is the pen that makes the ink behave. Makes it do what YOU want it to do. Writes at the lightest touch—keeps on writing smoothly and evenly—and keeps the ink where it belongs—INSIDE the pen and not on your fingers.

Moore's, you know, is the original "won't leak" pen—shuts the ink up bottle-tight when you screw the cap down. And it's not only the steady, dependable kind of pen you like yourself, but—

the ideal gift for Xmas

Look over the styles at your dealer's. Get him to show you WHY Moore's writes at a touch—WHY Moore's always writes freely—WHY Moore's can't leak. And then get yourself a pen that works like it was made to order for you—a Moore's.

The Best Spot On Earth To Put Money

in First Mortgages secured by
improved and producing farms in

Kansas—Oklahoma—Arkansas—Texas.

Here we have had record-breaking crops, the European war has caused high prices for all farm products, and the people are more prosperous than in any other section of the United States. On farm loans the income is high, the security the very best, and the value of the property behind the investment steadily rising in value. For forty-three years the Maxwell Investment Company has been making loans in the Central West, but for the first time has the opportunity for investment in first farm mortgages here in the most advantageous circumstances. No loans are made except after rigid inspection by our field agents, and the management of the company is in closest personal touch with the farmers of these great farming sections. We offer only loans into which we have put our own money, and do not loan more than 70% of the value of the property.

Loans and all material statements in reports signed by independent appraisers. Our service includes full title abstract, and we report on each mortgage promptly.

Write for booklet "Our History," and list of loans.

INVESTMENTS - AND - FINANCE

HAS A TURN FOR THE BETTER SET IN?

AT the opening of the business week beginning on October 26 a series of incidents "had pointed to decided improvements in the peculiar situation into which this country had been thrown by the European War." So said the *New York Evening Post*, which enumerated these incidents as follows: the announcement that our new banking system would be established in a fortnight; England's declaration that the sea was open for export, even to hostile countries, of non-contraband articles, such as cotton; large increases in purchases of materials here by Europe; the disappearance on Saturday, October 24, of the deficit in New York bank reserves; and evidence that the bankers' cooperative plan to finance that portion of the cotton crop which the war might make unsalable was making good progress. Commenting on these evidences of better conditions the writer said:

"Inasmuch as the dilemma which has confronted this country since July has had primarily to do with the problem of international finance and trade, it was altogether logical that the foreign exchange market should give the first sign of what was going on. Exchange on London, in the week when Germany's declaration of war was plainly impending, rose to the extraordinary rate of \$7 in the pound sterling. In a normal market, it can not rise above 4.89½, because at that figure it is profitable to export gold and draw exchange against it. The \$7 rate at the end of last July measured the frantic haste of financial Europe to draw at any price on its American credits, to strengthen a home position where the impending war seemed to threaten general bankruptcy. The war began; London relieved its own situation by a series of unprecedented financial expedients.

"Yet it continued to draw heavily on New York, and exchange rates, even at the opening of this month, stood at the quite abnormal level of \$5 in the pound. In the well-known language of Lombard Street, the exchanges were moving heavily against us; and the extent of that adverse movement seemed to measure the depth of our financial predicament. A week ago the rate began to fall. Three or four days ago the movement in our favor became extremely rapid. Yesterday (October 26), for the first time since the third week of July, exchange on London, at 4.89, reached a familiar and normal level.

"So striking a reversal of position, in the market most sensitive to the present drift of affairs, suggests a review of the actual situation. Our particular difficulties, which developed during the second month of war, were four in number. We were cut off from access to the supplies of European capital which our markets habitually use; so much so that even renewal of existing loans was doubtful. We were threatened, or believed ourselves to be, with prodigious realizing sales of the mass of American securities held in Europe, and, for that reason, dared not reopen our Stock Exchange. Our export trade was heavily cut down, despite the large grain shipments, by the collapse of the European demand for certain of our staple products, notably cotton. Finally, our banks were doing business on a basis of emergency bank-note issues and clearing-house loan certificates, and their cash reserves were almost as far below the legal ratio to de-

posits as they were in the panic weeks of 1907.

"The problem how far our markets and our industrial undertakings, as a result of the war's huge requisitions on European capital resources, will have to dispense with the usual assistance from that quarter is still unsolved. It is not yet clear how much the absence of this European capital will affect our country's business situation. The facts, however, which stand forth without dispute are that, despite a natural preliminary hesitation, we have maintained our credit by exporting gold in large amount to meet pressing liabilities in the foreign markets, and that meantime the United States, alone of the great financial nations, is proceeding with its own accumulation of capital, purely for use in peaceful industry.

"These are the more obscure considerations in the situation. In the export trade and the bank position we have something more tangible to observe. Our excess of merchandise exports over imports in September was less by \$31,000,000 than in 1913. But if our cotton exports had been only half as large as they were the year before, the total export excess would have been fully as great as in the previous September. Now last month's weekly cotton exports by us to Europe averaged barely one-ninth of the 1913 figures, whereas the weekly average thus far in October has been nearly one-third that of a year ago. This recovery can not fail to be stimulated by the wider opening of European markets hitherto shut off, if not through the suggested taking of cotton by the London banking community as security for advance of capital from there.

"As to the home banking situation, we have still to reckon with the mass of emergency bank-note issues, the outstanding clearing-house loan certificates, the unsettled loans on Stock Exchange collateral, and the unusual burdens assumed in financing, first New York City's foreign debt, next the requirements for export gold, and finally the cotton-trade's position. But we can also see that, in the face of all these handicaps, the New York banks have restored their surplus reserve, and that not only they, but the National banks of the country as a whole, now actually hold in their reserves more gold than they held a year ago."

HOW THE MANCHESTER SHIP-CANAL MAY YET PAY DIVIDENDS

It is now twenty years since the great ship-canal, leading from the River Mersey to Manchester, England, was opened. Various were the prophecies then made as to its commercial success. For a long period it failed to pay even its interest charges in full, to say nothing of dividends on stock, and it was not until 1907 that all the interest charges were paid in any one year. Deficits, meanwhile, were made up by issuing what is known as "preference stock," this stock representing funded unpaid interest on debentures and other loans made by the city of Manchester. On this preference stock a dividend was paid for the first time last year, the rate being 2½ per cent.

After 1907, the next year in which the first charges were fully earned was 1910. Since 1910 they have been earned each year, and now, in excess of interest charges, this sufficient sum to pay 2½ per cent. on the preference stock has been earned. This dividend,

Special List of Electrical Gifts for Christmas

(Send for booklet)

Electric Breakfast Set:

Cook breakfast at the table in 15 minutes. No. 4266.

General Utility Motor: Unique.

One motor will run sewing machine, polish silverware, sharpen knives and has a dozen other uses. Booklet No. 4219.

Sewing Machine Motor:

Makes play of sewing. Runs any family machine. Booklet No. 4152.

Electric Iron:

For all household and many other purposes. No. 4281.

Special List of Electrical Gifts for Christmas

(Send for booklet)

Electric Cooking Devices: Including Toaster-Stoves, Percolators, Chafing Dishes, Samovars, Frying Pans, Milk Warmers, etc. No. 4197.

Electric Curling Irons: Hot when wanted. No soot. No fumes. No. 4265.

Small Motors: Great time, labor and money savers in the home, office, store and shop. Booklet No. 4230.

Electric Radiators: Luminous and radiator types. No. 4197.

Heating Pads:

The modern successor of the hot water bottle. No. 4197.

MANY of your friends use electricity for lighting, but some may have missed the many other phases of household helpfulness which comes from the use of such electrical devices as are shown in the above special Christmas list.

These goods may be obtained from your Electric Light Company or from any good electric shop. You will be interested in the catalogs referred to. Send for them. Below is a further list of Westinghouse Electric catalogues. Send for any in which you are interested. Address Dept. DD.

Polishing and Grinding Motors: For jewelers, opticians, dentists, hotels, machine shops, garages and homes. Booklet No. 4220.

Dental Lathes: Moderate price, of the highest reliability. No. 4257.

Proction Motors: For making electrical measurements of greatest accuracy. No. 4087.

Battery Charging Rectifiers: For charging automobile storage batteries. Type for electric Vehicle Batteries. No. 4201. Vibrating type for ignition batteries. No. 4237. For telephone batteries. No. 4204.

Instrument Sterilizers: For physicians and dentists. Electrically heated. No. 4218.

Switchboards: Standard forms and built to order for all special purposes. No. 1304.

Water Heaters: Heat water in tanks, vats and sterilizers. No. 4240.

Hat Making Machinery: Electrically heated. Easily regulated. No. 1175.

Electric Vehicle Motors: Interesting and useful data for prospective owners of electric pleasure and commercial vehicles. Booklet No. 3223.

Electric Fans: Over 24 different styles and sizes for all purposes. No. 4258.

Arc Lamps: Latest improvement, long burning flame carbon. No. 4258.

Automobile Fittings: Switches, Sockets, Fuse boxes, wire, etc., for equipping automobiles with electric lights. No. 4263.

Small Lighting Generators: One kilowatt steam-driven generator. Will provide current for forty 25-watt incandescent lamps. No. 3695.

Electric Linotype Pans: Save time and money in the printing plant. No. 1531.

Candy Factories: Electrically heated chocolate warmers. No. 2476.

Carpenter Shop: Electrically heated glue cookers. No steam or gas piping. Can be easily moved about. No. 4293.

Motor-Driven Eraser: For draughting rooms. Saves time and tracing cloth. No. 4140.

Ventilating Outfits: Pure air for offices, stores, theatres, restaurants, public buildings. Full line described in No. 4256.

Westinghouse Mazda Lamps: Twice the light of old style carbon lamps for less than half the cost of current. Light closely resembles sunlight. All sizes from 2 1/2 to 1000 watts for every kind of service. For literature address Westinghouse Lamp Co., 1261 Broadway, New York.

Automobile Equipment: Electric Starting, Lighting and Ignition apparatus, meters, vulcanizers and battery charging outfits. No. 4223.

Graphic Motors: For analyzing and checking factory operations. No. 4160.

Tailors' Electric Irons: For every shop use. No. 4190.

Moving Picture Rectifiers: Making alternating current available for direct current arc lamps. No. 4277.

Electric Meters: Accurate instruments to measure current for every purpose. No. 4241.

Ozonizers: Refresh the air, remove odors from bedroom, nursery, kitchen, smoking-room, theatre, office, store and factory. No. 4242.

Electric Meters and How to Read Them: Explaining just what the meter measures. No. 4032.

Portable Motors: For every kind of electrical measurement. No. 1104.

CHANNELL CHEMICAL CO.
Chicago — Toronto — London — Berlin

however, is not the full amount called for. The full dividend is $3\frac{1}{2}$ per cent. Before any dividends can be paid on the original shares in the company $3\frac{1}{2}$ per cent. must be paid on the preference stock. The outlook, therefore, for dividends on the original stock issue is not bright.

The London *Economist*, commenting on the payment of this $2\frac{1}{4}$ -per-cent. dividend, remarks that the company "has now reached a point where it may really be said to have emerged from practical bankruptcy and dependence for its existence on the good offices of Manchester." That paper does not regard the payment of dividends on the original stock as "immediately in prospect," but it sees "grounds for expecting that dividends will be paid at some time not so very far away—an event which a few years ago seemed out of the question." This forecast, however, it realizes to be dependent "on the assumption that Lancashire remains one of the world's industrial centers." The prosperity of Lancashire in recent years has been greater than ever before, and there are signs of further growth in the extent and variety of the business centered in that industrial county.

"The ship-canal is in a position somewhat analogous to that of the Great Central Railway with respect to the latter's London extension. The capital expenditure has been made, but the traffic, the growing, is not sufficient to pay a remunerative rate of interest upon it. The rate of interest earned upon the capital of the Ship Canal Corporation, however, is steadily improving, as the following figures show:

	Ship-canal Tolls, Dues, Etc.	Total Gross Receipts	Net Revenue	Capital Expendi- ture	Ratio of Net Revenue
1905	£ 449,436	£ 729,973	£ 235,616	£ 16,373,037	1.43
1906	498,837	791,793	268,304	16,486,427	1.61
1907	515,543	825,366	292,734	16,617,101	1.76
1908	506,975	776,368	264,626	16,729,154	1.58
1909	534,059	803,497	291,051	16,790,491	1.73
1910	555,735	829,809	301,326	16,798,526	1.79
1911	540,841	857,076	299,218	16,818,954	1.74
1912	605,179	902,526	313,743	16,865,349	1.86
1913	654,937	1,062,030	341,089	16,829,222	2.02

"The fluctuations of trade are clearly marked in these figures, but over the period there is steady progress. A feature which encourages a hopeful view of the future is the fact that the ratio of working expenses shows no tendency to advance, thanks to the increase in rates of duty which have been made from time to time. In 1905 the ship-canal expenditure absorbed 55 per cent. of the receipts. Last year it absorbed 49 per cent., tho the elimination of the railway accounts from last year's figures had something to do with the alteration, as the railway works at practically no profit at all. In 1912, however, the ship-canal and railway expenditure absorbed 53 per cent. of the revenue, this figure being strictly comparable with the 55 per cent. in 1905. The Bridgewater Canal system is not a source of great profit, nor does the profit from it show any steady tendency toward improvement. Still, its net profits in 1913 represented 2.28 upon the capital sunk in it, which is a higher return than is earned by the undertaking as a whole.

"In the past ten years the gross revenue of the company has risen by about £300,000, and the net revenue by rather more than £100,000. It may not be unreasonable to assume that £50,000 will be added to the year's net revenue during the next ten years, of which additional fixt charges in respect of £500,000 of new capital at 4 per cent. will absorb £20,000, leaving

Nurse Baby and Drink Holstein Cows' Milk

Nurse your baby, and its chances for life and future health will be ten times greater than if it is bottle-fed. You should drink freely of purebred registered Holstein cows' milk.

Nurse baby at regular times, but never more than once in two hours. Give baby all the cool boiled water it wants.

If you cannot nurse your baby, get purebred Holstein cows' milk, and ask your physician as to its modification. Keep the milk cold, covered, and clean.

We say "purebred Holstein cows' milk." It is nearest to the human mother's milk, digests easily, and imparts to the child the vitality and strength that are peculiar to this breed of black-and-white cattle. Holstein milk is light-colored. Don't imagine yellow milk is better, for it isn't.

If baby is sick, vomits or has diarrhea, stop feeding, give boiled water, and send for a physician.

Send for our FREE booklet, "The Story of Holstein Milk."

HOLSTEIN-FRIESIAN ASSOCIATION

1 American Bldg., Brattleboro, Vermont

hardly realized in Great Britain. From the Russian frontier a continuous series of victories is reported; the Austrian withdrawal in Galicia is explained very much in the same way as was the Allies' retreat in France, while, strangely enough, the German check and retreat from the Marne are received almost with relief, since, as was reported to me, there was among many people a feeling that the German armies were being 'too successful,' and that a temporary setback of this kind was necessary to prevent the troops from becoming overconfident and careless. The most popular event in the whole war has been the appearance of the 'secret' siege-guns, to which is attributed the German success before Liège, Namur, and Maubeuge. In the popular mind there is a confidence in the fetish which appears almost startlingly childish.

"To a certain extent it is admitted that the losses have been heavy. But this, it is said, has been compensated for by victory, and the reserve strength of the people has hardly yet been tapped. A significant commentary on this assertion is the fact, openly admitted, that school-boys of 16 and 17 years of age are being called up into the ranks. One thing must be admitted. Apart from the problem of unemployment, which appears to have got beyond the resources even of German ingenuity, and which will only begin to make itself felt in its real horror as winter comes on, the civilian side of the war service seems to have been admirably organized. According to what was seen by Dutch visitors, there is hardly a woman, rich or poor, who has not got her special work. The hospital service is said to be in every way excellent, and innumerable private houses have been given up voluntarily, either as hospitals or as convalescent homes for the nurses themselves."

The letter pertaining to conditions in France comes from Paris. Here conditions at the end of September had so much improved, the outlook for commerce and industry being brighter, that the removal of the Government to Bordeaux seemed to be quite unnecessary. Following are items from this letter:

"Throughout August supplies reached Paris with remarkable regularity, considering the immense strain imposed on the railways by the transporting of troops. The remarks I made in my last letter about the cheapness of food still holds good, and, in fact, the food position is steadily improving. The possibility of reviving normal commercial and industrial activity is receiving continually the closest attention. As to trade in general, home trade is recovering slightly, in spite of the ravages of the enemy, and overseas trade, thanks to the safety at sea provided by the British fleets, should improve gradually.

"The most formidable obstacle in the way of repairing the machinery of commerce is the moratorium and the exaggerated extent to which the banks appear to be availing themselves of its provisions.

"The recent census showed that there were 18,000,000 people occupied in industry, commerce, and agriculture. Of these, mobilization has drawn away 3,000,000. Five-sixths are left, and it is essential for themselves and for the State that they should earn their livelihood in their trade, and so increase the productivity of the country. Among the 15,000,000 there are many, of course, such as railway employees, agricultural laborers, porters, etc., whose employment continues more or less as usual. Millions, however, are normally engaged in manufacture, and it should be far easier than in Germany to provide remunerative labor for them. To this end a whole host of schemes has been set on foot."

BROWN'S Bronchial TROCHES

FOR
COUGHS
AND
COLDS

never fail to instantly relieve hoarseness, loss of voice, coughs, irritation or soreness of the throat. They are used extensively all over the world by prominent clergymen. All public speakers and singers find them invaluable. Used over fifty years and still unrivaled. Unquestionably the most

Convenient and Effective Cough Remedy

You can use them freely with perfect safety as they contain no opiates or other harmful drugs. Always keep a box in the house ready for use. Carry them in your purse or vest pocket. They are sold everywhere in boxes—never in bulk.

BALTIMORE, MD.

CURRENT EVENTS

EUROPEAN WAR

IN THE WEST

October 22.—General Joffre reports the Allied line solid between Nieuport, where the Belgians are, and Ypres. A German effort to reach the Oise from the Somme is successfully checked.

October 23.—The Allies claim to have retaken Lille, while the Germans announce successes to the west of Lille and north-west along the Yser Canal. German troops are reported south of Dixmude.

October 24.—In the Argonne region the French announces the seizure of Melzi-court, a village commanding the roads to the Aisne valley.

October 25.—The Germans are crossing the Yser Canal, between Nieuport and Dixmude, pushing back the Belgians.

October 26.—Tho at present across the Yser, the Germans are unable to proceed farther toward the coast or to reach Dunkirk. Nor do violent night attacks along the line from La Bassée to the Somme meet with success.

October 27.—Allied gains are reported south of Dixmude, between Ypres and Roulers, and in the Vosges. In the Vosges, it is claimed, the Germans have been pushed back into Alsace.

October 28.—Following the repulse of two severe night attacks, Paris announces, the German offensive between Dixmude and Nieuport is moderating.

IN THE EAST

October 23.—Petrograd announces details of the Battle of the Vistula, between Novos Georgievsk and Ivangorod, lasting from October 7 to 18, with the hottest fighting on the 13th. The Russian force of 1,000,000 claims to have routed the German 600,000 by a flank attack to the north. The victors are said to be advancing along the Pilieza River, southwest from Warsaw.

Russia announces the capture of the heights of Radymno, north of Przemyśl, on the San.

Rome reports Russian successes in ten days of desperate fighting south of Przemyśl.

October 26.—Rome and Petrograd agree that the Austro-German Army in Russian Poland has failed to make a stand and continues in flight westward in the general direction of Kalisz, near the Prussian border. It is reported that the Germans are evacuating Lodz.

GENERAL WAR NEWS

October 22.—At the opening of the Prussian Diet, among other war-bills is passed one granting a war-credit of \$375,000,000, secured by treasury notes payable before January 1, 1916.

Lisbon papers report Portuguese troops to the number of 26,000 already at the front in France, tho their exact position is concealed by the censors.

October 23.—Tokyo reports that the Japanese bombardment of Tsing-tao has begun.

October 24.—The British Admiralty announces that the destroyer *Badger* has rammed and sunk a German submarine off the Dutch coast.

It is announced that Lieutenant-Colonel Maritz's rebellion in South Africa has been practically quelled by force. No notice is taken of the Colonel's request to surrender with honor.

October 27.—The British Colonial Office

The Successful Treatment of

TUBERCULOSIS

Depends upon proper care in a suitable climate. Albuquerque, the Heart of the West Country, possesses the desirable qualities of low humidity and high altitude as does no other spot in the West or Southwest. Agricultural development and railroad facilities account for the comparatively low cost of living and a metropolitan development. Sanatoria and health seekers' accommodations unexcelled. Magnificent opportunities for investment and ability.

For attractive booklet descriptive of climate, etc., address

HEALTH DEPARTMENT
Commercial Club
ALBUQUERQUE, NEW MEXICO

learns from the Governor-General of the Union of South Africa that men and equipment are being commandeered in north Orange Free State by the authority of General de Wet and in western Transvaal by the command of General Beyers, to oppose the British forces.

October 28.—London announces that General Beyers's rebel command has been completely routed by the forces under General Botha.

GENERAL FOREIGN

October 26.—The Carranza ultimatum to the Aguas Calientes conference is made public. It includes demands for General Villa's retirement to private life; General Zapata's relinquishment of his army and abandonment of hostilities; and the future eligibility of General Carranza to election to the Presidency.

British Ambassador Sir Cecil Spring-Rice, in a communication to the State Department, assures this Government of England's intention to treat our commerce with the utmost consideration, but urges that in every case ships under American registry have the ultimate destination of their cargoes clearly designated.

Twenty-four men are found guilty of high treason in the conspiracy against the life of the Austrian Archduke Ferdinand. Serajevo, where the trial

is taking place, is at this time under bombardment by the Servian-Montenegrin troops.

The British Government releases the Standard Oil tank ship *Brindilla*.

October 27.—Carranza's demands for the retirement of Villa and Zapata are rejected by the Aguas Calientes conference, after a protracted discussion.

DOMESTIC

WASHINGTON

October 22.—Piqued at the rejection of the emergency-currency proposal for the relief of the cotton situation, Congressmen, led by Senator Hiram Smith, attempt a general filibuster. The War Revenue Bill is crowded through both houses, but adjournment is blocked.

October 24.—Congress adjourns.

GENERAL

October 22.—A five-inch rainfall near San Antonio, Texas, destroys 200 houses, renders 2,000 people homeless, and causes the deaths of fifteen.

October 27.—A double explosion in the Franklin Coal Company's mine at Royalton, Illinois, traps 106 miners behind a wall of fire, leaving little hope of rescue.

Travel and Resort Directory

Pinehurst NORTH CAROLINA

Center of Winter out-of-door life in the Middle South.

Four excellent Hotels—many cottages—The Carolina opens informally Nov. 10, Formally Nov. 20.

Holly Inn, Berkshire and Harvard open early in January.

Three 18-hole golf courses, and one 6-hole practice course. Tennis, hockey and saddle horses, model dairy, shooting grounds, trap shooting.

Frequent tournaments in all sports for desirable prizes. Good roads to a railroad station in a half-hour. Through Pullman Service, from New York via Seaboard Air Line only one night from New York, Boston, Cleveland, Pittsburgh and Cincinnati. Read our illustrated booklet, containing full information. Pinehurst General Office, Pinehurst, Leonard Teas, Owner, Boston, Mass.

FUNK & WAGNALLS COMPANY NEW YORK

San Diego Panama California Exposition

Your Opportunity to see California and Her Great Exposition

Celebrating the Opening of the Panama Canal.

SOMETIME during 1915 you will contemplate a trip—to lake or mountain, sea-shore or camp.

All the fun, the recreation, the health you count upon will be yours, plus a wealth of knowledge on the garden spot of America, if you come to California and her great expositions, San Diego and San Francisco.

1915 is the "year of decision" and California is the land of opportunity. You don't know all that this life holds for you until you have seen Southern California.

When the cold winds chill you to the bone, and the flowers and grass are gone at home, pack a trunk and bring the family to San Diego. Take advantage of the low railroad rates. You can live in San Diego cheaper than you can at home, whether you stay a week or a lifetime.

Perhaps—very likely in fact—you will find here freedom from your struggle for financial independence.

And the Exposition! San Diego has built an exposition which does not remotely resemble any other exposition past or present. It is a dream city of the old world—a paradise of multi-colored flowers and verdant foliage. It is a big Garden of Eden in which are massed the counterpart of all the wonder spots you ever saw in your life or picture.

The buildings are low—of Spanish Mission architecture. Purple bougainvillea and clinging roses of every hue climb to rug-draped balconies. Flocks of pigeons hover above the towers, where mission bells swing as in days of old. Long shaded restful arcades, with here and there a Spanish dancing girl with her tinkling tambourine or castanet, blend with the picture.

These buildings house no rows of tiresome exhibits of finished products. Instead they throb with action. The development of manufacturing as a science is shown. Apparatus, machinery, tools, instruments from the big plants of the world have been transplanted to show you how the things you use and wear and eat are made.

There's a 10-acre model farm, where you can get the facts and figures for that little place you have been dreaming about for the future. A tea plantation, and a thousand other marvels which you wouldn't miss for the world. Think of missing it all and having to get it second-hand from your friends who saw.

Five hundred miles to the North lies San Francisco where during the greater part of 1915 will be held another Exposition, also celebrating the opening of the Panama Canal, presenting to the world many features differing from the Exposition Beautiful—the two supplementing one another. When California celebrates, the Golden State's enthusiasm requires two outlets.

This is your opportunity to see California—San Diego, Los Angeles, Riverside and San Francisco. To see the Grand Canyon on your way out, and Yellowstone Park on your way back. The railroads, the hotels and exposition have all combined to make it easy for you.

Ask your railroad ticket agent for the facts, then

EUGENE COWLES

Famous Ham. A member of the original Bostonians, and a great favorite throughout the country.

"For me Tuxedo is the one all around suitable tobacco. It makes pipe-smoking a real pleasure, a real comfort, and a real help to me."

Eugene Cowles

GEORGE B. SUTTON

An expert billiard player. At one time champion.

"Before I tried Tuxedo I rarely smoked a pipe. Now I'm a steady pipe smoker. I've discovered in Tuxedo a cool tobacco that gives me complete satisfaction."

George B. Sutton

JOHN CORT

Theatrical Manager, who controls a large number of theatres.

"In my opinion, Tuxedo is the best pipe tobacco a man can buy. Cool, mild and fragrant. Tuxedo has no equal."

John Cort

Cheer Up Your Whole Winter With Tuxedo

There's no sweeter time for smoking Tuxedo than Winter-time. Smoking seems more cosy, intimate and cockle-warming when you can look out at the mists and fog over the glowing bowl of your fragrant pipe.

Begin this winter right—become friends with Tuxedo—and you'll find the long days filled with brain-and-body content. You'll look upon your work and find it good. Your nights will be nights of sound and wholesome sleep.

The fire that burns the grains of Tuxedo will fill your whole Winter with its rosy glow.

Tuxedo

The Perfect Tobacco for Pipe and Cigarette

Within the last few years pipe-smoking has become popular all over the country; and this popularity of the pipe is due in great measure to Tuxedo and the famous "Tuxedo Process." This original process absolutely removes all bite and sting from the tobacco; so that, if you like, you can smoke pipeful after pipeful of Tuxedo all day long.

Tuxedo is a light, mild, naturally mellow Kentucky Burley, with a delicate aroma but a full tobacco richness to it. It has been widely, but unsuccessfully imitated. Be sure you get the original—Tuxedo. Try it today.

YOU CAN BUY TUXEDO EVERYWHERE

TOPICS - OF - THE - DAY

THE REPUBLICAN REVIVAL

THE SOLIDEST COMFORT in the election returns is given, by common editorial consent, to the Republicans. They have, as even their foes concede, gone far toward

recovery from the disaster of 1912. A Democratic majority of 147 in the House of Representatives has been reduced to less than 30. Republican Governors and Senators have been elected in several great States, including New York, Ohio, and Pennsylvania, and the Progressives, except in a few Western States, have so largely returned to their old allegiance as to become almost a negligible factor in the election returns. But Democrats are far from accepting this Republican success as a Democratic defeat. Secretary McAdoo even uses the words "glorious victory." Democratic editors point out that their party retains a working majority in both Houses of Congress, and has achieved notable successes in several State campaigns. As the *New York World* (Dem.) and *Evening Post* (Ind.) take pains to note, the Democrats are still in the saddle; the usual mid-term reaction did its worst but failed to shake them off. Moreover, since their two opponents of 1912 have so generally reunited, leaders in Washington are "pointing with pride" to the fact that they have won in what was substantially a straightaway test of strength with a consolidated opposition.

Progressives find little to console them except the overwhelming victory of Governor Johnson in California, tho George W. Perkins and other leaders profess satisfaction with the "rebuke" administered to the Wilson Administration, and the

Chicago Post speaks for those who seem to think that the voters simply failed to discriminate between the Republican and Progressive programs, or deserted the ranks temporarily to

strike effectively at Democratic economic policies. Newspapers of all parties agree that the old "full dinner-pail" argument was effective. In many Eastern States, the Republicans made a straight protection campaign, while in general the commonest Democratic plea was, "Stand by Wilson." Whether the consideration of the Wilson policies, foreign and domestic, brought on the blow or served to prevent the catastrophe from being overwhelming is hard to say; both opinions find able editorial presentation. Mr. Hearst's writers sharing the first view with many Republicans, and the *New York Evening Post* joining its Democratic contemporaries in adopting the other. A notable reaction from the somewhat evident radicalism of recent years is seen in this election by a number of thoughtful editors, and is found particularly significant by the *New York Times*. As evidence, there are the recession of the Progressive party and the success of conservative candidates in both old parties. Republicans of approved regularity rejoice in the return of "Uncle Joe"

Copyrighted by Funk & Wagnall, New York

A NEW REPUBLICAN HOPE.

Chas. S. Whitman's election as Governor of New York State is considered by the press to indicate him as presidential timber.

Cannon and William B. McKinley to public life, and in the re-election, despite violent opposition, of such old-line Senators as Boies Penrose, Jacob H. Gallinger, and W. P. Dillingham; tho a picturesque triumph of radicalism is the election to Congress of the first Socialist from the East, chosen by the voters of a New York East Side district, a former Tammany stronghold.

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label, subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE** or **CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnall Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

Prohibition and suffrage results are not generally considered by the press to have any great partizan significance. Yet evidence of a general reactionary tendency in this election is discerned in the small suffrage gains. Nevada and Montana gave the vote to women; Missouri and Ohio withheld it, as did also South Dakota, North Dakota, and Nebraska, tho the close vote in these States gives the suffragist workers hope of victory in the official recount. Advocates of State-wide prohibition are as likely to be cheered by the fact that Arizona, Oregon, Washington, and Colorado went dry as to be dismayed by the news that Ohio and California emphatically prefer to remain wet.

Because of the closeness of the returns in a number of districts, the exact Democratic majority in the House of Representatives can not yet be stated. Democratic estimates place it as high as 30, Republicans as low as 11. According to the New York *Herald's* figures there will be 229 Democrats, 196 Republicans, 7 Progressives, one Socialist, and one Independent. Senatorial contests in Colorado, Nevada, and Wisconsin were in doubt several days after the election. If the Democrats are successful in these States, they will have a Senate majority of 16, a net gain of four.

To Republican papers the Republican successes in so many States and Congressional districts mean just one thing—a rebuke to the Wilson Administration. This is the interpretation of such dailies as the New York *Tribune*, Boston *Transcript*, Baltimore *American*, Philadelphia *Press*, Pittsburg *Gazette-Times*, St. Louis *Globe Democrat*, and San Francisco *Chronicle*. Even the war, say several of these editors, did not prevent the voters from showing their disapproval, tho they add that it may have kept the condemnation from being more complete. Mr. Wilson, declares the New York *Tribune*, has been judged in most of the "big industrial and commercial States on his record as a disturber of business and a banisher of prosperity independently of the effects of the European conflict." Moreover:

"It was he who warred on business, little as well as big, long before the European fighters took it into their heads to do the same. . . . His policies created the unrest from which the country has suffered ever since it became known two years ago that the Democratic party had been restored to power in all the departments of the Government.

"Yesterday's elections were a popular verdict against Mr. Wilson's attitude and achievements."

Making practically the same argument, the Boston *Transcript* observes that the people have seen through Democracy's "sham slogans," and realize that "prosperity at home has proved to be 'purely psychological,' peace in or with Mexico a colossal fake, and 'the setting of business' free one of those numerous figures of speech with which Mr. Wilson delights to adorn his rhetoric."

Nor is this solely a partizan view-point. Such dailies as the New York *American* (Ind. Dem.), *Times* (Ind. Dem.), and *San* (Ind.), Washington *Herald* (Ind.), and *Post* (Ind.) see the same popular vote of lack of confidence in the President and his Administration. Other editors admit the strength of the rebellion against the Democratic tariff and other legislation, but believe that the President's record and personality saved his party from complete rout. Such, for instance, is the view of the New York *Journal of Commerce*, *Evening Post*, and *Herald*, and the Newark *News*. Several independent papers also lay stress on the disappearance of the Progressive party and a feeling of reaction against radical legislation, policies, and leadership. "The Republican revival," says the New York *Globe* (Ind.), "is not due to Democratic loss, but to a Republican-Progressive reunion, whose continuance depends on future circumstances." As the Boston *News Bureau* picturesquely puts it, it is a case of "Expiring Moose and Flat Purses." In the first respect, it explains, the Democrats have "simply lost a factitious advantage earlier made a present to them; the normal relation has been pretty well restored." This paper, fairly representative of rather conservative but non-partizan opinion, continues:

"That our politics can not normally be triangular has now been once again definitely established; there does not seem to be enough of lasting vote power or of definite issues outside of two major parties. The count in Pennsylvania, after the Colonel's own canvass, and the way in which Sulzer, as he boasts, has made the Colonel 'look like thirty cents' in New York, and the collapse in the Bay State, all bespeak political demise. We are back to the accustomed dual basis. Mr. Wilson became President Wilson on 38 per cent. of the total vote; but his goal in 1916 must needs be very close to 51 per cent."

That under the existing circumstances "the Democratic party should have come so near holding its own is," to the New York *Evening Post*, "evidence of soundness and strength, and gives sufficient ground for it to face the national contest of 1916 with courage." So, too, think Democrats standing high in Administration circles. Says Postmaster-General Burleson, for instance: "For the first time in the history of the country a party which has revised a tariff bill has been returned to power on that issue alone." Other Democrats in Washington, we have it on the authority of a New York *Times* correspondent, "take great pleasure from the thought that, with the Progressives practically eliminated, Democracy has measured swords with Republicanism on almost equal terms and proved more than a match with it." Representative of extreme Democratic optimism is the Brooklyn *Citizen*, which concludes that, "measured by the Congressional elections and considering the practical disappearance of the Progressive party, the country has noted its approval of the Wilson Administration and the Wilson policies." To the New York *World*, however, the reduction of the party's House majority to so narrow a margin should "compel the most serious reflection." But for Woodrow Wilson, it declares, "Democratic control would have been completely obliterated."

Turning from two parties which claim a victory to one whose candidates ran no better than third, except in California and in cases where they "fused," and which polled so small a vote in some States as to lose its party rights, there is little explanation offered. Taking issue with the many who see the end of the Progressive party in last week's election, a New York Progressive writes to *The Tribune* (Rep.) to say that in New York the Progressives simply voted for Whitman to defeat Tammany—"you will be surprized at their strength when 1916 comes around." Herbert Knox Smith, the Progressive Senatorial candidate in Connecticut, also has hopes for the future. In California, the San Francisco *Bulletin* (Prog.) rejoices in the vote of "overwhelming approval" given Governor Johnson.

One of the few out-and-out Progressive papers which try to explain the slump by which so many able candidates were humiliatingly defeated is the Chicago *Post*. It says:

"The plain fact is that, under the depression of war, people did not and would not discriminate between the Progressive and the Republican program. They were against the whole Democratic economic plan. To hit it, they seized the most familiar and the most destructive weapon they could find."

Such is also the opinion of the Philadelphia *North American* (Prog.), which, tho bitterly disappointed by the "indelible shame" of the reelection of Senator Penrose, is forced to the conclusion that thousands of Progressives voted with the old party because of their conviction that the Wilson Administration had undermined the protective policy. Revolutions, it remembers, "always have an economic basis"—"the human desire for bread is still more potent than the yearning after righteousness." The New York *Evening Mail*, New York's most active Progressive newspaper, seems to have followed such arguments to their logical conclusion, and to be ready to campaign under the old banner. For it said, the day after an election so disastrous to Progressive hopes:

"The result means that the battle of 1916 has begun, and that the Republican party has been commissioned to undertake it in the name of prosperity for the people."

AMERICAN SYMPATHIES IN THE WAR

MUCH TALK is heard about American sympathy in the European War, but thus far it has had no basis except hearsay or very limited personal observation. Do a majority of the American press or the American people favor the Germans or the Allies? To approach an answer to this question we have obtained statements from between 350 and 400 editors, telling their own attitudes and the feelings of their communities toward the warring nations. We need hardly say that we give the result of this inquiry entirely without partizanship, and purely for our readers' information. The replies cover the country from the Atlantic to the Pacific and from Mexico to the Canadian border. They can not very well be woven into a connected narrative, but the reader who scans the summary presented here will find the country divided into large areas where the feeling is preponderately for one side or the other, or is so mixed as to be neutral. Yet the sympathy on either side is that of the distant observer. No belligerency is evident anywhere. Reports of pro-German sentiment follow pretty closely the geographical distribution of our German-American population, but at the same time a number of editors report a more favorable feeling toward Germany now than at the start of the war, so both sides can exact some comfort from the findings. We hear frequently from sections of the Middle West, in which the Germans preponderate, that "this is a German community—we are for the Germans." Or it is related of other districts that the "extreme partizanship" of the German-Americans has awakened a good deal of active sympathy for the Allies. But no matter in what territory we come upon downright supporters of the Allies, we are nearly always assured by our informants that "not Germany or the Germans" do they and their readers condemn, but "Prussian militarism." The reproaches to the Kaiser for having plunged the German people into war are severe by pro-Ally partizans in some quarters. In others it is noticed not unfavorably that the local Germans are "very loyal to the Fatherland and the Kaiser." Finally, in some middle-sized towns of mixed population we even find a general tone of absolute neutrality. The citizens are said to have only one idea about the war, and that is to see it over and done with at the earliest possible day. In the larger cities, such as New York, Chicago, and others, the sentiment of the community is aptly described as "very mixed," because of the great and various foreign population. Looking at the matter in wider scope, that is, in the Government's geographical divisions of the country, we are struck with an old fact discovered anew. The marked leaning of New England toward the Allies may be the effect of the lineage of the majority of the inhabitants, just as the pro-German tendency of the Central States or of regions in the far Northwest proceeds from the heavy population of Germans and German-Americans in this region. In the Southern and Southwestern States, whose people are principally of English ancestry, sympathy inclines to the Allies, while the Western States to the Coast seem of the same bent, tho less markedly. Part explanation of this condition is found in the statement of one authority that in certain sections "the Teutonic element is

far in the minority." Nor must it be overlooked that in neighborhoods which were "on the fence," so to speak, at the beginning of the war, American resentment against so-called "censored" British dispatches works for German sentiment, just as the Belgian invasion has influenced some "neutral" minds against Germany. The following summary shows in cold figures the complete returns to our inquiry. To these must be added the warmth of personality as expressed in the statements of the editors.

ATTITUDE OF THE PRESS

Of the 367 replies, 105 editors report that they favor the Allies, 20 favor the Germans, and 242 are neutral.

Of the pro-Ally editors 34 are in the Eastern States, 13 in the Central, 47 in the Southern, and 11 in the Western.

Only one pro-German editor hails from the Eastern States, while 10 are from the Central, 5 from the Southern, and 4 from the Western group.

The neutral editors number 43 in the Eastern States, 112 in the Central, 51 in the Southern, and 36 in the Western.

ATTITUDE OF THE PEOPLE

The feeling of the cities and towns represented is reported as favoring the Allies in 189 cases, for the Germans in 38, and neutral or divided in 140.

The pro-Ally cities and towns heard from total 52 in the Eastern division, 40 in the Central, 71 in the Southern, and 26 in the Western.

The pro-German communities are 2 in the Eastern group, 29 in the Central, 4 in the Southern, and 3 in the Western.

Cities and towns reckoned as neutral or divided number 24 in the Eastern States, 66 in the Central, 28 in the Southern, and 22 in the Western.

MAINE TO PENNSYLVANIA

The sentiment of several representative cities in Maine, as gaged by their newspapers and shown by the editorial leaning of these journals, is almost entirely in favor of the Allies. In Portland there are editors that admit their policy is one of sympathy with the Allies, whose cause, they believe, is "generally, altho not entirely," supported by the public at large; and advices to the same effect come from Augusta, the capital, and from Brunswick, the seat of Bowdoin College. On the other hand, we hear from next-door New Hampshire that "there is an equal division of sentiment" in Portsmouth, and that "there are many strong German sympathizers." In contrast to this view is the verdict of four journals in Manchester, a much larger place, that "sentiment in this State probably runs more to the Allies than to the Germans," while from the capital, Concord, and from Nashua we receive like information. For all that, it must be remarked that the majority of the New Hampshire editors observe neutrality in the columns of news and editorials. Crossing into Vermont, we are met by much outspoken support of the Allies from both editors and people. "Had the Germans not invaded Belgium," writes a Burlington editor, "we would have

"I LOVE MY COUNTRY, BUT I'LL BE HANGED IF I EVER LOVE ANOTHER!"

—Weed in the New York Tribune

been neutral. We lean toward the Allies." Concerning the people of his section, he tells us that they are "strongly against the success of the Germans, yet not wishing that Germany be destroyed." Others simply declare themselves in favor of the Allies without comment. Less downright is the statement of a Rutland editor who says that the sentiment of the community is in favor of the Allies, and his paper also favors them "at present," altho "nominally neutral with a strong antimilitarist feeling." From Bennington we hear that the Allies are "very strongly" upheld, "the active partizans of the Germans are plenty."

In Massachusetts we find an impressive showing of sympathy for the Allies set off against pronounced editorial expression of neutrality in some quarters. Such is the attitude of Boston, as reported by its press. A Framingham editor of the neutral class adds that, judging from the comment that reaches him, the general public of his locality favors the Allies, "while giving full credit to German ability." As an instance of the temper of the "near-neutral" mind, we may cite the statement of a Worcester editor who says he "doesn't favor" either side, "but believes and says the Allies are in the right." The report comes from Lowell that "the success of the Germans would be an unprecedented calamity."

In Rhode Island we hear from both Providence and Newport that public feeling favors the Allies "overwhelmingly." But in Connecticut, while there is a strong pro-Ally sentiment, there is also no lack of sympathy for the Germans, especially where German-Americans constitute part of the population. Indeed, one paper in New Haven claims that the city prefers the Germans; but two others hold that, except among the Germans themselves, the general sentiment is for the Allies. This would seem to be the feeling in other cities also of this State where some of the newspapers are neutral and some pro-Ally.

In New York State neutral editors preponderate, while popular feeling is divided. This is particularly true of the large cities in which there is a native German population. Ardent as may be the supporters of the Allies, we hear from Troy, Watertown, and Oswego, yet the Germans are enthusiastically for their Fatherland. From Ithaca, with about 15,000 population, we hear a feeling is "intense against the Germans," but, on the other

hand, from the State capital, with its 100,000 odd, we are told that as far as general sentiment goes "there have not been manifestations from which that could be determined or surmised." We learn from Syracuse, with more than 130,000 people, that "the general sentiment" favors the Allies. Farther westward, at Buffalo, where the Germans constitute about 25 per cent. of the population, there is naturally an equivalent pro-German sympathy. The rest of the people, according to one editor, incline toward the Allies. The chief journals of this city abide by neutrality, and one editor remarks very sanely:

"There is but little warlike feeling here, the vast majority deploring the cataclysm of war and praying and hoping for peace. There is no racial feeling here by reason of the war, and our French, German, British, and other people dwell together in great amity and good-will."

In New Jersey, the Teutonic city of Hoboken is pro-German, tho the English press here is neutral, as it is in Paterson. But Paterson is said to regard the Allies with a favoring eye. In Newark and Plainfield, press and people favor the Allies, while one editor reports Trenton as pro-Ally and another says it is neutral.

Advancing into Pennsylvania, we are brought face to face with a sharp division of opinion, especially in smaller cities. The press seem generally to be neutral. In Philadelphia one hears that "a large majority" favors the Allies, or that, "outside of the German population, the sentiment is almost unanimously anti-German." And the blame is laid to "German militarism and the invasion of Belgium." In the important manufacturing city of Norristown we find the editor of an avowedly pro-Ally paper stating that "at least 85 to 90 per cent. of this community are strongly in favor of the Allies." On the other hand, in another important manufacturing city, Lancaster, an editor, in despair of appraising the balance of public opinion, confesses: "I give it up!" Harrisburg, Pottsville, and Newcastle are divided in sentiment, tho in Newcastle a pro-German editor reports a pro-Ally majority. In Wilkes-Barre the Germans favor the Kaiser, "but the preponderance of sentiment has been pro-Ally. However, we believe this sentiment is changing somewhat as Cossack activities increase." McKeesport's main wish is the early end of the war.

OHIO TO KANSAS

On crossing the western border of Pennsylvania to enter Ohio we discover the newspapers are mostly neutral, altho a Lima editor avows that he is supporting the Germans, and says of his locality that "since the truth is becoming known, sentiment, which was at first anti-German, is steadily changing in favor of Germany." Also from Newark and Hamilton word comes of a pro-German attitude; while we hear of Cincinnati that "a large proportion of the population being German, there is a distinctive German sentiment in this community."

Where public opinion is divided, as in Springfield, we are told that "pro-German sentiment is more evident than pro-Ally," or we read of Cleveland that "sentiment is rather for the Allies, but the Germans are heard more." Toledo, Youngstown, and Akron report their German population as loyal to the homeland, with the rest mostly neutral or pro-Ally.

Farther westward, in Indiana we find the parallel between local public opinion and that of Ohio so striking as to fall immediately under notice. We become aware of large centers of German population with the resultant pro-German attitude. But that the conflict of divided opinion is even sharper in Indiana may be instanced from the fact that of two editors in Indianapolis one writes: "Marked German sentiment. Large German population." The other says merely that the sentiment of the community is with the Allies. Several other cities with large German populations also report the feeling divided along racial lines.

Traveling still westward along the Lake tier of States into Illinois, the impression that German feeling runs high in German localities is intensified. In towns of from ten to twenty thousand, such as Belleville and La Salle, not only is the common opinion pro-German, we are informed, but also certain editors openly declare that their papers favor the Germans. And yet we hear also of towns of approximately equal importance, Jacksonville, for instance, in which the Allies are the favorites, altho the Germans do not lack sympathizers, while in the multifarious population of Chicago public opinion can only be described as being "very mixed." But there are also rather neutral towns like Joliet where, we learn, "there is no pro-Ally sentiment, and American-born and Irish and others are disinterested and hope for a speedy conclusion of hostilities."

If population is largely the deciding element in Ohio, Indiana, and Illinois, population and geographical position have much to do with the complexion of sentiment in Michigan. "On account of our proximity to the Canadian border and the fact that we have among our inhabitants a great many French, English, Canadians, Belgians, Russians, and Armenians," writes a Detroit editor, whose paper is editorially neutral, "if a canvass could be taken it would undoubtedly show that there is a slight preponderance of sentiment in favor of the Allies." The editor of another neutral paper in the same city tells us that "while Detroit has a large German population and is a border city to Canada, there is no marked bitterness on either side" tho,

"naturally, German-Americans favor Germany, and the Canadians and English the Allies." From Grand Rapids we hear of an editor who is "neutral—with inclinations toward the Allies," and who thinks that public sentiment "favors the Allies, tho the community is very open-minded." In Sault Ste. Marie a neutral editor gives the odds to the Allies because there are fewer Germans than Canadians, French, and persons of Scotch descent. Flint is also said to lean toward the Allies; but we learn from a neutral editor in Bay City that, while public sympathy "has been with the Allies, efforts of local Germans are changing it somewhat."

By whatever route we enter Wisconsin we are greeted with a predominating pro-German opinion that is offset by a fair showing of divided sentiment. The newspapers are almost all neutral, even in Milwaukee, tho, as one editor writes, the city "has a large German population and sentiment favors the Germans." Other cities recorded as wholly in favor of the Germans by neutral editors are Sheboygan, Watertown, Wausau, and Stevens Point; while from Racine the information from a neutral paper is that "at first" the town supported the Allies, but "more recently disclosures of falsehood directed against Germany by England have inclined people to sympathize with Germany." Eau Claire, Madison, Waukesha, Oshkosh, and other towns repeat the now familiar report of German support of Germany, with others ranged on the opposite side.

In Minnesota, also, the strength of German population affects the general opinion. Yet the influence is hardly so emphatic as in Wisconsin. We try to be "absolutely fair," says an editor of Minneapolis, and adds that the sympathy of the city is with the Germans. From St. Cloud, where the population is largely "either German or German descent," a neutral editor sends word that the general sentiment is "almost unanimous for the Germans." Altho there are many Germans in Stillwater, we hear that

"little is said" about the war; but farther north, in Duluth, we ascertain that the city is "decidedly" in favor of the Allies or else that "it is almost unanimously—outside of those of German birth or descent—the hope of the community that Germany will lose, tempered with the hope that if it does the German people will not suffer what we fear its victims will suffer if Germany wins."

There is a noticeable similarity of complexion in Iowa to other Middle Western States above pictured. Out of twenty-four towns nine confess to be pro-German, seven to be pro-Ally, and eight to be "divided." German support of the Germans and non-German support of the Allies are reported from Keokuk, Burlington, and other cities, and we learn from an editor of Cedar Rapids and others that the majority favored the Allies at first, but now it is coming to be believed "there may be more merit in the German attitude than is made to appear." From Fairfield we hear that the community feeling has changed completely in favor of the Germans, and of Red Oak that it is "more favorable to the Germans than when the war commenced."

THE MODERN WAY OF HEAPING COALS
OF FIRE UPON AN ENEMY'S HEAD

—Greene in Puck.

GERMANY'S NAVAL VICTORY IN THE PACIFIC

THAT BRITANNIA is having her troubles in ruling the waves has been made evident for some time by the exploits of the *U-9* and other German submarines in the North Sea, and by the commerce-destroying activities of the *Karlsruhe* in the Atlantic and the *Emden* in the Indian Ocean. But the most serious blow to British naval prestige and the most impressive demonstration of German naval prowess to date, our editorial observers remark, is the defeat of Rear-Admiral Sir Christopher Cradock's cruiser squadron off Coronel, Chile, on the evening of Sunday, November 1, by a German squadron under Vice-Admiral Graf von Spee. The British face their losses soberly and without flinching, while their friends here point to the fact that their real naval strength has hardly been touched and still remains about twice that of Germany, and is supported by the navies of France and Japan. The immediate result of the Coronel engagement, remarks the *New York World*, is that "the boasted mistress of the seas has been swept from the South Pacific, and cargoes in British ships for the west coast of South America have become practically uninsurable." The *World* goes on to say that while "in tonnage the Chilean defeat costs Great Britain less heavily than the torpedoing of the *Cressy*, *Hogue*, and *Aboukir*," the manner of it is a severer blow to her prestige, and it leaves her Navy "for the moment crippled in one important part of its vast field of action." The fact that the German squadron had something the advantage in numbers, tonnage, guns, and speed, some of our editors note, only emphasizes Great Britain's blunder in allotting to an inadequate fleet the task of clearing the Pacific of the German commerce-destroyers. On this point we read in a Washington dispatch to the *New York Sun*:

"The German victory off Coronel was the result, in the opinion of naval officers here, of a gross blunder in British naval policy, a blunder which is likely to cause more anger than the futile attempt to relieve Antwerp and the failure to deal with the *Emden* and the *Karlsruhe*. It appears that the Admiralty must be held responsible for underestimating the skill and energy of the German commander in the Pacific and for sending against the German ships a squadron so inferior in numbers and heavy guns that it was doomed from the moment it was sighted by the Germans. . . .

"Apparently the Admiralty planned to locate and destroy the German ships one by one, and considered that a squadron of three cruisers, not one of which was equal in gun-power to the principal German cruisers, would be sufficient to clear the Pacific.

"But the Germans were not stupid enough to await attack one by one. Naval officers here declare that there has been nothing finer in naval warfare than the skill and certainty with which Vice-Admiral von Spee collected the scattered ships, acquainted himself with the movements of the British fleet, and then struck when victory was assured. The British squadron was not only outnumbered but outmaneuvered and outfought. Officers and men were sent to their death, since it is not to be questioned that the British fleet never had a chance."

In many quarters we find tributes to Admiral von Spee's strategy in secretly gathering together his widely scattered units, estimating the probable movements of Admiral Cradock's fleet, and striking under conditions apparently of his own choosing. According to Admiral von Spee's report five German cruisers, the *Gueisenaue*, *Scharnhorst*, *Nürnberg*, *Leipzig*, and *Dresden*, met and engaged the four British ships, *Good Hope*, *Monmouth*, *Glasgow*, and *Otranto*, "between six and seven o'clock in the evening, during a heavy rain and rough weather off Coronel." This official German report, as telegraphed from Valparaiso, goes on to say:

"The *Monmouth* was sunk and the *Good Hope*, after a great explosion on board, took fire.

"Her subsequent fate is unknown, owing to darkness having set in. The *Glasgow* and the *Otranto* also were damaged,

but the darkness prevented our obtaining knowledge of the extent of it.

"Our ships, the *Scharnhorst* and *Nürnberg*, were not damaged. The *Gueisenaue* had six men wounded. The rest of our ships also were undamaged."

This setback, says the *Brooklyn Eagle*, carries two lessons for the British Admiralty:

"The first is that tho the penning up of the main German strength in the North Sea is important, perhaps most important, there should be no waste of strength there; that more and swifter and stronger vessels are needed to hunt and destroy, if possible, the German cruisers now at large that may threaten commerce. The second lesson is that manifestly some of the South-American nations are regarding too lightly their obligations as neutrals and are winking at the furnishing of coal to German war-ships. This is a matter to be investigated first and checked afterward. It is a matter vital to the use of the German units far from any German ports."

The *Monmouth* and the *Good Hope*, says the *New York World*, bring the number of vessels lost by the British Navy since the beginning of the war to twenty. It has been remarked that Germany's naval policy, unlike that of her land campaign, in which she struck at once with the full weight of her Army, seems to be one of slow attrition and brilliant minor engagements. While this policy has met with much success, the *New York Evening Post* remarks that—

"Great Britain's fleet is stronger to-day despite this, by reason of the finishing of battle-ships nearly completed, and the taking over of Turkish battle-ships and Brazilian monitors is not to be overlooked. Her numerical superiority remains overwhelming, and can hardly be altered save by an unthinkable disaster in a great fleet action. But it can hardly be denied that the honors of the war for skill, daring, and courage in the face of great odds seem thus far on the side of her adversaries."

WAR AND CRIME—Attention is called by one editor to the moral uplift seemingly exerted by war nowadays, as contrasted with its effect in years gone by. This is seen in the recent announcement of the English Director of Public Prosecutions at the London session, when the grand jury was congratulated on the fact, the *New Orleans Times-Picayune* informs us, that crime in England since the outbreak of the war has decreased by 40 per cent. The contrast between this report and war as history reveals it, as the promoter of crime and the unbridling of all the baser passions, is so marked that this paper is led to hail it as a sure sign of moral growth and a new patriotism. To be sure, many of the criminal class are now safely engaged in wholesale crime upon the battle-field, and consequently prevented from stirring up civil disorder, but the reader is assured that this does not explain by any means the whole reduction of crime during the war. We are reminded that a similar reduction existed in this country during the Spanish War, and are urged to believe that the true cause is that—

"The public mind is turned in a new direction and that a spirit of patriotism holds many in check who might otherwise be inclined to violate the laws.

"In England, for instance, the war has brought to a sudden end the many offenses committed by the militant suffragettes, who have decided that this is a most unfavorable time for them to air their grievances and present their case by incendiarism and other violence. In Ireland the differences growing out of the Home Rule movement have quieted wonderfully, and the country is more peaceful than it has ever been. There is evidently a very strong popular sentiment everywhere that Great Britain should be on its good behavior just now, and should show to the world how orderly and well balanced it can be. The present war has produced enough horrors on the battle-field, and it is gratifying to know that at home in the belligerent countries the amount of crime has decreased and that the churches are better attended. There is a very general sentiment that the war is to be followed by a world-wide moral and religious movement; it is gratifying to see that this movement has already begun where there is no fighting or marching of soldiers."

TURKEY'S TURBAN IN THE RING

TURKEY'S PLUNGE into the European conflict after blowing hot and cold for three months conjures up in the minds of some of our editorial observers the ominous specter of a "general war"—a possibility, remarks the *Springfield Republican*, "the terrible significance of which only far-sighted thinkers have till now comprehended." The participation of "The Sick Man," thinks the *New York Sun*, "threatens to involve all the other nations of Europe except Spain, Switzerland, the Scandinavian countries, and Holland." That it may lead to a "Holy War" involving the 200,000,000 Moslems of Europe, Asia, and Africa is an eventuality discussed in all quarters. And the *St. Louis Globe Democrat* even suggests that, in view of the possibility of fanatical attacks upon the thousands of Americans engaged in missionary work in Turkey, the question of American neutrality may for the first time become a difficult one. The American armored cruisers *Tennessee* and *North Carolina* are reported in Turkish waters, "ready to protect American lives and property." In any case, remarks the *Syracuse Post-Standard*, the advent of Turkey as an ally of the Kaiser "extends the war area, adds to the daily cost in blood and treasure of the murderous business in which Europe is engaged, and introduces into it new barbarisms." Counting Portugal, Turkey is the eleventh nation to enter the war.

But when it comes to estimating the value of this new ally to the Austro-German cause opinions differ diametrically. Thus, while many papers feel with the *New York Evening Post* that Germany will ultimately find Turkey's cooperation more of a liability than an asset, on the ground that the other countries almost certain to be drawn in in Turkey's wake will create a balance of new forces in favor of the Allies, others share the view of the *Indianapolis News* and *Springfield Republican*, that Turkey's course represents "the first diplomatic triumph

scored by Germany." As the situation stands, remarks the *Chicago Tribune*, "from the military and naval point of view the accession of Turkey is a substantial if not formidable addition to the strength of the German side." The *Chicago* paper goes on to say that the Turkish Army is estimated at 220,000 on a peace footing, with a war strength, first and second line, of 360,000, and an estimated maximum strength of 900,000. The Turkish Navy, it adds, has become a formidable factor by the acquisition of the two fast modern German cruisers, the *Göeben* and the *Breslau*. Including these, Turkey's naval strength, according to a writer in the *New York Evening Post*, consists of three battle-ships, four cruisers, three torpedo-gunboats, ten destroyers, ten torpedo-boats, twenty-eight small gunboats, a coast-defense ship, and some auxiliary craft. This fleet is said to outpoint Russia's Black Sea Fleet in weight and power. As evidence that those chiefly concerned regard Turkey's participation as more likely to help the Germanic cause than to hurt it, the *Charleston News and Courier* points to the fact that Germany eagerly invited that participation and the Allies made every effort to prevent it. According to Constantinople dispatches, the Turkish Minister of Finance accuses the German officers and men on the Turkish war-ships of forcing Turkey's hand by beginning the bombardment of Russian Black Sea ports. Germany is rumored to have made Turkey a war-loan of \$50,000,000; the Young Turk party, headed by Enver Pasha, has for some time made no secret of its German sympathies; and German officers are said to hold positions of high authority in the Turkish Army and Navy.

The most ominous aspect of Turkey's move, as many note, lies in the possibility of its leading to a "Holy War" of Mohammedans against Christians. In this connection we are reminded that there are 82,000,000 Mohammedans in India, 13,000,000 in Russia, 9,000,000 in Egypt, and over 11,000,000 in French North

THE NEW AREA THAT TURKEY BRINGS INTO THE WAR

Africa. Thus England, because of her position in India and Egypt, has most cause for concern. "A 'Holy War,'" says the *Newark Star*, "may shake the very foundations of the British Empire." "The weak point in the Triple Entente's line-up," remarks the *Baltimore American*, "is Egypt and the Suez Canal." But, despite rumors of Moslem disaffection in Egypt and of Arab unrest in French Africa, there seems to be considerable belief that a "Holy War" will not develop. Thus in the *New York World* we read:

"At the outset, Aga Khan, the spiritual leader of the Mohammedans in India, Central Asia, and East Africa, has openly condemned the Sultan's course and challenged his authority over Islam. From the frontiers of Northern India to the Sudan, and all through the dominions in Africa where Arabs come under British rule, the Aga Khan's message will be spread, declaring it to be the duty of Moslems to 'remain loyal and faithful to their temporal and secular allegiance.'"

Turkey's own stake in the war, in the case of Germany's victory, thinks the *Columbia State*, is "the return of Thrace and Macedonia and the greater part of the territory lost in the Balkan War." Failure, it is generally admitted, will mean the end of Turkey in Europe.

Discussing the extent to which the interests of Italy, Greece, Roumania, and Bulgaria are affected by Turkey's desperate course, the editor of the *New York Evening Sun* writes:

"For Italy the position is this: If Turkey reconquers Egypt, Italy's hold in Tripoli becomes wholly precarious. All that she won with so much effort in blood, in treasure, becomes practically valueless.

"Again, Italy has already taken steps to establish her influence in Albania. But if Turkey succeeds in restoring her military power nothing is more inevitable than that she will endeavor to regain her lost provinces in the Balkans. And of these Albania, with its Mohammedan population, promises to be the easiest to reconquer.

"Finally, it is Austria, not Russia or France or England, which is Italy's rival in the Near East. If the Austro-German alliance is successful its next aim will naturally be to assert an industrial as well as political supremacy in the Ottoman Empire. Under Turkish rule possibly Salonika will become the eastern gateway of the two central Powers. Serbia and Montenegro will pass to Hapsburg rule and Italy will be outstript in the race to the Near East.

"As to Roumania, the situation is less serious. Her ambition to redeem Austrian and Hungarian provinces inhabited by Roumanians still stands. In addition she must view with apprehension any alliance between Bulgaria and Turkey, because in the second Balkan War she seized Bulgarian territory, and must expect attack if Bulgaria shares in a victorious alliance with the central Powers. As long as Bulgaria remains neutral she can afford to stay out, but the desire for Transylvania and Bukovina is unmistakable; the sympathy of the masses of the people is plainly with the Allies, and the Turkish decision might easily give just the impulse needed to send Roumania into the ever-widening conflict.

"Bulgaria remains the storm-center of the present situation. In the second Balkan War, Serb, Greek, Roumanian, and Turk combined to deprive her of the fruits of her splendid victories. Greece, Serbia, and Roumania took from her lands populated by Bulgars. Russia, in Bulgarian eyes, betrayed her at the critical hour. 'Call us Tartars, Huns, anything but Slavs,' were the bitter words of one Bulgarian general at Bucharest. It is easy then to see how Bulgarian resentment at recent wrongs may provoke participation with Turkey in the war.

"If Bulgaria remains neutral, Turkish troops can not join the battle in central Europe. If she joins the Austro-German alliance, the combined Turkish-Bulgarian armies may presently be in Serbia endeavoring to join hands with the Austrians across King Peter's little State, and thus open a way for Turkish army corps to appear in France or in western Galicia.

"As to Greece, like Roumania she is bound to Serbia in an alliance to preserve the *status quo* created by the treaty of Bucharest. Victorious, Turkey would inevitably reclaim the Egean islands held by Greece, would demand and obtain Salonika, if Bulgarian claims were rejected. The entrance of Turkey on the side of Germany would inevitably bring Greece in on the other side. All her history, all her sympathy binds her to France and England."

AMERICA FEEDING BELGIUM

AFTER THE BURNING of Louvain, says the *Louisville Courier-Journal*, a press correspondent wandering near the city saw in the dust of the road a child's rag doll over which the heavy wheels of the great gun-carriages had passed. That doll, he declared, "was Belgium as he found it after the ruthless invasion." And the American press seem to agree with more or less unanimity that the condition of Belgium is the great tragedy of the European War. True, there are those who assert with the *St. Louis Globe Democrat* that "the Allies are under every moral obligation to divide their rations with the Belgians, who held the Germans off till they were prepared." And the *New York Evening Sun* enlarges upon Germany's duty to "the helpless population freshly brought under German rule," asking pointedly which nation should "see to it that no man, woman, or child starves or freezes this winter because of the 'military necessity' that made a desolation of a million homes"? Others would raise the "charity-begins-at-home" cry and point to American causes and institutions languishing from lack of funds. But the more general inclination is to note that the Allies and Holland are doing all they can, and have their hands full in their own countries, and that Germany may be doing her best, and must first of all see that her own soldiers are provisioned. Despite all that can be done, says King Albert, in a message to the American people, "the suffering in the coming winter will be terrible, but the burden we must bear will be lightened if my people can be spared the pangs of hunger, with its frightful consequences of disease and violence." Writes Brand Whitlock, the United States Minister to Belgium, who has remained in Brussels:

"The civil population of Belgium, already in misery, is faced with starvation. . . . We have obtained from the German military authorities assurances that all foodstuffs taken into Belgium by the commissioner for the civil population will be respected by the soldiery and not made the object of military requisition. Not money, but food, is needed."

So the question is, according to statements of the American-Belgian relief committee, shall the American people, "blest with peace and comparative plenty, . . . turn a deaf ear to the cries of these poor women and children for food and shelter from the cold"? And the answer is, "Americans must feed Belgium this winter." In response to this call, money and supplies have been pouring in to the relief committees, the Red Cross, and other agencies. Funds have been raised in divers ways, and many are offering their personal services. This year's Nobel peace prize fund, report has it, will be devoted to the support of Belgian refugees in Holland. But most interesting of all, to judge by the newspaper comment it has elicited, is the action of the Rockefeller Foundation. It publicly states its purpose "to exert itself to the extent, if necessary, of millions of dollars, for the relief of non-combatants in the various countries involved" in the war, and it calls its action "a natural step in fulfilling the chartered purposes of the Foundation, namely, 'to promote the well-being of mankind throughout the world.'"

Belgium, naturally, is the first of "the various countries involved" to receive help. A stanch American freighter, the *Massapequa*, was quietly chartered and filled at a cost of \$275,000, and has already set sail for Rotterdam with 4,000 tons of flour, rice, beans, and bacon, which will be carefully distributed in Belgium, in cooperation with the relief committee. This action is generously and unanimously applauded by the press. Thus, observes the *New York Evening Mail*, does this great agency for good find its "first big opportunity and justification" — "without soliciting contributions, without appointing committees made up of men too busy to give real time and thought to the work, without seeking publicity until the plan had been thoroughly canvassed and definitely outlined. The Foundation has set out

on the greatest mission of human help ever undertaken." Others rejoice in the large sum of money immediately available and in the assurance that the Rockefeller organization will do its work expeditiously and competently. Yet a host of editors, several representatives of organized relief work, and the Foundation itself would warn the American public against the abandonment of individual generosity on the supposition that it is no longer needed. Ambassador Page, in London, says that 3,000,000 Belgians are now practically without food, and that no food can be bought anywhere in Europe. According to a Brussels dispatch appearing in American newspapers, nearly 7,000,000 people are homeless. It is thought that there are now 200,000 Belgians in England and 800,000 in Holland. We are informed that a million homes have been destroyed or made uninhabitable, and that

"Malines, Louvain, Liège, Namur, Charleroi, Mons, Dinant, and a score of smaller places have been so shattered by the artillery-fire of the opposing armies that less than half of the normal population is decently sheltered.

"The seizure of cattle for the armies has left the country without beef, milk, and cheese.

"At Liège, the Pittsburgh of Belgium, the steel industry has been brought to a standstill. At Antwerp, the New York of the Belgians, all shipping has stopped.

"Brussels, the deserted capital, has been spared destruction, but its industries are shut down. Lace-workers are being fed at soup-kitchens. The stores have no food to sell and the public has no money to buy if opportunity offered. Members of

noble families have discharged their servants and joined the bread-line.

"The beet crop has been ruined by the armies, and the sugar- and beet-factories are closed. There are no horses or other equipment for harvesting, or trains to move the small amount of beets that have survived the devastation of war, and few able-bodied men to assist the brave women who are endeavoring to ward off starvation by gathering what little remains of the crops in the field.

"Antwerp's diamond-cutters are all in the army. Malines' tapestry-factories are in ruins. Many cotton-mills are in ashes, and those that still stand are closed. All universities and schools have been abandoned. Nearly all the physicians are at the front or serving in the hospitals. Hundreds of priests and nuns are caring for the sick and wounded. Few churches are fit for occupancy as hospitals or otherwise. The convent homes have been deserted necessarily by the Sisters. Many are so badly wrecked that they could afford no shelter.

"The single ray of hope is afforded by the American Commission for Relief in Belgium. The liberality of Holland is described as splendid, but the country's grain supply is exhausted."

In expectation of a large Belgian immigration to this country, both now and after the war, a movement is on foot to provide farms for them on easy terms in various parts of the United States. Every agricultural State seems to be active in this movement, such papers as the *Los Angeles Express*, *Duluth News-Tribune*, *Savannah News*, *New Orleans States* and *Times-Picayune*, joining in the welcome to their respective sections.

WE are gratified to note that England celebrated Apple Day by putting another corps in the field. —*Boston Transcript*.

IF further progress is made in long-range gun-firing, the Kaiser will soon have to conquer Russia in order to obtain proper distance for operations on the Allies. —*Washington Post*.

THE actual assassin of the Archduke Francis Ferdinand gets off with twenty years in prison. Some way or other, the penalty on the rest of Europe seems out of proportion. —*New York World*.

AFTER all, the most encouraging fact for Europe is the United States. If Europeans can live in peace in a great confederation in the western hemisphere, they can do the like at home. —*Life*.

PERHAPS the sharp conflict between the war reports from Berlin and Petrograd may be due to some marked dissimilarity between the Russian and the German ideas of what constitutes a victory. —*New Orleans Times-Picayune*.

PROFESSOR MÜNSTERBERG indignantly declares he never said a word of an interview attributed to him by the *Cologne Gazette*. Which shows that even German journalistic conditions do not wholly suit the Professor. —*Chicago Herald*.

GOOD NIGHT!

—Caption in the New York Sun.

CANADIAN VIEWS OF A GERMAN INVASION

CANADA SMILES at Count von Bernstorff, refuses to take Dr. Dernburg seriously, and even makes it plain that she does not take much stock in our Monroe Doctrine. In commenting on von Bernstorff's recent promise that Germany will not annex Canada, the majority of the Canadian papers seem a little sarcastic, while the few which deal seriously with the matter seize it as an excuse to beat the recruiting-drum for the British Army. That the German Ambassador is not popular with our neighbors is made very evident. The *Montreal Herald* mentions his "delicate tact," and goes on to say that:

"Count von Bernstorff has a genius for rubbing Uncle Sam the wrong way. He has selected this moment, when all America is horrified at the atrocities and vandalism of barbarian Germany, to announce to the United States Germany's opinion of the scope of the Monroe Doctrine. There is nothing in it, he holds, which would prevent Germany landing an armed force in Canada. Possibly he expects that the United States will now go out of its way to tell him how cordially they would welcome such delightful neighbors on the Canadian side of three thousand miles of unfortified territory. Or was he speaking for Canada's benefit, in the hope that we might be scared?"

The same note of genial satire is sounded by the *Montreal Daily Star*, which, after a few caustic remarks upon Germany's "dunderheaded diplomacy," goes on to state that this diplomacy

"now proceeds at a most opportune moment to arouse American apprehensions anew by calling in question the effectiveness of their cherished Monroe Doctrine. Why should the German diplomats go out of their way to stir up that question at all? Why not let a sleeping 'eagle' rest? If there be any answer, except the incurable stupidity of that diplomacy, since Bismarck retired, we do not know it."

The *Star* proceeds to chide us for our lack of foresight, and hints that if we took a really broad view of our interests we would at this moment be fighting with the Allies for the purpose "of making doubly sure of the final paralysis of German Imperialism." It is, however, kind enough to believe that we are sincere in our determination to uphold the Monroe Doctrine, but has grave doubts about our ability to do so effectively. It says:

"There is not a shadow of doubt in our minds that the Americans would fight—if they could fight with any hope of success—against a German occupation of Canada. Whether they could fight with success, after the destruction of the British Navy and the subjection of Europe had made a German occupation of Canada possible, we beg leave to doubt. But, for the present, it is—happily—not a question of fighting the Germans in Canada. The British Navy rides between, and the Allied armies stand between."

The *Halifax (N. S.) Morning Chronicle* is polite to the German Ambassador, but refuses to be alarmed. It observes:

"It is very considerate of Count von Bernstorff to inform the American people that a German invasion of Canada is out of the question. Quite so. The Kaiser's legions have more than they can handle nearer home, and their invading days are rapidly drawing to a close."

The *London (Ont.) Advertiser* is angry with certain American papers for coming to the conclusion that the Dominion will

be to blame should Berlin and Washington be drawn into controversy and that Canada should have remained neutral. It remarks:

"We were under the impression that Canada's loyalty to the Empire was something so big, so obvious, that our taking part in this conflict would never be questioned. To a Canadian, to remain neutral during an Empire crisis such as exists to-day would be a monstrous thing."

It then proceeds to give what it considers to be the real reason for bringing up the question at this moment:

"The fact is that all these semi-official German statements in regard to the Monroe Doctrine have been dished up largely for Washington consumption. Von Bernstorff declares that Germany subscribes to the Monroe Doctrine only as regards South and Central America, and follows this up with a reassuring statement to

the effect that Canada is not to be invaded. From here, it looks as if Germany was tactfully telling Uncle Sam that she has neither fear nor regard for the Monroe Doctrine. She retains the privilege of invading Canada, but doesn't intend to. Evidently the Monroe Doctrine is to remain a live issue."

The rather wild possibility of a German-American raid into Canada is next explored:

"There is only one way in which we could be annoyed or injured. If a German-American raid could be organized and carried out, something like the Fenian raids of fifty years ago, there might be some trouble for us. But that could only be done with the connivance of the United States Government, and on that score we need have no doubts. Any such attempt would be promptly nipt in the bud. And while there are doubtless many German-Americans who sympathize with the Fatherland, and wish it success, the only way in which they would try to give it material assistance would be by going to Europe and joining its army."

The *Montreal Family Herald* admits that a German invasion of Canada is possible—under certain conditions—and says:

"And this is quite possible if Germany wins. Put Germany in command of all the resources of Europe—as she would be if she won this war—and the Monroe Doctrine could not protect us. The Monroe Doctrine would be powerless before a superior navy, and the million soldiers marching on orders from Berlin."

"We should think of these things when we are deciding how many men we ought to send to the front. There is no limit—save the number of men of military age in this country—to what we ought to be ready to do to prevent a German victory."

BERNSTORFF—"And by the way, tell your friend that I—that is, we—have no desire, that is, no intention, of taking his country."

—*Beck's Weekly* (Montreal).

THE BOER REVOLT AS A CIVIL WAR

ENGLISHMEN EXPERIENCED in South-African affairs have long held an opinion that finds expression in the *London Daily Chronicle*, the most influential and best informed of the Liberal organs. This is the startling view that the Union of South Africa is likely to be broken by an internecine strife which will be comparable only to our own Civil War. The South-African Dutch have been divided, since the Boer War, into two groups, the reactionaries, led by such men as Generals De Wet, Herzog, and Beyers, who have preserved their republican ideals, and the progressives, headed by Generals Botha and Smuts, who have grasped the ample opportunities offered by the British and have ruled South Africa since the Union was formed. The present conflict, tho ostensibly a revolt against Britain in favor of the Germans, is, in reality, we are informed, the final struggle between the old Boer traditions and modern progress. Generals De Wet and Beyers, who are now in open rebellion, are men of immense influence over the unenlightened and bigoted farmers who form the backbone of the reactionary party. In speaking of them *The Chronicle* says:

"There are still Boers in the backveldt who dislike a united South Africa and have never abandoned the ideal of an inland Boer State living by itself, according to old Boer traditions. They are a minority, probably a small minority, but they have high fighting value, and some of the ablest Boer generals are among their leaders. Their secession has but recently broken up the South-African party. There is now peril that it may break up the South-African Union. The struggle, if it came, would be not so much a struggle against Great Britain, but a civil war, like that in the United States half a century ago between the Union and secession. General Hertzog and ex-President Steyn may perhaps be regarded as now holding the key to the situation."

While *The Chronicle* is the only London paper which sees this as the true inwardness of the situation, the others by no means blink its dangers, tho most of them exhibit an incurable British

"For all that we are clearly of the opinion, formed on a good deal of recent first-hand intelligence, that the rebellion is by no means such a serious affair as it may seem at first glance. General Botha has enormous influence with his people. He led them in the war; he has been their chosen leader ever since. His personality, set against that of the rebel leaders, will tell heavily."

"The traitors reckon, no doubt, on concentrating in their favor all the vague discontent and lingering regrets for republican government that still survive among the Dutch of the country

THE LATEST APPLICATION.
"A sower went forth to sow."

—*De Nieuwkraker* (Amsterdam).

districts, but the weight of Dutch opinion will go solidly against them. The rebels may start with some successes; they may even succeed in scoring some sensational coup during the first few weeks, but they can not have many resources or much staying power."

It may be that *The Times* overestimates the influence of General Botha upon the South-African Dutch, for *The Daily News* is not slow to recognize the tremendous force of General De Wet's example upon his fellow countrymen. It points out that

"General De Wet was a chivalrous as well as brave enemy, and if he can forswear the signature which he attached to the Peace Treaty many lesser men who may have hesitated will swing over to treason. It would be ridiculous to depreciate a movement which much fanaticism has gone to make, but seldom have men with fine qualities provoked so needless and futile a tragedy as that for which De Wet and Beyers have made themselves responsible."

The most extraordinary thing about the South-African situation to British eyes is the fact that the rebels are acting, ostensibly, on behalf of Germany. They are warned that a victorious Kaiser would never restore the two Boer republics, and assured that Germany would never give them anything like the measure of self-government they have enjoyed since they came under the sovereignty of England. The *London Standard* brings out this view when it states:

"It is the idlest of dreams that the days of Kruger can be restored. If Great Britain emerges, as she will surely emerge, victorious in this great conflict, the territory comprised in the Union of South Africa must be subject to the British Crown. If, on the other hand, Germany should by any chance realize her vision of world-power, it is equally certain that South Africa will be subject to the Kaiser. The Power that has trodden on Belgium, whose representatives express daily whole-souled contempt for scraps of paper, will assuredly disregard any promises that may have been made in bidding for the help of the disaffected Dutch. The latter, in the event of German success, would have cause to regret, under the most illiberal rule the world knows, their ingratitude for the generous magnanimity with which they have been treated by British statesmen."

Many, indeed most, of the English papers are inclined to view this revolt as the result of German intrigue, which they, of course, denounce as highly reprehensible.

SHORT-LIVED.
Now for the others!

—*Daily Star* (Montreal).

optimism. Such is the attitude of *The Times*, which still voices the opinion of England with a curious accuracy. It remarks:

"The rebels have chosen their moment well. The South-African expeditionary force is engaged in operations against German Southwest Africa. Imperial troops which were quartered in the Dominion before the war were released by the South-African Government for service in Europe and have in all probability already left the country."

WILL IT BE IN THIS MANNER?

"The Czar will cross the German frontier at the head of 5,000,000 Rumanians." (A Reuter News Dispatch.)

—© Kladderadatsch (Berlin).

AS THEIR ENEMIES SEE THEM.

HOW GERMANY VIEWS PORTUGAL

UNDISTURBED by Portugal's entry into the war, the German press represent the Fatherland as continuing calmly on its way. Nor does the curious fact escape attention that England calls upon Portugal for aid while she harbors within her borders that Republic's arch-enemy, ex-King Manoel. What this aid amounts to can be seen from the comment of the military expert of the *London Daily News*, who, after discussing in detail Portugal's military resources, remarks:

"From the above figures we may say that Portugal can put an army of 100,000 men into the field, complete with all arms, and maintain it up to this strength for as long as the war lasts.

"Of the quality of the troops it is not possible to speak with any certainty, as we have no experience to guide opinion."

German comment on such assistance to the Allies is directed rather against England than Portugal, which is regarded as the dupe of her stronger neighbors. The Berlin correspondent of the *Frankfurter Zeitung* thus reflects the views of the highest governmental quarters:

"With Portugal enrolling herself on the side of France, England, Russia, Japan, Montenegro, and Serbia—not forgetting the Principality of Monaco—no one in Germany will be disturbed, but rather encouraged. Portugal is allied with England—nay, more than that, for a long period she has been dependent on England, as dependent as a vassal State, and, when England wishes, the Republic must join the long list of our enemies. Even if this sublime Republic should send a military expedition to France it would merely share the fate of the French, English, and Indian troops. A few German ships now lying in Portuguese harbors may, it is true, be lost. What will happen to Portugal, however, depends on the peace that will be concluded when the war is over. Portugal will then, perhaps, have the same experience as that which has brought tears of blood into the eyes of the Belgians. It will realize that English protection is of no avail, not only because England is too weak to protect those countries dependent on her which she incites to war, but also because her covetous, cold-blooded policy would in no

"BUBBLES."

—*London Opinion*.

sense be furthered by preventing them from bleeding to death. The countries that rely on England, France included, will be able to compare their experience when the final settlement is made, and the question of Portugal and her colonies will then be discussed as a matter of subordinate importance.

"One hears so much nonsense from the enemy's camp that it is quite possible that the anxious souls in Bordeaux really believe that England is accomplishing something for the furthering of the common cause when she induces Portugal to participate in some manner in the war. This move, at any rate, proves one thing, namely, that our most unscrupulous adversary is Britain, that same Britain that still dares to maintain that only the violation of the neutrality of Belgium impelled her to go to war. That this is a lie all intelligent people know, and many proofs that it is a lie will be forthcoming before the war is over.

"The fate of Belgium, whose King and Government have had to flee their country, is a sample of what the nations which have allowed themselves to be deluded by England have to expect."

WAR IN THE MARSHES

THE WORST PIECE OF GROUND in all Europe for military operations is said to lie along the Russo-German frontier in East Prussia, the scene of so many stirring exploits during the past few weeks. For days at a time the opposing forces have been fighting in the marshes, often up to their necks in water, while field-gun after field-gun has been engulfed in the mud. Few can realize the difficulties and hardships encountered by the troops in marching through this maze of forest, bog, and water. To bring this home to the people of the German capital, a special correspondent of the *Berliner Tageblatt* writes:

"People at home will be unable to form an accurate picture of the difficulty of carrying on war beyond the Russian border. No two miles are the same in character, and there are plenty of woods, marshes, rivers, and other obstacles. The Polish and Jewish population is essentially friendly to us, but among them are many Russians and other treacherous elements which give

the enemy information of all our movements and of the strength of the individual forces. This is quite apart from the reconnaissance service of the Russian airmen. We have, moreover, to do with a vastly superior enemy, who can not be underestimated."

In the face of such obstacles, General von Hindenburg's victory over the Russians at the battle of the Masurian Lakes is declared especially brilliant. It is more than that; it is a striking example of the manner in which Germany prepared for war and of the value of such preparation.

The Munich *Neueste Nachrichten* gives the following interesting outline of the General's life-work:

"Two opposing views have been held for decades past in military circles on the subject of the marshy region which includes the Masurian Lakes. One was that of General von Hindenburg, that the Russians must be forced into the lakes. The other was that the Russians must be kept away from them at all costs. The majority was against Hindenburg, who, however, clung obstinately to the 'mistake of his life.' Hindenburg was in command of a corps in the provinces when he heard that the idea had been mooted in the Reichstag of draining the lakes.

"The old General hastened to Berlin, where he explained, protested, and agitated. When his cause seemed hopeless he went to the Emperor. There he pleaded so effectively that his Majesty promised that his lakes should not be touched. Each year Hindenburg was sent to the maneuvers in the district where the lakes lay. There, as at all maneuvers, the soldiers of one army had a white ribbon in their caps and the other army had a red one. The reds were the Russians, and the whites, always commanded by Hindenburg, had to defend East Prussia.

"When the reds knew they were to fight Hindenburg, they said, until the saying became proverbial, 'To-day we shall have a bath.' They knew that everything they could do was unavailing, the end was always the same: Hindenburg entangled them hopelessly in the Masurian Lakes. This was repeated year by year. With the signal to break off the maneuvers the red army was invariably standing up to its neck in water.

From "The Sphere," London.

THE WORST BATTLE-GROUND IN EUROPE.

In this waste of bog and water General von Hindenburg performed perhaps the most brilliant piece of strategy of the present war and gained a notable victory over the Russians he had enticed there.

"Then the General was pensioned. He spent all his summer holidays among the lakes. He borrowed from Königsberg a gun with its normal gun-carriage, and had it dragged, from morning to night, out of one pool into another. He measured how deeply a cannon of a certain size sank in the mire, he ascertained how many horses were required to drag a cannon over fairly solid ground, and discovered swamps out of which not even twenty horses could extricate a gun. He noted, he measured, he calculated, he drew plans. The rest is known."

When the Russians appeared in the neighborhood the Emperor again employed the old General, who gained the brilliant victory for which he had spent his life preparing. —Translations made for THE LITERARY DIGEST.

SCIENCE - AND - INVENTION

DISEASES OF THE BATTLE-FIELD

MALADIES THAT ASSAIL an army in the field, with especial reference to the present European War, are discussed by a contributor to *The Illustrated London News* (October 10). According to this writer, the British troops at the front have hitherto been singularly free from the attacks of such diseases. In other campaigns, he says, disease has slain thousands where bullets and shells have killed hundreds, and he thinks it only too likely that before long the present immunity will cease. Why disease should attack masses of men in the prime of life, living in the open air, and on the whole well fed and clothed, at first sight may seem strange. The blame has generally been laid upon the drinking-water. But even when this is properly guarded, an irremovable source of disease remains in the myriads of flies bred in the carrion and filth that inevitably collect round perpetually shifting camps and bivouacs. As every one now knows, these insects are carriers of infection. Luckily, with the approach of winter their activity ceases. We read further:

"Of the diseases which assail an army in the field, a few stand out so prominently that all others may practically be neglected. These are cholera, typhoid fever, dysentery, and pneumonia; and they have this in common, that they are all caused by specific bacilli. Thus cholera is the child, so to speak, of the dreaded *vibrio*, and pneumonia that of the *pneumococcus*; while typhoid and dysentery have each their own special microbe. Their modes of attack are, however, different, for the *pneumococcus* can enter the organism by the nose and mouth only; typhoid and dysentery through the alimentary canal; while the way in which cholera is propagated is at present unknown. All four, perhaps, have this in common, that while the microbes causing them are probably always present with us—that of cholera being a doubtful exception—they seem only to assault a subject previously weakened by exposure, bad feeding, or intemperance. It is on these facts that our chance of successfully repelling them mainly rests.

"The first means of combating these enemies is, therefore, isolation. Directly a soldier is shown to be suffering from any of these diseases he should be separated from his fellows and removed to a place where his ejecta, sputa, and the like can no longer form a center of contamination. This may seem a counsel of perfection to those who know the conditions prevalent in war-time, but much might be done by careful preparation, and isolation hospitals at the base might well be organized by civilians who are but too apt to think that surgical cases are the only ones worth attention. If it be true, as announced in the daily press, that the Austrians are already suffering from cholera, no time should be lost in making these preparations, and the service thus rendered to the just cause of the Allies might easily prove more valuable than many more sensational."

The writer next takes up the subject of prevention, which he reminds us, is proverbially better than cure. First among preventive methods is inoculation, which, in the case of typhoid especially, has been abundantly proved to be effective. Experiment leaves no reasonable doubt on this point, and inoculation against typhoid is now compulsory in the armies of several countries. Most of the British officers have voluntarily submitted to it. Then comes careful avoidance of any drinking-water other than that boiled and filtered supplied to the men by the transport and supply service. Nor is the question of clothing to be neglected. The soldier may be trusted to keep himself warm for comfort's sake; but a belt of flannel worn round the stomach next the skin is said to have proved its efficiency as a preventive of cholera and dysentery in Oriental countries. To quote further:

"In these matters the soldier can do much to help himself. There is still the psychology

side of the case, in which he must depend a good deal on his officers. A light heart will often carry its owner unscathed through centers of infection which will prove fatal to the mentally deprest, and is one of the most valuable prophylactic known to science.

"Hence the officer should do what he can to keep up the spirits of his men, should encourage them to sing, and should take care that they hear any good news which is going. By so doing he will be rendering another invaluable service to his country even if he adds thereby to the cares on his already overburdened shoulders. Fortunately, if there is any faith to be placed in reports, the natural temperament of Tommy Atkins in war will make his task in this respect a light one."

ORIGIN OF PETROLEUM—The long-vexed question of the origin of deposits of petroleum seems to be settled by the investigations of Mr. Jean Chautard, the result of which was recently presented to the French Academy of Science. According to Mr. Chautard extensive research in different parts of the globe proves that petroleum-bearing rocks never have characteristics denoting an igneous origin. They are always sedimentary rocks and, moreover, they all contain deposits which indicate alternations of marine and lagunary conditions. Such alternations are, of course, the sign of intermittent regressions of the waters covering them.

"This enables us," says the *Bibliothèque Universelle* (Lausanne August), "to form an idea of the conditions favoring the formation of petroleum. At the lagunary periods there was an accumulation of organic débris, the remains of animals and vege-

tables which had either lived and died there or had been brought thither.

"The marine recurrences brought impermeable sediments which covered this débris and protected it from the oxidizing action of the air, thus permitting it to become bituminized. Hence petroleum is of organic origin and not mineral." - Translation made for THE LITERARY DIGEST.

ELECTRICITY IN WAR

APPARENTLY electricity is not playing the part in the European War that might have been expected from the elasticity with which it is applied to all manner of uses in ordinary life. It might be thought, says *The Electrical Review* (London, October 9), that modern warfare, which impresses into its service every conceivable means of worrying the enemy, would find it an invaluable agent of offense and defense in the field, but we seldom meet with any mention of electricity in reports from the seat of war. The reason is, *The Review* thinks, that its services are only requisitioned when there is a generating station in working order in the vicinity.

"Thus, in several engagements where the local conditions allowed of it, wire entanglements have been charged with electricity at high pressure, with disastrous effects upon the unfortunate soldiers whose fate it was to run foul of them. It is trying enough to work among high-pressure conductors under normal conditions; the horror of rushing upon them in the dark, without hope of rescue, may be left to the imagination.

"The only other application of heavy-current electricity appears to be the search-light projector, but we do not hear much of this from the front. It seems that, as in the early days of electrical science, it is as a means of communication that electricity is most fully utilized on the field of battle; field-telephones were long ago developed to a high degree of excellence and efficiency, and have rendered priceless service in recent

the aeroplane does not lend itself so well to this purpose. The overland telegraph-lines would certainly be destroyed by both sides in the course of their respective retreats, but every effort would be made during the advance to restore them, and many British telegraph linemen have been assisting in this work.

"As regards the naval war, the situation is very different. The enormous advantages conferred upon our forces in all parts of the world by our vast network of cables, and still more

by our wireless telegraphs, which enable us to keep continuously in touch with all our war-ships, can not be overestimated; in this respect we possess an overwhelming superiority."

BOILING THE NORTH SEA—Under this sarcastic heading the proposal of an inventor with more ingenuity than practicality, for defense against submarines, is discussed by *The Electrical Review* (London, October 9). The plan itself is thus quoted from *The Times* (London), whose naval expert, *The Review* thinks, had evidently "run short of serious matter":

"The idea of submarines being automatically destroyed by an electrical blockade is cleverly worked out by one writer, with plans showing how it might be adopted all the way from the North Friesian Islands to Borkum, or farther south, on a line opposite the German coast. The plan suggested is to place a series of good conducting poles, supported by buoys, at suitable intervals from one another, slightly below the surface, the poles being sufficiently long to reach the depth in which submarines move. Strong currents of electricity would pass continuously from pole to pole, and would, it is assumed, be of sufficient power to destroy any metal-built vessel passing through the current, either by firing her petrol or exploding her torpedoes. Sea-water being a fair conductor of electricity, says the writer, the current would pass from one pole to another, and by the use of resistance-indicators any defect in the apparatus would be revealed and could be quickly repaired. The current would be supplied from the east coast by cable, and to prevent interference with the system it would be necessary to guard it by an adequate patrol. It is also suggested that an experiment could be made on a smaller scale for the electrical defense of one of our own harbors, and of course the current would have to be shut off when British submarines were passing in or out."

The *Review's* brief comment is as follows:

"The dense mass of ignorance of electrical phenomena dis-

now the combatants have at their disposal also the portable wireless telegraph, which, on a battle-front having an extent of 250 miles, must be of inestimable value in maintaining communication between the Commander-in-Chief and his widely scattered colleagues. To what extent wireless transmission from aerial scouts has been utilized we do not know, but in view of the progress that had been made before the war we can hardly doubt that it has been employed, at least by air-ships;

played by this writer need not prevent us from trying to form a mental picture of his apparatus, so 'cleverly worked out.' The possibilities are immense."

FORESTS OF STONE

PROBABLY the fossil forest most widely known to Americans is the one in Arizona, tho there are others in California and in Egypt. Dr. F. H. Knowlton, of the United States Geological Survey, tells us in *American Forestry* (October) that the finest ones of all are to be found in Yellowstone Park. Here

Courtesy of "American Forestry," Washington, D. C.

A Fossilized PINE

A monarch of a forest of a million years ago, this pine-tree remains preserved in stone. Even its thick bark has been preserved. It is three feet through and thirty feet high.

most of the trees were entombed by volcanic outbursts, while they still stood upright, and upright they still stand—or what is left of them—often indistinguishable, at a little distance, from lichen-covered trunks. These fossil forests cover an extensive area in the northern portion of the park, being especially abundant along the west side of Lamar River for about twenty miles. They are easily reached over the wagon road from the Mammoth Hot Springs, or from the Wylies Camp at Tower Falls, and are in their way quite as wonderful and worthy of attention, Professor Knowlton tells us, as many of the other features for which the Yellowstone National Park is so justly celebrated. He writes:

"One traversing the valley of the Lamar River may see at many places numerous upright fossil trunks in the faces of nearly vertical walls. These trunks are not all at a particular level, but occur at irregular heights; in fact, a section cut down through these 2,000 feet of beds would disclose a succession of fossil forests. That is to say, after the first forest grew and was

entombed, there was a time without volcanic outburst—a period long enough to permit a second forest to grow above the first. This in turn was covered by volcanic material and preserved, to be followed again by a period of quiet, and these more or less regular alternations of volcanism and forest growth continued throughout the time the beds were in process of formation.

"The area within which the fossil forests are now found was apparently in the beginning an irregular but relatively flat basin, on the floor of which after a time there grew the first forest. Then there came from some of the volcanoes, probably those to the north, an outpouring of ashes, mud flows, and other material which entirely buried the forest, but so gradually that the trees were simply submerged by the incoming material, few of them being prostrated. On the raised floor of the basin, after a time, the next forest came into existence, only to be in turn engulfed as the first had been, and so on through the period represented by the 2,000 feet or more of similar beds. The series of entombed forests affords a means of making at least a rough estimate of the time required for the upbuilding of what is now Specimen Ridge and its extensions.

"During the time this 2,000 feet of material was being accumulated, and since then to the present day, there has been relatively little warping of the earth's crust at this point; that is, the beds were then, and still are, practically horizontal, so that the fossil forests, as they are being gradually uncovered, still stand upright.

"When the volcanic activities had finally ceased, the ever-working disintegrating forces of nature began to tear and wear down this accumulated material, eroding the beds on a grand scale. Deep cañons and gulches have been trenched and vast quantities of the softer materials have been carried away by the streams and again deposited on lower levels or transported to great and unknown distances. . . .

"The height attained by the trees of this fossil forest can not be ascertained with certainty, since the tallest trunk now standing is only about 30 feet high, but every one observed is obviously broken off, and does not show even the presence of limbs. Perhaps the nearest approach to a measure of the height is afforded by a trunk that happened to have been prostrated before fossilization. This trunk, which is 4 feet in diameter, is exposed for a length of about 40 feet, and as it shows no apparent diminution in size within this distance it is safe to assume that the tree could hardly have been less than 100 feet high and very probably may have been higher. This trunk is wonderfully preserved. It has broken up by splitting along the grain of the wood into great numbers of little pieces which closely resemble pieces of 'kindling-wood' split from a clear-grained block. In fact, at a distance of a few yards it would be impossible to distinguish this fossil 'kindling-wood' from that split from a living tree."

Besides the fossil forest on Specimen Ridge, several others in the Yellowstone region are enumerated and described by the writer, of which the most accessible is west of the Tower Falls Soldier Station and the Wylie camp on the road from the Grand Cañon to Mammoth Hot Springs, by way of Mount Washburn. It is on the middle slope of a hill that rises about 1,000 feet above the little valley and may be reached by an easy trail. Others are on Cache Creek, on the slopes of Thunderer Mountain and on Mount Norris. In addition, the vast area east of the Yellowstone Lake and the region still farther east, beyond the limits of the park, which have not been thoroughly explored, probably contain more or less fossil wood. To continue the quotation:

"An enumeration of the kinds of trees that are represented by the woods in the fossil forests of the Yellowstone National Park is interesting. By studying thin sections under the microscope it is possible to distinguish the different kinds with reasonable accuracy, and the following species have been detected.

"Magnificent redwood, Alderson's pine, amethyst pine, laurel, aromatic bay, Hayden's sycamore, Knowlton's sycamore, Felix's buckthorn, Lamar oak, and Knowlton's oak.

"Altho only three kinds of coniferous trees have thus far been found in the fossil forests of the park, fully 95 per cent. of all the trunks belong to these three species. The preponderance of conifers is probably due to the facts that they were presumably more abundant in the beginning, and that, in general, coniferous wood decays less rapidly than that of most of deciduous-leaved trees. . . .

"The question is often asked, how old are the fossil forests?"

It is, of course, impossible to fix their age exactly in years, tho it is easy enough to place them in the geologic time-scale. The forests of the Yellowstone National Park are found in the Miocene series of the Tertiary period . . . —relatively very recent, tho . . . it may well have been a million years ago. It must be remembered, however, that this estimate involves more or less speculation based on a number of factors which may or may not have been correctly interpreted."

DO BATTLES CAUSE RAIN?

THE OLD POPULAR BELIEF that great battles produce rainstorms crops up anew with every war. Scientific men have told us over and over again that there is neither fact nor theory to support it, but it is apparently as lively as ever. A recent writer in *Pearson's Weekly* treats it as a serious fact, and calls it "one of the extraordinary things of warfare." A noteworthy example, we are assured, was the storm that overwhelmed the Spanish Armada in 1588, which was due, we are solemnly told, to the powder burned immediately preceding, in the encounter with the English Fleet. All of which causes *The Scientific American* (New York, October 24) to heave a sigh of despair and to attempt editorially a new demonstration of the futility of what it considers a mere superstition. Says the editorial writer:

"Once in the early Stone Age somebody remarked to somebody else that rain frequently occurred after battles. The author of this casual statement was probably not a psychologist, else his conscience would have smitten him for having set afloat in the world the germ of a particularly fatuous fallacy. The evolution of the idea was probably complete long before the Age of Bronze. Big battles are often followed by rain. Big battles often produce rain. Big battles invariably produce rain. Even the modern penny-a-liner can not improve on the last statement. The myth is fixt—crystallized—and probably imperishable. . . .

"Let us see how it happens that rain has so often followed battles as to suggest to uncritical people that there was a physical relation between the one and the other.

"First of all, no such relation exists. Rain is the result of the active condensation of moisture in the atmosphere, and this is purely a question of humidity and temperature. If the humidity be sufficiently increased, or the temperature sufficiently lowered, condensation is inevitable—provided certain nuclei of condensation (dust particles or molecules of hygroscopic gases) be present; and, outside of the laboratory, they always are present.

"Now, it is conceivable that a warring army might produce a local rain-storm by setting fire to a great city. If the air be rather moist, a large conflagration invariably builds up great cumulus clouds above it. The heated air rises and cools by expansion, just as it does from the sun-heated earth on a summer day, and condensation results. Under favorable conditions a very big fire might cause a smart shower, or even a thunder-storm, tho usually the process goes no further than to form clouds.

"A battle, however, can not be supposed to have any appreciable effect upon either the temperature or the humidity of the air. Two explanations of the alleged production of rain by battles have been offered; one nonsensical, and the other pseudoscientific. The nonsensical explanation is the popular one, viz., that the condensation of moisture is promoted by the concussion due to cannonading, or that the drops already condensed and constituting the clouds are jostled together by the same process, with the result that they coalesce and fall as rain. As was once pointed out by Professor Newcomb, the effect of a violent explosion upon a body of moist air a quarter of a mile away is exactly the same as that of the clapping of one's hands upon the moist air of the room in which the experiment is performed, i.e., absolutely nil. Or again, if we stand in the steam escaping from a kettle and clap our hands we shall not produce a shower, tho we jostle the water-drops just as much as the explosion does at a distance of a quarter of a mile.

"The pseudoscientific explanation is that the gases and smoke produced by explosions increase condensation by increasing the number of 'nuclei' in the atmosphere. The nucleation of the atmosphere, as affected by ordinary dustiness, by hygroscopic gases, by radioactive discharges, by ultra-violet light, and what not, is still an obscure subject. An outstanding result of recent

investigations, however, appears to be this: The lower atmosphere normally contains more than the minimum number of nuclei necessary for the process of condensation, and this process can not be made more active by a mere increase in the number. Thus various and abundant nuclei, in the form of gases and smoke, are given off to the atmosphere by great manufacturing centers, yet these places do not have a heavier rainfall than the surrounding open country. Pittsburg, for example, is one of the driest places in Pennsylvania. . . .

"Now, if we examine the history of battles and the history of weather we shall find that rain does not always follow great battles, tho it frequently does so, and for two very obvious reasons. If, for example, we consult the meteorological records of northern France, where some of the greatest battles in history have recently occurred, we learn that, under normal conditions, rain may be expected in that region about every other day, on an

THE ANCIENT OF ANCIENTS.

Another tree on which the bark has been preserved, and in this case also surrounded by descendants of a new millennium.

average. Thus at Sèvres, ten miles from Paris, the records from 1898 to 1901 show an average of 157 rainy days per annum. These rainy days did not, of course, alternate regularly with rainless days; but there were generally several rainy spells each month. It is, therefore, evident that the probability of rain within, say, twenty-four hours after a battle, or a dog-fight, is rather high, owing to the ordinary operations of nature.

"The probability of rain after, or during, a battle is, however, materially increased by the fact that the intervals of fair weather between successive rain-spells are normally utilized by commanders in the movements of troops which precede a battle. These movements can generally be effected only in dry weather, and they may require several days. By the time all the dispositions have been made the barometric conditions have changed; the dry 'high' has passed on its regular way to the eastward, and the edge of a rain-bringing 'low' has entered the terrain. Thus a downpour is likely to occur soon after the engagement is well begun; but its cause must be sought in the interplay of forces over which mankind has no control."

WHEN A NATION HATES

NOT MANY POETS have given expression to sentiments of pure hate. When Browning wrote the "Soliloquy in a Spanish Cloister," he took a case of pure fiction and limited the interchange of those withering sentiments to two individuals, but the war has brought forward a "Chant of Hate" in which a whole nation is voiced—whether willingly or not—in its feeling against another nation, Germany against England.

A CHANT OF HATE AGAINST ENGLAND

BY ERNST LISSAUER IN "JUGEND"

Rendered into English verse by Barbara Henderson.

French and Russian, they matter not,
A blow for a blow and a shot for a shot;
We love them not, we hate them not,
We hold the Welch and the Vögel gate,
We have but one and only hate,
We love as one, we hate as one,
We have one foe and one alone.

He is known to you all, he is known to you all,
He crouches behind the dark gray flood,
Full of envy, of rage, of craft, of gall,
Cut off by waves that are thicker than blood,
Come let us stand at the judgment-place,
An oath to swear to, face to face,
An oath of bronze no wind can shake,
An oath for our sons and their sons to take.

Come, hear the word, repeat the word,
Throughout the Fatherland make it heard,
We will never forego our hate,
We have all but a single hate,
We love as one, we hate as one,
We have one foe and one alone—
ENGLAND!

In the captain's mess, in the banquet-hall,
Sat feasting the officers, one and all,
Like a saber-blow, like the swing of a sail,
One seized his glass held high to hail;
Sharp-snapt like the stroke of a rudder's play,
Spoke three words only: "To the Day!"

Whose glass this fate?
They had all but a single hate,
Who was thus known?
They had one foe and one alone—
ENGLAND!

Take you the folk of the earth in pay,
With bars of gold your ramparts lay,
Bedecked the ocean with bow on bow,
Ye reckon well, but not well enough now,
French and Russian they matter not,
A blow for a blow, a shot for a shot,
We fight the battle with bronze and steel,
And the time that is coming Peace will seal,
You will we hate with a lasting hate,
We will never forego our hate,
Hate by water and hate by land,
Hate of the head and hate of the hand,
Hate of the hammer and hate of the crown,
Hate of seventy millions, choking down
We love as one, we hate as one,
We have one foe and one alone—
ENGLAND!

regard them as misled by the War Lord and his military machine." Maurice Maeterlinck, to be sure, framed his "inexorable resolution" (see THE LITERARY DIGEST, September 26), after the first chapter of Belgian suffering had been read, to destroy the Germans "as we destroy a nest of wasps, since we know these never can change into a nest of bees." It is perhaps useful to note here that Mr. Edmund Gosse observes in *The Edinburgh Review*, apropos of some verses written by the French poet, Sully Prud'homme, during the Franco-Prussian War, that "As often occurs on like occasions, the emotion in the poet's brain was too violent and too immediate to allow of due artistic expression. At such times little is effective in poetry save the denunciations of unmeasured anger." The note sounded by Ernst Lissauer, whose chant of hatred, published in *Jugend* (Munich), is translated for the *New York Times* by Barbara Henderson, is "impressive poetry," says the *Pittsburg Dispatch*, "because it is fired by a genuine hatred." This paper disbelieves, however, the truth of the allegation that this violent hatred is shared by the entire German people, saying:

"No doubt there are many who regard England with entirely sane sentiments, instead of being unanimous in the wild enmity expressed by these lines. But such poems, inspired by bitter hatred and declaring that the hatred is to be handed down from generation to generation, will increase enmity, and are to be sincerely deplored. No ground is stated in the poem as the cause of this hatred. Therefore we are left to the wonder if it is not that whether Conservatives or Liberals are in power the island is equally opposed to German conquest. However that may be, the poem includes land and people in one universal enmity.

"This is very different from the German spirit exhibited by the German songs of 1870. It is of another century. While it is the powerful expression of a powerful sentiment, it is a sentiment wholly misplaced. An American contemporary, commenting on it, says that 'it is likely to be taken in England as a symptom of emotional insanity,' which it is, in the sense that most of the acts of militarism are in that class. Unreasoning and violent hatred, while it may cause war, is a fearful guide for international policy."

The *London Times* does not look upon the poem, which reached England through this American channel, as the surging of a brain-storm, and observes:

"We do not remember such hatred as this expressed by any poet. There is something frightful about it, something deadly, concentrated, malignant.

"It is no hysterical outburst of weakness, but a revelation of collected, conscious, and purposeful rage. It only sums up in concentrated form many previous expressions of the same feeling, but it does so with an intensity which makes it a portent.

"Such verses spring only from the heart of a people, and we shall do well to note them."

The bases of this Anglophobia, as an Englishman sees them, are discusst by Mr. Sidney Brooks in *The Independent* (November 2), where he traces the change of feeling between the two countries dating from 1870. The obstacle that Britain, being first in the field as a colonial power, opposed to German expansion, is cited as the main grievance. "That we should have acquired such a start at so trifling a cost, while Germany was struggling through blood to attain the indispensable condition of unity, appears to Germans so flagrantly unfair as to afford a strong presumption of trickery. From that to convicting Great Britain of hypocritical duplicity, of stirring up strife among her rivals while she quietly carries off the booty, has proved a very short step."

Nothing quite like it has been produced so far in any other country. The poems evoked from the British people are regarded by many others besides the *Pittsburg Dispatch* as "mild and rather ineffective." "Most of them are based on the idea that the British do not blame the German people, but

Mr. Brooks's account of the intensification of the long-smoldering hatred during the present conflict is this:

"It is, of course, our part in the struggle that has brought German Anglophobia to boiling-point. The reason is simple and has nothing whatever to do with any 'betrayal of Teutonic culture.' It is that against Russia and France Germany believed she had a fighting chance, but that against Russia and France and Great Britain she knows she has none. Our Navy, our incomparable resources in men and wealth, have turned the scales against her and made her task impossible and her failure certain. The British Navy has swept German commerce off the seas and keeps its thumb hard prest on the enemy's economic windpipe. Imagine for a moment what the situation would be to-day if Great Britain had remained neutral, how in every single particular it would be infinitely more favorable to Germany; how her fleets would be free to operate against the northern towns and coast of France, and her commerce and food-supplies would be following their normal routes. More than that, the German troops might now be in Paris.

"That is why Germany hates us beyond any of the Allies and with a quite peculiar ferocity. We do not reciprocate it, and therefore it comes all the easier to us to grin and bear it. There is hardly a trace of hostility in the sentiment of the British people toward the Germans. There is, on the other hand, a strong and just antagonism against the German war caste and its spirit and its leaders. But Anglophobia in the Fatherland appears to embrace all sections of the German population and to be directed against all sections of our own. We realize in England that it is futile to hope for any change till the madness of militarism has been exorcized and till it is proved by the uses to which we put our distant but inevitable victory how clearly we distinguish between the panoplied brutality of Prussian arrogance which we abhor and the German people whom we sincerely respect."

LOUVAIN'S LOST MANUSCRIPTS

LOUVAIN has taken its place with Alexandria in the history of burned books. What was lost to the world of scholarship when the Belgian library was destroyed is shown by a writer in the *New York Sun* who speaks of the ancient manuscripts formerly deposited there:

"A catalog of these was published in 1641, describing forty-two manuscripts. Since the suppression of the ancient university in 1797 it is a matter of some difficulty to tell how many manuscripts were in the possession of the library. After the creation of the State University of Louvain the discovery of manuscripts of the ancient classics, of the Holy Fathers, the books of the priories, breviaries, and manuscripts relating to the history of Belgium increased the number to 246.

"One of the treasured manuscripts is the 'Fasti Academiae Lovainensis,' a manuscript on paper, ninety-one leaves, giving lists of the faculties of arts, theology, law, and medicine. There are indications that this goes back to the second year of the university. A folio volume gives the annals of the Dukes of Brabant after Charles (named Habsburg), covering the period from 1200 to 1555. The 'Annales des Pays-Bas' after Pepin until the year 1752, a folio manuscript on paper, is of the highest historical importance. An octavo manuscript on paper, in writing of the fifteenth century, is entitled 'Chronica Ultrajecti, Hollandiae, Frisiae, Brabantiae, Flandriae, Gueldriae, Zutphaniae, Cloviae et Montis.' This was in the celebrated library of Uffenbach, and some savant who has made notes in the volume describes it as 'un morceau précieux.'

"The most extended of the various treatises is the chronicle

of Utrecht, which is written in verse of the year 1461. Another manuscript, written in the sixteenth century, in which the most recent date is 1516, is the 'Chronica Diestense,' which contains the charter of the liberties of Diest. Another paper manuscript relating to Brabant and Grimberg contains colored plates of horsemen who engaged in battle.

"An extremely rare manuscript by Charles Ducange gives a plan for a history of France, and contains different papers

FIRST SCULPTURAL EFFECTS OF THE WAR.

This photograph shows busts of the Crown Prince Frederick William, "Conqueror of Longwy," and of General von Hindenburg, who defeated the Russians in East Prussia, recently unveiled outside the Eberlein Museum, Berlin. The question is, is this the British Lion at bay?

relative to the administration of the library of Louvain. The *Carmina of Prudentius* is a small folio manuscript on parchment, containing 117 leaves, in writing of the ninth century. There are also beautiful manuscripts of Cicero, Horace, Lucan, Ovid, and other classical writers.

"The Bibles and liturgical manuscripts are very choice. A Book of Hours, on parchment, containing 225 leaves, is written in Gothic characters and is of great beauty. It has two superb miniatures and colored initials and borders. The library also contained a great number of works with notes in manuscript by Lessius, Molanus, Mireus, Schott, Bellarmis, and other scholars."

A CALM VIEW OF TREITSCHKE

THE GERMAN WAR PROPHET, Heinrich von Treitschke, has been shown in so many unamiable lights recently that the notes of Prof. Henry W. Farnham, of Yale, help us to correct the figure that is rapidly forming in popular imagination. Von Treitschke's teachings are held up as the inspiration of German militarism, and confirmation would seem to be furnished by the note-books of the Yale professor, who, but for the war, would this year fill the post of Roosevelt exchange professor in the University of Berlin. In *The Yale Alumni Weekly* (New Haven) he first speaks of the German professor's physical peculiarities:

"A prominent magazine recently contained an article on this man, in which his name was consistently misspelled from beginning to end, and in which he was referred to as 'an odd, little man, with a voice so bad it could hardly be understood in college lecture-rooms.' Treitschke was, in fact, a very large man, with a strong face and a decidedly impressive personality, and the defect in his speech was due to deafness caused by sickness in his youth, in consequence of which he was unable to modulate his voice. It was indeed so difficult for a beginner to understand him at all that during the first half of the first lecture of his which I attended I could not make out what he was talking about, and felt that I should have to give up the course. Then I suddenly found my ear attuned to his peculiarities, and in time the very defects of his elocution seemed to lend emphasis to what he

said. "I well remember the vigor with which in one of his lectures he said: 'If there is any unpardonable sin in politics, a sin against the holy ghost of politics, it is weakness.' This sentence, which was incorporated in his posthumous book on politics, has been quoted with approval by General von Bernhardi, and is perhaps as good a summary as could be given in a single sentence of his leading thought. As I take down my old note-book of thirty-seven years ago and turn over its pages, I seem to see his flashing eyes and hear his raucous voice.

"The purpose of the State," so read my notes, "is power, and nothing can be more moral than this purpose. The statesman is often in a position to choose between two evils in order to

RAW MATERIAL FOR EXPERIMENTS.

Eliza Doolittle, enacted by Mrs. Campbell, is the Covent Garden flower-girl who Shaw proves phonetically could be transformed into a duchess and go unsuspected by other duchesses.

maintain this highest good, but the diplomatist lies (if he does it) for the advantage of the State, while the merchant lies for his own advantage. The impulse of a youthful State to destroy an old and decaying State is higher than all maxims of positive law. The statesman who acts unwisely is immoral.' 'When a State has the choice between the moral and the immoral it should choose the moral, for good faith is in politics a real power, but it is often possible to obtain a moral purpose only by immoral means, altho not every moral purpose sanctifies immoral means.'

"These brief sentences do not claim to be the exact words of Treitschke, but they certainly represent the impression which his words made upon me, and I believe that they do not do him injustice. The vigor of his utterances often called forth strong opposition among the students, which they express, according to the German custom, by rubbing the floor with the soles of their shoes. Altho Treitschke was stone-deaf, it seemed as if he must have felt these demonstrations in some way, possibly through the vibrations of the floor, for whenever one occurred he would hit back with some oracular utterance like a sledge-hammer, calculated to crush, if not to convince, his critics."

TRANSFORMING POWER OF PHONETICS

THE SPEECH OF OUR DAY has often enough been proved of such a character that drastic reform has been thought desirable. A few years ago, under the lecturing of Mr. Henry James, a society to effect the reforming process was formed, but whether its meetings were kept secret and confidential or how long it managed to exist are questions that the general public could not possibly answer. Meanwhile our speech of the street, the drawing-room, and especially of the stage goes on its limping way with all sorts of sounds and intonations due to the influences of our cosmopolitan life. Possibly the society for the improvement of spoken English might have flourished better if it had had Mr. Bernard Shaw at its head but too late for its salvation has he come forward as the dramatic exponent of phonetics. Mrs. Patrick Campbell has brought his latest play, "Pygmalion," to our shores after its exploitation in Berlin, Vienna, and London, and a Columbia professor, Raymond Weeks, supports him in declaring that there is nothing absurd in the notion that there can be "anything dramatic in a science which treats of the nature and production of speech sounds." Last year we gave some account of this play after its London production, but the present writer views it from a new angle. To refresh our readers' minds, we quote the summary of the plot given by Mr. H. T. Parker in the *Boston Transcript*.

"On a wet evening in summer, Higgins [the professor whose hobby is 'phonetics'] takes refuge from a shower under the pillared porch of one of Inigo Jones's churches in the Covent Garden quarter of London. There he hears the rude, inchoate, often half-inarticulate sounds that a cockney flower-girl utters. There also he encounters another devotee of phonetics, Colonel Pickering, and together—English fashion on a wager—they devise the supreme test of their science. They will teach the flower-girl to speak English as cultivated people speak it; incidentally they will instruct her in the manners, customs, interests, and ideas of such folk; and she shall emerge as a welcome guest at her ease in the gardens of ambassadors or the salons of elect ladies. Of such stuff and by such processes might duchesses be made.

"The experiment proceeds triumphantly. Liza Doolittle is bathed, clothed, and installed in Higgins's bachelor household. She is taught to speak English with the exactest of cultivated intonations. She is schooled in polite manners and customs. Her mind is sedulously sown with ideas and impressions suitable to her new environment. She succeeds and she fails in the salon of Higgins's mother. She triumphs unquestionably in a long day that begins at an ambassador's garden-party and ends in a box at the Royal Opera. Then Professor Higgins, without a thought or a scruple over her, and Colonel Pickering, with some searching of heart, are done with their 'subject' and their 'experiment.' But Miss Doolittle, as she has now become, is by no means done with them. She does not intend to be cast, naked of anything but cultivated intonations, good manners, and pretty clothes, upon an unsympathetic world in which there is no place for her. 'Phonetics,' it seems, and daily life with those that teach them may waken thought and feeling in a gutter-girl, sharpen her wits, and warm her emotions. She may even have a regard for her teacher that is very like affection and fall into sentimental, if not passionate, resentment when he would put her by like any other discarded specimen."

Mr. Shaw's choice of a subject has been "profound, unerring," declares Professor Weeks in the *New York Times*, going on:

"His purpose has not been simply to amuse, as was, perhaps, Molière's when he wrote the delightful scene in which *Monsieur Jourdain*, of the bourgeois gentilhomme, is given a lesson in phonetics by his professor of philosophy. It cut deeper, and the author knew that he was analyzing one of the fountain-springs of character. The principles by which the London flower-girl, speaking her unspeakable cockney dialect, acquires in the space of a few months the language and address of a duchess are significant, and have nothing in common with the irrelevant hypnotism of a *Trilby*. They are significant because they are scientific, and because they are scientific the lesson of 'Pygmalion' is a true lesson."

The Professor then goes on to tell us how Bernard Shaw knew

THE PROFESSOR WITNESSING THE SUCCESS OF HIS EXPERIMENTS.

This scene shows the transformed flower-girl seated between the two Kensington ladies on the sofa at Mrs. Higgins's tea, her speech so transformed as to raise no suspicion of her humble origin, even the anguinary epithet she uses at her departure being taken as the latest fashionable slang. The professor in the background enjoys his joke at the others' expense.

that "there existed a science of phonetics, and that its methods and conclusions were more accurate by far than those of the experts in handwriting who have contributed so exuberantly to detective stories and to detective plays." As he says:

"While we can not be sure in the case of one possessing such large intellectual curiosity, it is probable that he learned of the new science through his friend, Mr. William Archer. In any event, Mr. Shaw appears to be aware of the latest word in phonetics. His qualifications in phonetics are apparent both in the development of his motif and in the stage directions at the commencement of Act II. This act takes place in the phonetic laboratory of the hero, Higgins (what a Shavian name for a hero!), and we see the usual instruments for experimental phonetics, such as a phonograph, a laryngoscope, tuning-forks, an apparatus for manometric flames, to be utilized in measuring the air-pressure of consonants, etc.

"It is thoroughly characteristic of Shaw that phonetics appears to him 'amiable' because it is useful, that is, because it enables one to divest himself of a vicious accent learned in infancy, and to put on in its place the elegant mantle of a so-called polite pronunciation and intonation. There are in England phoneticians, like Mr. Daniel Jones, of University College, London, who can accomplish marvels in the more or less complete eradication of dialect peculiarities. The best laboratory in existence for all such purposes is that of the Abbé Rousselot at the Collège de France. The Abbé is considered the founder of experimental phonetics, a study whose purpose, at first purely scientific, has only recently assumed a social or economic value. It is the construction, so to speak, of this last arch of the bridge which inspired Shaw to see in phonetics a dramatic motif, as yet unutilized.

"The spoken language is far more important than we believe. It has been called the garment of the soul. If the soul exists, while we can not see it or touch it, weigh it or photograph it, we can hear it. Nothing in the world is so intimate a part of us as our spoken words, neither clothes nor furniture, houses, books, friends, ideas—manners even. Surely, therefore, whatever affects our spoken language is vitally important: accent, intonation, pronunciation, vocabulary, syntax. In recasting, in reforming the speech of the gutter-snipe flower-girl, as he calls her, Higgins, the phonetician and hero, does a heroic act; he recasts and reforms her soul.

"It will be well to reply to doubts which some may feel as to the possibility of one's distinguishing slight differences in dialect, as Higgins does in the opening scene. The scene represents the portico of St. Paul's at 11.15 of a rainy night. Among those who have taken refuge from the rain is a diligent note-taker, who

is none other than the enthusiastic phonetician, Higgins. The animated group ends by noticing Higgins, takes him for a spy or a detective, and acts threateningly toward him. With just a touch of the bravado of *Cyrano* in Act I, Scene IV, of '*Cyrano de Bergerac*,' Higgins turns to each person who addresses him. To the flower-girl he says, 'You were born in Lisson Grove'; to the bystander, 'And how are all your people down at Selsey?'; to the sarcastic bystander, who has inquired if he knows where he, the sarcastic bystander, comes from, he replies correctly, 'Hoxton.' Is this thing possible? We can, of course, all tell an Irishman from an Englishman and both from an American. We can generally distinguish a New Englander from a Southerner or from a Westerner. But are finer distinctions possible? Could we say unerringly to one person, 'You come from Arkansas'; to another, 'You are from Maine'; to a third, 'You are from Ohio'? Yes; this thing is possible."

The American professor makes a distinction between Shaw's manufactured duchess and some Americans in declaring that the former develops no taint of snobbishness:

"Whether Shaw was aware of the danger beneath his path or not I do not know, but it was there. It is well known that in the Western States—to speak more accurately, west of the Hudson—such words as 'cast,' 'past,' 'path,' 'grant,' and 'advantage' are pronounced with (approximately) the vowel of 'patter,' whereas in New England and in the so-called polite dialect of London the vowel is pronounced much as in the first vowel of 'father' in the current American pronunciation. Allow me to add, by way of parenthesis, that at least three-fourths of the English-speaking population of the City of New York use the 'Western' vowel, as do the great majority of Americans. From the standpoint of national usage the vowel of 'patter' requires no defense. It will probably triumph, whatever well-meaning lexicographers (coming most of them from New England) may say or do. Now, when an adult 'Westerner' removes to some such center as Boston or New York and is found a few years later to have replaced his native vowel (that of 'patter') by the vowel of 'father,' his old friends put him down as a prig. I venture the statement that, while one may not, of course, call all who do this prigs, one may safely say that all who are prigs do it—supposing, to be sure, that they can!

"Shaw has, then, accomplished a real achievement in presenting to us a manufactured duchess, who, linguistically, leaves no impression of snobbishness. . . .

"I have been asked whether it is possible for a phonetician to reform, as Shaw has indicated, the vicious speech of a person of Eliza's age and station. Yes, provided, of course, that both the teacher and subject possess unusual talent and zeal."

RELIGION-AND-SOCIAL-SERVICE

WAR'S DESOLATION IN PALESTINE

JERUSALEM is a long way from Ostend, but the war has its sufferers even in the Holy Land. And the Jewish papers in this country are calling for help for their fellow Hebrews in Palestine, "for a starving population of a hundred thousand souls, who can not be moved at present for lack of shipping accommodations, and who, if moved, would not find a refuge ready to receive them anywhere." This article pictures the distress before Turkey entered the war. More somber colors must be added to make it portray conditions now. *The American Israelite* (Cincinnati) demands that Zionists, non-Zionists, and anti-Zionists join in a general relief movement. Conditions in Palestine, *The Modern View* (St. Louis) hears, are nothing short of a panic. In August,

"the banking institutions refused to pay bills or checks or to return deposits to owners. Steamers which were expected failed to turn up; telegraphic and postal communication with Europe was impossible, and an economic crisis began.

"With the Turkish Government mobilizing and apt any day to leap into the whirlpool of war, the ugly situation is made worse. Labor and investment are at a standstill. The people are in distress. The number of unemployed grows from day to day, and a famine is feared."

The orange, wine, and almond crops, worth about \$600,000, are now non-marketable and a total loss, according to the *American Israelite's* weekly review of Jewish affairs abroad. Wage-earners are facing starvation. The worst sufferers, we read, "are naturally those who depend entirely on the charitable gifts sent from abroad, which are cut off, not only by suspension of shipping, but by the fact that most of these gifts come from countries like Hungary, Poland, and Russia, which are affected by the war. The pious Jews in Galicia and Russian Poland, who drop their pennies into the collection-boxes of the synagogue, are now either homeless refugees or are confronted with the superhuman task of allaying distress at home." A letter from an American nurse, quoted in *The American Hebrew* (New York), says that there are no boats coming or going except an occasional Italian steamer, and that gold is the only currency that counts. Hospitals are closing. Schools have closed for lack of funds and because teachers have been called away to fight. Food prices have greatly risen. Besides all that—

"The Turkish Government is mobilizing very strongly, drafting into the army men from ages twenty to forty-five. A number of Jewish men are buying themselves off at the price of 1,000 francs. Stores and all sorts of business places were pillaged for supplies for the Turkish Army."

This letter, written in September by a Miss Kaplan, continues:

"The retrenching process is proving a very hard one just at this time of the year, when disease is more prevalent, aggravated by a lack of food.

"We can not take up a case of illness without rendering material assistance in one way or another. It is simply impossible not to do it. Families who would never have thought of applying for charity are compelled to do so now or starve. Destitution at present is also due to the preparations for the war. A number of poor shoemakers, saddlers, and other workmen are compelled by the Turkish Government to work making supplies for the Army, for which, of course, they do not get paid. A patient of ours, the wife of a saddler, gave birth to twins. She was sick from lack of food; her husband has been working for the Government the last five weeks, not earning anything, and he and his family simply starved, except for an occasional crust given by the neighbors. It was simply impossible not to give her some meat, milk, etc., to help her to build up a little. There are a great number of similar cases where food would do good. With great difficulty will we be able to get through this month (September) and perhaps October. That is about all.

"In Lo-Maan Zion, Rothschild Hospital, and in many families, the help were told that their salaries can not be paid at present, but if they are willing to work for their food they can do so, to which they cheerfully agreed. Misgab le-Dach Hospital closed some weeks ago; the Bikur Cholim is expected to close soon. How long the rest will hold out is a question. The Shaari Zedek Hospital has only ten free patients. Esrat Mashim, the insane asylum, has discharged quite a number of its inmates, who have become very heavy burdens on their families. The Mission Schools were closed and the missionaries received instructions to sail for England, as there is no money to keep up their work.

"The Jewish community is trying its level best to relieve distress among the poor. I do not mean the usual poor, but such families as become dependent upon charity through the present crisis. Three soup-kitchens have been opened, one in Beth Aam, another in Beth Jayna, and a third in Meah Shearim. . . . It is rumored there is only enough flour in Jerusalem to last one month. Mr. Ruppin promised to send fifty sacks of wheat, but it is not safe to send it, as it is feared the Government may confiscate it for the Army on its way to Jerusalem. Medicines are getting scarce in Jerusalem, and prices have also gone up. There is not enough quinin, and this is a calamity, for it is so much used here for the treatment of malaria."

FIGHTING ALCOHOL IN EUROPE

ONE of the outstanding results of the war already attained is the retirement of a nation from the liquor business. Russia has issued an edict prohibiting the sale of vodka during the war, and the Czar has ordered his Finance Minister to devise some other means of revenue to substitute for that formerly accruing from the Government's sale of this beverage. Nearly one-third of the Empire's revenue is thus cut off, and its substitution must be effected at a peculiarly difficult time. Tho Russia is furnishing the most notable adherent to the ranks of the enemies of alcohol, the other nations are not entirely behindhand. France has prohibited the sale of absinthe, the German Emperor has pronounced against beer-drinking, and Lord Kitchener, in sending forth his first troops, told them to abstain from drinking while on the Continent. "In this conflict," says *The North American* (Philadelphia), "each participant recognizes the supreme need for calling to its aid the vital factors that make for success, and these only," and one of the first steps was a move against alcohol. This journal adds:

"In the estimation of the guiding minds of these four first-class Powers, it was as necessary to deal with the question of alcohol—even in malt combinations—as to consider guns, ammunition, supplies, and transportation. Commenting editorially on this feature of the great war, *The Journal of the American Medical Association* says:

"Field-marshal Earl Kitchener is reported to have counseled the English soldiers to abstain from drinking while abroad, reminding them that their duty can not be done unless health is preserved. The men were cautioned to keep constantly on guard against excesses.

"The German Emperor is said to have forbidden the "trenting" of the soldiers in his armies.

"The sale of absinthe, imported by French soldiers in an earlier war, when alcohol was used to fight fever, has been restricted in Paris.

"It is of slight consequence whether or not these rumors are entirely correct. They represent the current tendencies, which are undeniable by any one who has watched the recent decisions of American naval authorities, in the face of adverse criticism couched in the usual phrases concerning personal liberty.

"The truth is that the relation of alcohol and fighting has been squarely met and the fact admitted that they are not compatible."

"A recent writer has express this by saying that a temperate army was something not conceived of in the old theories of war;

but a drunkard is to-day as much out of place in an army as he would be on a battle-ship."

"It has been scientifically demonstrated by experiments made in the Swedish Army that even a small quantity of alcohol decreases the marksmanship of the man with a gun. Under Lieutenant Bengt Boy a squad of soldiers were put through a test after having gone without beer for a certain period of time. Out of a total of thirty targets, their average was twenty-three hits."

"Later these same soldiers were allowed a glass of beer apiece one evening and another glass the following morning, and the average number of hits that afternoon was three. To check up this result, which seemed out of reason, another test without beer was made some days later, when these same soldiers averaged twenty-six hits."

The edict of the Russian ruler takes into account not only the welfare of the soldier in the field and the success of the nation's arms—

"The men and women left behind, who must look after the sources of food-supply and the necessary workers in mills, mines, and factories, are, in their way, equally necessary. That this majority has been considered in the edict against alcohol is evidenced by the following dispatch from Petrograd dated September 30:

"P. Bark, Minister of Finance, yesterday received an order to the effect that the prohibition of the sale of vodka shall be continued indefinitely after the end of the war."

"This order is based principally on the tremendously improved condition of the country since the Emperor issued the edict prohibiting traffic in this liquor."

"This startling regeneration of the peasantry, in the opinion of the Russian authorities, is likely to have an important effect on the social and economic condition of all Russia."

"Each of the Governments which has put a ban on drinking receives large revenues from the manufacture and sale of alcoholic liquors. Next to the well-worn plea for 'personal liberty' this is the rum supporter's strongest argument."

"Where will you get the money to run the country if you cut out the sale of liquor?" he asks.

"The best answer we know of is the action of these four great nations, which, at a time when every cent that can be got is urgently needed for the conduct of the war, finds it more profitable to reduce this revenue than to run the risks incidental upon the general use of alcoholic drinks among the soldiers and, as in Russia, the general public."

France has been urged by its well-known economist and statistician, Raphael Georges Lévy, to make its reform permanent also. In the *Figaro* (Paris) he writes:

"We have already stopt the sale of absinthe. Why halt on the road? It is only when favored by a great current of enthusiasm and national revival, like that which crosses the country at this moment, that virile resolutions can be taken. Vive la France et mort à l'alcool!"

This writer goes on to declare that alcohol is more dangerous than "the savage German beaten by our armies." He thinks a progressive limitation of liquor-shops and the end of all secret manufacture to be feasible methods of reform. The *New York World* declares that the Czar's edict was the inauguration of the greatest temperance movement in the history of the world:

"It was not intended at the time that the suspension of the traffic in this liquor should be more than a temporary expedient. But so rapid has been the change in the habits of the people and so remarkable the improvement in the condition of the peasantry

that by imperial decree the sale of vodka is to be barred indefinitely after the war."

"The sale of spirits in Russia is a State monopoly, which has produced nearly 30 per cent. of the Government's ordinary revenues. In order to meet the needs of the imperial exchequer, it has encouraged the growth of the traffic, multiplied the number of dram-shops in the rural districts, and directly aided in the spread of poverty and drunkenness among the working-classes. Being a cheap drink made from grain or potatoes, the Czar's Ministers for revenue purposes have deliberately adhered to the policy of increasing the consumption, regardless of the steady degradation of millions of the Czar's subjects. Only rarely has a statesman like Count Witte ventured to question the wisdom of the Government's course, and even he was not able to offer a satisfactory revenue substitute."

"That some of the cruel consequences of war should be unexpectedly offset by a great social and economic reform of which Russia stands in need is one of the ironies of circumstances."

A VISION OF A NEW RUSSIA

A CHANGE appears to have come over the English attitude toward the Russian autocracy. We read less in English papers about Russian assaults upon human liberty and more about Russia's better side. A writer

in *The Christian World* (London) holds that "the old Russia which filled the Siberian mines with political prisoners, and deported the Stundists to the Caucasus, and planned Jewish pogroms, and devastated the Polish villages, is not the Russia which we know to-day, and is certainly not the Russia which will arise renewed and purified and Westernized from the present struggle." He bases his belief on the fact that "astute observers of national currents seem agreed that both in the thinking processes of the governing classes and in the psychology of the nation as a whole new directions are shaping which will powerfully contribute to the advancement and happiness of the Russian people." He proceeds to elaborate more fully how he arrives at such an optimistic view:

BY UKASE OF THE CZAR.

—Bushnell in Central Press Association.

"We must remember that the Russian people are essentially a religious nation, and that the things of eternity and of the spirit are for them tremendous realities. During a long residence in Russia it was my privilege to come into contact with all sorts and conditions of men in that vast country. Those of my readers whose memories go back far enough will remember how unsparingly I condemned the reaction, the tyranny, the barbarism of the Russia of that period; but I hope I always distinguished between the actions of the few misguided reactionaries and bigots in Church and State and the great masses of the uncomplaining, humble, patient, suffering, and simple men of the people. If there is one characteristic of the Russian which stands out more than another it is his total indifference to the material side of life and his proneness to an admiration for ideals. And it is worth noting that in all the Russian's ideals, there is an interweaving of the spiritual as it was interpreted by Jesus Christ, the Man of Sorrows. The divine ideal of the Crucified is at the head of all their ideals, and their most trusted teachers are those who taught that the simplicity of God is wiser than the wisdom of men, and that the weakness of God is more powerful than their strength. Nietzsche would call the supreme virtues of the Russian 'slave-virtues.' The brutalized Overman does not appeal to the *muzhik* of the steppes, triumphant militarism is neither lovely nor admirable in his eyes, and to the true son of Russia there are more beauty, more glory, and grandeur in the suffering Christ on Calvary than

in all the military triumphs of Caesar or Napoleon. In discussing the future of Russia, and the influence which she will undoubtedly exercise on Western Europe, this aspect of the national character is one which should be continually before our eyes.

"Will the readers of this article just think for a moment of the shattering of ideals which has been the work of the German scholars of the nineteenth and twentieth centuries? It is not only the blows they have struck at the traditional views of revealed religion, it is the terrible blows they have leveled at the fabric and foundations of all Christian ethics. Such a literature would be impossible in Russia; it would be unthinkable in the land whose people, according to one of the greatest of them, are destined to save the world. And when Dostoyevsky said this he meant that his countrymen were the embodiment of all those virtues and spiritual gifts against which brute force battles in vain, and that whatever their dreams they are not dreams of world-conquest or of the gross carnalities which earthly dominion would bestow on its possessors. Dostoyevsky and Tolstoy are read by the Russian youth as Nietzsche and Treitschke are read in Germany. Dostoyevsky believed in Russia; he is the main representative of the national optimism; he is Russia's greatest autochthonic writer. I would like to see Englishmen turning to a study of his profound spiritual characters, all of them conceived from a Christian standpoint. The bodily sick in his books are often the spiritually sound, and we see the fair sinners and the scoundrels of the slums coming under that slow process of Gospel purification until finally, as in a flash, they stand out white, cleansed in the blood of the Lamb. Whole companies of Russians of all classes are presented to us, none of them with what Nietzsche would call the 'morality of gentlemen,' all of them with the 'morality of the slave'; but this morality of theirs is invariably that which proceeds from unselfishness as the highest virtue, from the denial of life, from the hatred for the strong and the oppressor."

From Tolstoy especially, this writer avers, we may learn the nature of the common people of Russia.

"In all his characterizations he seeks to extol the superiority of nature over artistic culture, and however great his admiration may be for the natural and simple man, he invariably points out that the noblest qualities of his hero are noble just in so far as they resemble and are modeled after the qualities of the Son of Man. No one knew better than Tolstoy all the aspects of militarism, and no one has painted in more terrible colors the shame and the horror of it. He has no reverence, hardly any toleration even, for the leaders of great armies. Those of us who have read 'War and Peace' will recall the scene where the wounded *Andrei* lies stretched on the battle-field and looks up to the heavens. Napoleon, with his staff, stops by the side of the wounded officer, and the man, whose admiration for the Emperor had hitherto been boundless, finds him small and insignificant in comparison with what is going on between his own soul and the God who made the immeasurable heavens. In no other land in the world is the religious system identified with Tolstoy's name possible, in no other land would such a system have so many adherents. He adopts to their full extent the teachings of Christ about the unlawfulness of war and of armed defense, and unhesitatingly accepts the teaching, and makes it the chief corner-stone of his system, that when smitten on one cheek we ought to turn the other also."

We are asked also to remember that "with all Russia's evil reputation as a suppressor of liberty, few countries have a longer martyr-roll in the great cause of human freedom." For example:

"The freedom of Roumania is largely owing to the blood of Russians spilt on her behalf. Serbia owes her very existence to Russia, and when Bismarck would not risk the bones of a single Pomeranian grenadier on behalf of the liberties of Bulgaria, Russia sent her thousands of youthful enthusiasts to be slaughtered in the trenches round Plevna. It is mainly due to Russia that Europe has been so largely freed from the incubus of the rule of the Turk, and it was her fine idealism, her enthusiasm for the Cross, her hatred of the Crescent, which have been among the noblest inspirations of her people. You find this splendid enthusiasm for liberty in every great Russian writer, not only in the two we have already discussed, but in Turgenev and Lermontov, in Pushkin and Gogol and Tchekhof. Some of these great writers may be freethinkers, but they never forget that the greatest of all earthly boons is liberty; they may have lived strange Bohemian existences, but they never forget that they are one in spirit with those countless throngs of their unsophisticated

countrymen who year after year abandon all their earthly belongings to tramp on pilgrimage to the sacred shrines of Kiel and Jerusalem."

THE LAPSED BROTHERHOOD OF MAN

TO ADD to the disheartening aspects of the European War comes the prospect of the piling up of race prejudices and hatreds. It is born in quarters where it never existed, points out the *New York Evening Post*, and it is becoming reawakened in others where it had been gradually yielding to the slow process of time and the still slower spread of the teaching of the brotherhood of man. "To masses of the allied nations, the Germans they praised yesterday for many admirable and very human qualities have become as devils incarnate. And the Germans in multitudes are just now asking themselves how it is that they were unaware of the abominable character of the British, of whom they have been happy to harbor so many thousands these last four decades." The status of the Japanese and negro in Germany has radically changed through the calling of Japanese and African, to say nothing of Indian troops, into the allied ranks. The racial element involved in the German charge that this war was a concerted Slavic movement against the civilization of Europe is now in prospect of still wider expansion by the entrance of the Turk. The *Evening Post* editorial proceeds:

"As every one knows, the friction which led Serbia and Austria to fire the deadly train is at bottom racial—the Slavs and Croats against the Austrian Germans; and this historic racial strife has now flamed up as never before. Into it all is now to be injected the Mohammedan problem; at least, the entrance of Turkey into the hostilities on the side of Germany makes possible a tremendous religious explosion throughout the East. If the Turkish ally should make it awkward for Germany to assert that she is defending European culture, that ally also renders it easy for Germany's opponents to declare that she has called to her aid the historic enemy of Western culture and of Christianity. . . .

"If the long-promised holy war should come in Egypt and elsewhere, it will easily take on a racial form, for it will be not merely Mohammedan against Christian, but the Anglo-Saxon and the Slav against the Turk, the Egyptian, and the natives of India and black Africans as well—a hideous prospect, indeed for the twentieth century of Christianity. There is but one race which bids fair to gain a little from it all—the Jewish. The Czar, so often faithless, keeps his word this time there may be a great change for the unhappy Jews among his subjects. Having been permitted to die for the Little Father only as private soldiers, they are now to furnish officers for the slaughter and there are intimations of other distinctions and privileges. In Germany, too, some bars of race seem to have been let down in the war; and the Czar has held out hopes of a Polish renationalization as well.

"Here are perhaps some brands to be snatched from the burning—but what trifles, if we survey the whole world! We were just beginning, by greater knowledge of one another through our race congresses, through the awakening of the East, through the strengthening of international bonds by trade by the travel of thousands, by the interdependence of business everywhere, to get to know and respect one another. Now we are, by reason of the accursed system of European alliances an armaments, the whole work checked, if not undone. Dyin antipathies are warmed back to life with new and deepened intensity; the whole world is thrust back to the Middle-Age state, when every people feared everybody else, like a thief in the night; when to be a stranger of different customs and habits was to be a barbarian, to kill whom was justified. Everywhere that men are different it will be easy now to arouse hatred and scorn and enmity. The brotherhood of man, the fundamental teaching that one should love one's neighbor as oneself—the are for the hour mere subjects for mocking and flouting by those who believe that man's mission is only to kill and burn. By this can be only for the hour. The doctrines of brotherly love and of Christian peace have survived as great cataclysms as gone steadily on to wider conquests by the nobility of the ideals. They are certain in the end to overthrow all enemies as to unite in one friendliness the Slav and the Teuton, the black the yellow, and the white alike."

CURRENT - POETRY

MANY "feministic" poems have been written in the last two years, and most of them passed quickly into oblivion. But here is a poem that deserves to live—a simple, sincere, passionate arraignment of what suffragists call "man-made civilization." The apparent breaking up of that civilization among the nations of the Old World in the present chaos of battle gives special force to the last line of Miss Widdemer's poem. "The Housekeeper" appeared in *The Independent*.

THE HOUSEKEEPER

BY MARGARET WIDDEMER

Oh, Woman, what is the thing you do, and what is
the thing you cry?
Is your house not warm and enclosed from harm,
that you thrust the curtain by?
And have we not toiled to build for you a peace from
the winds outside,
That you seek to know how the battles go and ride
where the fighters ride?

You have taken my spindle away from me, you
have taken away my loom,
You bid me sit in the dust of it, at peace without
cloth or broom,
You have shut me still with a sleepy will, with
nor evil nor good to do,
While our house the World that we keep for God
should be garnished and swept anew.

The evil things that have waxed and grown while I
sat with my white hands still,
They have meshed our World till they twined and
curled through my very window-ill;
Shall I sit and smile at mine ease the while that
my house is wrongly kept?
It is mine to see that the house of me is straight-
ened and cleansed and swept!

My daughters strive for their souls alive, harried
and starved and cold—
Shall I bear it long, who was swift and strong in
guarding them while of old?
My children cry in our house the World, neglected
and hard-oppressed—
Is my right not then to command all men to be
still while the children rest?

I who labored beside my mate when the work of the
World began,
The watch I kept while my children slept I will
keep to-day by Man;
I have crouched too long by the little hearth at the
bidding of Man my mate—
I go to kindle the Hearth of the World, that Man
has left desolate!

Try as we may to escape war-poems, some of them are so good that they demand notice. Mr. Alan Sullivan's verse always is interesting, but it has never before reached a level quite so high as in this poem, which we take from the *Toronto Globe*. Its refrain suggests that of another memorable poem, Mr. Alfred Noyes's "Before the World Was God."

PROSPICE

BY ALAN SULLIVAN

The ancient and the lovely land
Is sown with death; across the plain
Ungarnered now the orchards stand,
The Maxim nestles in the grain
The shrapnel spreads a stinging flail
Where pallid nuns the cloister trod,
The air-ship spills her loaden hail;
But—after all the battles—God,
Athwart the vineyard's ordered banks,
Silent the red-vent forms recline,
And from their stark and speechless ranks
There flows a richer, ruddier wine;
While down the lane and through the wall
The victors writhe upon the sod.

Nor heed the onward bugle-call;
But—after all the bugles—God.

By night the blazing cities flare
Like mushroom torches in the sky;
The rocking ramparts tremble ere
The sullen cannon boom reply,
And shattered is the temple-spire,
The vestment trampled on the clod,
And every altar black with fire;
But—after all the altars—God.

And all the prizes we have won
Are buried in a deadly dust;
The things we set our hearts upon
Beneath the stricken earth are thrust;
Again the Savage greets the sun,
Again his feet, with fury shod,
Across a world in anguish run;
But—after all the anguish—God.

The grim campaign, the gun, the sword,
The quick volcano from the sea,
The honor that reverses the word,
The sacrifice, the agony—
These be our heritage and pride,
Till the last despot kiss the rod,
And, with man's freedom purified,
We mark—behind our triumph—God.

By a well-wrought sonnet (in *The Public*) we are reminded that not all the waters of the world can be blood-stained. Mr. Winke is rather too fond of the hyphen—"cannon-bristling," "myriad-flagged," etc.,—but the thought was worthy of expression and he has exprest it well.

THE GREAT LAKES

BY CHARLES H. WINKE

[By agreement between the United States and Great Britain, these waters are free from war-ships and other hostile activities by both nations.]
No cannon-bristling squadrons rode at rest
Within gun-sheltered harbors on these Lakes;
Here but the urgency of Commerce wakes
The cloven waves to song, with keels deep-pressed
Into their bowens, hurrying east and west,
Trade's myriad-flagged Armada ne'er forsakes
These seas at Desolation's best, but makes
A fruitful highway of their neutral breast.

O Shores and Oceans of the fort-etailed Earth,
What will the triumph of the Future be
When birds build safely in your ev'ry gun?
When all the ships innumerable that girth
Your shining vasts shall share the ministry
Of Peace and only her blest errands run!

That enemy of war, Miss Edith M. Thomas, recently contributed these moving lines to the *New York Times*. They are so convincing that they seem to describe an actual incident, and their lesson is unmistakable.

THE PEACE-PACT

BY EDITH M. THOMAS

They were foes as they fell in that frontier fight,
They were friends as they lay with their wounds
unbound.
Waiting the dawn of their last morning-light,
It was silence all, save a shuddering sound
From the souls of the dying that rose around;
And the heart of the one to the other cried,
As closer they drew, and their arms enwound,
"There will be no war on the Other Side."

As the souls of the dying mounted high
It seemed they could hear the long farewell!
Then together they spake, and they questioned
why—
Since they hated not—why this evil befell?
And neither the Frank nor the German could tell
Wherefore themselves and their countrymen died,
But they said that Hereafter in peace they
should dwell—
"There will be no war on the Other Side."

As they languished there on that field accursed,
With their wounds unbound, in their mortal
pain.

Spake one to the other, "I faint from thirst!"
And the other made answer, "What drops
remain

In my water-flask thou shalt surely drain!"
As he lifted the flask the other replied,

"I pledge thee in this till we meet again—
There will be no war on the Other Side!"

And it came to pass as the night wore deep
That fever through all their veins was fanned,
So that visions were theirs (yet not from sleep),
And each was flown to his own loved land. . . .
But, rousing again, one murmured, "Thy hand!
Thou art my brother—naught shall divide;
Something went wrong . . . but understand,
There will be no war on the Other Side."

ENVOI

Comrades of peace, we can give but our tears
As we look on the waste of the human tide . . .
Yet forever one cry so haunts my ears—
"There will be no war on the Other Side!"

A highly artificial form is beautifully humanized in the following poem, which we take from *Lippincott's Magazine*. Mrs. Coates is so truly an artist that she never is only an artist.

WHERE HAROLD SLEEPS

BY FLORENCE EARLE COATES

Where Harold sleeps the night is blest,
In the Great Mother's careful breast
He lies the brave and sweet among,
Who, loved by the wise gods, die young—
The goal achieved without the quest.

The winds of autumn from the West
May rudely rock the unsheltered nest,
Yet shall all joys of Spring be sung
Where Harold sleeps;

And we, our human griefs confess,
We, too, by a dear hope carnest—
Death's hope illimitable, sprung
From nothing that to earth hath clung—
Shall, waiting a new dawn, find rest
Where Harold sleeps!

Crickets make pleasanter music than cannon. And songs about crickets, especially when so gifted a poet as Miss Minna Irving writes them, afford a grateful relief to ears long battered with war-songs. This charming fancy appeared in *Poetry Journal*.

THE CRICKET AND THE MOON

BY MINNA IRVING

Once in a country far across the ocean,
And many years ago,
He was a strolling minstrel boy with only
His violin and bow.
Clad in a suit of rusty black he wandered
From town to town by day,
And slept beneath the stars in open meadows,
Or stacks of fragrant hay.

He played beneath a high-born lady's window,
The dew was on the rose,
A full white lily at his side unfolded
Its heart of scented snows.
His music drew her from her downy pillow,
He saw the curtain stir,
She smiled upon him through the open lattice,
He died for love of her.

Still in a suit of rusty black he wanders
In mossy gardens old,
And plays beneath some dark and lonely casement
That tangled ivies fold.
The notes are mournful and the bow is broken,
The strings are out of tune,
But still his high-born lady far above him
Looks out, the silver moon.

The Best Pen is the Cheapest Pen

Waterman's Ideal Fountain Pen

is the one with

Many Advantages

The trade-mark Waterman's Ideal means a great deal to writing convenience, and writing convenience means a great deal to you.

**Self-Filling
Regular
& Safety
Types.**

**\$2.50
TO
\$50.00**

WATERMAN'S IDEAL NEW YORK

**Safety Type
For Ladies.**

**The Clip-Cap
Prevents Loss.**

THE advantages in Waterman's Ideals started the world using fountain pens. You write without the drip. Mussy inkwells and scratchy steel pens are discarded. The patented Spoon Feed is the advantage feature that assures proper ink flow and prevents inky fingers and blots. The Gold Pens are an artful advantage. They are strong. They write smoothly. Hard iridium tips make them last for years.

Waterman's Ideal is the cheapest pen. Every pen stamped Waterman's Ideal is guaranteed to give satisfaction. Gold points furnished to suit every hand. Avoid substitutes.

Illustrated Christmas booklet on request.

Sold at all the best stores.

phrases. It will be time to talk that way when one has some hope of a to-morrow.

I am here at the home of an honest peasant of the wealthier sort, who has received us most hospitably, and to whose generosity I am indebted for this pen and these two sheets of paper. This morning I managed to buy a bit of powdered chocolate and boiled myself a cup of it, with milk. What a luxury that was! And how comfortable I am here! But these things will last only at the pleasure of Fortune. I shall give myself no anxiety on that or any other score, and I urge you with all insistence to accept the same point of view.—
Translation made for THE LITERARY DIGEST.

THE HEROES OF FORT CAMP DES ROMAINS

THIS curiously named fortification appeared frequently in the dispatches of the first part of October, up to its fall on the 6th, but with little detailed description of the struggle centered about it. The reader perhaps imagined a fortress shelled to pieces, its defenders put to flight, and the victorious enemy swarming exultantly over the bastions, bayoneting promiscuously the survivors. In reality, however, the end of the siege was by no means the traditional one, as an Associated Press writer found when, in passing through St. Benoit, near the borders of Lorraine, he came by chance upon the survivors of Fort Camp des Romains—some three hundred prisoners, fine young fellows, evidently the pick of the French line. The deference with which they were treated by their bearded Landwehr guard was marked. The correspondent learned speedily the cause, and the story of their brave and desperate defense:

Their armored turrets and cemented bastions, altho constructed after the best rules of fortification of a few years ago, had been battered about their ears in an unexpectedly short time by German and Austrian siege-artillery. Their guns were silenced, and trenches were pushed up by an overwhelming force of pioneers and infantry to within five yards of their works, before they retreated from the advanced intrenchments to the casemates of the fort. Here they maintained a stout resistance, and refused every summons to surrender. Hand-grenades were brought up, bound to a backing of boards, and exploded against the openings into the casemates, filling these with showers of steel splinters. Pioneers, creeping up to the dead angle of the casemates, where the fire of the defenders could not reach them, directed smoke-tubes and stinkpots against apertures in the citadel, filling the rooms with suffocating smoke and gases.

"Have you had enough?" the defenders were asked, after the first smoke treatment.

"No," was the defiant answer.

The operation was repeated a second and third time, the response to the demand for surrender each time growing weaker, until finally the defenders were no longer able to raise their rifles, and the fort was taken.

When the survivors of the plucky garrison were able to march out, revived by the fresh air, they found their late opponents presenting arms before them in recognition

ONCE upon a time—as the story-tellers say—tomatoes were known as "love-apples." And you can't help thinking there was something appropriate in the name when you notice the pleasing effects of

Campbell's TOMATO SOUP

The tempting "love-apple" color "gets" you "at first sight." The first taste captures you, young or old. The flavor and quality "grow" on you more and more. And the regular use of this delicious soup becomes a healthy habit which adds to the joy of living every day.

"UNDER THE
LOVE-APPLE TREE"

The thinnest watch made
in America or Europe,
is a Gruen.

Duplicate parts to be had
through Gruen dealers ev-
erywhere, insuring prompt
repairs in case of accident

GRUEN VeriThin Watch

You want a thin model watch, of course, but you do not want thinness at the expense of accuracy and durability.

Open the back of every watch shown you and see that the inside dust protection cap is there, as shown in the illustration of the Gruen Verithin on the right.

See also that the movement fills the case and is not merely a ladies' movement patched in the center of a thin edged man's case.

In the Gruen Verithin you will find the genuine thin model timekeeper. Its thinness is in the construction of the movement—in a unique arrangement of wheels that saves half the space without reducing size or strength of parts. Thus can this watch "fit your pocket like a silver dollar," yet maintain the highest standards of timekeeping service.

Thousands have written for the interesting

"Story of the Gruen Verithin"—you should have one, too. With it we will tell you how you can obtain a Gruen Verithin—as not every jeweler can sell you one of these beautiful precision watches.

Prices:—Adjusted models, \$25 to \$60. Precision models, \$50 to \$250. Lady Verithins, \$45 up. The Dietrich Gruen, the world's finest pocket timepiece, \$285 to \$650. Other Gruens in a wide variety of models and prices.

Note:—Many watches are called and sold as Precision timekeepers that are not. If you want the very highest timekeeping perfection attainable, look for the mark *Precision* on the movement—not merely the mark *Adjusted*.

THE GRUEN WATCH MANUFACTURING CO.

Makers of the famous Gruen Watches since 1870

31 Gov. Square, Cincinnati, O.
Canadian Branch: C. P. R. Building, Toronto

GRUEN Wristlet Watches

Make sure that the wristlet watch you buy is a real timekeeper as well as a beautiful piece of jewelry. Look first for a standardized name on the watch itself. Gruen Wristlet Watches are made with all that skill in small watchmaking for which the name Gruen has become famous. The reputation for precision timekeeping won by the Gruen Verithin is your guarantee of real timekeeping qualities in Gruen Wristlet Watches. Ask your jeweler to show you the latest models. Prices \$15 to \$350.

of their gallant stand. They were granted the most honorable terms of surrender, their officers were allowed to retain their swords, and on their march toward an honorable captivity they were everywhere greeted with expressions of respect and admiration.

RUSSIA'S VODKA-LESS ARMY

THOSE whose burden it has been to attempt to stem the Slavic tide now setting westward toward Berlin may well begin to wonder what has become of the Russ of twelve years ago, whom the Jap defeated so easily. The Russ has put aside his vodka and girt himself in earnest for war. He is showing the same untroubled certainty about it that he would exhibit in going forth to a day's plowing. And this time, apparently, the officer who leads him is worthy of the man. The so-called Russian Army of the Russo-Japanese War has vanished utterly. Instead, there is a fighting machine worthy of any people's admiration. Perceval Gibbon, novelist, writing from Vilna, Russia, to the *London Daily Chronicle* and the *New York Times*, describes the Army's appearance as he saw it at the German frontier. He was in the hamlet of Eydtkuhnen, a tiny village shattered by the war, but nevertheless at that moment the heart of the great Russian fighting machine. He says:

From beyond the nearest shoulder of land sounded suddenly some gigantic and hoarse whistle, an ear-shattering roar of warning and urgency. There were shouting and a stir of movement; the wagons and Red Cross vans began to pull out to one side; and over the brow of the hill, hurtling into sight, huge, unbelievably swift, roaring upon its whistle, tore a great gray-painted motor-lorry, packed with khaki-clad infantrymen. It was going at a hideous speed, leaping its tons of weight insanely from rock ridge to traffic-churned slough in the road; there was only time to note its immensity and uproar and the ranked faces of the men swaying in their places, and it was by, and another was bounding into sight behind it. A hundred and odd of them, each with thirty men on board—three battalions to reinforce the threatened left wing—a mighty instrument of war, mightily wielded. It was Russia as she is to-day, under way and gathering speed.

At Rennenkampf's headquarters at Wirballen, where formerly one changed trains going from Berlin to Petrograd, one sees the fashion in which Russia shapes for war. Here, beneath a little bridge with a black- and white-striped sentry-box upon it, its muddy banks partitioned with rotten planks into goose-pens, runs that feeble stream which separates Russia from Germany. Upon its farther side, what is left of Eydtkuhnen, the Prussian frontier village, looms drearily through its screen of willows—the walls smoke-blackened and roofless, crumbling in piles of fallen brick across its single street, which was dreary enough at its best. To the north and south and behind to the eastward, are the camps, a cityful, a countryful of men armed and equipped; the mean and ugly village thrills to the movement and purpose. On the roof of the schoolhouse there lifts itself

against the pale autumn sky the cobweb mast and stays of the wireless apparatus, and in the courtyard below and in the shabby street in front there is a surge of automobiles, motor-cycles, mounted orderlies—all the message-carrying machinery of a staff office. The military telephone-wires loop across the street, and spray out in a dozen directions over the flat and trodden fields; for within the dynamic kernel to all this elaborate shell is Rennenkampf, the Prussian-Russian who governs the gate of Germany.

Here is the brain of the army. Its limbs go swinging by at all hours, in battalions and brigades, or at the trot, with a jingle of bits and scabbards, or at the walk, with a bump and clank, as the gun-wheels clear the ruts. It is the infantry that fills the eye—fine, big stuff, man for man the biggest infantry in the world.

Their uniform—of peaked cap, trousers tucked into knee-boots, and khaki blouse—is workmanlike, and the serious, middle-aged officers trudging beside them are hardly distinguishable from the men. They have not yet learned the use of the short, broad-bladed bayonets; theirs are of the old three-cornered section type with which the Bulgarians drove the Turks to Tobataldja; but there is something else that they have learned. Since the first days of the mobilization that brought them from their homes there is not a man among them that has tasted strong drink. In 1904 the men came drunk from their homes to the centers; one saw them about the streets and on the railways and in the gutters. But these men have been sober from the start, and will perforce be sober to the end.

Of all that elaborate and copious machinery of war which Russia has built up since her failure in Manchuria there is nothing so impressive as this. Her thousand and odd aeroplanes, her murderously expert artillery, her neat and successful field wireless telegraph, even her strategy, count as secondary to it. The chief of her weaknesses in the past has been the slowness of her mobilization; Germany, with her plans laid and tested for a mobilization in four days, could count on time enough to strike before Russia could move. She used her advantage to effect when Austria planted the seed of this present war by the annexation of Bosnia and Herzegovina; she was able to present Russia in all her unpreparedness with the alternatives of war in twenty-four hours or accepting the situation. But this time it has been different.

At Petrograd one sees how different. Hither from the northern and eastern governments come the men who are to swell Rennenkampf's force. Their *cadres*, the skeletons of the battalions of which they are the flesh, are waiting for them—officers, organization, equipment, all are ready. The endless trains decant them; they swing in leisurely columns through the streets to their depots, motley as a circus—foresters, *muzhiks* in fetid sheepskins, cattlemen and rivermen, Siberians, tow-haired Finns, the wide gamut of the races of Russia, all big or biggish, with those impassive, blunt-featured faces that mask the Russian soul, and all sober. No need now to make men of them before making soldiers; no inferno at the wayside stations and troop-trains turning up days late. It is as if, at the cost of those annual 780,000,000 rubles, Russia had bought the clue to victory.

C.D. Peacock

ESTABLISHED 1837

137 State Street-CHICAGO

CHRISTMAS GIFTS FROM PEACOCK'S carry the prestige of a name over three-quarters of a century old and the quality guarantee of a reputation known all over the world. Hundreds of thousands of people shop by mail here each year, through our 224-page illustrated catalog. Our new 1914-1915 book is ready; a copy will be sent you free upon request. From its richly illustrated pages you can select all your Christmas gifts with the certainty of satisfaction which the Peacock money-back guarantee insures.

13764 Cuff Buttons, 10k Yellow gold, each 2 1/2 inches, round, \$5.00

13068 Pendant Neck Chain, 10k gold, 5 pearls, 1 diamond \$10.00

14774 Circle Brooch, polished gold filled, 3 pearls \$0.90

13040 Solid Pearl Neck Chain, 2 strands, 14k clasp, \$10.00

ELGIN WATCHES

Men's Peacock Special Elgin, a very thin model in a 14k gold case, \$20.00. Other models in 14k gold cases up to \$100.00. "Lady Elgin," 14k gold case, open face, 15 jewel, \$30.00. 17 jewel, \$40.00. Elgin Bracelet Watches, \$35.00 to \$100.00.

The New Howard *Ionic*

The latest achievement of the HOWARD Watchmakers and one of the most beautiful Time-pieces ever designed.

The HOWARD Ionic—12-size, 17-jewel, extra-thin, open-face, the movement adjusted to three positions, temperature and isochronism, cased in a single-joint gold-filled case of special design, exceedingly flat and compact—price \$40.

Owing to the extreme care given to the finish and adjustment of every HOWARD movement, only a small number of these new watches will be available this year.

The more enterprising jewelers will make a point of having a few to show, and we would strongly advise anyone who is interested to see the Ionic and make reservation at an early date.

A Howard Watch is always worth what you pay for it. The price of each Watch is fixed at the factory and a printed ticket attached from the 17-jewel (double roller) in a Crescent Extra or Bass Extra gold-filled case at \$40, to the 22-jewel at \$150—and the EDWARD HOWARD model at \$300.

*Not every jeweler can sell you a HOWARD WATCH.
The jeweler who can is a good man to know.*

E. HOWARD WATCH WORKS, Boston, Mass.

EDISON'S PROPHECY: A DUPLEX, SLEEPLESS, DINNERLESS WORLD

ON the recent thirty-fifth anniversary of the Edison electric lamp, Mr. Edison was induced to indulge in prophecy and to discuss for a few moments the present and the future of the race, from an inventor's point of view. Among other things he confessed that the electric light never "stirred much sentiment" in him, as its perfection was a long and tedious process of experiment, and its introduction only another period of care and worry. The electric car, however, is a much more romantic figure in his reminiscences. The first practicable electric railway was put into operation at Menlo Park, Edison's private estate. "I was sure," declares Mr. Edison, "that the idea was a possible one." But funds were needed, and there lay difficulty, for capital was hesitant, and, more than that—

I was assured by the greatest financial figures in Wall Street that this scheme of operating railroads by electricity was the craziest idea that ever had been advanced by any one assuming to be sane.

I had carefully gathered all the figures of the cost of horse-cars and their operation and was sure that the substitution of electric power for horse-power would result in an enormous saving. Indeed, I knew, and my knowledge was exact. I knew electric traction was the coming thing, and a very big thing. But it fooled me.

It was bigger than I thought it was. I had made a better guess than Wall Street had, but my guess had been far from adequately prophetic. It was so big that it amazed me. It increased traffic startlingly. As a matter of fact, electric traction has increased street-car traffic, I estimate, by 500 per cent.

The first electric cars revealed a facility of operation and a rapidity of movement which no one but myself seemed to have expected.

Their multiplication of traffic was enormous, their effect upon street-railway receipts was very great. Then the men in Wall Street, who had declared them to be a crazy dream, began to speculate in electric-traction stock. They have been at it ever since.

The one great value of the electric light—and of the electric railway too—he holds, is that they expand mankind's "day." Heretofore, man has worked with the sun and slept with the dark, but Mr. Edison finds in this the fallacy of *non sequitur*. Man has formed the habit of sleep in the dark hours merely because the dark incapacitated him for work. In the future, man, aided by the electric light, will overcome this habit, go with less and less sleep, until finally he never sleeps at all. "I rather like to think of that," he says, for—

Everything which decreases the sum total of man's sleep increases the sum total of man's capabilities. There really is no reason why men should go to bed at all, and the man of the future will spend far less time in bed than the man of the present does, just as the man of the

present spends far less time in bed than the man of the past did.

As a matter of fact, a very simple bit of arithmetical figuring will show that by and by humanity will have to live in double shifts, so that there may be room upon the earth for all the people.

The day of life in double shifts will come in spite of war. Medical science will save more lives this year than war will take, no matter how terrifically murderous that war may be.

In the old days man went up and down with the sun. A million years from now he won't go to bed at all. Really, sleep is an absurdity, a bad habit. We can't suddenly throw off the thralldom of the habit, but we shall throw it off.

Humanity can adjust itself to almost any circumstances. Not so very long ago we had a good deal of trouble here in the factory while we were trying to perfect the disk record for our phonographs. Eight of us then started upon the work with very definite intentions of wasting just as little time as possible. For five weeks we put in from 145 to 150 hours a week each at the job. One hundred and fifty hours a week means more than 21 hours a day—and we all gained weight.

The man who sleeps too much suffers from it in many ways and gains nothing from it. The average man who sleeps seven or eight or nine hours daily is continually oppressed by lassitude.

I have never overslept, and I have never had a dream, good or bad, so far as I know, in my life.

Nothing in the world is more dangerous to the efficiency of humanity than too much sleep, except, perhaps, stimulation. The elimination of all stimulant would be a fine thing for the race. The temperance movement's advance ought to be a subject for general congratulation. Presently we shall be cutting out tobacco, tea, and coffee, and we all shall be better for it.

In the matter of sleep, the electrical genius suggests a campaign of sleeplessness, in which all the population of the United States should join, agreeing to sleep one hour less each night. Juggling about the 90,000,000 of people and 365 days of the year, some bizarre effects are brought about in estimates of time saved for this country, and the consequent saving in wealth. But one may save in food as well as sleep, and to as great advantage. When all the world is eating what it needs and no more, poverty will cease to exist. Thus speaks the prophet, and proves it with his own experiences:

I consume five ounces to a meal, three times a day, including the water in the food. I drink lots of water.

The man engaged at hard physical labor, whose work makes the engine of his body require more fuel than mine does, could get on perfectly well with eight or ten ounces to a meal, altho he might find the achievement of the habit difficult.

On the average, men would get on better if they reduced their food consumption by two-thirds. They do the work of three-horse-power engines and consume the fuel which should operate 50-horse-power engines.

If the world would cease its overeating, it thereby would do away with poverty.

Good Light In your store In your office

In your store and window, good light displays merchandise well and makes seeing easy and comfortable. Customers stay longer, and purchase more; they speak well of the store and visit it often, without always knowing why. Stores with good light have an advantage over stores with poor light.

In your office good light makes seeing easy and comfortable for everyone. Employees earn more money for you by doing more and better work with fewer mistakes, and with fewer headaches and absences due to eye-strain. You see and work better yourself.

Good light can be made to cost less (less current) than poor light when you know the facts.

Alba Lighting Equipment

for stores, offices, factories, business buildings, institutions and residences, gets more and better light from the same current (saves you money).

Alba is attractive, softens the light (takes out the eye-irritation), directs it where needed (makes it usable), and turns the harsh, brilliant glare of tungsten lamps into an agreeable light that is easy to see by and work by (increased efficiency).

Good Light is easy to get

when you know the facts — frequently it only requires some simple changes in your equipment. The following articles on good light tell the facts.

Save Your Good Looks with PEBECO TOOTH PASTE

Sooner or later, the soundest and most perfect teeth yield to the attacks of "acid mouth." Then cavities appear and decay of the tooth-substances follows, with permanent disfigurement of your mouth.

Your dentist can repair the damage from time to time; but isn't it much better to help him by seeking out the cause of the trouble and removing that? This you can do with Pebeco Tooth Paste.

You cannot ordinarily see or feel "acid mouth." But at this very minute it is probably at its destructive work on your teeth.

Trial Tube Free

We have some little test papers that positively detect acid. Let us send you these and also a free trial tube of Pebeco Tooth Paste, containing enough to last for ten days. With this you can prove that Pebeco *does* counteract acid.

The taste of Pebeco will surprise you. It is not sweetened, but has a keen, refreshing flavor which is preferable to mere sweetness.

Pebeco is a little higher in price than ordinary dentifrices but it lasts longer, for you need to use only a little at a time, and the tube is larger. It saves money as well as teeth.

Manufactured by

Manufacturing Chemists

107 William Street New York
Canadian Office: 1-3 St. John St., Montreal

Use 1/2 brushful

Stop and think this matter out. We now are consuming as food 600,000 bushels of wheat to accomplish a result which would be accomplished better by the consumption of 200,000 bushels of wheat.

This is wasteful in more ways than one. In the first place, it wastes the wheat, and, by making the supply short, makes it expensive and decreases the power of each acre of land to support human life.

In the second place, it increases the death—and illness—rate of those who overeat. Putrefaction of foodstuffs in the lower intestines is the cause of most diseases.

Humanity will never reach its ultimate development until it cuts down sleep and food. I consider this the most important conclusion which I have come to during my years of hard and constant effort.

UNCENSORED BREVITIES

AMONG the feats of heroism of these days, maintaining a true state of neutrality is by no means the least. Neutrality is apt to be a thankless position, with all the uncertainty and discomfort experienced in walking a rope or discussing a family jar. Perhaps the first requisite is a clear idea of the exact meaning of both the letter and spirit of neutrality. Luckily we have discovered a definition taken from William Penn's "Some Fruits of Solitude," which could not easily be surpassed in cool common sense by any that has since appeared:

Neutrality is something else than Indifference, and yet of kin to it too.

A Judge ought to be Indifferent, and yet he can not be said to be Neutral.

The one being to be Even in Judgment and the other not to meddle at all.

And where it is Lawful, to be sure, it is best to be Neutral.

He that espouses Parties can hardly divorce himself from their Fate; and more fall with their Party than rise with it.

A wise Neuter joins with neither, but uses both, as his honest Interest leads him.

A Neuter only has room to be a Peacemaker; for being of neither side he has the Means of mediating a Reconciliation of both.

Iron Crosses have been issued in vast numbers already, but only within the last few days has come notice of the first Victoria Cross won in the present conflict. The story, as contributed to the New York Tribune from London, is told in two letters, the first from a soldier named Dobson to his wife, commenting on an event that is unexpected and rather puzzling:

"You will know by the time you receive this letter that I have been recommended for the Victoria Cross, an honor I never thought would come my way. I only took my chance and did my duty to save my comrades. It was really nothing."

The second letter is from Lady Mildred Follett, whose husband commands Dobson's company. It is addressed to Mrs. Dobson:

"You will be glad to know that your husband is very well and has behaved

Elgin Wonder Tales

*A veteran who
chased Sitting Bull*

*and fought the wily
Filipinos*

Brigadier General Frank Taylor, United States Army, Retired, contributes a chapter to Elgin history which is typical of Elgin performance at home and abroad. This story needs no comment. A photograph of the watch is shown above.

GENERAL TAYLOR says: "You are quite within bounds in advertising that 'Elgins that have seen service for 20, 30, and 40 years are not uncommon.' I have had my Elgin since 1876, have carried it in Indian campaigns and in the Philippine Islands; in fact, wherever service has called me. As far as keeping time goes, it is as good to-day as ever."

This watch was purchased in 1876, when the General was a Lieutenant in the United States Army. He has carried it constantly for thirty-eight years, covering his entire military career as Lieutenant, Captain, Major, Lieutenant-Colonel and finally Brigadier General. It has been in constant use except for an occasional cleaning.

When this watch was first purchased the General was serving under General Crook in the engagement against Sitting Bull. For forty days he was obliged to sleep on the ground, a good part of the time in the rain, but this did not affect the watch. In 1900, when the General was serving in the Philippines, due to the damp weather there the hands of the watch rusted, but on taking it to a jeweler it was found that the movement was in perfect condition and that only the hands needed renewing.

Your own jeweler is an Elgineer—master of watchcraft—and he knows Elgin Watches through and through. Write us for booklet which tells more of these stories and illustrates leading Elgin models.

with very great gallantry. Captain Follett says: 'A thick fog came down, so I sent three men out 100 yards to our front to warn them of an attack by the enemy. After they had been there an hour the fog suddenly lifted, and they were fired on at close range. One man was killed, one badly wounded, and one crawled back. I didn't know how to get the wounded man back, so I called for a volunteer and Reservist Dobson at once responded and went out to fetch him. He was heavily fired at, but not hit.'

Those who have prophesied that the European War will so brutalize and harden men to the thought of human distress and suffering that the world's work of charity and reform will be set back half a century, should consider such a story as the following, told by a British soldier returned from the Aisne, through the columns of the *London Standard*. It is undoubtedly only representative of a thousand tales that are never told:

Near our trenches there were a lot of wounded and their cries for water were pitiful. In the trenches was a quiet chap of the Engineers, who could stand it no longer. He collected all the water-bottles he could lay hold of, and said he was going out. The air was thick with shell- and rifle-fire, and to show yourself at all was to sign your death-warrant. That chap knew it as well as we did, but that was not going to stop him. He got to the first man all right and gave him a swig from a bottle. No sooner did he show himself than the Germans opened fire. After attending to the first man he crawled along the ground to others until he was about a quarter of a mile away from us. Then he stood up and zigzagged toward another batch of wounded, but that was the end of him. The German fire got hotter and hotter. He was hit badly, and with just a slight upward fling of his arms he dropt to earth like the hero he was.

Later he was picked up with the wounded, but he was as dead as they make them out there. The wounded men for whose sake he had risked and lost his life thought a lot of him, and were greatly cut up at his death. One of them who was hit so hard that he would never see another Sunday said to me as we passed the Engineer chap, who lay with a smile on his white face and had more bullets in him than would set a battalion of sharpshooters up in business for themselves, "He was a rare good one, he was. It's something worth living for to have seen a deed like that, and now that I have seen it I don't care what becomes of me." That's what we all felt about it.

There are in Berlin, says the *Chicago Daily News*, a girl of nine, a boy of seven, and a little fellow of four whose story "throws more illumination upon the injustices of war and the good-heartedness of mankind than does many a war-novel." These are the children of a Russian citizen of German blood, who entrusted them blindly but with perfect faith to the kindness of the German nation. As the story goes:

When the war broke out he was called to serve in the Russian Army. His wife is

A Handsome Parlor Davenport By Day— A Roomy, Comfortable Bed at Night!

Whether your home is large or small, a **Kroehler Bed Davenport** will be a great convenience. It has the exact appearance of a handsome parlor davenport. At night it serves as a regular or extra bed.

A gentle pull on the strap at back of seat unfolds a full size, sanitary, all steel bed frame and springs. It closes as easily. Separate, removable felted cotton mattress. You don't sleep on the upholstery. Room for bedding when closed. Indestructible—Luxuriously Comfortable either as a bed or davenport.

dead, and he dared not leave his children guarded only by servants in a province soon to be overrun by troops. So he took the three little children to the German frontier and said to them:

"This is the German frontier. You are to stand here until you see a German." Then he said to the elder son, "When you see a German you will tell him who you are and why your father is not with you." He kissed them good-by, and left to join his regiment.

All afternoon the three children stood on the frontier, waiting for a German. Toward night German sentinels discovered them.

"Hello!" said one to the other. "Here are three little Russians. What are you doing here?"

The boy of seven repeated what his father had told him, adding: "But we are not Russians. We are Germans, but our father had to go to the Russian Army."

The sentinels, amused by this naive interruption in their duties, continued their questions.

"Please, sir," said the boy, "we can't tell you any more. We are sleepy and hungry."

The sentinels laughed at the last remark, but laughed in a kindly way. They took the three children to their general. The general took them to his wife. After she had fed them and allowed them to sleep for the night, she sent them on to friends in Berlin.

It is only a brief obituary, in the midst of a dispatch concerning the destruction of Arras. But there is, in its very brevity, an appeal to the sympathy that might be lost in a longer account:

The body of Miss W. Bell, a young English nurse, who had shown great gallantry in attending the wounded on the battle-field, has just been buried at Le Mans. She was struck down by a shell, and, having both legs broken, was conveyed to the British hospital at Le Mans, where she died. She lies amid the British, French, and German soldiers for whom she gave up her life.

A special correspondent of the New York Globe is responsible for a curious and affecting little story of active service. He asserts that the tale was told him by "Corporal Igoe" in a London café, who had heard it on a troop-train bringing back the wounded. It concerns the mutiny of a London bus-driver, and runs as follows:

A British battery had been under heavy fire at Charleroi. Now we know that the British were defeated in that action. One of the guns of the battery had especially drawn the enemy's fire. At last only three men were left to serve it.

"So there they was," said Mr. Igoe with enjoyment, "sweatin' and cursin' 'orrible."

Two of the men had been "buddies" for years. Igoe says—he does not give his authority—that they had been conductor and chauffeur on a Charing Cross bus. Their one amusement was the tame and pastoral one of pigeon-flying. The driver used to carry a pigeon-basket between his knees. At the end of the run they would mount the top of the bus and watch their birds fly home.

"The conductor, 'e was killed," said

NATCO HOLLOW TILE

Fireproof, age-proof, damp-proof, vermin-proof, warmer in Winter, cooler in Summer

THE monopoly so long enjoyed in the past by the ordinary home building materials only serves to make more impressive the remarkable record of NATCO Hollow Tile and its claims upon the consideration of every owner, architect and builder.

NATCO construction is essential if the home is to have its utmost commercial value or afford the comfort, the safety from fire and the freedom from deterioration demanded by modern standards.

Floors, partitions and roofs are hardly less important than the exterior walls in their need of NATCO construction—NATCO fire-safety. There are special forms of NATCO Hollow Tile for these features. But no Hollow Tile is *genuine* NATCO Hollow Tile unless it bears the imprinted trademark, "NATCO."

More information as to NATCO Hollow Tile will be found in the new 32-page hand-book, "**FIREPROOF HOUSES**," which contains 25 illustrations of NATCO residences, and is an invaluable guide to the prospective builder. Mailed to any address upon receipt of 10 cents.

Igoe. "Shrapnel it was that 'it him. Fair took his 'ead off."

So then there were two men left to serve the gun. It was a pretty hard job. Rifle-balls played a tattoo upon the steel shield. The crews of the other guns in the battery had been badly cut up. No one could come to their aid. At last the officer in command got the word to fall back. He shouted the order to his men, for the little bugler was dead under a wheel. The guns were to be deserted. No horses could be brought to them in face of the enemy's fire. The driver of the Charing Cross bus looked at his captain. His bloodshot eyes strained out of his powder-blackened face.

"But look at 'im, sir," he pleaded. In a little hollow back of the gun the conductor of the Charing Cross bus was fast asleep. His poor body was protected there from German bullets. His buddy had thrown his khaki jacket over the cruel wounds. The hands were crossed upon the dead man's breast. The clumsy artillery boots fell away from each other. "They killed him," said the bus-driver piteously. "I can't go away and leave my pal."

"Come on," said the officer, "we're ordered to retire. Fall in."

"You go to 'ell, sir," said the bus-driver firmly.

What was left of the battery doubled under the little hill on which the guns were mounted. Safe for the moment in the tiny valley, they looked back at that shell-torn eminence whence they had fled. There they saw the Charing Cross bus-driver cramming a shell into the gun. The silent other man crouched behind the shield ready to fling the breech block to.

"So then the others went back," said Igoe simply. "They saved the guns."

In the roll-call of the heroes of the earlier fighting abroad stands, not the least upon the list, the name of Corporal Lupin, of Liège. There he lost his life, but at a cost to the invaders of the defeat of an attacking column, and the annihilation of a battery of field artillery, horse and man. The story of his courage, recorded in the *Philadelphia Evening Ledger*, is told by Major Jeanne, who fell wounded in the defense of Liège:

We were on the right bank of the Meuse, at Bellaire, in close touch with the German battery. The musketry on both sides was terrible. All at once, the Germans adopted new tactics. They seemed to withdraw from their position, and we could distinctly notice their ranks splitting as if in great confusion. It was only to bring up more artillery which had been rushing from behind. The move was smartly executed, the ranks closed again, and for a time they seemed as if they were going to have the advantage over us.

But now again young Lupin had seen his chance looming, and what he did altogether changed the face of things. Like a flash, the boy dashed off under cover of a ditch to the left of the German battery. At 300 meters distance he found shelter behind a wall. He took aim at the battery in *enfilade*, and his Mauser brought down in quick succession the chief officer, the under officers, and the artillerymen. This time real confusion took place at the German battery, which was nearly silenced. The Germans, thinking that a whole platoon was now attacking them, directed their last piece

of artillery on the wall, and with a terrific crash the wall came down, burying the brave Corporal Lupin. The boy's bravery had weakened the German position, and it did not take us long to scatter them and put another victory on our list.

"These lords and cockneys," says a correspondent, writing to the *New York Evening Post*, "are just one cheerful, hard-working family, making the best of their job." Formality has been thrown out of their kit: it was in the way. Nor are they small-minded haters of their foe. Their job is to kill him, not to despise him or fail to give him the meed of appreciation he deserves. Says the writer:

Social caste there may be in England, but England in the field is without the first curse of militarism. You see at top-notch, sweeping all else aside, the race's genius for administration that has made its great history.

And from Tommy in the cafés, sighing for cigarettes which the enemy had swept clean away; from MacGregor, chucking biscuits to girls washing clothes in the river and giggling at his naked knees—you could not get one word of venom against the Teuton. "The blasted simpleton," said one of a prisoner he had taken, "just lay on his back in the motor, playing a mouth-organ, 'appy as a king."

"Expect their rifles to 'it us?" said another, who produced a kitten which he had carried all the way from Belgium tucked in his coat. "'Ow can they, when they fire 'em from down by their knees—just like that?"

Out in the trenches—a long, long way from Tipperary—the British soldier has made himself at home, with his customary contempt for obstacles and conveniences. Fighting is his work, and he takes to it with the utmost good grace. He has even developed a wit to fit the situation—a "trenchant humor"—which consists in nicknaming impertinently all the horrifying weapons that are turned against him and with which he is supposed to be impest. The *New York Tribune* gives one example:

Here is the tale of the private who was suffering from neuralgia as he lay in the trenches and who found a most unusual cure. It is told in a letter from a soldier to his mother, as follows:

"We're just keeping at it in the same old slogging style that always brings us out on top. There's one chap in our company has got a ripping cure for neuralgia, but he isn't going to take out a patent, because it's too risky and might kill the patient. Good luck's one of the ingredients, and you can't always be sure of that."

"He was lying in the trenches the other day, nearly mad with pain in his face, when a German shell burst close by. He wasn't hit, but the explosion knocked him senseless for a bit. 'Me neuralgia's gone,' says he, when he came around. 'And so's six of your mates,' says we. 'Oh, crikey!' says he. His name's Palmer, and that's why we call the German shells now 'Palmer's Neuralgia Cure.'"

NUTS CHOCOLATE COVERED *A New Package of*
Whitman's

An enticing assortment—all nuts, chocolate covered. The selected whole meat nuts, gathered from all the world and handled with scrupulous care, are worthy of the rich coating of exquisite super-extra chocolate. These centers are walnuts, double walnuts, cream walnuts, pecans, cream pecans, pecan caramels, filbert clusters, almonds, white nougat, hard nougat, amaranthes, peanut chips and Brazil nuts.

Substantially packed in an elaborate two-tray box. One dollar the package in pound size only (more in extreme west and Canada). If no Whitman agent near you, send us \$1.00 for package by mail. Write for booklet.

STEPHEN F. WHITMAN & SON, Inc., Philadelphia, Pa.

The Best of Florida's Oranges and Grapefruit from Grove to Your Home

The Carney groves on beautiful Lake Weir are famous for the early maturity and superior quality of the fruit they produce. Actual tests by chemists showed this fruit to lead that from all other sections of Florida in becoming sweet and fully flavored.

For years the Carney Parson Brown oranges and Banner Brand grapefruit have been deservedly popular in leading markets. That consumer may get them with all the flavor, juiciness and sweetness they have when picked from the trees, these fruits now are offered in small packages, direct from the groves.

Box containing three dozen Carney Parson Brown oranges prepaid to any point North of Florida and East of the Mississippi for \$1.50. Box of one dozen Carney Banner Brand grapefruit for \$1.50, prepaid in territory named, or assorted box grapefruit, oranges and tangerines, for \$1.50 prepaid in that territory. Order now for Thanksgiving. Booklet free.

The Carney Investment Company
Summerfield, Florida

The Xmas Gift of Perpetual Service

THE CELLO METAL HOT WATER BOTTLE

BEAUTIFUL to look at is the Cello, sparkling silver-bright, and packed in a special holiday holly box. A welcome gift indeed.

Its attractive appearance is equalled by its wonderful convenience and constant economy. The Cello is made of the finest brass, heavily nickel-plated, which we have found to be the only material that will positively withstand the severe test to which a hot water bottle is subjected. No rubber to dry up, crack, burst or leak. Sold to you with a guarantee, not a caution against boiling water.

The Cello is curved to fit the body, without awkward angles. Extra long handle for massage. It will serve you faithfully for a lifetime.

The Cello will stay hot all night. Nicely made bag of blue flannel makes it soft as a pillow.

Ask for the Cello at your drug or department store—in 1, 2 and 3 pint sizes, prices \$1.75, \$2.00 and \$3.00 respectively. 35c extra for 1 pint massage handle; 50c extra for 2 and 3 pint sizes. If you shouldn't find the Cello, order direct of us, mentioning size wanted and name of your dealer and we will deliver by parcel post prepaid. Money back if you are not more than satisfied.

A. S. CAMPBELL CO.
385 Commercial St.,
Boston, Mass.

Can be filled from any faucet or bottle without slightest danger of scalding or burning the hands.

AIR CHAMBER TO KEEP HANDLE COOL. RUBBER VALVES.

EXPANSION BRASS SPRING.

LOCK SEAM.

Air chamber around neck makes it comfortable to handle. Patent spring fitting accommodates all expansion contraction and vacuum keeping the Cello airtight in shape. A feature in other bottle makers. The Cello is perfectly safe—sterilizing every time you fill it.

AMERICAN SYMPATHIES IN THE WAR

(Continued from page 941)

Traveling south to Missouri, we hear from St. Louis that it is a city of "many different nationalities," in which the Germans represent the larger proportion of the foreign population. In Carthage the sympathy "depends on the nationality of the inhabitant or his ancestors and is largely prejudiced in any case." From what we hear, such a frame of mind may prevail also in Kansas City, Joplin, and Columbia. Reports from Kirksville, Brookfield, Cantersville, and Felton show a pro-Ally sympathy, matched in De Soto, Boonville, and St. Charles by a pro-German.

If we look into North Dakota we are conscious of a rather strong leaning toward the Allies, tho in localities like Fargo the sparse German population stands by the Fatherland. From Bismarck we hear that "sympathies run almost according to nationality," altho "German sentiment is favoring." In South Dakota, Pierre reports that the majority favors the Allies, but that it is "not so strong as at the start"; while we learn from Aberdeen that the present feeling is pro-Ally "except in German settlements." Deadwood and Brooklines show partiality to the Allies, Huron is reported neutral, and Mitchell is not only neutral, but shows no rancor on either side.

The spirit of tolerance, too, is evident in the report of an editor of Blair, in Nebraska, which State also has a considerable German population. "We have a large German citizenship," he writes, "but with few exceptions they don't believe in 'rocking the boat.' They are first of all American citizens, with full confidence in America, the President, and his policy." From Omaha we learn that sentiment is "greatly divided," with indications that "the larger number favors the Allies," and this opinion is repeated from Superior, while from Alliance we are told that "opinion seems to be that Germany largely is to blame for the war, but people regret to see her crushed." Divided also is Grand Island, but as it is "rather a German community," it is said, "a vote might show 70 per cent. for the Germans"; and a like appraisal is made of the general attitude of Beatrice.

In Kansas, towns of pro-Ally tendency are nearly matched in number by those in which opinion is divided. In Leavenworth a "strongly German community" where sympathy is "largely" pro-German, we are informed that "sentiment is not shown to any extent"; but in Emporia, Burlington, Smith Center, and Iola the majority of the people and some newspapers are "undoubtedly" friendly to the Allies. Owing to the influence of German population in Topeka, Wichita, Atchison, Salina, Ottawa, and Winfield, the sentiment is about "evenly divided," slightly favoring the Allies.

DELAWARE TO TEXAS

Making a sudden eastward shift across the country to Delaware, the first State of the South Atlantic Division, we begin to feel the contact of a general pro-Ally opinion. Dover favors the Allies "by a great majority," we hear; and from Wilmington, through neutral editors, we learn that the city is "pro-Ally, without being anti-German." Another report states that "there is much German sentiment in Wilmington, particularly among German-Americans and Hungarians. Taking the State at large, however, the sentiment is with the Allies, due largely to the English ancestry of the people."

In Maryland the press is generally neutral, altho one paper avows that its "sympathy is with the Allies." The public, as we hear from the same city, is "mostly anti-German." And word comes from Cumberland that "sentiment here, even among a large number of Germans, is with the Allies and against the German Emperor and his military party. This is due to the treatment of neutral Belgium, and the belief that the Emperor and not the German people forced the war." As a straw showing the way the wind blows in Washington, D. C., we are told by an editor that his paper "in its editorial policy aims to be fair to both sides in the present European War. Public sentiment here has been distinctly in favor of the Allies, . . . a sentiment which has increased since the fall of Antwerp."

In the representative cities of Virginia the description of community feeling ranges from "practically unanimous for the Allies" to "pretty generally in favor of the Allies"; the "only exceptions," we hear from Hampton, are "among these nearly full-blooded Germans. Most of those of Pennsylvania or German descent are pro-Ally." In West Virginia, towns like Huntington and Elkins are squarely on the side of the Allies. But from Wheeling, with 28 per cent. of the population German, and from Morgantown, with many Germans employed in the glass-factories, we learn that public opinion is "divided." A Martinsburg neutral editor, who "deplores the biased reports of the Allies regarding German atrocities," writes that, "generally speaking, the community has recently changed from the Allies, and now favors the Germans. The Allies' censorship of the news unfavorable to them and Japan's advent at England's urging have done much to bring about this reversal of feeling, until now German successes are hailed with joy."

In North Carolina we learn that Durham is "strongly" pro-Ally, and the editor who provides this information supports the Allies in his paper, and believes what is true of Durham is "true throughout the South." At least it is said also of Winston-Salem, but we hear from Greensboro that while the Allies are looked upon as the "winning

DO YOU NEED MONEY?

Fisk & Wagoner Company, 354-60 Fourth Ave., N. Y.

Similar is the statement from Texarkana by an editor who admits that he "favors the Allies, but is fair to the Germans." He feels that the "onus of the war is on Germany," and because of that "the preponderance of public opinion in this section seems to be largely on the side of the Allies. However, the people are not partizans in the matter." Contrary is the word from Argenta, where it is said that "the German sympathizers are more aggressive in insinuating their views and making more showing," but that sympathy for the Allies "undoubtedly predominates." The same verdict comes from Little Rock, Blythesville, Harrison, and Helena.

The effect of a large German population in New Orleans, Louisiana, favoring Germany is offset, we learn, by a larger French population favoring France and a majority of American-born people of other races who incline toward the Allies. Less complicated is the situation of Baton Rouge, which is said to be wholly lined up for the Allies.

In Oklahoma ten cities stand forth unhesitatingly for the Allies, and several editors support them in their columns. From Adair we hear that public opinion is about equally divided, and that the editor of the county journal favors the Germans editorially. The opinion of Oklahoma City is that "war is wrong, and that the Powers could have settled all differences by arbitration."

Passing into Texas, we find in Dallas that the papers are neutral, while the people in general seem to favor the Allies. The Allies are said to be favored also in Palestine, Denison, and El Paso, altho from the last-named city we hear that the public is "not strongly biased either way, and that the general disposition is to hear both sides." In Laredo an editor who supports the Germans says that "the community supports them," while a neutral editor in Houston writes that in this section, "outside of German influence, 90 per cent. are favorable to the Allies." A neutral editor in Waco says of the community feeling

ROYAL CHAIR CO., Sturgis, Mich.

that "it's all according to the seasonin', as Mr. Weller was wont to say"; and we hear from Marshall, Texas, that altho the majority feeling leans toward the Allies, "the disposition is to shut up about the war and talk diversification of crops. Many have quit reading war-news."

MONTANA TO CALIFORNIA

In the Mountain and Pacific Division of the States, to begin with Montana, a Butte editor whose policy is "neutral, but opposed to German militarism," observes that "for its size Butte probably has a larger foreign element than any other town in the United States, and the sentiment is strong'y with the Allies." Bozeman also favors the Allies. An editor in Helena who openly defends the Allies says that the community also is in favor of them, altho "some Germans are very aggressive in patriotism, but most of them admit that the Kaiser is wrong." Crossing into Idaho, we find in such cities as Boise, Coeur d'Alene, and Twin Falls that the newspapers practise absolute neutrality while the people are disposed to favor the Allies.

In Wyoming we hear from Rawlins of an editorial stand against "Germany's militarism, which is a world menace at all times," and the reason therefore why "the community stands up for the Allies." In Colorado the word comes from Denver that "we are all striving to live up to the President's neutrality proclamation." In the same city a Swedish-American paper declares for the Germans. Colorado Springs is wholly pro-Ally, says an editor whose columns take the same attitude. At Grand Junction a pro-Ally editor says that sentiment is "about equally divided," while at Durango the general mind is described as neutral.

Also neutral, according to one report, is Tucson, Arizona, altho another says that the general feeling favors the Allies, and this writer adds that "of course there are some Germans and people of German descent who favor Germany, but they are comparatively few." A mixed state of opinion is ascribed moreover to Phoenix and to Prescott, while Bisbee and Yuma are said to be distinctly pro-Ally.

Going into Utah we find complete pro-Ally sympathy in Brigham City, Heber City, and Logan; while a prominent editor in Salt Lake City writes that his attitude is neutral tho "the sentiment of the community is very largely in favor of the Allies, due no doubt to the fact that the Teutonic element is far in the minority."

Nevada comes out strongly for the Allies in Las Vegas and also Winnemucca, in which town an editor writes that "we all like the German people, but not Kaiser Billy and his militarism."

To enter the Pacific Coast States, beginning with Washington, we hear from "near-neutral" editors in Yakima and Ellensburg that the communities lean

toward the Allies. However, while this statement is also said to be "probably true" of Walla Walla still "there are many on the other side." From Spokane it is reported "that general sentiment is liberal and willing to hear both sides; but much criticism of Germany's treatment of the Belgians is heard. The Kaiser is held by many to be responsible for this and for the war. But the people of Germany have plenty of friends." One Tacoma editor says that the feeling in favor of the Allies is "less pronounced than it was shortly after the war began." And another writes that "lately sentiment has changed very noticeably; it is not changing in favor of Germany so much as it is taking a neutral ground."

Finally, from Bellingham, in the far northwest of the State, we have word of an editor who is a German supporter and who says that the feeling in his town is "for the Germans! Always."

In Oregon, also, German editorials and public support are found at Eugene and at La Grande, while the Allies are said "to have the best of it" in Portland, Albany, and Grant's Pass. In Salem we hear that "the natives of the belligerent nations generally favor the country they have emigrated from. Americans seem to be taking no sides; but more expressions of sympathy for the Allies, especially the Belgians, are heard."

The fact that the lineage of people inclines their sympathies more directly than any other impulse is remarked by a San Francisco editor. We read that "no one could answer the question as to the general sentiment of this city. San Francisco is very cosmopolitan and contains great numbers of all nationalities." Another view of San Francisco concedes that perhaps pro-Ally sympathizers are in the preponderance. Yet it is admitted that the "Germans are very aggressive," while "the strong Irish element seems divided." From San Diego we hear also of a mixed population making a mixed public opinion. One editor writes that "the Germans are loudest in the protests," but declares that all sides accuse him of partiality, altho he is trying to be neutral. Another San Diego editor, whose paper supports the Germans, says that "at first the community was hostile to the German side, but that it is now wincing and seems rather to favor the Germans." From Chico, Cal., the report comes that the Allies are more kindly regarded. In Santa Barbara we hear from one source that the city is "pro-Ally," and from another that it is neutral. Neutrality, moreover, is ascribed to Fresno and to Bakersville, because, as one writer says, "we are sincerely for world peace, and we consider absolute neutrality the first international duty of every citizen and of every newspaper in the United States at the present time."

**"D'Artagnan"**Width 5"
Height 9"

Dumas's hero adventurer is here modeled into a man as we might picture him, "alive," quick, his foil broken at his feet, and a smile on his face. Could we ask a more gallant figure.

"Admiration"Width 5"
Height 9"

Certainly this is a nude of exquisite beauty and grace. The maiden, refreshing herself at the clear, cold pool, has found her reflection on that is pleasing, and the frog, in its admiration, questions not the trespasser.

**"Lazy Student"**Width 5"
Height 7"

This lazy page has turned from his duties to what he finds more to his liking. He evidently is a great book lover, but we fear the volumes about him are the most exciting novelettes of his time rather than the volumes of a student.

An exceptionally appropriate book rock.

"Babyhood"Width 5"
Height 6"

These three little cherub-like figures in their playfulness would push over your books, if they might, but the chubby little figures are just able to keep them upright for you. This is an exquisite piece that all should like.

**"Gladiator"**Width 4"
Height 7"

A superb example of the physically perfect man. Every muscle in his wonderful body is in play to hold your books in place.

How Does The New War Tax Law Affect You?

Are you familiar with the provisions of the new War Tax Law just enacted by Congress? This law applies to individuals, firms and corporations.

We have prepared a synopsis of the law which will enable you to readily determine in what respect it affects you, and shall be glad to supply copies upon written or personal application.

Capital and Surplus, \$30,000,000

SAFETY FIRST INVESTMENT GOLDEN KANSAS

Is most prosperous—has greatest wealth per capita—of any state in the entire Union.

OUR GILT EDGE 6% MORTGAGES ON CENTRAL KANSAS FARMS

Invested 20 years, \$50,000,000, without a dollar lost. Large amount of small, well-located farms, pay taxes, look after everything—guard your interests. Get booklet "A" and latest list. THE FARM MORTGAGE CO., Box 2, Topeka, Kas.

6%
For 20 years we have been paying our customers the highest returns consistent with a conservative method. First mortgages loans of \$200 and up. We can recommend after the most thorough investigation. Please ask for loan list No. 4201. THE FARM MORTGAGE CO., Box 2, Topeka, Kas.

Your Money Will Earn 7 & 8%

Invested in first mortgages in Oklahoma City business district. Much more than bank loans. Interest paid quarterly. Value of property three times amount of loan. Write for free booklet describing our business and list of loans. We have loans of \$1000 up to \$100,000.

Aurelius-Swanson Co.
31 State Nat. Bank Bldg., Oklahoma City, Okla.

"I would strongly recommend the Fits-U Eyeglass, madam."

It is certainly the most becoming and also the easiest to adjust correctly. You scarcely notice the pressure, yet the lenses are always held firmly in the right position. We have found the Fits-U by far the most satisfactory finger-piece mounting. It gives the security of spectacles with an infinitely more becoming effect."

Ask your oculist, optometrist or optician— knows.

SAVINGS AND THE WAR'S COST COMPARED

MYVES GUYOT, formerly a minister in the French Cabinet, recently made a study of the cost of the war in Europe in which he drew a comparison of this cost with the income of the people who are engaged in it. Should the war last only three months he thought the number of men in arms would be 3,000,000 Germans, 2,000,000 Austrians, or 5,000,000 in the camp of France's enemies; while 3,000,000 Frenchmen and 4,000,000 Russians would oppose them, or 7,000,000 in all, without reckoning England and not counting the smaller units in the Balkans. As reported in the *New York Times Analyst* he then said:

"At an estimated cost of 12.50 francs (\$2.50) per day per head—which is rather too optimistic—every fighting day destroys fully 150,000,000 francs (\$30,000,000), and six months' outlay reaches 27,000,000,000 francs (\$5,400,000,000).

"The capacity for saving of the various nations involved can be said to be, annually: Four billion francs for France, six for Germany, and eight for England, a total of 18,000,000,000 francs (\$3,600,000,000), or equal to the cost of four months' warfare. But fighting nations do not only cease from saving; they also stop paying their way. Losses through the curtailment of producing power can be estimated, M. Guyot finds, at 44,000,000,000, and the damage done to human machinery he appraises at 18,000,000,000, or a gross total of 80,000,000,000 francs lost to capital account, which may be reduced if a certain amount of production is kept up during the war.

"Out of an 'active' population of 20,700,000, comprising 13,000,000 able-bodied men, there remain in France after mobilization some 10,000,000 men available for economic purposes, without reckoning the women. Commercial paralysis is not due, therefore, to lack of labor, but rather to the difficulty of transportation, the moratorium, and so on.

"After the war every one will have to rebuild the very elements of one's existence; the reconstruction, therefore, will be general. The first countries to need borrowing will be those which, having lost, must pay war indemnities. Enticed by substantial remuneration, hoarded money will come forth, and a great financial movement is to be expected.

"The commercial intercourse between France and Germany, amounting to 2,000,000,000 francs per annum, may somewhat abate, but it will not disappear entirely.

"Great Britain, which has 100,000,000,000 francs invested abroad, will retain her huge exporting power, but the destruction of Europe's surplus capital, making South-American loans very difficult, will close up many outlets to European exports in general.

"The United States need not worry. Its European purveyors will send out all the goods wished for in exchange for dollars—such dollars as are brought into the States by the present good crops. It is true that your customs authorities value at \$8,000,000 the drop in monthly receipts attributable to the war, but in the end the thing must right itself. England will always remain your big customer, and as for Germany, will she not make up later for the \$68,000,000

(XX) worth of cotton, for instance, which she can not obtain during the war?"

M. Guyot added that, thanks to "the hard-learned economic lessons of the war," the world may reckon on a reduction of standing military expenses after hostilities and on "a great development of initiative, thanks to the feeling of lasting security which is to replace the uncertainty and hesitation to which the Kaiser's policy had reduced the whole of the world for many a year."

NOTABLE DECLINES IN IMMIGRATION

Statistics of immigration to and emigration from the United States have commonly had more than passing attention from students of economic conditions, because they furnish guides to what is going on both at home and abroad. "If affairs overseas are adverse, there is a strong tendency to immigrate," says a writer in *Bradstreet's*, and, at the same time, if matters here are on the down grade, emigration ordinarily increases. Just now another reason for closely watching these statistics arises from influences due to the European War, which should cause an exodus of reasonably large proportions because of the stoppage of transatlantic traffic from certain countries, and because of calls issued by the warring nations for reservists to return to their colors. From figures issued by the Bureau of Immigration, *Bradstreet's* extracts the following information on conditions at the present time:

"For the first month of the European-Oriental War we find that only 51,231 aliens arrived in the United States, while 54,112 departed, making a net loss of 2,881 in our population from this source. In other words, immigration decreased 28.8 per cent. from the preceding month and 64 per cent. from August of 1913, while furnishing the smallest total reported since January, 1912, when only 46,820 arrived in this country. But it is probably more significant to learn, as we do, that emigration was not heavy, the number departing during August being but 54,112, showing a decrease from the previous month of 773 persons. Indeed, the sum given contrasts with departures of 78,207 in June, 57,787 in May, 69,218 in January last, and 56,587 in December, 53,931 in November, 54,000 in October, and 49,095 in August of 1913. So it will be seen that emigration was not remarkably large.

"Examination of the figures giving departures and arrivals by races shows that 10,708 more Italians went out than came in, southern Italians comprising 9,652 of the total. But the ebb and flow of the race named are always strong. On balance this country also lost 1,725 Poles, 2,325 people whose nationality is not specified in the returns, 303 Slovaks, 253 Roumanians, 416 Magyars, 1,365 French, 845 Croatians and Slavonians, 1,315 Russians, 60 Dutch and Flemish, and an equal number of Turks. But 1,190 more Irish came than departed, while English immigrants outnumbered those emigrating by 1,503, and the German race furnished an excess in this respect of 1,045. It is to be noted that 17,459 alien emigrant laborers went out during August, while only 5,447 came in, which figures convey the inference that lack of employment was the impelling cause.

"Now, it may be of service to compare the outward and inward flow of United States citizens as distinguished from that of aliens.

over a period of months. The following gives the statistical facts:

	Arrivals	Departures
1911		
August	36,928	36,721
September	30,151	20,000
October	32,290	29,806
November	18,534	24,143
December	17,011	18,481
1912		
January	12,860	25,506
February	15,461	21,156
March	19,706	18,007
April	21,271	34,970
May	17,753	55,844
June	22,334	46,726
July	37,352	29,863

The foregoing figures include males as well as females. This table gives the statistical facts as to immigration and emigration during the months of the years named:

	1914	1913	1912	1911
January	44,704	40,441	38,453	36,351
February	46,873	39,156	43,300	42,826
March	92,821	96,968	91,145	81,667
April	119,045	126,371	99,839	96,036
May	107,796	137,262	113,635	95,361
June	71,728	174,381	92,425	71,019
July	61,377	138,344	78,101	51,737
August	37,706	126,140	82,377	50,110
September		124,347	105,811	62,599
October		134,140	108,300	69,414
November		104,671	94,739	61,766
December		95,357	76,315	61,626
Total	541,694	1,307,318	1,026,340	782,545

	1914	1913	1912	1911
January	8,442	8,794	8,367	7,243
February	9,242	12,199	9,521	8,670
March	16,312	24,283	19,793	15,230
April	22,622	38,915	27,162	18,841
May	19,052	27,430	19,022	14,714
June	13,306	22,196	15,810	10,930
July	11,634	16,336	12,417	9,049
August	13,525	16,473	15,424	13,243
September		20,441	22,555	16,194
October		18,927	20,298	17,474
November		12,390	13,346	12,582
December		11,314	11,268	10,061
Total	113,499	229,365	186,270	154,969
Grand total	655,193	1,536,683	1,212,610	937,514

This table shows the number of aliens arriving as well as the number departing during August:

	1914	1913	1912	1911
Aliens Arriving				
Immigrant	37,706	126,140	82,377	50,110
Non-immigrant	13,525	16,473	15,424	13,243
Total	51,231	142,613	97,801	63,353
Aliens Departing				
Immigrant	30,307	20,342	26,725	31,915
Non-immigrant	23,905	28,853	20,710	20,549
Total	54,212	49,195	47,435	52,464
Loss in population	*2,881	91,580	81,866	10,948

The above loss of 2,881 for August of this year contrasts with heavy to fair gains in most preceding months, exceptions to the rule having been furnished by January of this year, when emigration exceeded immigration to the extent of 16,068 by the like month of 1913, at which time there was a decrease of 1,800, and by December and July of 1912, those months having reflected losses of 195 and 8,097, respectively.

COMMODITY PRICES LOWER

In the course taken by wholesale prices of commodities in October the notable features were sharp drops in wheat and provisions, slighter declines in textiles and fabrics, some advances and other heavy declines in drugs and chemicals. Meanwhile other declines below the sharp breaks recorded at the close of September occurred. These were in metals and some miscellaneous commodities, such as india-rubber and hops. Wheat advanced sharply during the month in consequence of heavy export-buying, but on freer offerings weakened slightly toward the close. Corn and oats likewise made advances in consequence of the foreign demand. Provisions were irregular, and on the whole weaker on liberal hog receipts and poor cash demand.

It's the Brains of a Burroughs You Buy

Q Don't think of a Burroughs as a machine. No one wants a machine if he can get along as well without it. But every business needs Burroughs—the Brain. The machine itself is just a lot of wheels and levers. The Brain is a trained servant which renders profitable service every day and hour. Burroughs, the Brain, gives the book-keeper's brain a real chance to work. It carries the burden of your figure work—more accurately than human brains—in a fraction of the time—and practically for nothing.

Q We have trained a Burroughs Brain to do your kind of work. There are many different kinds of Burroughs, each especially adapted to a particular business need—of smallest merchant or biggest manufacturer. Let us study your business. We will recommend a Burroughs which will take hold of your work with the specialized intelligence of a highly trained clerk. This preliminary study of your needs is an important phase of Burroughs Service. We prove what a Burroughs Adding Machine will do before we try to sell you.

Q We have a department of System Service which helps you work out better business methods. Thousands

of business men are using this valuable service.

Q Our Invention Service Department keeps 97 men at work studying how to make the Burroughs more useful and less expensive. This department has succeeded in building into even our \$175 machine several times the utility we were able at first to give in a \$475 machine.

Q And after you have purchased the right machine, Burroughs Service continues. There is a Burroughs Service Station within a few minutes' or an hour's reach of nearly every owner. If you damage a machine, we fix it immediately. We clean and oil every Burroughs for a year free.

Q And back of these Service activities is a great factory and organization, which, in a sense, is an active partner to Business the world over. The Burroughs is but a machine—Burroughs Service is a big force you need in your business. Tell us just what are your business problems—leaks—dangers—and we will come back with practical ideas gleaned from hundreds in your own business.

Q Will you talk this over with one of the Burroughs men in your vicinity?

BURROUGHS ADDING MACHINE COMPANY

49 Burroughs Block, Detroit, Michigan

European Office, 26 Cannon Street, London, E. C., Eng.

Makers of adding and adding subtracting bookkeeping machines, listing and non-listing adding and calculating machines, visible printing adding and calculating machines. 30 different models in 42 combinations of features—\$150 to \$550 in U. S. Easy payments if desired.

Burroughs Service

Western Electric

Washer and Wringer

The Name Guarantees It

Here is the right Electrical Washer. Correctly designed. The revolving cylinder sends the hot, cleansing suds through the fabric without injury to even delicate laces. Cost of operation so slight that it need not be considered. Only proper and modern way to wash clothes, whether by housewife, servant, or laundress. Converts wash day and ironing day into one. If your house is wired for electricity and you want to practice domestic economy—investigate.

EQUIPMENT FOR EVERY ELECTRICAL NEED

It may even lose the lawsuit

It's plain folly to risk the permanency or even the neatness of your records for the pitiful savings you can make by using poor carbon paper. The use of

TRADE **MULTIKOPY** MARK Carbon Paper

is the one sure means of insuring carbon copies that will be legible, and legal evidence if need be, for all time to come. Thanks to its scientific formula and smooth surface, it gives off neither too much nor too little carbon; but just enough to make the sharp, distinct, permanent impressions that your files must have. Always uniform, never changes in any climate. Most economical, because one sheet is good for 100 clear copies. Insist on MultiKopy.

Pittsburgh, 830 Park Bldg.

Other points in the market for commodities were set forth as follows by *The Journal of Commerce*:

"Some of the staples worked to lower basis. Pork provisions dropt from high at \$23 on September 30 to \$22.50 at the close of last month, while coffee declined from .07 $\frac{1}{2}$ to .06 $\frac{1}{2}$; refined granulated from 7.25 to 6.50. In the same list, however, an advance from .27 at the close of September to .30 on the last day of October was noted on eggs, and sugar 96 centrifugal advanced from high 6.27 to 6.50.

"Gray and brown cottons are now being revised downward steadily. Colored cottons are unchanged, in consequence of the uncertainty of dyestuff supplies. Japan silks have dropt radically, but Italian grades less so. Low-grade foreign and domestic wools were in strong demand, and prices on these descriptions went up sharply. The feature of the month was the way the local market was cleaned up of pulled wools for export to England and Canada. The embargo placed on wool shipments from the British colonies upset the plans of importers who had arranged to ship direct.

"The drug and chemical market, which during the preceding month showed a continual decline toward normal prices, recorded further declines, with only a single advance. Cod-liver oil, which ruled high at \$24 at the close of September, closed in October at \$19; menthol broke from previous months' high at \$4.15 to \$2.00; nitrate of soda, spot, from \$2.15 to \$1.00; peppermint oil, bulk, from \$2.35 to \$1.00; quicksilver from \$1.05 to 90c. The advance noted was in alcohol, grain."

"WONDERFUL OPPORTUNITIES LIE AHEAD OF US"

S. W. Straus gives in *The Investor's Magazine* his impressions as to the influence the European War will exert on conditions in this country. He bases these impressions on personal observations made recently in Europe and on "conversations with bankers and government officials in England, Germany, Holland, and the United States." His outlook for this country is optimistic and he looks for an early end of the war:

"As each day goes by I appreciate more fully our advantages in this country at this time, and begin to grasp more thoroughly the wonderful opportunities that lie ahead of us. I am going to state my conclusions first of all:

"First—The war will be a short one. It may be over by 1915. Europe's loss in life and in money, disruption of trade and of finance, pressure of poverty and hunger will soon bring peace.

"Secondly—Conditions in the United States are bound to improve week by week and month by month whether the war is ended soon or not. We have got past the first shock without a panic or a breakdown of business. As we adjust ourselves to conditions and rally our forces, we are bound to see a constant betterment in the United States.

"Thirdly—We are not at all likely to see any great increase in the cost of living beyond its present levels.

"Fourthly—We may expect a period of somewhat easier money before long.

"Fifthly—This case will be tremendously increased when the new Federal Reserve system is put in operation. This will enable us to transact the nation's business on a smaller amount of gold than was available in the past. Large amounts of gold will, therefore, be set free which will be available for use in the international money market. We will undoubtedly play a large part in financing the rehabilitation of Europe when the war is over.

BOYS OR THOSE WHO KNOW THEM

Chicago Flexible Shaft Company
88 No. La Salle St., Chicago, Illinois

"Sixthly—The wise provisions of the Federal Reserve law which permit our national banks to open branches abroad will allow us to take the necessary preliminary steps toward acquiring a much larger share of South America's trade than we enjoy at present. South America is now in a serious financial condition. American banks must be prepared to finance our trade with the Spanish-American Republics, which will be greatly aided by the opening of the Panama Canal. When this is done, we will lay the foundation for a vastly increased commerce.

"Seventhly—When the war is over it will be found that the previous balance of power in Europe will not be greatly disturbed, and the international boundary-lines of July 30, 1914, will not be radically altered. Conditions will be such, in this respect, as to help the world to get back to normal.

"Eighthly—The new spirit of cooperation between the National Administration and American bankers and business men, and the elimination of the old feeling of animosity which has done so much to hold back the nation's progress in the last few years, will do much toward reestablishing prosperity.

"Ninthly—The next few years will be most prosperous for American farmers and for all industries and lines of business based on agriculture in this country. Even if peace is restored and Europe's armies sent home by spring, the harvests of 1915 abroad will be much below normal. There will be a great demand at good prices for American grains and food products of all sorts. Our production will be greatly in excess of our domestic consumption, and Europe will pay well for our surplus. The prosperity our farmers will enjoy as a result of these conditions will extend to all rural communities and will work upward, benefiting in turn the railroads, the iron and steel industries, farm-implement makers, and all other lines.

"Tenthly—It will soon be found that the increased prosperity of our industries helped by the war balances, or more than balances, the damage to those which have been injured. As time goes on, conditions in the latter class will work a cure, and this favorable balance will steadily and rapidly increase.

"Eleventhly—An important factor is that European travel will be greatly reduced, and most of the \$300,000,000 annually spent by Americans abroad will remain at home.

"These are my conclusions, based on my personal observations and on conversations with bankers and government officials in England, Germany, Holland, and the United States. The world is going through a momentous crisis. Blood is being spilled like water. Billions upon billions of dollars of property are being destroyed, and when it is all over and done, it is very much to be doubted that any nation or set of nations will profit greatly at the expense of the others.

"This war had to come.

"It is based on hatreds and jealousies that run back scores of years. The crisis had been near for a long time, and only a rival incident was necessary to touch off the powder-magazine—indeed, most great wars have been directly caused by trivial incidents. The inner governmental circles of the great European countries have known for some years that this war was coming. Their preparations had been on a scale that has brought more than one Power to the verge of bankruptcy. The war itself, with its colossal destruction of values and of life, is hurrying the nations to financial and economic ruin at a whirlwind pace. This destruction is on too vast a scale to last long. I feel quite safe in saying that the nations will be exhausted, worn out, and sick of slaughter and destruction before Christmas. Then will come the work of peace."

Protection and Procrastination

Protection—that's the natural tendency of every careful man. Communities protect themselves against fires, robberies and other crimes. Corporations protect themselves against failure by sane and sound business methods. Firms and individuals protect themselves against different kinds of loss by insurance. No man thinks of risking fire loss at home without protection. Most men carry life insurance—but only twenty per cent. protect themselves against accident or illness.

Procrastination—that's ignoring the compensating law of chance. One man in seven is hurt every year. Thousands are disabled by illness. The average man thinks that most accidents occur to those who travel and who are in hazardous pursuits. That idea is wrong. Thousands upon thousands of accidents happen in the streets and in the home. Most men think they will escape serious sickness—but sickness comes.

Protection against accident or illness is every man's duty to himself. No one can afford the cost of being hurt, nor of being sick. The oft-repeated saying, "I can't afford to be sick," hits the nail on the head—no one can. How are you protected against the temporary loss of your earning capacity? How will you finance the cost of being laid up? If you should be injured, if you should suffer a serious illness, would you reap the compensation of protection, or of procrastination?

The Equity-Value Disability Policy is for any man, in any walk in life. It gives the

protection you need at a cost of \$10.00* per thousand if you are a preferred risk. If you should be suddenly disabled either by accident or illness, your weekly indemnity would be at the rate of \$5.00 for every \$1000 of insurance. For protection against accident alone, with the same weekly indemnity and principal sum, the cost is \$3.50* per thousand. Here is real provision against chance stealing your earnings, a salary while you're laid up if you should be overtaken by a sudden jolt.

It will certainly pay you to know just what the Equity-Value Disability Policy will give you in protection. It will certainly pay you to examine it and see for yourself its many advantages. Know its full import. Know just how you can protect yourself against time-loss, against money-loss, against chance and the doctor's bill—for a lower premium than other policies paying the same principal sum and equal indemnity for accidents and illness, anywhere in the world. Sign and mail the coupon. It will bring a sample Equity-Value Disability Policy or Accident Policy, with full information. Your signature involves no obligation, of course.

Maryland Casualty Company Baltimore, Maryland

*This rate applies to all states excepting North Carolina, Florida, Alabama, Mississippi, Tennessee, Arkansas, Texas, Oklahoma and Missouri, in which the rate for the Equity-Value Disability Policy is \$11.00 per thousand, or \$4.00 per thousand for accident insurance only.

—and here's the reason: We import direct from the Cutters of Europe—eliminate the waste of needless middlemen; our vast sales permit smallest profits; and our enormous stock enables us to continue our old famous before-the-war price; in spite of stopped imports; in spite of war-closed cutting establishments!

SEND NO MONEY! No References, No Deposit!
Simply tell us what diamond and mounting you prefer; we ship it at our expense; permit fullest examination; all without obligating you to buy. This Basch Plan, 36 year-tested, enables you to see before paying even one cent!

Our real Money Back Guarantee

Contracts in writing to pay you back the full price IN CASH less 10 per cent anytime within one year if you desire for any reason to return the diamond; also allows full price IN EXCHANGE at any time. Also certifies exact weight, quality and value as proof that you get fullest value for your money.

1915 De Luxe Basch Copy "Heart's Desire" by Dorothy Star-see in Diamond Book, Free! 9 colors. Thousands of illustrations. Contains important facts by recognized experts absolutely needed to buy diamonds intelligently. The contract (Basch) takes over prejudice. Also shows world's most complete line of Watches and Jewellery—Standard makes at factory prices, starting by mail-order. Write letter or postal to

L. BASCH & CO. Dept. 1 235 State and Quincy Sts., Chicago

 No. 15D21 1/2 carat dia. Complete \$12.00	 No. 15D23 1/2 carat dia. Complete \$48.75	 No. 15D34 1 carat dia. Complete \$101.25
 No. 15D24 1/2 carat dia. Complete \$50.50	 No. 15D28 Solid Gold Tie-Clasp 1 dia. \$1	 No. 15D29 Solid Gold Cuff Links 2 dia. \$1.75

where numerous private banking failures had produced a feeling of distrust among small depositors. Some of the large institutions in that district received notices for the withdrawal of several million dollars. The same paper adds:

"At the present time the savings-bank deposits are running in advance of last year. The closing of the security markets has been a considerable factor in the better showing, as many savings which ordinarily would have gone into securities are now being placed in savings-banks. For the same reason withdrawals are inclined to be less than a year ago. Many who have been affected by prevailing business conditions are postponing the withdrawing of funds till after the new year in order to secure the full half-year's interest on their accounts, and in the meantime are meeting present needs by borrowing of banks and trust companies on pass-books as collateral."

SPICE OF LIFE

Unnecessary.—"Did you tell Blinks I was a fool?"

"No; I thought he knew it."—*Harvard Lampoon.*

Off-Traveled.—WILLIE—"Paw, why is the way of the transgressor hard?"

PAW—"Because so many people have tramped on it, my son."—*Cincinnati Enquirer.*

Thrift.—BUTTON—"Get up! Get up! The hotel's afire!"

SCOTTISH GENTLEMAN—"Right, laddie; but if I do, mind ye, I'll no pay for the bed."—*Answers.*

His Busy Day.—"What is that letter?" asked the busy merchant.

"Answer to your letter to a young lady proposing matrimony. Replying to your esteemed favor, the young lady declines."

"Hum! Send her our follow-up form No. 17."—*Puck.*

Doubly Unfortunate.—OLD LADY (compassionately)—"Poor fellow! I suppose your blindness is incurable. Have you ever been treated?"

BLIND MAN (sighing)—"Yes, mum, but not often. 'Tain't many as likes to be seen going into a public-house with a blind beggar."—*Yale Record.*

A Ray of Hope.—THE FAMILY MAN—"The cost of everything is increasing at a terrible rate."

THE MILITARY EXPERT—"Not everything. According to statistics in former wars it cost \$10,000 to kill a man, but now, with improved ordnance and ammunition, it can be done for one-third of that."—*Puck.*

Anxious for News.—He had waited thirty minutes for a slow waiter to bring his dinner.

"Now," he said to the waiter, "can you bring me some cheese and coffee?"

"Yes, sir; in a minute, sir."

"And," continued the diner, "while you are away you might send me a postal-card every now and then."—*Woman's Home Companion.*

Get Rid of Gun Fear

These War Times Demand It

EVERY gun-shy mother and every gun-shy daughter should get rid of gun fear, especially in these times, which make idlers, who in turn make more burglars and more brutes. For who knows when they, left alone, may hear the brute monster's knock at the back door? Or who can tell when the dreaded burglar, knowing them to be alone, may flash the terror of his light and mask and gun in their helpless faces?

Out into the back lot with your family and a harmless Savage today. When they discover its easy aim cracking ten lightning shots into the bull's eye, watch their gun fear change into shooting enthusiasm; their gun hate to gun affection; their burglar and brute terror to haughty indifference. In other words, watch them get rid of gun fear.

The Savage shoots two to four more shots than any other automatic; shoots only one shot per trigger pull, but shoots as fast as you can crook your finger, and is as harmless as a cat around the house, because a touch or a look tells whether it is loaded or empty.

Get a Savage and get your family "gun-broke" in the back lot today. Or at least send for free booklet.

SAVAGE ARMS CO., 3211 SAVAGE AVE., UTICA, N. Y.

THE

SAVAGE AUTOMATIC

It is just as important to insure in a good company as it is to insure against

FIRE!

Six out of seven fire insurance companies either fail or retire. Every big conflagration—like Boston, Chicago, Baltimore and San Francisco—takes its toll of the companies. Even the ordinary routine of meeting daily obligations is too great for many to withstand.

The Hartford Fire Insurance Company pays losses at the rate of more than \$3,000 every hour of the working day and has paid \$170,000,000 to its policy holders since it was founded in 1810. Its meets all honest claims fairly and promptly.

The Hartford agent in your town will put you in touch with expert fire insurance service. He will justify the confidence you place in him when you tell him you want the absolute protection of the Hartford.

Nobody wants a fire. We have a booklet that tells how to prevent it. Send for a free copy. Use the coupon.

Operating Problems for Motor-Truck Owners

Makers and owners of motor-trucks are making mutual progress toward placing this new transportation system on a sound basis. Manufacturers are eliminating unbusinesslike sales practises and standardizing their output. Owners are studying operating efficiency and running their vehicles in accordance with scientific principles. All of which is paving the way for the great future of the commercial motor vehicle.

Many purchasers of motor-trucks are still prone to put too great a burden of responsibility upon the truck makers. Many of these owners exact too much of the truck and too little of themselves. They demand and receive a highly perfected machine, but in many cases they fail to demand correct use of this machine in daily service. When this happens, the truck and its makers are blamed.

Some of these deficiencies in operating methods were the subject of helpful discussion at the recent convention of motor-truck makers, dealers, and owners at Detroit. Some of the points brought out at this assemblage should receive the careful attention of every motor-truck owner.

Of particular interest was the discussion of loading capacities and loading space. It was shown that there is much guesswork or total ignorance among owners about load weights. The experience of a Philadelphia department store was cited as an illustration of incorrect relation between truck capacity and weights carried. In this instance it was a case of underloading.

The truck employed by this firm for package delivery weighs 4000 pounds with a rated load capacity of 3000 pounds. Investigation showed that the loads range from 800 pounds to a maximum of 1195 pounds. This maximum is reached only with the body packed absolutely full. Thus the total weight moved with the maximum load is 5195 pounds. Of this the "payload" represents only 23% of the total weight; the "deadload," 77%. Moral: this truck is either much too big for its loads or its body is not designed to permit of adequate loading. Consequently, its operation is economically insufficient. Another motor-truck engaged in carrying candy stock in New York was found to be handling an average "payload" of 22 3/10%, its non-paying load being 77 7/10%, while another vehicle owned by the same firm only 18 8/10% "payload" and 81 2/10% "deadload." Gross oversize is faulty just as undersize is disastrous.

It was shown that owners give too little attention to body dimensions and design, loading spaces often being inadequate.

Great emphasis was placed upon the necessity of adequate tiring. A vital point in relation to load distribution and tire wear was disclosed in this part of the proceedings. It is found that while the weight of a vehicle and load may be within safe tire limits, the practise of carrying heavy weights far back upon a long overhang is exceedingly injurious to the rear tires.

The worst enemy to the successful operation of a motor-truck was declared to be the careless driver. A foundry company in the West entrusted a first-class truck to an irresponsible driver. Within six months the machine had to be returned to the factory and rebuilt. When the truck was received back, a careful, reliable driver was put in charge. Under his handling the truck has been operated nearly four and one-half years with almost no repairs.

Since the pioneer motor-trucks made their appearance, The Digest has been intensely interested in the development of this new factor in commercial life. It has been our aim to stimulate interest in the commercial motor vehicle, to influence manufacturers and merchants in behalf of its introduction, and to advocate efficiency methods of operation. To this end we shall continue to publish, as we have in the past, information and suggestions which may be helpful to motor-truck owners.

To those who do not at present own a truck, but could operate one to advantage, we shall be glad to extend the services of our Motor-Truck Department.

Motor-Truck Department

The Literary Digest

Recognized.—**SHE**—"The waiter is hanging around as tho he expected something."
HE—"Oh, yes; he's a tipical waiter."
Providence Journal.

Careless.—"How did the cashier of your bank get into jail?"

"Left the 's' off speculation."—*Philadelphia Ledger.*

She Knew Him.—"You won't object if I go on with this embroidery while we talk, will you, Mr. Borcham? I always think that one should keep one's mind occupied."
—*Life.*

Wrong Cue.—**ALGERNON**—"Do you think two can live as cheaply as one, Miss Simpkins?"

MISS SIMPKINS (eagerly)—"Yes, Algernon, yes! I certainly do!"

ALGERNON—"How sad! And still women think they are mentally qualified for the ballot."—*Judge.*

Obliging.—**VISITOR** (at séance)—"I want to talk with Mr. Brown."

ATTENDANT—"What Mr. Brown?"

VISITOR—"I can not remember his first name, but he is only lately deceased."

ATTENDANT (formerly a department store worker)—"Please show the gentleman some of the latest shades of Browns."
—*Harper's Weekly.*

Then War Was Declared.—**BRIGGS**—"We are coming around to see you this evening."

GRIGGS—"That's right; but do me a favor, old man. Don't let your wife wear her new fall suit; I don't want my wife to see it just now."

BRIGGS—"Why, man alive, that's just why we are coming."—*Boston Transcript.*

Not Needed.—Two college students were arraigned before the magistrate charged with hurdling the low spots in the road in their motor-car.

"Have you a lawyer?" asked the magistrate.

"We're not going to have any lawyer," answered the elder of the students. "We've decided to tell the truth."—*New York Times.*

Courtesies of War.—The wife of General Metzinger, a distinguished French officer, whose son, a captain in the army, was recently wounded, was traveling from Switzerland to Lorraine.

She overheard a conversation between two German officers during a rain-storm.

One said: "Oh, I left my umbrella at hotel in Paris."

The other replied: "Never fear; you will be able to go and get it next week."

"Pray do not trouble yourselves," interrupted Mme. Metzinger; "my son, who is a captain in the French Army, will undertake to bring it to Berlin himself."
Chicago Tribune.

Blaming Münsterberg.—**DAD** (from the hall)—"Why, Marjorie, how dim the light is in here!"

FREDDY (the fiancé not a college graduate in vain)—"Yes, sir. Professor Münsterberg has a theory that brilliant light numbs the intellect. We are now trying to find the degree of illumination by which the attention is kept and the mental functions active."—*J.*

LISTERINE

Use it every day

As a wash and dressing for superficial cuts and wounds, Listerine, in the proportion of one to ten or twenty parts of boiled water, will be found very efficacious. Physicians use Listerine as the safe, non-poisonous antiseptic.

Do not accept an imitation. The original Listerine is safest and best. Other uses given in folder wrapped around the bottle.

All Druggists Sell Listerine

LANBERT PHARMACAL COMPANY, St. Louis, Mo.

The Fireplace that HEATS the HOUSE as well as the HEARTH

Requires less than half the fuel and gives 85% of the heat uniformly into the room instead of 15% given by all other grates.

Burns any kind of fuel. Keeps fire over night.

Requires no special chimney construction.

Made for old houses as well as new.

Will heat upper or adjoining rooms in addition to the room in which it is installed. Satisfaction guaranteed or money returned. 60,000 now in use.

RATHBONE FIREPLACE MFG. CO.
